1.0 Introduction and Summary

The Draft Environmental Impact Report (EIR) for the Arcata General Plan 2045, has been prepared to comply with the California Environmental Quality Act (CEQA).

1.1 CEQA Program EIR Guidelines

CEQA requires that discretionary decisions by public agencies be subject to environmental review. CEQA requires an EIR to be prepared when it can be determined that substantial evidence supports a fair argument that significant environmental impacts may result from a project. The purpose of an EIR is to identify the significant effects of the project on the environment, to identify alternatives to the project, and to indicate the manner in which those significant effects can be mitigated or avoided (Public Resources Code [PRC] 13, Section 21002.1[a]). Each public agency is required to mitigate or avoid the significant effects on the environment of projects it approves or carries out whenever feasible. The environmental effects of a project that must be addressed include the significant effects of the project, growth-inducing effects of the project, and significant cumulative effects.

The purpose of an EIR is not to recommend either approval or denial of a project. Rather, CEQA requires decision-makers to balance the benefits of a project against its unavoidable environmental effects in deciding whether to carry out a project. The lead agency will consider the analysis in the Draft EIR, comments received on the Draft EIR, and responses to those comments before making a final decision. If significant environmental effects are identified, the lead agency must adopt “Findings” indicating whether feasible mitigation measures or alternatives exist that can avoid or reduce those effects. If environmental impacts are identified as significant and unavoidable after proposed mitigation, the lead agency may still approve the project if it determines that the social, economic, or other benefits outweigh the unavoidable impacts. The lead agency would then be required to prepare a “Statement of Overriding Considerations” that discusses the specific reasons for approving a project, based on information in the Draft EIR, comments received on the Draft EIR, and other information in the administrative record.

1.2 Type of EIR

This Draft Program EIR has been prepared by City of Arcata for the proposed Arcata General Plan 2045 (General Plan 2045) pursuant to CEQA (PRC Section 21000 et seq.) and the CEQA Guidelines (Title 14 California Code of Regulations [CCR] Section 15000 et seq.). This Draft EIR is a program level EIR that evaluates the effects that goals, policies, and related implementation measures proposed in the Arcata General Plan 2045 would potentially have on the environment. This EIR focuses on the secondary effects that can be expected from adoption of the of the General Plan but is not as detailed as an EIR for a construction project (CEQA Guidelines § 15146 (b) Degree of Specificity). Content and process requirements for Program EIRs are found in the Title 14 CCR Chapter 3: Guidelines for Implementation of the CEQA.

1.3 Intended Uses of the EIR

The purpose of the Program EIR is to provide a clear understanding of the environmental impacts associated with a project that is proposed by a public agency or private interest. The EIR is used by decision-makers, Responsible and Trustee Agencies, and the public to understand and evaluate project proposals and assist in making decisions on project approvals and required permits. The Program EIR also serves as a first-tier EIR for subsequent EIRs on projects that would implement the Plan.

EIRs are prepared to meet the requirements of CEQA when a proposed project may have a potential “significant” impact on the physical environment. An EIR is defined by the CEQA Guidelines as “… a detailed statement

prepared to describe and analyze significant environmental effects of a project and discuss ways to mitigate or avoid the effects" (Title 14 CCR Section 15362). An EIR must include a description of the physical environmental conditions in the vicinity of a project, as they exist at the time the Notice of Preparation (NOP) is published, from both a local and regional perspective. This environmental setting normally constitutes the baseline physical conditions by which the lead agency determines whether an impact is significant.

EIRs are prepared under the direction of a lead agency. The lead agency is the decision-making body that would ultimately certify the adequacy of the EIR and approve the implementation of a project. The lead agency for the proposed Project is the City of Arcata (City).

1.4 Organization of the EIR

This Draft EIR is organized into Chapters, as identified and briefly described below. Chapters are further divided into Sections (e.g., Section 3.2, Aesthetics).

Chapter 1 **Introduction and Summary.** Chapter 1 describes the purpose and organization of the Draft EIR, context, and terminology used in the Draft EIR. This Chapter also identifies the key issues to be resolved in the Draft EIR and summarizes the environmental impacts and mitigation measures to reduce or eliminate those impacts.

Chapter 2 **Project Description.** Chapter 2 describes the General Plan 2045, including the General Plan 2045 objectives, location and setting, background, overall concept and proposed activities, and anticipated permits and approvals.

Chapter 3 **Community Environment - Environmental Setting, Impacts and Mitigation Measures.** For each environmental resource category (broken out into sections), Chapter 3 describes the existing environmental and regulatory setting, discusses the environmental impacts associated with the General Plan 2045, identifies feasible mitigation measures to reduce or eliminate those impacts, and provides conclusions on significance.

Chapter 4 **Transportation and Circulation - Environmental Setting, Impacts and Mitigation Measures.** Chapter 4 describes the existing environmental and regulatory setting, discusses the environmental impacts associated with the General Plan 2045, identifies feasible mitigation measures to reduce or eliminate those impacts, and provides conclusions on significance for the transportation and circulation resource category.

Chapter 5 **Natural Environment - Environmental Setting, Impacts and Mitigation Measures.** For each environmental resource category (broken out into sections), Chapter 5 describes the existing environmental and regulatory setting, discusses the environmental impacts associated with the General Plan 2045, identifies feasible mitigation measures to reduce or eliminate those impacts, and provides conclusions on significance.

Chapter 6 **Energy Conservation - Environmental Setting, Impacts and Mitigation Measures.** Chapter 6 describes the existing environmental and regulatory setting, discusses the environmental impacts associated with the General Plan 2045, identifies feasible mitigation measures to reduce or eliminate those impacts, and provides conclusions on significance for the energy conservation category.

Chapter 7 **Alternatives Description and Analysis.** Chapter 7 describes the alternatives to the General Plan 2045 that are being considered to mitigate the General Plan 2045 environmental impacts while meeting the General Plan 2045 objectives. This Chapter also identifies the Environmentally Superior Alternative.

Chapter 8 **Other CEQA Required Sections.** Chapter 8 describes the unavoidable significant impacts, growth-inducing, and irreversible impacts of the General Plan 2045.

Chapter 9 **List of Preparers.** Chapter 9 identifies the Draft EIR authors and consultants who provided analysis in support of the Draft EIR's conclusions.

Appendices **Appendices A-G.** contain various key technical reports and publications that have been summarized or otherwise used for preparation of the Draft EIR.

The Draft EIR is organized by chapter as shown in the table of contents. The chapters include analysis of impacts by issue, such as land use and planning, and geologic resources. Each issue is examined using the following typical format:

1.4.1 Study Area

This subsection identifies the study area used to describe the environmental setting and complete the impact analysis (i.e., the geographic scope of the analysis used to consider direct and indirect impacts). While the study area generally includes the City limits, some resource categories include a larger geographic scope as the study area for each environmental discipline has been established based upon its relevance to that discipline and may include adjacent unincorporated areas. For example, in Section 3.3 (Air Quality), the project is located within the North Coast Unified Air Quality Management District, which regulates air quality at the regional level; therefore, the study area includes the City limits as well as the North Coast Air Basin. The rationale for study area selection is provided in the introductory text of each section, if different from the typical City limits boundary.

1.4.2 Setting

This subsection presents a description of the existing physical environmental conditions within the study area for the specific resource category evaluated (see above). The setting describes existing conditions at an appropriate level of detail to understand the impact analysis and provides a baseline by which to compare the potential impacts of the proposed General Plan 2045.

1.4.3 Regulatory Framework

This subsection provides a brief discussion of applicable federal, state, and local regulations and policies that are relevant to the resource category. The General Plan 2045 is primarily focused within the limits of the City. The southern portion of the City is located within the Coastal Zone boundary. The primary permitting jurisdiction resides with the Local Coastal Program of the City of Arcata. The City's Urban Services Boundary, Sphere of Influence, and Planning Area extend into Humboldt County (Figure 2-1 – City of Arcata Planning Areas). The regulatory requirements for the City and other agencies (as applicable) are described in this subsection along with applicable federal and state regulations and policies.

1.4.4 Evaluation Criteria and Significance Thresholds

This subsection provides the significance thresholds for evaluation of environmental impacts. The significance thresholds are based on the Appendix G of the 2023 CEQA Guidelines.

1.4.5 Methodology

The methodology subsection discusses the approach to the impact analysis.

1.4.6 Impacts and Mitigation Measures

This subsection evaluates the potential for the General Plan 2045 to significantly affect the physical environment described in the setting for each respective resource category. Potential impacts are identified and characterized and, where feasible, mitigation measures are identified to avoid or reduce significant impacts to a less-than-significant level.

1.4.7 Impacts

As described above, significance thresholds for each environmental resource category are presented in each section of Chapter 3 through Chapter 6. For the impact analyses, the following categories are used to identify impact significance:

No Impact. This determination is made if a resource is absent or if a resource exists within the study area but there is no potential that the Project could affect the resource.

Less than Significant Impact. This determination applies if there is a potential for some limited impact on a resource but the impact is not significant under the significance threshold.

Less than Significant Impact after Mitigation Incorporated. This determination applies if there is the potential for a substantial adverse effect in accordance with the significance threshold but mitigation is available to reduce the impact to a less-than-significant level.

Significant and Unavoidable Impact. This determination applies to impacts that are significant, even after mitigation has been included to reduce the impact. Under this determination, no additional feasible mitigation is available to reduce the impact to a less-than-significant level.

1.4.8 Mitigation Measures

Environmental impacts are numbered in this Draft EIR using the section number followed by sequentially numbered impacts. Mitigation measures are numbered sequentially, and do not necessarily correspond to the impact numbers.

1.5 General Plan Preparation and Format

The Arcata General Plan 2045 will help shape how the City will look, function, and manage resources for the next 20+ years. The Plan contains long-term goals, policies and implementation measures to reach the year 2045 and beyond. Comprehensive in scope, it conveys the fundamental values that decision makers will use to guide the City's evolution, from its ongoing physical development to its growing network of services.

1.6 Public Scoping Process

On February 4, 2022, the City issued an NOP for the Project. The NOP was issued in accordance with the CEQA Guidelines (Title 14 CCR Section 15082) with the intent of informing agencies and interested parties that an EIR would be prepared for the Project. A copy of the NOP can be found in Appendix A. The NOP was circulated between February 4, 2022 and March 7, 2022. A virtual agency scoping meeting for the Project was held on February 24, 2022. A virtual public scoping meeting was held via Zoom on March 10, 2022. Comments provided in response to the NOP and during the agency and public scoping meetings have been summarized by the City in Appendix B (Notice of Preparation Comments).

1.7 Availability of the Draft EIR and Public Comment Period

The Draft EIR will be circulated for 45 days, from January 31, 2024 to March 18, 2024, to allow interested individuals and public agencies to review and comment on the document. Document files will be made available for review upon request at Arcata City Hall, 736 F Street, Arcata, California and online at https://www.cityofarcata.org/896/Strategic-Infill-Redevelopment-Program. Comments may be submitted in writing via the United States Postal Service or via email. Written comments on the Draft EIR will be accepted through March 18, 2024 until 5:00 pm. Public agencies, interested organizations, and individuals are encouraged to submit comments on the Draft EIR for consideration by the City. All written comments should be addressed to:

David Loya, Community Development Director
City of Arcata
736 F Street
Arcata, CA 95521
707-825-5955, dloya@cityofarcata.org

To facilitate understanding of the comments, please provide a separate sentence or paragraph for each comment and note the page and Chapter/Section of the Draft EIR to which the comment is directed. This approach to commenting will help the City provide a clear and meaningful response to each comment.

A public hearing will be scheduled for the purpose of receiving public comments on the Draft EIR before the Planning Commission on or after February 13, 2024. The Final EIR will be reviewed by the City Council for consideration on or after May 1, 2024. At the end of the public review period, written responses will be prepared for all substantive comments received on the Draft EIR during the circulation period. The comments and responses will then be included in the Final EIR and will be considered by the City Council prior to making a decision on the Project.

1.8 Effects Found Not to be Significant

To provide more meaningful public disclosure, reduce the time and cost required to prepare an EIR, and focus on potentially significant effects on the environment of a proposed project, lead agencies can focus the discussion in the EIR on those potential effects of a project which the lead agency has determined are or may be significant. lead agencies may limit discussion on other effects to a brief explanation as to why those effects are not potentially significant (PRC Section 21002.1(e) CEQA Guidelines Sections 15128 and 15143). Information used to determine which impacts would be potentially significant was derived from a review of the Project in the preparation and public review of the Initial Study, field work, feedback from agency consultation and input, and comments received on the NOP. All resource categories are discussed in Chapter 3 through Chapter 6.

1.9 Areas of Controversy and Key Issues to be Resolved

Section 15123 of the CEQA Guidelines requires an EIR to identify areas of controversy known to the lead agency, including issues raised by agencies and the public. The following provides a brief summary of the comments and issues identified during the scoping process for the EIR. Comments received on the NOP are included in Appendix B of this document.

Comments received included statements germane to CEQA as well as concerns regarding issues not considered to be environmental issues under CEQA, such as proposed changes to existing parking, potential changes to private landscaping and trees, requests for additional community engagement, and statements for or against the Project or specific elements thereof. Comments indicative of areas of controversy on environmental issues germane to CEQA included:

- Concerns related to the capacity and ability of local services, such as fire protection and the wastewater treatment system, to adequately serve additional development and growth
- Concerns related to residential affordability and gentrification as well as development height and density
- Requests to address aspects of the climate crisis including promotion of electrification and reduction of greenhouse gas and vehicle miles traveled
- Concerns related to transportation safety
- Concerns related to construction impacts on wetlands and migratory birds
- Concerns related to construction and operational noise due to traffic

1.10 Cumulative Impacts

Cumulative impacts are defined as “two or more individual effects which, when considered together, are considerable or which compound or increase other environmental impacts” (CEQA Guidelines Section 15355). Cumulative impacts can result from individually minor, but collectively significant, actions taking place over a period of time.

Cumulative impacts are discussed in each environmental resource section following the description of the Project-level impacts and mitigation measures. The cumulative impact analysis is based on the same setting, regulatory framework, and significance thresholds presented in each resource category section. Additional mitigation measures are identified if the analysis determines that the General Plan 2045’s contribution to an adverse cumulative impact would be cumulatively considerable and, therefore, significant.

1.10.1 Approach to Cumulative Impact Analysis

Two approaches to cumulative impact analysis are discussed in CEQA Guidelines Section 15130(b). The first approach is a list of past, present, and probable future projects producing related or cumulative impacts. The second approach is a summary of projections contained in an adopted local, regional, or state-wide plan, such as a general plan or related planning document, or in an adopted or certified environmental document, which describes or evaluates conditions contributing to cumulative effects. For this Draft EIR, the cumulative impact analysis utilizes the list approach. In addition, the analysis of cumulative impacts uses relevant planning documents, where they provide an appropriate evaluation.

To identify projects to be considered for cumulative impacts, outreach was conducted to the following agencies and organizations:

- California Department of Transportation (Caltrans)
- California Polytechnic University Humboldt (Cal Poly Humboldt)
- City of Arcata Environmental Services and Public Works
- City of Eureka Planning Department
- Blue Lake Rancheria
- Humboldt Bay Municipal Water District
- Humboldt Bay Harbor, Recreation and Conservation District
- Humboldt County Planning and Building Department and Public Works Department
- Pacific Gas & Electric
- Redwood Coast Energy Authority
- Wiyot Tribe

1.10.2 List of Relevant Projects

Table 1.10-1 provides a list of past, present, and reasonably foreseeable future projects known within and near the Project area, including a brief description of the projects and their anticipated construction schedules (if known). Single-family homes and other similar small-scale uses were not included because of their negligible cumulative effects. Projects that were in conceptual design or were otherwise considered speculative were not included.

Table 1.10-1 Projects Considered for Cumulative Impacts

Entity	Project	Location	Timeframe
Broad Reach Power/EWP (developer); RCEA (energy purchaser)	Fairhaven energy storage	Fairhaven/Samoa	2023-2024
Cal Poly Humboldt	Craftsman Mall Student Housing Project	505-022-011, 505-022-012, 503-372-002, 503-372-003, 503-372-004, 503-372-005, 503-372-006, 505-011-002, 505-011-006, 505-011-007, 505-011-010, and 505-012-004	2023-2027
Caltrans	Arcata/Samoa Beach Fiber Project	State Route 255; between post miles 2.012 - 8.467	2022
Caltrans	Three Hum Bridges	HUM-101-PM 86.77	2021
Caltrans	Hum-101 Strengthen 2 Bridges	HUM-101-PM 87.84 at West End Road Overpass	2022
Caltrans	200/299 Separation	HUM-200-PM 2.7	2022
Caltrans	Hum-299 Culverts	Various locations along SR 299	2022
Caltrans	Arcata to Blue Lake Camp	HUM-299-PM 0	2023
Caltrans	Hum-299 Off Ramp Improvement	HUM-101-PM 88.3	2025
Caltrans	Safety Corridor Improvements	NA	2023-2025
City of Arcata	Aldergrove Marsh Restoration Pilot Project	Adjacent to Ericson Way	2021
City of Arcata	Arcata 30th Street Commons Project	507-092-008	2021-2022
City of Arcata	Open Door Community Health Center	505-121-031	2023-2024
City of Arcata	Frank Martin Court Culvert Replacement	Frank Martin Court within the railroad right of way	2023-2024
City of Arcata	Westwood Garden Apartments expansion	Westwood Court	2023-2024
City of Arcata	Old Arcata Road Improvements	Old Arcata Road between Buttermilk and Jacoby Creek Road	2023-2025
City of Arcata	Annie and Mary Trail Improvements	Railroad corridor between Larson Park and Park 1	2023-2028
City of Arcata	Foster Avenue Extension	505-161-009 and vicinity	2023-2028
City of Arcata	Arcata Sunset Roundabout Project	Sunset Avenue and LK Wood Boulevard	2025 or later
City of Arcata	Sorrel Place Housing-43 Units	021-163-007	Completed
City of Arcata	Homekey Projects	Days Inn and Red Roof Inn	Unknown
City of Arcata	St. Lous Road Trail Extension	St. Louis Road and Sunset Avenue	Unknown
City of Arcata	Canyon Creek Apartments	Todd Court, adjacent to Larson Park	Unknown
City of Arcata	Annie & Mary Trial Connection to Blue Lake	North of Park 1	Unknown
City of Arcata / Cal Poly Humboldt	Creekside Annexation and Potential Future Development (TBD)	505-161-011	2023-2028

Entity	Project	Location	Timeframe
City of Eureka	31 Unit Apartment	Myrtle and Sunny Avenue	2025-2027
City of Eureka	31 Unit Apartment	8th and G Street	2025-2027
City of Eureka	28 Unit Apartment	6th and M Street	2025-2027
City of Eureka	20+ Unit Apartment	5th and D Street	2026-2028
City of Eureka	20+ Unit Apartment	6th and L Street	2026-2028
City of Eureka	90 Unit Apartment	C to F Street, North of 1st Street	2026-2028
City of Eureka	49 Unit Apartment / Motel Conversion	4th and M Streets	Under construction
Great Redwood Trail Agency	Great Redwood Trail	Railroad corridor	Varies by segment
Humboldt Bay Harbor, Recreation and Conservation District	Humboldt Bay Offshore Wind Heavy Lift Marine Terminal	364 Vance Avenue on the Samoa Peninsula	2025 - 2035
Humboldt Bay Harbor, Recreation and Conservation District	Maintenance Dredging of Woodley Island Marina	Woodley Island Marina	2023 - 2033
Humboldt Bay Harbor, Recreation and Conservation District and Caltrans	Eelgrass Restoration Project for Multiple Projects	In-bay; near above	2024 - 2027
Humboldt Bay Harbor, Recreation and Conservation District and Caltrans	Spartina Removal Project	Tuluwat Island	2023 - 2030
Humboldt Bay Municipal Water District	Mad River Pipeline Undercrossing Project	Warren Creek Road	2018 - 2019
Humboldt Bay Municipal Water District	12 kV Switchgear Replacement Project	7270 West End Road	2020-2023
Humboldt Bay Municipal Water District	Collector Well 2 Lateral Replacement Project	7270 West End Road	2023
Humboldt Bay Municipal Water District	On-site Hypochlorite Generation Project	7270 West End Road	Under Construction 2023-2024
Humboldt Bay Municipal Water District	Collector Mainline Redundancy Project	7270 West End Road	Under Construction 2023-2025
Humboldt Bay Municipal Water District	Turbidity Reduction Facility Large Standby Generator	444 Pipeline Road	2023-2025
Humboldt Bay Municipal Water District	Seismic Retrofit of 2 Million Gallon CT Tank Reservoir	444 Pipeline Road	2024-2026
Humboldt Bay Municipal Water District	Seismic Retrofit of 1 Million Gallon Domestic Water Reservoir	444 Pipeline Road	2024-2026
Humboldt Bay Municipal Water District	Seismic Retrofit of 1 Million Gallon Industrial Water Reservoir	New Navy Base Road	2024-2026
Humboldt Bay Municipal Water District	15" Domestic Water Pipeline Replacement	Samoa Peninsula	Unknown

Entity	Project	Location	Timeframe
Humboldt Bay Municipal Water District	3 to 4.5 Million Gallon Reservoir at Turbidity Reduction Facility	444 Pipeline Road	Unknown
Humboldt County	Large Cannabis Farm just outside City limits	Foster Avenue	2023-2025
Nordic Aquafarms (Redwood Coast Energy Authority as energy provider TBD)	Aquaculture Project	Samoa	2023-2030
Northern Humboldt Union District	Arcata High School Athletic Facilities Improvement Project	505-111-004	2020-2022
Redwood Coast Energy Authority	Hatchery Road Solar	Blue Lake	2024-2026
Redwood Coast Energy Authority	10-20 Public electric vehicle charging stations (*this project is conceptual and may or may not come to fruition*)	In or near Arcata	By 2030
Redwood Coast Energy Authority	3-5 microgrid sites (*this project is conceptual and may or may not come to fruition*)	In or near Arcata	By 2030
Redwood Coast Energy Authority	Redwood Coast Offshore Wind Project	About 25 miles west of Eureka	By 2030
Redwood Coast Energy Authority	Redwood Coast Airport Microgrid	McKinleyville	2018-2023
Renewable Properties (developer); RCEA (energy purchaser)	Foster Ave Solar	Arcata Bottom	2023-2024

1.11 Summary of Impacts and Mitigation Measures

Table 1.11-1 identifies, by resource category, the significant Project impacts, proposed mitigation measures, and post-mitigation significance. Additional information about the impacts and mitigation measures can be found in Chapter 3 through Chapter 6 of this Draft EIR, as referenced for each resource category.

Table 1.11-1 Summary of Impacts and Mitigation Measures

Impact	Project Significance	Mitigation Measure	After-Mitigation Significance
3.2 Aesthetics			
Impact AES-a: Would the Project have a substantial adverse effect on a scenic vista?	Less than significant impact	No mitigation is necessary	Not applicable
Impact AES-b: Would the Project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	No impact	No mitigation is necessary	Not applicable
Impact AES-c: In a non-urbanized area, would the Project substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from a publicly accessible vantage point).	Less than significant impact	No mitigation is necessary	Not applicable
Impact AES-d: Would the Project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	Less than significant impact	No mitigation is necessary	Not applicable
Impact AES-C-1: Would the Project contribute to a cumulatively significant impact to visual resources?	Less than significant impact	No mitigation is necessary	Not applicable
3.3 Air Quality			
Impact AQ-a: Would the Project conflict with or obstruct implementation of the applicable air quality plan?	Less than significant impact	No mitigation is necessary	Not applicable
Impact AQ-b: Would the Project result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is non-attainment under an applicable federal or state ambient air quality standard?	Potentially significant impact	**Mitigation Measure AQ-1: Prohibit Woodburning and Gas Hearths and Fireplaces in New Residential Development** The City shall prohibit the installation of woodburning or gas hearths or fireplaces in all new residential development.	Significant and unavoidable impact
Impact AQ-c: Would the Project expose sensitive receptors to substantial pollutant concentrations?	Potentially significant impact	**Mitigation Measure AQ-2: Implement Construction Screening and Reduction of TACs Emissions** The City shall require applicants for development projects that would be located within 1,000 feet of an existing sensitive receptor to identify the construction schedule and, for projects that would require more than 12 months of construction, implement the following minimization measures to reduce potential TACs (toxic air contaminants) emissions. Measures to	Significant and unavoidable impact

Impact	Project Significance	Mitigation Measure	After-Mitigation Significance
		reduce risk from construction emission may include, but are not limited to: – During construction, use construction equipment rated as US EPA Tier 4 Interim for equipment of 50 horsepower or more. – During construction, use construction equipment fitted with Level 3 Diesel Particulate Filters for all equipment of 50 horsepower or more. **Mitigation Measure AQ-3: Implement Enhanced Evaluation between Incompatible Land Uses** The City shall implement an enhanced evaluation of incompatible land uses to reduce the potential exposure of sensitive receptors to substantial air pollutants for land use developments that would locate sources of air pollutants or sensitive receptors in closer proximity than the distances recommended in California Air Resources Board's Air Quality Land Use Handbook of: – 1,000 feet of a distribution center (more than 100 trucks per day, more than 40 trucks with operating transport refrigeration units per day, or where transport refrigeration unit operations exceed 300 hours per week) – 300 feet of any dry-cleaning operation – 500 feet for dry cleaning operations with two or more machines – Within the same building for dry cleaning operations that use perc dry cleaning operations – 300 feet of a large gas dispensing facilities (throughput of 3.6 million gallons per year or greater) – 50 feet of typical gas dispensing facilities For projects that would result in sensitive receptors being closer than the screening distances above, the project applicants shall submit a Health Risk Assessment to the City Planning Department prior to project approval. The Health Risk Assessment shall be prepared pursuant to the latest Office of Environmental Health and Hazard Assessment policies and guidance and use the following quantitative performance measures: – Result in an excess cancer risk level of less than 10 in a million; – Result in a non-cancer hazard index less than 1.0 (acute or chronic); and – Result in an incremental increase of less than 0.3 µg/m3 annual average PM2.5	

Impact	Project Significance	Mitigation Measure	After-Mitigation Significance
		If the Health Risk Assessment demonstrates that the development project would meet all performance measures above, no other action is required. If the HRA shows the development project would not meet all necessary performance measures, the applicant shall identify, quantify, and implement project design features or other measures to reduce the impact to the satisfaction of the City. The applicant shall provide quantification to the City to demonstrate that the project achieves the performance measures. **Mitigation Measure AQ-4: Electrify Loading Docks** The City shall require the electrification of all new loading docks to facilitate plug-in capability and encourage trucks to utilize grid power to deliver goods. **Mitigation Measure AQ-5: Require Enhanced Air Filtration at New Sensitive Receptors** The City shall require air filtrations systems at new sensitive receptor buildings to be designed and constructed with air filters rated at a minimum efficiency reporting value 13 or higher.	
Impact AQ-d: Would the Project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	Less than significant impact	No mitigation is necessary	Not applicable
Impact AQ-C-1: Would the Project contribute to a cumulatively significant impact to air quality?	Potentially significant impact	**Mitigation Measure AQ-1: Prohibit Woodburning and Gas Hearths and Fireplaces in New Residential Development** **Mitigation Measure AQ-2: Implement Construction Screening and Reduction of TACs Emissions** **Mitigation Measure AQ-3: Implement Enhanced Buffer between Incompatible Land Uses** **Mitigation Measure AQ-4: Electrify Loading Docks** **Mitigation Measure AQ-5: Require Enhanced Air Filtration at New Sensitive Receptors**	Significant and unavoidable impact
3.4 Cultural Resources			
Impact CR-a: Would the Project cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?	Potentially significant impact	Not feasible	Significant and unavoidable impact
Impact CR-b: Would the Project cause a substantial adverse change in the significance	Less than significant impact	No mitigation is necessary	Not applicable

Impact	Project Significance	Mitigation Measure	After-Mitigation Significance
of a archaeological resource pursuant to Section 15064.5?			
Impact CR-c: Would the Project disturb any human remains, including those interred outside of formal cemeteries?	Less than significant impact	No mitigation is necessary	Not applicable
Impact CR-C-1: Would the Project contribute to a cumulatively significant impact to cultural resources?	Historic Resources: Potentially significant impact Cultural Resources: Less than significant impact	Historic Resources: Not feasible Cultural Resources: No mitigation is necessary	Historic Resources: Significant and unavoidable impact Cultural Resources: Not applicable
3.5 Greenhouse Gas Emissions			
Impact GHG-a: Would the Project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	Potentially significant impact	**Mitigation Measure GHG-1: EV Charging Infrastructure Ordinance** The City shall include a policy in the General Plan 2045 to prepare and pass electric vehicle (EV) charging infrastructure ordinance requiring, at a minimum, implementation of 2022 Title 24 Part 11 (CALGreen Code) Voluntary Tier 2 EV Charging Infrastructure for residential and non-residential development. The City shall review and update ordinance on a triennial basis, consistent with the CALGreen Code's update schedule, to reflect updates to the CALGreen Code Voluntary Tier 2 measures.	Less than significant impact with mitigation
Impact GHG-b: Would the Project conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	Potentially significant impact	**Mitigation Measure GHG-1: EV Charging Infrastructure Ordinance**	Less than significant impact with mitigation
Impact GHG-C-1: Would the Project contribute to a cumulatively significant impact relative to greenhouse gas emissions?	Less than significant impact	No mitigation is necessary	Not applicable
3.6 Hazards and Hazardous Materials			
Impact HAZ-a: Would the Project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	Less than significant impact	No mitigation is necessary	Not applicable
Impact HAZ-b: Would the Project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the	Less than significant impact	No mitigation is necessary	Not applicable

Impact	Project Significance	Mitigation Measure	After-Mitigation Significance
release of hazardous materials into the environment?			
Impact HAZ-c: Would the Project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	Less than significant impact	No mitigation is necessary	Not applicable
Impact HAZ-d: Would the Project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	Less than significant impact	No mitigation is necessary	Not applicable
Impact HAZ-e: For a Project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project result in a safety hazard or excessive noise for people residing or working in the project area?	No impact	No mitigation is necessary	Not applicable
Impact HAZ-f: Would the Project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	No impact	No mitigation is necessary	Not applicable
Impact HAZ-g: Would the Project expose people or structures to a significant risk of loss, injury, or death involving wildland fires?	Less than significant impact	No mitigation is necessary	Not applicable
Impact HAZ-C-1: Would the Project result in a cumulatively significant impact from increased exposure of the public or environment to hazards or hazardous substances?	Less than significant impact	No mitigation is necessary	Not applicable
3.7 Land Use and Planning			
Impact LU-a: Would adoption and implementation of the General Plan physically divide an established community?	Less than significant impact	No mitigation is necessary	Not applicable
Impact LU-b: Would adoption and implementation of the General Plan cause a significant environmental impact due to a conflict with any land use plan, policy, or	Potentially significant impact	No additional mitigation measures for land use planning would be required beyond those identified throughout this EIR, including Mitigation Measure GHG-1, Mitigation Measure NOI-1, Mitigation Measure NOI-2, and Mitigation Measure NOI-3.	Less than significant impact with mitigation identified throughout this EIR

Impact	Project Significance	Mitigation Measure	After-Mitigation Significance
regulation adopted for the purpose of avoiding or mitigating an environmental effect?			
Impact LU-C-1: Would adoption and implementation of the General Plan contribute to a cumulatively significant impact to land use and planning?	Less than significant impact	No mitigation is necessary	Not applicable
3.8 Noise			
Impact NOI-a: Would adoption and implementation of the General Plan 2045 result in exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	Potentially significant impact	**Mitigation Measure NOI-1: Noise Study for Planned Sensitive Uses within Roadway Setbacks** For any planned sensitive uses within the corresponding roadway setbacks identified in Table 3.8-8, where the City has determined that noise attenuating standards in building design are not likely to effectively comply with noise performance standards, the developer shall undertake a noise study to determine noise control requirements. Dependent on the proximity to the roads, noise control measures may include central air conditioning, acoustic barriers for outdoor activity areas, and/or upgraded building exterior construction. **Mitigation Measure NOI-2: Location and Design Features for High-Noise Generating Uses** In general, high-noise generating uses (e.g., new industrial uses) should be located away from noise-sensitive land uses and minimize excessive noise through project design features that include noise control and landscape buffers. These are supported by General Plan Policies LU-4a, Industrial Uses, LU-4e, Conversion and reuse of industrial sites, and Policy group N-2 in the Noise Element, as well as regulations in the Land Use Code, Section 9.30.050, Noise Standards. **Mitigation Measure NOI-3: Acoustical Analysis for Noise Sensitive or Employment Land Uses within Recommended Setbacks** For discretionary projects, the City may require an acoustical analysis as part of the environmental review process for development of noise sensitive land uses or employment land uses proposed within the recommended setbacks of Table 3.8-9. This analysis shall meet the following requirements: a. Be prepared by an engineer, architect, or other qualified person experienced in the field of acoustics with an Institute of Noise Control Engineering Board Certification. b. Include representative noise level measurements with sufficient sampling periods and locations or reference to noise	Less than significant impact with mitigation

Impact	Project Significance	Mitigation Measure	After-Mitigation Significance
		contours and other sources to adequately describe local conditions. c. Recommend appropriate mitigation or include reference to standardized metrics for assemblies used in the construction that are known and tested to reduce interior noise to achieve compliance with the adopted policies and standards of the Noise Element. d. Estimate interior and exterior noise exposure after the prescribed mitigation measures have been implemented. In the event that an acoustical analysis of a proposed development identifies exceedances of applicable non-transportation sound level limits, the analysis should identify and expand on the source(s) of noise responsible for the non-compliance. Upon identification of the problematic source(s), tailored mitigation measures can be developed.	
Impact NOI-b: Would adoption and implementation of the General Plan 2045 result in exposure of persons to or generation of excessive ground-borne vibration or ground-borne noise levels?	Potentially significant impact	**Mitigation Measure NOI-4: Vibration intensive construction operations such as pile driving should be avoided whenever possible in favor of less intensive alternatives such as caisson drilling.** If vibration intensive operations must be conducted, active vibration monitoring of nearby sensitive structures shall be conducted to ensure no foundational/structural damage occurs.	Less than significant impact with mitigation
Impact NOI-c: Would adoption and implementation of the General Plan 2045 result in substantial permanent increases in ambient noise levels in the project vicinity above levels existing without the project?	Potentially significant impact	**Mitigation Measure NOI-1: Noise Study for Planned Sensitive Uses within Roadway Setbacks** **Mitigation Measure NOI-2: Location and Design Features for High-Noise Generating Uses** **Mitigation Measure NOI-3: Acoustical Analysis for Noise Sensitive or Employment Land Uses within Recommended Setbacks**	Less than significant impact with mitigation
Impact NOI-d: Would adoption and implementation of the General Plan 2045 result in substantial temporary or periodic increases in ambient noise levels in the project vicinity above levels existing without the project?	Less than significant impact	No mitigation is necessary	Not applicable
Impact NOI-e: For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	No impact	No mitigation is necessary	Not applicable

Impact	Project Significance	Mitigation Measure	After-Mitigation Significance
Impact NOI-f: For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?	No impact	No mitigation is necessary	Not applicable
Impact NOI-C-1: Would adoption and implementation of the General Plan 2045 contribute to a cumulatively significant impact to noise?	Less than significant impact	No mitigation is necessary	Not applicable
3.9 Population and Housing			
Impact PH-a: Would adoption and implementation of the General Plan induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	Less than significant impact	No mitigation is necessary	Not applicable
Impact PH-b: Would adoption and implementation of the General Plan displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	Less than significant impact	No mitigation is necessary	Not applicable
Impact PH-C-1: Would adoption and implementation of the General Plan 2045 contribute to a cumulatively significant impact to population and housing resources?	Less than significant impact	No mitigation is necessary	Not applicable
3.10 Public Services and Recreation			
Impact PSR-a1: Would adoption and implementation of the General Plan result in substantial adverse physical impacts associated with the provision of new or physically altered government facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for fire protection?	Less than significant impact	No mitigation is necessary	Not applicable
Impact PSR-a2: Would adoption and implementation of the General Plan result in	Less than significant impact	No mitigation is necessary	Not applicable

Impact	Project Significance	Mitigation Measure	After-Mitigation Significance
substantial adverse physical impacts associated with the provision or new or physically altered government facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for police protection?			
Impact PSR-a3: Would adoption and implementation of the General Plan result in substantial adverse physical impacts associated with the provision of new or physically altered government facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for schools?	Less than significant impact	No mitigation is necessary	Not applicable
Impact PSR-a4: Would adoption and implementation of the General Plan result in substantial adverse physical impacts associated with the provision or new or physically altered government facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for parks?	No impact	No mitigation is necessary	Not applicable
Impact PSR-a5: Would adoption and implementation of the General Plan result in substantial adverse physical impacts associated with the provision or new or physically altered government facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for other public facilities?	Less than significant impact	No mitigation is necessary	Not applicable

Impact	Project Significance	Mitigation Measure	After-Mitigation Significance
Impact PSR-b: Would adoption and implementation of the General Plan increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	Less than significant impact	No mitigation is necessary	Not applicable
Impact PSR-c: Would implementation of the General Plan include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?	Less than significant impact	No mitigation is necessary	Not applicable
Impact PSR-C-1: Would adoption and implementation of the General Plan 2045 contribute to a cumulatively significant impact to public services?	Less than significant impact	No mitigation is necessary	Not applicable
Impact PSR-C-2: Would adoption and implementation of the General Plan 2045 contribute to a cumulatively significant impact to recreational resources?	Less than significant impact	No mitigation is necessary	Not applicable
3.11 Tribal Cultural Resources			
Impact TCR-a: Would the Project cause a substantial adverse change in the significance of a tribal cultural resource listed or eligible for listing in the California Register of Historic Resources, or in a local register of historic resources as defined in Public Resources Code section 5020.1(k)?	Less than significant impact	No mitigation is necessary	Not applicable
Impact TCR-b: Would the Project cause a substantial adverse change in the significance of a tribal cultural resource that is a resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to the criteria set forth in subdivision (c) of the Public Resources Code section 5024.1? In applying the criteria set forth in subdivision (c) of the Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American Tribe.	Less than significant impact	No mitigation is necessary	Not applicable

Impact	Project Significance	Mitigation Measure	After-Mitigation Significance
Impact TCR-C-1: Would the Project contribute to cumulatively significant impact related to tribal cultural resources?	Less than significant impact	No mitigation is necessary	Not applicable
3.12 Utilities and Service Systems			
Impact UTL-a: Would the Project require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electrical power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	Less than significant impact	No mitigation is necessary	Not applicable
Impact UTL-b: Would the Project have sufficient water supplies available to serve the Project and reasonably foreseeable future development during normal, dry and multiple dry years?	No impact	No mitigation is necessary	Not applicable
Impact UTL-c: Would the Project result in a determination by the wastewater treatment provider which serves or may serve the Project that it has adequate capacity to serve the Project's Projected demand in addition to the provider's existing commitments?	No impact	No mitigation is necessary	Not applicable
Impact UTL-d: Would the Project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	Less than significant impact	No mitigation is necessary	Not applicable
Impact UTL-e: Would the Project comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	Less than significant impact	No mitigation is necessary	Not applicable
Impact UTL-C-1: Would the Project contribute to cumulatively significant impact related to utilities and service systems?	Less than significant impact	No mitigation is necessary	Not applicable

Impact	Project Significance	Mitigation Measure	After-Mitigation Significance
4.2 Transportation			
Impact TR-a: Would the Project conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?	Less than significant impact	No mitigation is necessary	Not applicable
Impact TR-b: Would the Project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	Less than significant impact	No mitigation is necessary	Not applicable
Impact TR-c: Would the Project substantially increase hazards due to geometric design features e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	Less than significant impact	No mitigation is necessary	Not applicable
Impact TR-d: Would the Project result in inadequate emergency access?	Less than significant impact	No mitigation is necessary	Not applicable
Impact TR-C-1: Would the Project contribute to cumulatively significant impact related to transportation?	Less than significant impact	No mitigation is necessary	Not applicable
5.2 Agricultural and Forest Resources			
Impact AG-a: Would the adoption and implementation of the General Plan 2045 convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland) as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	Less than significant impact	No mitigation is necessary	Not applicable
Impact AG-b: Would adoption and implementation of the General Plan 2045 conflict with existing zoning for agricultural use, or a Williamson Act contract?	No impact	No mitigation is necessary	Not applicable
Impact AG-c: Would the Project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as	No impact	No mitigation is necessary	Not applicable

Impact	Project Significance	Mitigation Measure	After-Mitigation Significance
defined by Government Code Section 51104(g))?			
Impact AG-d: Would the Project result in the loss of forest land or conversion of forest land to non-forest use?	Less than significant impact	No mitigation is necessary	Not applicable
Impact AG-e: Would the Project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	No impact	No mitigation is necessary	Not applicable
Impact AG-C-1: Would adoption and implementation of the General Plan 2045 contribute to a cumulatively significant impact to agriculture and forest resources?	Less than significant impact	No mitigation is necessary	Not applicable
5.3 Biological Resources			
Impact BIO-a: Would the Project have a substantial adverse effect, either directly or through habitat modification, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by CDFW, USFWS or NMFS?	Potentially significant impact	**Mitigation Measure BIO-1: Protect Special-Status Bats during Structure Demolition** If a structure is to be demolished, a qualified bat biologist shall conduct pre-construction surveys for special-status bats during the spring or summer prior to construction in areas where potential maternity roosts may be disturbed/removed. If Project work will take place between August 16 and March 31, no surveys shall be required because there will be no impact to roosting bats, as this period is outside of the maternity season. If Project work occurs within the maternity season, survey methodology should include visual examination of suitable habitat areas for signs of bat use and may utilize ultrasonic detectors to determine if special-status bat species utilize the vicinity. If bats exist, species presence and site use patterns should be documented, including roost sites. Bat presence in the Project may vary seasonally and annually. Surveys should be conducted in a manner to detect the presence of hibernating or torpid bats, reproductive colonies, and/or migratory stop-over roosts. If no bat utilization or roosts are found, then no further study or action is required. If bats are found to utilize the Project vicinity, or presence is assumed, a bat specialist should be engaged to advise the best method to prevent impact. This may include, but will not be limited to: – Consultation with the California Department of Fish and Wildlife (CDFW) to determine appropriate measures for	Less than significant impact with mitigation

Impact	Project Significance	Mitigation Measure	After-Mitigation Significance
		protecting bats with young if present, and for implementing measures to exclude non-breeding bat colonies during construction process. – Phased removal of the structure where selected portions not containing cavities are removed on the first day, with the remainder of the structure removed on the subsequent days.	
Impact BIO-b: Would the Project have a substantial adverse effect on any riparian habitat or other Sensitive Natural Community identified in local or regional plans, policies, regulations or by the CDFW or USFWS?	Less than significant impact	No mitigation is necessary	Not applicable
Impact BIO-c: Would the Project have a substantial adverse effect on state or federally protected wetlands (including but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	Less than significant impact	No mitigation is necessary	Not applicable
Impact BIO-d: Would the Project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	Less than significant impact	No mitigation is necessary	Not applicable
Impact BIO-e: Would the Project conflict with any local policies or ordinances protecting biological resources such as a tree preservation policy or ordinance?	No impact	No mitigation is necessary	Not applicable
Impact BIO-f: Would the Project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	No impact	No mitigation is necessary	Not applicable
Impact BIO-C-1: Would the Project contribute to a cumulatively significant impact to biological resources?	Less than significant impact	No mitigation is necessary	Not applicable
5.4 Geology and Soils			
Impact GEO-a: Would the Project directly or indirectly cause potential substantial adverse effects including the risk of loss, injury, or death involving rupture of a known earthquake	Less than significant impact	No mitigation is necessary	Not applicable

Impact	Project Significance	Mitigation Measure	After-Mitigation Significance
fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42?			
Impact GEO-b: Would the Project directly or indirectly cause potential substantial adverse effects including the risk of loss, injury, or death involving strong seismic ground shaking?	Less than significant impact	No mitigation is necessary	Not applicable
Impact GEO-c: Would the Project directly or indirectly cause potential substantial adverse effects including the risk of loss, injury, or death involving liquefaction, landslides, or otherwise unstable soils?	Less than significant impact	No mitigation is necessary	Not applicable
Impact GEO-d: Would the Project result in substantial soil erosion or the loss of topsoil?	Less than significant impact	No mitigation is necessary	Not applicable
Impact GEO-e: Would the Project have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	No impact	No mitigation is necessary	Not applicable
Impact GEO-f: Would the Project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	Potentially significant impact	**Mitigation Measure GEO-1: Inadvertent Discovery of Paleontological Resources** If potential or paleontological resources are encountered during Project subsurface construction activities or geotechnical testing, all work within 50 feet of the find shall be stopped and a qualified archaeologist funded by the City and approved by the City shall be contacted to evaluate the find, determine its significance, and identify any required mitigation. The applicant shall be responsible for implementing the mitigation prior to construction activities being re-started at the discovery site.	Less than significant impact with mitigation
Impact GEO-C-1: Would the Project contribute to a cumulatively significant impact to geology and soils?	No impact	No mitigation is necessary	Not applicable

Impact	Project Significance	Mitigation Measure	After-Mitigation Significance
5.5 Hydrology and Water Quality			
Impact HWQ-a: Would the Project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?	Less than significant impact	No mitigation is necessary	Not applicable
Impact HWQ-b: Would the Project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the Project may impede sustainable groundwater management of the basin?	No impact	No mitigation is necessary	Not applicable
Impact HWQ-c, i: Would the Project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces in a manner which would result in substantial erosion or siltation on- or off-site?	Less than significant impact	No mitigation is necessary	Not applicable
Impact HWQ-c, ii: Would the Project substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?	Less than significant impact	No mitigation is necessary	Not applicable
Impact HWQ-c, iii: Would the Project create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?	Less than significant impact	No mitigation is necessary	Not applicable
Impact HWQ-c, iv: Would the Project impeded or redirect flood flows?	Less than significant impact	No mitigation is necessary	Not applicable
Impact HWQ-d: Would the Project cause an increase in flood hazard, tsunami, or seiche zones, risk release of pollutants due to Project inundation?	Less than significant impact	No mitigation is necessary	Not applicable
Impact HWQ-e: Would the Project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	No impact	No mitigation is necessary	Not applicable
Impact HWQ-C-1: Would the Project contribute to a cumulatively significant impact to hydrology and water quality?	Less than significant impact	No mitigation is necessary	Not applicable

Impact	Project Significance	Mitigation Measure	After-Mitigation Significance
5.6 Mineral Resources			
Impact MR-a: Would adoption and implementation of the General Plan result in the loss of availability of a known mineral resource that would be a value to the region and the residents of the state?	Less than significant impact	No mitigation is necessary	Not applicable
Impact MR-b: Would adoption and implementation of the General Plan result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	No impact	No mitigation is necessary	Not applicable
Impact MR-C-1: Would the Project contribute to a cumulatively significant impact to mineral resources?	Less than significant impact	No mitigation is necessary	Not applicable
5.7 Wildfire			
Impact WDF-a: Would the Project substantially impair an adopted emergency response plan or emergency evacuation plan?	No impact	No mitigation is necessary	Not applicable
Impact WDF-b: Would the Project, due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose Project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	Less than significant impact	No mitigation is necessary	Not applicable
Impact WDF-c: Would the Project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	Less than significant impact	No mitigation is necessary	Not applicable
Impact WDF-d: Would the Project expose people or structures to significant risks, including downslope or downstream flooding or landslides as a result of runoff, post-fire slop instability, or drainage changes?	No impact	No mitigation is necessary	Not applicable

Impact	Project Significance	Mitigation Measure	After-Mitigation Significance
Impact WDF-C-1: Would the Project contribute to a cumulatively significant impact related to wildfire risk?	Less than significant impact	No mitigation is necessary	Not applicable
6.2 Energy Resources			
Impact ER-a: Would the Project result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during Project construction or operation?	Less than significant impact	No mitigation is necessary	Not applicable
Impact ER-b: Would the Project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	Less than significant impact	No mitigation is necessary	Not applicable
Impact ER-C-1: Would the Project contribute to a cumulatively significant impact to energy resources?	Less than significant impact	No mitigation is necessary	Not applicable

2.0 Project Description

This Draft EIR analyzes the potential impacts of implementing the General Plan 2045 and associated zoning, as well as the Gateway Code, a form-based code for the 138 acres identified as the Gateway District, which constitutes the Project as defined by CEQA. The Draft EIR assesses the environmental conditions that exist and how they could be potentially impacted by the Project. This assessment takes into account Arcata's size, setting, and other physical characteristics that affect the environment.

Arcata is the second largest city in Humboldt County. It is situated on a coastal terrace, the lower portions of Fickle Ridge, and the easterly portions of the Arcata Bottoms, between Arcata Bay and the Mad River. Arcata Bay makes up a portion of Humboldt Bay, which is the largest commercial port between San Francisco, California and Portland, Oregon (Figure 2-1 – City of Arcata Planning Areas).

2.1 Project Background

The Arcata General Plan is a planning document with text and diagrams that express the goals, policies, and programs necessary to guide the community toward achieving its future vision over a long-term planning period (typically approximately 20 years). City decision makers rely on the General Plan as the basis for making decisions on matters such as land use, transportation, open space and conservation, provision of public services, and environmental quality and safety. It is also a policy document that guides decisions related to protecting and enhancing what the community values most, such as open space, coastal resources, and design of the built environment.

The City is preparing an update of its existing General Plan (formerly General Plan 2020) as well as preparing a "Gateway Area Plan" that will be a new element of the General Plan 2045, and a new associated Zoning Ordinance to implement the Gateway Area Plan through an area-specific, form-based code. The Gateway Area Plan Element will provide specific development guidance within the Gateway Area, which is an approximately 138-acre area entirely within City limits that is generally north of Samoa Blvd, west of K Street, and south of Alliance Rd (Figure 2-2 – General Plan Use Designations within the Gateway Area). As an element of the General Plan, the Gateway Area Plan must be consistent with the other elements of the General Plan (California Government Code Section 65300.5). The General Plan 2045, including the Gateway Area Plan Element and Gateway Code are collectively considered the "Project". Proposed zoning is conceptually described in this Draft EIR; however, it is considered a subsequent action to the General Plan 2045 and associated EIR. Proposed zoning code and Gateway Code (both specific to the Gateway Area) will be consistent with the Gateway Area Plan Element and proposed land use changes analyzed in this Draft EIR. The General Plan 2045 horizon year is year 2045, which reflects a 20-year planning period.

2.2 Purpose and Need

The Project is needed to update and amend the City's existing General Plan 2020 and to add a new General Plan Element, the Gateway Area Plan, to encourage infill development within current City limits, in accordance with Senate Bill (SB) 375 and California Government Code Section 65302. The General Plan 2045 seeks to build upon, but not substantially change, the vision established in the General Plan 2020 (adopted in the year 2000). The General Plan 2045 will also update the goals, policies, and implementation programs that articulate the vision for the City's long-term physical and economic development, while preserving open space areas and enhancing the quality of life for Arcata residents. The General Plan 2045 is anticipated to be adopted in Spring of 2024.

As a part of this Project, all existing General Plan Elements (other than the Housing Element) will receive minor focused updates to:

- Satisfy modern State mandates for General Plans that have been issued since the General Plan was last updated;
- Re-emphasize infill development to preserve greenbelts around the City;
- Adjust to climate change and promote sustainability;
- Promote social justice and racial equity;
- Amend any internal inconsistencies; and
- Ensure consistency and compliance with other City plans that have been adopted or revised in recent years, such as the 2019 Housing Element.

In addition to the minor updates outlined above, the following General Plan Elements will receive additional, more comprehensive updates to accommodate targeted infill policies and ensure consistency with the Gateway Area Plan:

- Land Use (modifications to land use map and development standards)
- Circulation and Mobility (update to accommodate areas of planned growth);
- Public Facilities and Infrastructure (modifications to support utility upgrades to accommodate areas of planned growth)
- Parks and Recreation (updates the policies and program of the adopted 1994 Parks and Recreation Element and incorporates the vision and objectives of the 2010 Parks & Recreation Master Plan)
- A new element (Health Element) will be added to the General Plan

California Government Code, Section 65302, subdivision (h)(1) requires an Environmental Justice element in the General Plans of certain communities. Arcata does not meet the thresholds for such an Element to be required because the City does not contain any Disadvantaged Communities, as identified by the California Environmental Protection Agency Pursuant to Section 39711 of the Health and Safety Code. Instead, the City is electing to reflect social justice and racial equity values in all Elements of the General Plan with a focus in the Health Element. Since the Housing Element was updated and adopted in late 2019, the Housing Element will not be modified as a part of this Project.

2.3 Goals and Objectives

The General Plan 2045 creates a framework to plan for and guide residential and non-residential growth and conservation within current City limits. This framework is based on a set of comprehensive goals and policies that enhance existing development patterns. The following objectives have been established to aid decision makers in their review of the Project and associated environmental impacts.

2.3.1 General Plan Objectives

- Provide an update to the City's General Plan to reflect the current values and overall community vision more effectively (see General Plan Chapter 1 for the community vision statement).
- Update General Plan policies to ensure they support the community vision.
- Enhance Arcatans' quality of life; promote equity and social well-being for the entire community.
- Re-emphasize and support well-planned infill projects that complement Arcata's historic development patterns and preserve open space.
- Accommodate growth that protects important environmental resources, as well as ensures long-term economic sustainability.
- Meet the housing needs of existing and future residents through a variety of housing types and designs including infill development, high-density multifamily / mixed use projects, and mixed use.
- Adjust to climate change and promote sustainability.
- Improve mobility and safety for pedestrians, bicyclists, and vehicles.

- Maintain opportunities for industry and employment to foster a diverse and resilient local economy.
- Satisfy current State mandates for General Plans that have been issued since the General Plan was last updated.
- Ensure consistency and compliance with other City plans that have been adopted or revised in recent years, such as the Housing Element.
- Ensure existing infrastructure and facilities (water, sewer, transportation, etc.) can support the planned / projected population.

2.3.2 Gateway Area Plan Objectives

- Focus on infill development to create a high-density residential and mixed-use neighborhood that reflects community values of open space, arts and culture, and livability.
- Stimulate the creation of a volume and variety of housing types.
- Promote racial equity, social justice, and diversity to support an equitable and inclusive community.
- Promote thoughtful development through form-based and streamlined development standards.
- Promote a balance of mixed uses to create a neighborhood that offers a car-free lifestyle consistent with the City's climate action goals.
- Design circulation improvements to accommodate planned growth, minimize vehicle trips, and support a pedestrian-friendly public realm.
- Support and grow the area's arts identity.
- Plan for environmental restoration and sustainability features.

2.4 General Plan Assumptions

The General Plan 2045 will shape how the City will look, function, and manage resources, from the date it becomes effective through the year 2045 (also referred to as the 'planning period' or 'horizon'). Preparation of the General Plan 2045 included a look to the past to consider the history and character of the City, as well as a look to the future. The General Plan 2045 assumptions identify trends that are expected to continue, and future characteristics that will reflect the vision of the community. Key to the City's development strategy during the planning period is the "Strategic Infill Redevelopment Program", encompassing a suite of planning documents intended to reinforce the City's priorities to infill development and greenbelt protection. The Strategic Infill Redevelopment Program encompasses studies and engagement work as well as planning policy and implementation ordinances, including:

- The Housing Element and Community Engagement Report
- The Infill Market Study and Community Engagement Report
- The Gateway Area Plan and Community Engagement Report
- General Plan Updates
- Local Coastal Program Updates
- Form-Based Code
- Land Use Code revisions

The last 20 years have brought significant changes to Arcata and further changes seem certain for the future. The General Plan 2045 includes goals, policies, and implementation measures that anticipate those changes to ensure that they will be effectively planned for and reflect this community's shared sense of values. Future trends may reflect changes in social, economic, cultural, and environmental factors that come from both inside and outside but will be shaped locally by the guidelines expressed in this Plan.

Population

The most significant ongoing trends concern Arcata's working, living, learning, and natural environments. For example, most of the large-scale timber-industry employers are now gone and Arcatans will more likely work for a small employer or be self-employed. Increased use of undeveloped and underdeveloped parcels is planned, as opposed to outward expansion.

Population Assumptions

- Modest growth rate of 1% to 1.4% annually.
- Total resident maximum population in 2045 of 27,000 (calculated at 1.4% annually).
- Average household size ranging between 2.2 and 2.5.
- Cal Poly Humboldt will continue to influence Arcata's demographics, resulting in a lower median age than surrounding communities and the state as a whole.

The City anticipates moderate population growth over the planning period. The planning period between 2000 and 2020 expected 1 percent growth per year and a total population growth of 20 percent. Over the decade from 2010 to 2020, the actual population growth was approximately 0.94 percent annually. The City is planning for the same annual background growth rate of 1 percent plus a growth factor associated with the increased population pressure associated with climate change, Cal Poly Humboldt, telework and COVID migrants, and a host of regional and local economic drivers that affect the desirability of this community. Considering all these factors, the General Plan 2045 population growth rate planning scenario is as high as 1.4 percent. The range of 1 percent to 1.4 percent results in a final population of between 25,000 and 27,000 by 2045. See Image 2-1 below for population projections.

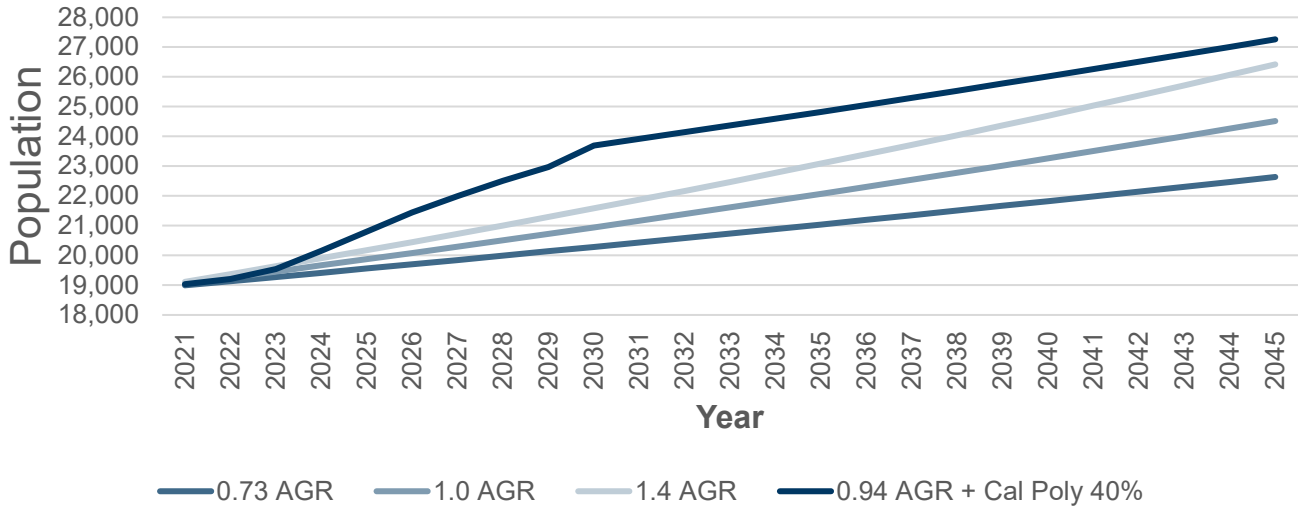

Image 2-1 Population Growth Scenarios.

The final populations and trend lines resulting from low, moderate, and high annual growth rates are shown along with a scenario that modeling 0.94 percent annual growth rate, the average annual growth rate for the 2010-2020 decade, plus 40 percent of the resident student and faculty population projected in the Cal Poly Humboldt Prospectus (HSU 2021).

Table 2.4-1 identifies population scenarios with estimated proportion of growth from Cal Poly Humboldt. The total population, total growth expressed as a percent of 2020 population, the average annual growth rate, and the proportion of the added population directly attributable to a student or faculty member is shown for each growth scenario. The Cal Poly Humboldt Prospectus anticipates a total resident population of just over 10,000 students by 2030 (HSU 2021). Cal Poly Humboldt students and faculty may make up a considerable proportion of the new growth within the City.

Table 2.4-1. Population Scenarios with Various Average Annual Growth Rates

Parameter	Average Annual Growth Rate (AGR) Scenario		
	0.73 AGR	1.0 AGR	1.4 AGR
Population			
2020 Population (starting population)	18,857	18,857	18,857
2045 Additional Population	3,771	5,643	7,543
2045 Total Population (Starting + Additional)	22,628	24,500	26,400
Growth			
25-year growth as a percent	20%	30%	40%
Average annualized growth rate (AGR)	0.73%	1.06%	1.36%
Cal Poly Humboldt Contribution to Growth			
Cal Poly Humboldt Proportion - 40% Prospectus	57%	38%	29%
Cal Poly Humboldt Proportion - 60% Prospectus	86%	57%	43%

Source: City of Arcata 2023

Employment and the Economy

Arcata's economy will continue to emphasize a balance between education, health care and social services, arts and entertainment, retail trade and manufacturing, construction, and resource industries with more emphasis on science, technology, engineering, and mathematics and tech over time as Humboldt State University continues to transition to California's third polytechnic university.

Employment and Economy Assumptions

- Arcata will continue to attract small and medium sized businesses that are predominantly local start-ups.
- Business retention and succession planning will play a critical role in maintaining Arcata's economy and jobs base.

Major employers within Arcata include Cal Poly Humboldt, Mad River Community Hospital, Bettendorf Trucking, the Danco Group, and the North Coast Coop, but nearly 80 percent of employers have fewer than 10 employees. Small businesses are the foundation of the economy in Arcata.

Remote workforce acceptance will continue, creating jobs in the community that would otherwise be required to leave to obtain that work and, conversely, will provide workers the flexibility to move to Arcata, despite their place of employment being located elsewhere. This will predominantly impact white collar workers, potentially increasing Area Median Income and creating new markets for service, retail, and entertainment industries.

Housing

The City will grow within its existing boundaries. Infill development preserves the greenbelt around the City and provides for reinvestment in existing neighborhoods. The 2019 Housing Element identified Infill Opportunity Zones to prioritize for future infill efforts (see Section 2.5.2). In addition, the proposed General Plan 2045 Land Use Element has several changes to emphasize infill, including upzoning throughout the City, increasing allowable density in existing zones, and providing more flexibility in mixed use zones to increase housing production.

Housing Assumptions

- New housing will result from infill, not greenfield expansion/annexation.
- As the largest regional employer and principal population driver in Arcata, Cal-Poly Humboldt will continue to have an outsized influence on housing in the City. Cal-Poly Humboldt plans to develop and maintain housing to accommodate approximately 50% of its planned 2030 resident student population.

In addition to the City's emphasis on infill, the State housing law continues to shift towards providing property owners more options for by-right (ministerial) housing development. Accessory dwelling unit law, small lot subdivision law, the Housing Accountability Act, the Housing Crisis Act, the Affordable Housing and High Road Jobs Act of 2022, to name a few, are State attempts to address the housing crisis. Each of these provides streamlined permitting for housing development. This will likely result in an increase in development concentrated on housing production that the City will have little to no discretion to prohibit or condition.

It is assumed that the total resident maximum population in 2045 will be up to 27,000 (as stated above), and that 4,340 additional dwelling units would be developed to accommodate that growth. This Draft EIR assumes that the creation of dwelling units would occur within the City's existing boundaries, particularly within the Infill Opportunity Zones. However, due to the infinite combinations of how this development could occur and for the purpose of analysis in this Draft EIR, assumptions were made regarding the location and number of units to be developed by 2045. These assumptions include housing development to meet the need of future residents will be disbursed throughout the City with approximately 42 percent of units (46 percent of the population growth) estimated to occur within the Infill Opportunity Zones identified in the City's 6th Cycle Housing Element, 22 percent of units (32 percent of population growth) on sites scattered throughout the City, and the balance provided by Cal Poly Humboldt.

Environment and Infrastructure

Climate change will drive internal and external stresses. Coastal cities, including Arcata, will be impacted by migration of climate refugees permanently leaving other parts of the state and the nation seeking more moderate climates. Inland fires and high heat will affect air quality and population fluctuations associated with evacuees and climate tourists. Direct climate impacts will include changes in rainfall patterns, possible changes in summer fog and precipitation affecting forest health and agriculture, and sea level rise. In addition, fire risk will increase over time, which will affect a large proportion of residences in or adjacent to the forest areas and/or the urban interface.

Environment and Infrastructure Assumptions

- The natural resources surrounding the City will be protected through existing and updated City greenbelt policy and programs. While not currently engaged in intensive agricultural production, the lands around Humboldt Bay are productive and reflect an untapped source for food security and climate resilience.
- Physical infrastructure, including the wastewater treatment plant, water and sewer lines, water storage infrastructure, roads, and infrastructure associated with public services (e.g., police, fire protection, medical), will need to be repaired, updated, and replaced to meet the growth demands during the planning period.
- Green infrastructure, including Arcata Bay, the bottom lands, forests, and several creeks and wetlands within the City's boundaries, will continue to be protected and restored through City policy and its active acquisition and restoration programs.

Transportation and other community infrastructure systems are expected to increase in efficiency due to increased travel choices and improved community facility management practices. General Plan 2045 emphasizes bicycle and pedestrian pathway connections throughout the City, with the linking of neighborhoods to the downtown a high priority. More efficient transit service is planned to reduce reliance on single-occupancy vehicles.

Water, wastewater, energy conservation, drainage, and source-reduction measures will reduce the need for increases in infrastructure capacity and promote more efficient operation of existing systems.

The protection, enhancement, and management of the natural environment, and preservation of open space will continue to be high priorities. Creek, wetland, bayland and tideland, agriculture, forest, soil and mineral resource issues, and the broader issue of natural biological diversity and ecosystem function are specifically addressed in the General Plan 2045. The designation of open space throughout the City, and the agricultural greenbelt area around the City, are integral to Arcata's future form.

Reduced air, water, and noise pollution, along with increased protection from natural and built hazards, are planned. Emergency preparedness and prevention will increase through neighborhood-based efforts such as the

Community Emergency Response Team, improved coordination between community and business groups, and emergency response agencies. Northern California is extremely seismically active, and care must be taken to prevent human exposure to hazardous and unstable areas. Improved identification of these areas, and use of construction methods that increase stability of new and retrofitted structures, will help minimize risks and offer protection from physical hazards.

The architectural diversity and historic structures that form Arcata's unique physical character are important community assets to be preserved for the future. The General Plan includes Design and Historical Preservation Elements that provide guidelines for compatible design and resource preservation. The Design Element is intended to ensure community diversity and quality in the built environment, with structures that are harmonious with their neighborhoods. The Historical Preservation Element designates and protects landmark structures and sites that represent the City's social and physical development. These designated structures and sites serve as reminders of past eras, events, and significant persons in local, state, or national history.

2.5 Project Location and Setting

The City of Arcata is an incorporated community with an estimated population of approximately 18,900 persons in 2020, located in Humboldt County on California's North Coast (Census 2020). The City's incorporated area is approximately 11.4 square miles in size and situated on a coastal terrace at the north edge of Humboldt Bay (Figure 2-1 – City of Arcata Planning Areas). Humboldt Bay is a significant regional geographic feature and is the second largest marine embayment in California. The major features of the City are the Arcata Bayfront, including the Arcata Marsh and Wildlife Sanctuary, the Plaza and surrounding downtown area, Cal Poly Humboldt, the community forest and wooded slopes of Fickle Ridge, and the Arcata Bottoms agricultural lands to the west. Arcata is the second largest city in Humboldt County.

Arcata's land use characteristics have been shaped by many factors and reflect more than 140 years of Eurocentric development. The early settlement of the town, then called Uniontown, grew around the central open space Plaza. The timber industry also left an indelible land use imprint on the community. Many of the lumber mills, which operated in the early to mid-1900s, are now closed and the abandoned mill sites are undergoing a slow transformation to other uses.

Cal Poly Humboldt occupies approximately 146 acres, east of State Route (SR) 101 and within walking distance of the downtown area. It is the northernmost campus in the California State University system, the community's major employer and a regional education center with a year-around curriculum. Cal Poly Humboldt has made recent land acquisitions throughout the City and the General Plan 2045 is developed under the assumption that there will be additional acquisitions throughout the planning period.

Current acquisition includes:

– Creekside (APN 505-161-011)
– Stewart School (APN 020-133-003)
– Cal Poly Bookstore (APN 021-044-008)
– Craftsman Mall (APN 505-022-011, -012; 503-372-002 through -006)

Arcata's Bayfront first served as a community dock and shipping port, and the adjacent marsh now functions as a world-renowned wastewater treatment facility and wildlife refuge. Many residential areas of Arcata, such as Sunny Brae and Bayside, were built while unincorporated County lands, subsequently annexed to the City. The lot sizes, subdivision designs and street configurations of these areas reflect County, rather than City, development guidelines. These and other factors have influenced the land use characteristics of the community and will play an important role in shaping land use patterns for the future.

In Arcata, there are residential, commercial, industrial, agricultural / forest / natural resource, and community facility uses similar to those found in other communities. It is Arcata's mixture of history, the diversity of uses within those land use categories, and how the community values its history and diversity, that makes the City unique.

2.5.1 City Limits, Urban Services Boundary, Sphere of Influence, and Planning Area

The City limits, Urban Services Boundary, Sphere of Influence, and Planning Area are shown on Figure 2-1 – City of Arcata Planning Areas. Collectively, these planning features, and the policies that guide related development activities such as annexation, constitute much of the City's growth management program. Each of these features is described in more detail below. California planning law requires the City to adopt a general plan for lands within its limits and for any land outside its boundaries which bears relation to its planning. Each section of the Draft EIR will define the area considered in that section's respective analysis (i.e., the study area). The majority of the Draft EIR study areas equate to the City limits because the City limits represents the incorporated lands under the direct jurisdiction of the City.

City Limits

This includes all incorporated lands under the direct jurisdiction of the City. Adjustments to City limits require annexation approval by the Local Agency Formation Commission and the City. During the General Plan 2045 planning period, the City's growth is expected to be accommodated entirely through redevelopment and infill. However, forestlands owned by the City that are part of its Non-Industrial Timberland Management Plan or other natural areas, such as the McDaniel Slough restoration area, may be annexed for non-urban development uses. The City does not expect to annex for urban development.

Urban Services Boundary

The Urban Services Boundary encompasses the area wherein urban development is expected to occur during the General Plan 2045 planning period. Inside the City limits, the boundary excludes areas inappropriate for urban development, such as certain Agriculture – Exclusive designated lands and the Natural Resource designated lands such as the Arcata Marsh and Community Forest. The Urban Services Boundary can include areas outside of the City limits but within the Sphere of Influence where urban development is planned. It does not extend outside the City's Sphere of Influence. The boundary is determined by the City's interest in extending services and infrastructure (water, wastewater collection, police services, etc.) for urban uses. The City provides certain unincorporated areas (Pacific Manor and Jacoby Creek) with "water only" services, as shown on Figure 2-1.

Sphere of Influence

The Sphere of Influence includes unincorporated lands (under County jurisdiction) that may be annexed into the City during the General Plan 2045 planning period. Designating unincorporated lands in the Sphere of Influence allows the City to plan for the eventual annexation and extension of services as part of community growth. A Sphere of Influence is described as a plan for the probable ultimate physical boundaries and service area of a local agency. The Humboldt Local Agency Formation Commission adopted Arcata's current Sphere of Influence in 1987 and most recently amended it in 2020.

Planning Area

Defining a Planning Area is a means by which the City can communicate its concerns for the future of surrounding lands under the jurisdiction of the County or neighboring cities. The Planning Area may extend beyond the City's Sphere of Influence.

The City's Planning Area includes the incorporated City, surrounding county lands beyond the Sphere of Influence that are intended to remain unincorporated, where uses and activities impact the City. The Planning Area boundary is determined by geographic features such as the Pacific Ocean, dunes, the Mad River, Arcata Bay, the Fickle Hill ridge line, and hydrological features such as the watersheds of Arcata's creeks. It includes all of the Arcata Bottoms north of Arcata Bay, south of the Mad River (and south of Mad River Beach County Park), and west of the City. It also includes all of the Janes, Jolly Giant, Grotzman, and Jacoby Creek watersheds to the east and south. Other considerations for determining the Planning Area include preserving viewsheds and maintaining a greenbelt around the City.

2.5.2 Neighborhood Centers and Employment Areas

The Plaza is located in the central downtown portion of the City, specifically between 8th and 9th Streets and H and G Streets and is the historical central point that the City (formerly known as Uniontown) grew around. While the Plaza area is a significant commercial, cultural, social, and civic center of the community, there are several other distinct neighborhood and employment areas, or centers, that provide residential, commercial, and recreation areas, as well as community facilities for residents. The most prominent of the neighborhood centers and employment areas are described below.

Valley West / Giuntoli Lane Neighborhood Center

This neighborhood center is in the northernmost part of the City, west and east of SR 101, west of SR 299, and south of the Mad River. Existing land uses include a shopping center, visitor-serving commercial areas along Valley West Boulevard, a mix of commercial and industrial businesses along Giuntoli Lane, and surrounding residential areas. Its location between two freeways makes this area the major highway-oriented visitor-serving area of the City. Most of the hotel and motel rooms and franchise restaurants in the City are located on Valley West Boulevard. Other commercial uses include medical and other professional offices, auto related, and building supply businesses. There are several industrial uses, including manufacturing businesses, located along Giuntoli Lane. The residential uses are a mix of apartments, condominiums, mobile homes, and some single-family homes on larger lots.

Westwood / Sunset Neighborhood Center

This neighborhood center is in the western part of the City and includes a shopping center and commercial businesses along Alliance Road. Arcata Elementary School and neighborhood parks (Larson and Cahill Parks) are located east of Alliance Road and west of SR 101. The residential uses in this area are a mix of single-family homes, apartments, and condominiums. The Westwood Market is the main commercial use that anchors this neighborhood center.

Sunny Brae Neighborhood Center

This neighborhood center is in the southeastern part of the City and includes the Sunny Brae shopping center, Sunny Brae School, and surrounding residential areas. The main commercial uses include a market and hardware store. There are several restaurants, professional offices, and smaller retail businesses located in the Center. The residential uses in this area are a mix of single-family homes and apartments.

Bayside Neighborhood Center

This small neighborhood center is in the southern part of the City and includes commercial businesses, the Bayside School, Post Office, Community Center, and surrounding residential area. The residential uses in this area are predominantly single-family homes.

West End / Aldergrove Employment Center

This employment center is in the northeastern part of the City, west of SR 299, south of the Mad River, and north of West End Road's undercrossing below SR 101. The major industrial uses include the Louisiana-Pacific and Britt Lumber wood products facilities and the uses in the Aldergrove Industrial Park. There are also warehousing, trucking, building services, wood products milling and manufacturing, and related industrial uses along West End Road. Commercial uses in this area include auto and boat sales and service, professional offices, and food preparation and distribution services. There are low density residential uses in the unincorporated area to the east. The area has direct access to SR 299 and railroad tracks extending through the Aldergrove Industrial Park.

Samoa Boulevard and South G Street Employment Center

This employment center is in the southern part of the City and includes general and limited industrial, general commercial businesses on both sides of Samoa Boulevard, and the business park site south of Samoa Boulevard. The major industrial uses include North Coast Hardwoods, Johnson Products, and the Yakima

Products facility. Commercial uses include restaurants and retail businesses, auto related products and services, professional offices, and private recreational facilities. There are residential uses adjacent to the north and south of Samoa Boulevard. The area has direct access to SR 255, is within a mile of SR 101, and there are railroad tracks along the north side of Samoa Boulevard.

Gateway Area

The Gateway Area covers 138 acres and includes a mix of commercial, industrial, and residential uses, including the Creamery Building. It is bordered by Samoa Boulevard to the south and extends to Alliance Road to the north.

Infill Opportunity Zones

By increasing the density of local zoning and reducing barriers to development in areas with high potential for infill development, the City can target higher-density development to priority areas for affordable housing. In the Housing Element update in 2019, the City identified four neighborhoods whose current mix of uses present opportunities for infill development (Figure 2-3A – Existing Zoning and Infill Opportunity Zones). These areas are in close proximity to transit, commercial areas, support economic development efforts and the proposed mix of land uses may allow residents to live closer to their places of work and thereby encourage alternative modes of transportation. Some of these areas will require rezoning (Figure 2-3B – Proposed Zoning and Infill Opportunity Zones). These areas collectively are anticipated to produce approximately half of the City's infill growth during the planning period. The areas described below reflect current configuration as enacted at a policy level through the adoption of the City's 6th Cycle Housing Element; future planning may make minor modifications to add or subtract acreage to areas described below.

Gateway Area Opportunity Zone

The Gateway Area Plan has been initiated for the Gateway Area Opportunity Zone and is explicitly considered under this Draft EIR. The Gateway Area is composed of 189 parcels totaling 139 acres adjacent to and west of the Downtown area. The properties incorporated in the Gateway Area are predominantly Industrial Limited and Industrial General; however, there are also 1.6 acres of Central Commercial, 5 acres of Residential Low Density, 3.3 acres of Residential Medium Density, 3.9 acres of Residential High Density, and 1.5 acres of Natural Resources – Public Trust zoned land. The Creamery District, located in the heart of the Gateway Area, is central to the form and function of this area with the Creamery Building itself reflecting much of the artistic and cultural spirit that the Gateway Area Plan envisions for the future. The Gateway Area is planned to provide approximately 500 new units to the City's housing stock over the planning period. It is expected that the majority of that growth will occur on a relatively small number of parcels that currently have the greatest opportunity.

Valley West Opportunity Zone

The Valley West Infill Opportunity Zone includes 33.9 acres in the north of the City situated along Giuntoli Lane and between Valley East and Valley West Boulevards. Current zoning includes a mix of Commercial General, 0.7 acres of Commercial Visitor Serving, and 15 acres of Industrial Limited. The Land Use Element amendments propose rezoning the Industrial Limited to Mixed Use and the Commercial Visitor-Serving to Commercial-Mixed. However, the vacant and underutilized lands within the Valley West Opportunity Zone provide far greater development potential than current and proposed zoning would allow. The Valley West commercial areas have significant redevelopment potential for both housing and economic opportunities. While the specific visioning and land use proposals for the area have not been initiated, this Draft EIR anticipates potential minimum development at the proposed Residential High Density. The Valley West Area is near Carlson Park, the City's only access to the Mad River, other residential high and medium density existing neighborhoods, and largely transportation-oriented shopping and services. In particular, the Valley West shopping center has approximately 8 acres of underdeveloped property that could substantially add to both housing and resident-based retail and services lacking in the area now.

Craftsman's Mall / St. Louis Opportunity Zone

The Craftsman's Mall / St. Louis Road Opportunity Zone includes 41.8 acres near the geographic center of the urbanized potions of the City. This Opportunity Zone has 37 parcels comprising 12.2 acres of Residential Low Density along Todd Court and Eye Street, 7 parcels comprising 12 acres of Industrial Limited zoning, 6 parcels comprising 4.9 acres of Industrial General zoning, and 4 parcels of 7 acres zoned Residential Medium Density. The average parcel size is 0.7 ac or 29,145.7 sq ft, and the Craftsman's Mall property, which has the highest immediate potential for redevelopment, is owned by Cal Poly Humboldt. This area is near Cal Poly Humboldt's campus and is an ideal location for high density housing. It is surrounded by lower density residential zoning districts. The area also includes a lumber mill that is in full operation. This area will likely take longer to have a significant impact on housing due to ownership patterns and the relatively built-out and constrained nature of the area. Notwithstanding, there is significant long-term potential in the Craftsman's Mall / St. Louis Opportunity Zone. The visioning and rezoning have not been initiated in this Opportunity Zone, but this Draft EIR anticipates the proposed Residential High Density zoning to be applied to the properties.

Downtown Opportunity Zone

The Downtown and surrounding near Downtown areas encompass over 53.3 acres comprised of a variety of land use designations including 25.2 acres of Central Commercial, 6.5 acres of Commercial General, 4.1 acres of Residential Medium Density, 0.4 acres of Residential High Density, and 1.7 acres of Public Facilities. This area is generally built out, but there are some parcels that have significant potential for redevelopment with modified zoning, as well as several smaller parcels that could either be redeveloped, modified, or rebuilt if the zoning allowed more flexibility. More specifically, this Opportunity Zone includes the Northcoast Co-op property and the Union Town Shopping Center. In addition to these two large parcels that could produce hundreds of units between them, there are several vacant sites and parking lots that could have housing or other uses built on upper floors, retaining the parking. The Downtown Opportunity Zone is in the City's center of commerce. The Downtown is near Cal Poly Humboldt, the Plaza, the Arcata Ball Park, shopping, restaurants, the Creamery District, and three grocery stores. The redevelopment within this area over the planning period is anticipated to produce 60 units, though the number could be much higher if either the Co-op or Union Town are redeveloped.

2.6 The Proposed Plan

The proposed plan is defined in the goals, policies, and implementation measures of the General Plan 2045. The General Plan 2045 includes 15 Elements organized into six Chapters, as well as an introduction and a glossary. An overview of the General Plan 2045 components and the degree of changes from the current General Plan 2020 is provided in Table 2.6-1 (General Plan 2045 Overview and Organization). Summary descriptions of the General Plan 2045 Elements are provided in this section, organized by the degree of change from the existing General Plan 2020. The full proposed General Plan 2045 is available through the City's website, www.cityofarcata.org, and should be referred to for a complete listing of goals, objectives, policies and implementation measures. In addition to the Plan components, General Plan 2045 will require subsequent zoning amendments and the creation of new zoning code in the Gateway Area, as further described in Section 2.7 (Future Zoning Amendments), below. All proposed and revised zoning code will be in conformance with the Gateway Area Plan and this Draft EIR. Minor updates to the General Plan 2020 include updates for consistency.

Goals, policies, and related implementation measures proposed in the General Plan 2045 that could potentially have an effect on the environment include:

- Changing allowable height and densities (see Land Use Designations within Section 2.6.1 below);
- Changing some land use designations, including the addition of new land use designations (see Figure 2-3B);
- Prioritizing development in Gateway Area as well as designated Infill Opportunity Zones (see Figure 2-3B);
- Modifications to the roadway alignments throughout the Gateway Area;
- Construction, modification, or maintenance of the Railroad Right-of-Way through the Arcata Gateway Area and conversion to roadway or trail;
- Construction and modification of structures at APN 021-173-002 (Creamery Complex) involving partial or full demolition of the structures on the western portion of the property and redevelopment of residential or mixed-use structures;

– Construction and modification of structure at APN 021-171-017 (Seely and Titlow Building) involving partial demolition and construction of residential or mixed-use addition; and
– Construction and modification of residential or mixed-use structures the vicinity of identified historic structures within the Gateway Infill Opportunity Area and Downtown Infill Opportunity Area.

2.6.1 Gateway Area Plan Element

The new Gateway Area Plan Element will establish new policies, land use designations, and development standards within the Gateway Area, which is an approximate 138-acre location entirely within City limits that is directly west of Arcata's downtown core and generally north of Samoa Blvd, west of K Street, and south of Alliance Ave (Figure 2-2 – General Plan Use Designations within the Gateway Area). Currently, the Gateway Area primarily consists of former industrial lands. Due to its proximity to the downtown and core infrastructure, the Gateway Area represents a priority opportunity area for future redevelopment and infill growth.

Individually, the Gateway Area Plan would function like a specific plan, outlining a development vision and regulations for a specific area of the City. However, as an Area Plan and an Element of the General Plan, the Gateway Area Plan must be consistent with the other elements of the General Plan, including the planning or growth horizon year, which is 2045. Therefore, implementation of the Gateway Area Plan within the planning period is what is considered in the General Plan. The major difference between implementation of the full Gateway Area Plan and implementation of the Gateway Area Plan within the planning period is the scale of development. The level of development analyzed in the General Plan 2045 is driven by anticipated population growth (7,000 new residents to live here by 2045).

Gateway Code

The City is developing a targeted infill zoning ordinance for the Gateway Area using a form-based code, referred to as the Gateway Code. The Gateway Code will introduce new mixed use and residential uses into existing residential, commercial mixed-use and industrial areas with four new zoning districts intended to guide the creation of new mixed use activity centers and high-quality neighborhoods in the Gateway Area. The Gateway Code will establish standards relating to building form, character, and streetscape; a new community benefit program; and a streamlined permitting process intended to reduce project-specific discretionary decision-making by relying on objective design standards. The code will promote high-quality architecture, pedestrian-oriented streets, and a variety of housing options through prescriptive standards relating to building form and placement, building frontages, parking, public spaces, and streets. The Gateway Code will also include options for streamlined review in exchange for pre-determined "community benefits" including environmental restoration, increased percentages of low- or moderate-income housing units, or dedication of parcel frontage for active transportation. It is anticipated that benefits with physical impacts would improve the environment (e.g., creek daylighting) or would be part of a principally permitted project exempt from additional CEQA review.

Land Use Designations

The Gateway Area land use designation is Commercial Mixed-Use. This base designation is further refined in the Gateway Area Plan by land use sub-designations, which allow for a high-intensity mix of residential and non-residential land uses (see Figure 2-2). Each of these sub-designations are also known as "Gateway Sub-areas." Table 2.6-2 describes development standards related to density and building height for each Sub-area described below.

Gateway Barrel District – [G-B]

The Gateway Barrel District (approximately 35 acres) provides a high-density walkable residential campus on a former barrel manufacturing site and neighboring former industrial sites. Building and site design supports a pedestrian-friendly public realm compatible with the internal high-density residential character of the District. While land uses include retail, office, personal service, restaurant, and light industrial uses, the District is primarily residential. The Gateway Barrel District allows building heights up to eight stories for development providing community benefits. See Image 2-2 for the Gateway-Barrel District illustrative plan.

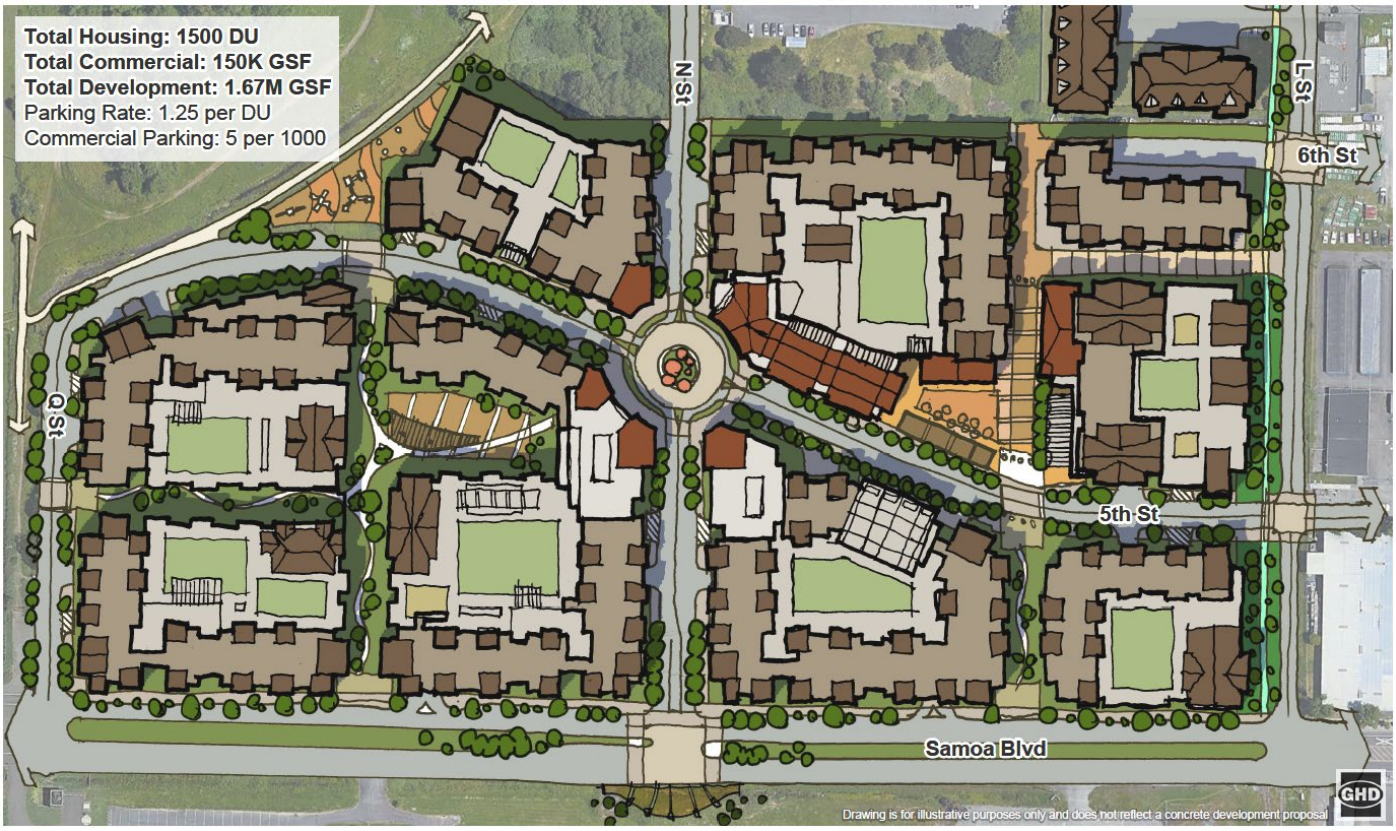

Image 2-2: Gateway-Barrel District Illustrative Plan

Gateway Hub- [G-H]

The Gateway Hub is a vibrant, high-intensity mixed-use area allowing for a broad range of residential, retail, office, personal service, restaurant, entertainment, light industrial, and other similar uses. The Gateway Hub allows building heights up to seven stories for development providing community benefits.

Gateway Corridor – [G-C]

The Gateway Corridor is a linear area along Samoa Blvd, L Street, and K Street, each of which serve as major bicycle and vehicular gateways into the City. This active, inviting, high-intensity, mixed-use designation requires a pedestrian-oriented ground floor design aesthetic intended to slow passing vehicular traffic and encourage drivers to park and walk. Street-facing uses primarily consist of non-residential uses, with residential allowed in limited cases as defined in the corresponding zone district. Upper floors primarily have residential uses, with some non-residential allowed in limited cases. Overall allowed uses include residential, retail, office, personal service, restaurant, entertainment, light industrial, and other similar uses. The Gateway Corridor allows building heights up to six stories for development providing community benefits.

Gateway Neighborhood – [G-N]

The Gateway Neighborhood provides a transition from the high-intensity Gateway Corridor to lower intensity residential uses outside of the Gateway Plan Area. Allowed land uses include residential, retail, office, personal service, restaurant, light industrial, and other similar uses. The Gateway Neighborhood allows building heights up to five stories for development providing community benefits. Building and site design supports a pedestrian-friendly public realm compatible with the residential character of surrounding areas.

Other Designations

Other designations that occur in the Gateway Area, such as Natural Resource, are described in the General Plan 2045 Land Use Element.

Community Benefits Program

The community benefits program requires developer and/or construction applicants to incorporate designated community amenities (a.k.a. “community benefits”) into proposed development projects in exchange for a streamlined, by-right approval process and increased development potential. This program is intended to facilitate the production of new multifamily and mixed-use residential development with amenities that benefit the general public. Amenities have been specifically targeted for the opportunities in the Gateway Plan Area. Multifamily and mixed-use residential projects throughout the Gateway Plan Area are eligible for participation in the Community Benefits Program. To be eligible for incentives, a project must meet City-specified architectural standards (outlined in the Form-Based Code or Gateway Code), minimum density requirement, and include a specified percent of affordable units. Table 2.6-2 shows the development standards and different community benefit bonus tiers, which permits higher intensities of development in exchange for greater levels of community benefits.

Table 2.6-2 Development Standards for Base Level Projects and Community Benefit Projects

	Base Tier	Community Benefits Bonus Tiers			
		Bonus Tier 1	Bonus Tier 2	Bonus Tier 3	Bonus Tier 4
Land Use Designations

Source: City of Arcata

Notes
1. Projects that do not provide the designated minimum residential density will need to obtain a use permit demonstrating projects support Gateway Area vision and objectives. For details, see Gateway Zoning Code (also known as form-based code).
2. Some use types (such as theaters) are exempt from minimum density requirements and minimum story requirements. Also exempt from minimum density requirements and minimum story requirements are some building types (such as historically significant structures and the adaptive reuse of existing buildings). For details, see Gateway Zoning Code (also known as form-based code).
3. The maximum number of residential units for any project will be determined through other development standards, such as building

height, setbacks, and Building Code requirements for minimum unit size.
4. Determined by applicable zone district. See Gateway Zoning Code (also known as form-based code).
5. Community benefits are not necessarily required but may be required as Conditions of Approval issued through discretionary processes, which may be required as determined by Gateway Zoning Code (also known as form-based code). The number of committees that must issue approvals will vary depending on applicable zone district and project type.
6. Required community benefits determined by applicable zone district. See Gateway Zoning Code (also known as form-based code).
7. Projects within the Base Tier may be required to receive approval from one or more discretionary City committees and may be subject to committee-issued conditions of approval. Requirements to receive approval from City committees will vary depending on location and project type. See Gateway Zoning Code (also known as form-based code) to determine if any discretionary committee approvals are required.
8. Projects that qualify for any of the Community Benefit Bonus Tiers are not required to receive approval from any City committees and are not subject to any conditions of approval issued by any City committees.

2.6.2 Land Use Element

The Land Use Element is intended to guide future land use decisions, and will continue to include the general distribution and general location and extent of the uses of land for housing, business, industry, open space, agriculture, natural resources, recreation, public buildings and grounds, greenways, and other categories of public and private uses of land within the City and its Planning Area, which is unchanged from Arcata's General Plan 2020 adoption in 2000.

Figures 2-3A and 2-3B illustrate the existing and proposed distribution of land uses by designation, as described in the General Plan 2045. In addition to designating land uses on the Land Use Diagram (Figure 2-3B), the Land Use Element includes goals, policies, and implementation measures for the overall land use pattern, and for each of the land use categories in the General Plan 2045 described below. Base zoning may be further augmented by state law, which allows for additional residential density in certain circumstances. The following Land Use Element land use designations are further described below, and an overview of changes in land use designations is presented below in Table 2.6-3 – Proposed Density Changes Summary.

Residential Land Use

– Very Low Density – [R-VL]: This allows the lowest density, two or fewer primary units (on individual lots) per acre, primarily for single family residential development.
– Low Density – [R-L]: This is the most common residential designation found throughout the community, including the older, historical neighborhoods. It allows one primary unit or duplex per lot.
– Medium Density – [R-M]: The multi-family and attached unit types associated with this designation include duplexes, townhouses, co-housing, low density apartments, and modular housing located in mobile home parks. Densities allow up to 25 units per acre.
– High Density – [R-H]: This designation is limited to a few areas in the City. In central Arcata and near Cal Poly Humboldt, this designation is intended to increase the affordable housing supply and preserve residential units within walking distances to commercial areas and Cal Poly Humboldt. On some undeveloped parcels, this designation allows for large-scale development proposals. Densities allow up to 50 units per acre.

Commercial Land Use

– Commercial Central – [C-C]: This designation covers most of the 17 blocks surrounding the Plaza and includes retail, professional office, civic, hotel, theater, upper floor residential, and similar uses.
– Commercial – Mixed Use [C-M]: This land use designation allows high-density infill development with a high degree of flexibility around uses. This land use designation is applied to a wide variety of parcels throughout the City considered suitable for infill development, redevelopment, and densification. Densities allow up to 50 units per acre.

Industrial Land Use

– Limited Industrial – [I-L]: This designation is intended to provide attractive industrial areas suitable for light manufacturing and limited commercial uses.

– General Industrial – [I-G]: This indicates areas that are appropriate for manufacturing, large-scale wood processing and storage, auto wrecking and storage yards, and all other high impact general industrial operations.

Public Facilities

– Public Facility – [PF]: This includes schools, public services and administrative offices, wastewater and solid waste management facilities, public parking lots, parks and non-commercial recreation uses, golf courses, auditoriums, and other public assembly spaces, hospitals, cultural facilities, community gardens, communication (including telecommunications) and transportation facilities, and utilities.

Agricultural and Natural Resource Lands

– Natural Resource – [NR]: This designation is applied to public or private lands where protection of unique and/or sensitive natural resources or managed production of resources are the primary objectives. The resources element describes three subdistrict zones within the Natural Resource district which are designated: Wetland Stream Protection Zone [NR-WSPZ], Timber Production Zone [NR-TPZ], and Public Trust Zone [NR-PTZ].

– Agriculture Exclusive – [A-E]: This is intended to preserve land for agricultural production. The Agriculture Exclusive designation is appropriate for lands with prime agricultural soils that are in productive farm use and wetlands that are used as grazed agricultural lands. Minimum lot sizes are 20 acres outside the coastal zone and 60 acres within the coastal zone.

– Agriculture – Residential [A-R]: This allows very low density (one primary unit per 2.5 acres on individual lots) agriculturally related residential development on smaller parcels of agricultural land.

Infill and Density

The Land Use Element will continue to accommodate projections of population and economic growth using infill principles. By increasing the density of local zoning and reducing barriers to development in areas with high potential for infill development, the City can target higher-density development to priority areas for affordable housing. The City's anticipated growth during the planning period is expected be contained within the present City boundary and concentrated largely within the Gateway Area and other Infill Opportunity Zones identified in the City's adopted 6th Cycle Housing Element in 2019 (Figure 2-3B). The General Plan 2045 Land Use Element's proposed maximum density and floor area ratios are provided in Table 2.6-3, and available as Table LU-1 in the Land Use Element.

Table 2.6-3 Proposed Density Changes Summary

Land Use Designation		Maximum Density (dwelling units per acre)		Maximum Floor Area Ratio (FAR)	
		Current GP 2020	Proposed GP 2045*	Current GP 2020	Proposed GP 2045
Residential					
R-VL	Residential - Very Low Density	2 du/acre	No change	0.2	No change
R-L	Residential - Low Density	7.25 du/acre	No change	0.5	No change
R-M	Residential - Medium Density	15 du/acre	25 du/acre	n/a	No change
R-H	Residential - High Density	32 du/acre	50 du/acre	n/a	No change
Commercial and Industrial					
C-C	Commercial - Central	n/a	No change	4.0	n/a
C-M	Commercial - Mixed Use	15 du/acre	50 du/acre	2.0	n/a
I-G	Industrial – General	Not allowed	No change	1.5	No change

Land Use Designation		Maximum Density (dwelling units per acre)		Maximum Floor Area Ratio (FAR)	
		Current GP 2020	Proposed GP 2045*	Current GP 2020	Proposed GP 2045
I-L	Industrial – Limited	15 du/acre	No change	1.5	No change
Gateway Area**					
G-B	Gateway-Barrel District	-	n/a	-	n/a
G-C	Gateway-Corridor	-	n/a	-	n/a

G-N	Gateway-Neighborhood	-	n/a	-	n/a
Other Designations					
A-E	Agricultural - Exclusive	1 du/parcel	No change	0.1	No change
A-R	Agriculture - Residential	1 du/parcel	No change	0.1	No change
NR	Natural Resource	1 du/parcel	No change	n/a	No change
PF	Public Facility	None	No change	1.5	No change
NZ	Not Zoned		No change		No change

Notes:
du = dwelling unit
*All Residential Land Use Classifications Subject to state accessory dwelling unit law
**There are no maximum densities or FAR in the Gateway Area

Similar to existing growth management principles, growth will be concentrated in and around the Downtown area, the Gateway Plan area, existing neighborhood commercial centers, and Cal Poly Humboldt. These areas are in close proximity to transit, commercial areas, support economic development efforts and the proposed mix of land uses may allow residents to live closer to their places of work and thereby encourage alternative modes of transportation. Some of these areas will require rezoning (Figure 2-3B – Proposed Zoning and Infill Opportunity Zones). These areas collectively are anticipated to produce approximately half of the City's infill growth during the General Plan 2045 planning period. The areas described below reflect current configuration as enacted at a policy level through the adoption of the City's 6th Cycle Housing Element (2019); future planning may make minor modifications to add or subtract acreage to areas described below.

Gateway Area Infill Opportunity Zone

The Gateway Area Plan has been initiated for the Gateway Area Infill Opportunity Zone and is explicitly considered under this Draft EIR as a new element of the General Plan 2045. The Gateway Area is planned to provide approximately 500 new units to the City's housing stock over the planning period. It is expected that the majority of that growth will occur on a relatively small number of parcels that currently have the greatest opportunity.

Valley West Infill Opportunity Zone

The Land Use Element amendments propose converting the Industrial Limited, Commercial Visitor-Serving, and Commercial-General Land Use designations to Commercial-Mixed Use. The Valley West commercial areas have significant redevelopment potential for both housing and economic opportunities. While the specific visioning for the area has not been initiated, this Draft EIR anticipates potential minimum development at the proposed Residential High Density. The Valley West shopping center has approximately 8 acres of underdeveloped property that could substantially add to both housing and resident-based retail and services lacking in the area now.

Craftsman's Mall / St. Louis Infill Opportunity Zone

This area will likely take longer to have a significant impact on housing due to ownership patterns and the relatively built-out and constrained nature of the area. Notwithstanding, there is significant long-term potential in the Craftsman's Mall / St. Louis Opportunity Zone. The specific visioning has not been initiated in this Infill Opportunity Zone, but this Draft EIR anticipates potential minimum development at Residential High and Medium Densities.

Downtown Infill Opportunity Zone

This area is generally built out, but there are some parcels that have significant potential for redevelopment with modified zoning, as well as several smaller parcels that could either be redeveloped, modified, or rebuilt if the zoning allowed more flexibility. More specifically, this Infill Opportunity Zone includes the Northcoast Co-op property and the Union Town Shopping Center. In addition to these two large parcels that could produce hundreds of units between them, there are several vacant sites and parking lots that could have housing or other uses built on upper floors, retaining the parking. The redevelopment within this area over the planning period is anticipated to produce 60 units, though the number could be much higher if either the Northcoast Co-op or Union Town Shopping Center are redeveloped.

Targeted upzoning (or increases in the allowable uses, residential densities, and development standards) will be necessary in these Infill Opportunity Zones to meet the both the City's 6th Cycle (2019-2027) housing allocation, and to meet 20-year growth projections through the Plan period of 2045. Outside of the Infill Opportunity Zones described above, the Land Use Map and development standards applicable throughout the City limits are anticipated to receive relatively minor changes from the General Plan 2020 and are described below. The updated Land Use Element's proposed modifications to land use designations and residential densities outside of the Infill Opportunity Zones that have the potential to impact future intensity of use within the City's neighborhood centers and employment areas include the following.

Valley West / Giuntoli Lane Neighborhood Center

The General Plan 2045 envisions the Valley West / Giuntoli Lane Neighborhood Commercial Area as a major residential and commercial center for North Arcata serving both neighborhood and regional needs. The Valley West area is also an Infill Opportunity Zone. Existing Commercial-Visitor Serving and Commercial-General zoning is proposed to be converted to Mixed-Use, which will expand allowed use types in the northern portions of the Valley West Neighborhood Center. The area surrounding the Valley West Shopping Center, including the adjacent commercial, office, and residential areas, shall be planned to accommodate a large concentration of high-density residential development as well as retail establishments, entertainment services, restaurants, and business and professional offices. High density residential use in the Valley West Infill Opportunity Zone will be streamlined and residential units shall be included, where feasible, in all new commercial development within the Valley West area. Valley West's Carlson Park will also be promoted as a major regional draw as Arcata's only park with direct access to the Mad River.

Westwood / Sunset Neighborhood Center

The General Plan 2045 envisions the Westwood / Sunset Neighborhood Center as a similar small-scale mix of residential and commercial uses with a focus on neighborhood serving businesses with a higher proposed maximum density in the Commercial-Mixed zone of up to 50 dwelling units per acre (previously 15 dwelling units per acre). No modifications to the number of parcels zoned for commercial / mixed use is proposed.

Sunny Brae Neighborhood Center

The General Plan 2045 envisions the Sunnybrae Neighborhood Center as a similar small-scale mix of residential and commercial uses with a focus on a neighborhood serving businesses with a higher proposed maximum density in the Commercial-Mixed zone of up to 50 dwelling units per acre (previously 15 dwelling units per acre). No modifications to the number of parcels zoned for commercial / mixed use is proposed.

Bayside Neighborhood Center

The General Plan 2045 envisions the Bayside Neighborhood Center as a similar small-scale mix of residential and commercial uses with a focus on a neighborhood serving businesses with a higher proposed maximum density in the Commercial-Mixed zone of up to 50 dwelling units per acre (previously 15 dwelling units per acre). No modifications to the number of parcels zoned for commercial / mixed use is proposed.

West End / Aldergrove Employment Center

The General Plan 2045 envisions the West End / Aldergrove Employment Center as a major industrial employment center for North Arcata with a concentration of living-wage industrial businesses and a synergy with the Valley West commercial area. Mixed use will be encouraged. Existing zoning will generally remain with limited conversions to the City-owned Happy Valley parcels (conversion from Industrial-General to Industrial-Limited).

Samoa Boulevard and South G Street Employment Center

The General Plan 2045 envisions the Samoa and South G Employment Center as a dynamic employment center for South / Central Arcata with a concentration of locally serving and visitor-serving businesses, with a gradual emphasis of commercial investment into areas within the City's Sea Level Rise Adaption Zone and limited residential investment, which will be targeted to inland areas of the City. Existing zoning will generally remain with targeted updates along Samoa Blvd (conversion from Coastal Commercial-General to Coastal Commercial-Mixed Use).

Gateway Area

The General Plan 2045 proposes significant land use updates in this designated area in the southwestern part of the City through inclusion of the Gateway Area Plan Element. The Gateway Area Plan establishes a broad range of residential and mixed-use redevelopment with an emphasis on housing creation in this area due to proximity to Downtown and other community services and destinations. Detailed description of the Gateway Area Plan Element is provided in Section 2.6.1 (Gateway Area Plan Element).

2.6.3 Circulation and Mobility Element

The Circulation and Mobility Element comprehensively addresses forms of, and facilities for, transportation. This includes travel demand and transportation system management, bus transit, streets and highways, bicycle and pedestrian facilities, parking, trail routes, and transportation improvement funding. There is policy direction for maintaining a balanced transportation system, with choices for transit, bicycle, and pedestrian, as well as private vehicle transportation modes.

The Circulation and Mobility Element will continue to include the general location and extent of existing and proposed major thoroughfares; vehicle, bike, and bus transportation routes; terminals; and other local public utilities and facilities, all correlated with the Land Use Element of the General Plan 2045. To accommodate anticipated growth, the Circulation and Mobility Element will also be updated to include plans for a more balanced, multi-modal transportation network that meets the needs of all users of streets, roads, and highways (including bicyclists, children, persons with disabilities, motorists, movers of commercial goods, pedestrians, users of public transportation, and seniors) for safe and convenient travel in a manner that is appropriate within the context of our community. The City's Pedestrian and Bike Master Plan (adopted 2010) will inform this update.

Outside of the Gateway Area Plan boundary, the General Plan 2045 Circulation and Mobility Element received minor changes from the General Plan 2020 with a clear renewed emphasis on safety, reflected in new language intended to ensure slow speeds and traffic calming are prioritized on all City streets, and de-emphasize Level of Service as a criterion for evaluating impacts of new proposed development, instead relying on methods that better measure a project's transportation-related environmental impacts such as vehicle miles traveled. Other changes include updated descriptions of the existing circulation system, travel patterns, travel demand, and traffic operations; updates to the planned future circulation system; minor enhancements to the goals and policies; and updated implementation programs.

Changes to the Element goals, policies, and related implementation measures proposed in the General Plan 2045 that could potentially have impacts on the environment include:

– Constructing or modifying streets, sidewalks, and trails and other vehicular and active transportation amenities; and
– Implementing changes in the existing circulation network.

2.6.4 Public Facilities and Infrastructure Element

The Public Facilities and Infrastructure Element addresses water supply and delivery, wastewater collection and treatment, stormwater management, educational facilities, community facilities, and integrated waste management. This Element addresses increased efficiency in providing facilities and services, and conservation by users.

The Public Facilities and Infrastructure Element will support growth in the identified Potential Infill Opportunity Zones and capacities of facilities such as the City's Wastewater Treatment Facility. This update will analyze necessary updates to development strategy based on recent planning documents, including the Humboldt County Association of Government's Regional Transportation Plan-VROOM 2022-2042, the City's Wastewater Treatment Improvements Project Facility Plan (2017), Wastewater Treatment Plant Final Pre-Design Report (2019), Infill Market Study (2021), and the City's Capital Improvement Program. The Public Facilities and Infrastructure Element update will leverage this analysis and identify infrastructure upgrades required to address population buildout over the planning period. This Element will consist of substantial changes from the General Plan 2020.

Changes to the Element goals, policies, and related implementation measures proposed in the General Plan 2045 that could potentially have impacts on the environment include:

- Upgrades to the City's wastewater treatment facility (core treatment plant upgrades, levee augmentation, etc.) and continued evaluation of on- and off-site alternatives to existing treatment facility in partnership with relevant state agencies, including North Coast Regional Water Quality Control Board, and as part of Capital Improvement Planning;
- Modifications to waste management and organics waste collection in response to the SB 1383 mandate;
- Improvements to City's water distribution and storage system as a part of Capital Improvement Planning;
- Improvements to City's sewer collection system as a part of Capital Improvement Planning;
- Constructing or modifying water supply and delivery systems to serve the population; and
- Modifications and upgrades to citywide facilities to accommodate demand (e.g., City Hall, public facilities / libraries, community and neighborhood centers).

2.6.5 Parks and Recreation Element

The Parks and Recreation Element (adopted in 1994) has served the City as the central policy document to guide the provision of parks and recreation in the City. The Element addressed a wide variety of recreation programs with policy areas addressing the community's desire to provide a wide spectrum of parks and recreation opportunities and facilities; encouraging cooperative agreements with other government entities and public / private partnerships to enhance the availability of recreation programs; and emphasized fiscal responsibility and the objective to minimize environmental impacts.

The new Parks and Recreation Element will draw heavily upon the Parks and Recreation Master Plan (adopted 2010) and upon goals and policies described in the Open Space Element. The Parks and Recreation Element will include an assessment of the current condition of parks and related facilities, analyze the existing and projected public demand for parks and recreation facilities, establish policies and guidelines for park planning and development, and identify funding sources for these initiatives. This Element consists of substantial changes from the General Plan 2020, with the entire Element being replaced.

Element goals, policies, and related implementation measures proposed in the General Plan 2045 that could potentially have impacts on the environment include:

- Expanding recreational opportunities in the City;
- Construction, modification, or maintenance of existing or new parks, recreational facilities, special use areas, greenways, or beautification areas; and
- Acquisition of new parkland or natural areas.

2.6.6 Health Element

This Element contains new health-related policy as well as new updated health policy previously housed in the Public Safety Element of the General Plan 2020. Topic areas relate to the intersections of local government policy control areas (land use, transportation, education, public engagement) and health. Although not subject to Senate Bill 1000, which requires cities with identified disadvantaged communities to incorporate environmental justice elements into their general plans, the Health Element includes many similar policies and goals intended to equitably increase healthy outcomes for all members of the Arcata community.

The Health Element will address community health concerns by outlining goals and objectives relating to active living, recreation, and physical activity; social connection and safety; healthy housing and environmental health exposures; healthy food access; health and human services; and community engagement. Health policy will be developed with a racial equity lens, in partnership with a diverse set of stakeholders living and working in Arcata's community.

The Health Element goals, policies, and related implementation measures proposed in the General Plan 2045 that could potentially have impacts on the environment are "cross-cutting" and will be captured through other elements of the General Plan 2045 (for example: parks facilities locations, transit-oriented development, public transportation).

2.6.7 Minor Updates

Eight elements will receive minor updates. A description of each element and updates to policy, goals, or implementation measures that could potentially have an impact on the environment are described below.

Design Element

This Element addresses overall community character, Downtown design, scenic highways and entryways to the City, scenic resources and landscape features, subdivision and residential design, commercial and industrial design, and landscape design.

The Design Element identifies detailed design policy in various neighborhoods throughout the City with particular emphasis on standards and review of the Arcata Plaza area, which constitutes the City's current Downtown core. Updates to the Design Element add policy around Infill Opportunity Zones and the development of objective design standards that can be applied for with new residential development designed at a higher density and intensity of use than what has historically been encouraged throughout these areas. The 2019 Housing Element and Infill Market Study (2021) will inform the update of this Element. This Element received only modest changes from the General Plan 2020.

The City's updated objective design standards will ensure no significant impact to community aesthetics, particularly because all Infill Opportunity Zones qualify as "urbanized areas" outside of natural scenic areas. In limited cases where Infill Opportunity Zones align with applicable zoning or other regulations governing scenic quality (e.g., coastal zone viewsheds, Downtown historic landmarks), the Design Element will include policy to ensure consistency with aesthetic quality. Such changes to the Element goals, policies, and related implementation measures proposed in the General Plan 2045 are not anticipated to impact the environment.

Several sections in the General Plan 2020 Design Element were more detailed than is appropriate for policy. Much of the detail was stricken from policy where the implementing ordinance and programs already include detail. These changes have no impact on the environment because the implementing regulations remain in place.

Several areas of the City were designated as locally scenic (Policy D-3a, D-3b, and D-3d), and several hedgerows, windrows, and clumps of trees were addressed in General Plan 2020 (Policy D-3i). These policies were removed or modified. These changes are not anticipated to have an effect on the environment because they were advisory only and/or the policy implementation remains in place.

Historic Preservation Element

This Element addresses historic landmarks, a process for identifying potentially historic sites, the Plaza Historic District, neighborhood conservation areas, controls on demolition of historic structures, public participation and education, and archeological and cultural resources.

The Historic Preservation Element identifies design policy in various neighborhoods throughout the City with particular emphasis on standards and review of the Arcata Plaza area, which constitutes the City's current Downtown core. The changes to the Historic Preservation Element are minor and associated with identification of historic resources.

Public Safety Element

This Element addresses emergency preparedness, seismic and other geologic hazards, flood and fire hazards, hazardous materials, crime safety, human health hazards, and climate adaptation and resiliency.

The Public Safety Element will continue to identify risks of fires, floods, droughts, earthquakes, tsunami, and landslides. An update of the Public Safety Element will comply with California Government Code Section 65302(g) and SBs 375 and 379. Climate change adaptation will be a principal focus of the Public Safety Element update. The Public Safety Element will acknowledge the context of other relevant plans at the regional and state level and align City goals and policies with these efforts. The City is currently included in the Humboldt County Local Hazard Mitigation Plan (adopted 2020) and County-wide Climate Action Plan (in progress). This Element received only minor changes from the General Plan 2020.

Changes to the Public Safety Element goals, policies, and related implementation measures proposed in the General Plan 2045 that could potentially impact the environment include:

– Expansion of Public Services personnel (police, fire) and relevant equipment;
– Expansions to existing evacuation routes/transportation facilities; and
– Cleanup of contaminated sites as part of Gateway Area Plan implementation (community benefits program).

Open Space Element

The Open Space Element addresses designating lands as open space to provide for protection of natural habitats and species as well as for public health; managed production of natural resources such as agricultural and forest products; recreational uses; coastal access; and avoidance of areas such as steep slopes, faults, and flood zones that are potentially hazardous if developed with intense urban uses.

The Open Space Element will continue to include details regarding the preservation of natural resources, the managed production of resources, outdoor recreation, and public health and safety, as well as tribal cultural resources within the context of related state and regional plans. The update of the Open Space Element will comply with California Government Code Sections 65302(e) and 65560 for the comprehensive and long-range preservation and conservation of open space land within the City. This Element received only minor changes from the General Plan 2020.

Changes to the Open Space Element goals, policies, and related implementation measures proposed in the General Plan 2045 that could potentially impact the environment include:

– Expanding on the identification and acquisition of open space areas;
– Encouraging the daylighting of creeks; and
– Subjecting high fire risk areas to defensible space, non-flammable materials, and suppression measures as applicable.

Resource Conservation and Management Element

This Element addresses conservation and management of the City's natural resources, including forested hillsides (including community forests), agricultural areas, baylands, tidelands, creeks, sloughs, and wetlands. These natural features are as much a part of the community as homes, shops, businesses, and schools.

Conserving, enhancing, and managing energy, water, and mineral resources, as well as natural systems, are essential considerations.

The Resource Conservation and Management Element will continue to address the conservation, development, and utilization of natural resources including water, forests, soils, rivers and other waters, wildlife, minerals, and other natural resources. The Energy Resource Management Policy will be updated to encourage the reduction of non-renewable resource use and to reflect the City's current participation in Redwood Coast Energy Authority's Community Choice Energy program, which supports renewable energy purchases. This Element received only minor changes from the General Plan 2020.

Changes to the Element goals, policies, and related implementation measures proposed in the General Plan 2045 that could potentially impact the environment include:

– Updates relating to the Arcata Community Forest Management Plan 2020 Update;
– Implementing energy alternative, energy conservation and greenhouse gas (GHG) reduction measures from Redwood Coast Energy Authority's Comprehensive Action Plan for Energy and the Humboldt Regional Climate Action Plan; and
– Developing an Electrification Ordinance to phase out natural gas infrastructure and use.

Growth Management Element

The Growth Management Element addresses the City's plan for growth and development in the Planning Area Boundary and Sphere of Influence, which encompass unincorporated lands outside City boundaries (see Figure 2-1). This Element also addresses growth and development issues within the City's incorporated limits and defines the Urban Services Boundary, which is the limit that City maintained services such as water, sewer, and drainage can be extended. This Element ensures municipal services and management operations are coordinated concurrently with anticipated development and consistency with Land Use, Circulation, Housing, and other Element plans and policies. Ensuring sufficient community facilities and support services is important to maintain social equity. Procedures for annexation of lands within the Sphere of Influence and modification of the Urban Services Boundary are also included in this Element.

The Growth Management Element will reaffirm the Urban Growth Boundary for the City and will continue to bolster the policies and programs of the Open Space Element. The update of the Growth Management Element is to align the existing Element with the Local Coastal Program and updated Municipal Services Review per the Local Agency Formation Commission. The Growth Management Element amendments will emphasize infill development, including new policies, to reaffirm an internal focus on future growth. This Element received only minor changes from the General Plan 2020.

Changes to the Element goals, policies, and related implementation measures proposed in the General Plan 2045 that could potentially have impacts on the environment include:

– Planned growth and prioritization of infill projects;
– Development in natural resource areas, although limited at rural densities;
– Updates to Sphere of Influence policies and language to ensure in compliance with state law; and
– Changes to the criteria to evaluate and approve proposed annexations.

Noise Element

This Element addresses stationary noise sources and levels, transportation noise sources and levels, acoustic analysis requirements, intrusive and intermittent noise sources, and noise attenuation.

The Noise Element will continue to provide a basis for comprehensive local programs to control and abate environmental noise and to protect citizens from excessive exposure. The update of the Noise Element will address the changes resulting from residential densification in Infill Opportunity Zones, including more intense and diverse uses. This Element received only minor changes from the General Plan 2020.

The intent of the Noise Element update is to include policy to ensure consistency and compatibility with the environment as undertaken by the City as the relevant regulatory agency. As such, changes to the Element goals, policies, and related implementation measures proposed in the General Plan 2045 are not anticipated to significantly impact the environment.

Air Quality Element

This Element addresses point and area sources of air pollutants, mobile sources of air pollutants, and regional air quality standards, monitoring, and education. Regional compliance to air quality standards is administered through the North Coast Unified Air Quality Management District (NCUAQMD). This Element addresses provisions for achieving and maintaining attainment of those standards.

The Air Quality Element will continue to address air pollution concerns and will bolster the policies and programs of the Air Quality Element. The update of the Air Quality Element will continue to have goals and objectives related to reducing air quality emissions from a variety of point and area sources, as well as mobile emissions. The Air Quality Element will continue to enforce the Regional Air Quality Standards enforced by the NCUAQMD. This Element received only minor changes from the General Plan 2020.

The intent of the Air Quality Element update is to include policy to ensure consistency and compatibility with the environment and ensure consistency with policies of the NCUAQMD as the relevant regulatory agency. As such, changes to the Element goals, policies, and related implementation measures proposed in the General Plan 2045 are not anticipated to significantly impact the environment.

2.7 Future Zoning Amendments

Subsequent to adoption of the General Plan 2045, the City's Zoning Code will require amendments to implement the new vision. These zones and zoning amendments will be derived from relevant General Plan 2020 policy housed in the Gateway Area Plan Element and the Land Use Element. Population growth is anticipated to be absorbed throughout the City primarily through infill, predominantly within the Infill Opportunity Zones. The City expects rezoning to accommodate new residential development, upzoning to allow higher densities in current residentially designated districts, and ordinances to address state law related to residential housing development (for example, accessory dwelling units (second units) and small lot subdivision requirements (SB 9 2020). All new and amended zoning code must be consistent with the General Plan 2045. The Gateway Code, along with the General Plan 2045 Gateway Area Plan Element, are collectively considered the "Project." Other citywide zoning amendments are considered subsequent and resultant actions to this Draft EIR.

2.8 General Plan Buildout Projections

The environmental analysis in this Draft EIR addresses the 'buildout' at the end of the planning period at year 2045. Two types of potential buildout are the theoretical buildout, which assumes maximum buildout of each parcel within the City limits, and the projected General Plan 2045 buildout, which is based on the anticipated growth and development demand over the planning period.

Theoretical Buildout

The theoretical buildout would be if each and every parcel within the City is fully developed to the maximum allowable use within the planning period, which is by 2045. This theoretical buildout scenario would result in construction and operation of a substantial number of new residential dwelling units as well as a substantial increase in non-residential land facilities. However, this growth scenario is highly unlikely to occur within the General Plan's planning period given the historical and anticipated growth rates of the City, and the anticipated development demand over the life of the General Plan 2045.

Projected 2045 General Plan Buildout

This Draft EIR evaluates the projected development that could occur with implementation of the General Plan through 2045. The projected development is informed by the City's historic and forecasted housing needs and development demands, as discussed in Section 2.4 (General Plan Assumptions). This approach is consistent with CEQA requirements that an EIR evaluate 'reasonably foreseeable' direct and indirect physical changes in the environment that may be caused by the project. Changes to the environment that are speculative or unlikely to occur are not considered 'reasonably foreseeable'.

The City expects to meet the development needs for housing and economic development for the 2045 planning period within its existing boundaries. The planned distribution of housing units with population growth on the upper end of the growth scenarios is stated above within the Housing section of Section 2.4 and is an approximation of where this growth will occur. Ultimately, the location of development will be dependent on market conditions; however, the list in Section 2.4 identifies reasonable assumptions regarding the likely location of growth. The development related to the City's economic growth will be concentrated in planned Mixed Use and Industrial Zones (see Land Use Element). Economic growth is planned to be commensurate with housing growth.

2.9 Environmental Protection Actions Incorporated into the Project

The following actions are included as part of the Project to reduce or avoid potential adverse effects that could result from construction or operation of the Project. Additional mitigation measures are presented in the following analysis sections in Chapter 3 – Community Environment. Environmental protection actions and mitigation measures, together, would be included in a Mitigation Monitoring Program at the time that the Project is considered for approval. The following Actions are included as implementation measures in relevant General Plan Elements.

Infrastructure Element

- Updates to and implementation of the City Urban Water Management Plan to ensure adequate storage capacity and promote water conservation
- Updates to and implementation of the Wastewater Maintenance Program to assess system capacity and condition and promote measures to reduce wastewater generation
- Updates to and implementation of the City's Capital Improvement Program
- Implementation of the City's Municipal Separate Storm Sewer System (MS4) requirements including provisions for maintaining integrity of stream hydrology and reducing pollutants from roads
- Updates to and implementation of the City Zero Waste Action Plan to reduce solid waste generation at the source
- Implement Infill & Infiltration projects to reduce influent flows to the Arcata Wastewater Treatment Facility during the winter season and improve overall functioning and reliability of the wastewater collection system

Resource Conservation and Management Element

- Updates to and implementation of the City Creeks and Wetlands Management Plan to maintain biological integrity and provide opportunities for restoration of degraded creeks
- Updates to and implementation of the City Forest Management Plan to manage aesthetic, timber, watershed, wildlife, and vegetation resources and maintain a monitoring program for forest practices
- Updates to and implementation of the City Energy Efficiency and Conservation Program to promote energy efficiency and identify and invest in energy programs
- Updates to and implementation of the Non-native Plant Species Removal Program to recommend nontoxic eradication measures for non-natives on private lands and establish eradication protocols on public lands

- Updates to and implementation of the City Sensitive Habitat Maps to ensure avoidance and appropriate treatment of sensitive habitats
- Updates to and implementation of the City Pesticide Ordinance to avoid potential hazards to the environment
- Creation of a Management Plan for the Jacoby Creek Gannon Slough Wildlife Area to guide management and restoration
- Creation of an Electrification Ordinance and Program for new construction to phase out natural gas

Land Use Element

- Updates to and implementation of the Land Use Code, which will ensure General Plan consistency and promotion of infill policies intended to reduce impacts on the environment (air quality and GHG emissions, infrastructure expansion)
- Conversion and reuse of contaminated mill and other industrial sites to pursue funding for environmental site assessments and cleanup of sites with environmental contaminants

Public Safety Element

- Updates to Floodplain Mapping and Management Program to maintain water quality and reduce exposure of people or structures to flood hazards
- Updates to and implementation of the City Emergency Preparedness and Response Programs to not expose people or structures to hazards including earthquake and tsunamis
- Evaluation of cooperative agreement with Fire Protection Agencies to provide protection to people and structures in case of wildfire

Circulation and Transportation Element

- Creation of a Neighborhood Traffic Management Program to install traffic calming devices and reduce hazards due to design features or incompatible land uses
- Updates to and implementation of the Pavement Management Program to and reduce hazards due to design features and improve water runoff as applicable
- Updates to and implementation of the City's Capital Improvement Program, Pedestrian Plan, and Bicycle Boulevards to encourage multi-modal transportation opportunities intended to reduce impacts on the environment (air quality and GHG emissions, infrastructure expansion)
- Exploration of Traffic Mitigation Fee Ordinance to mitigate traffic impacts
- Increased emphasis on vehicle miles traveled

Gateway Area Plan Element

- Creation and implementation of a Relocation Assistance Program and Housing Monitoring Program to reduce impacts of potential residential and business displacement
- Creation and implementation of Community benefits program to promote anti-displacement, energy conservation, vehicle miles traveled reduction and multi-modal transportation, wetland and creek restoration, and Brownfield cleanup and redevelopment
- Creation and implementation of the Gateway Habitat Map and Project list to maintain biological integrity and provide opportunities for restoration of degraded creeks and Environmentally Sensitive Habitat Areas
- Exploration of sewer pre-treatment to offset impacts to wastewater treatment capacity
- Creation and implementation of Gateway Infrastructure Financing Program to offset impacts to City infrastructure and utilities

2.10 Uses of the EIR and Required Agency Approvals

City of Arcata

The City is the lead agency for the proposed Project. After public circulation of the Draft EIR, the Draft EIR will go before the City Planning Commission for a public hearing. After the public hearing, a Final EIR will be prepared. The Final EIR will address public comments received during the public review period and any modifications, clarifications, or edits to the Draft EIR. The Final EIR will be reviewed by the City Council for consideration prior to making a decision. In order to approve the proposed Project, the City Council would consider the following actions:

– Certification of the EIR
– Adoption of required CEQA findings
– Adoption of a Statement of Overriding Considerations
– Adoption of a Mitigation Monitoring and Reportion Program
– Approval of the General Plan 2045
– Approval of the Gateway Code

Subsequent Use of the EIR

The City has prepared this Draft EIR to evaluate environmental effects associated with implementation of the General Plan 2045. Subsequent activities for more specific actions or development can use analysis from this Draft EIR where appropriate. CEQA Guidelines Section 15168(c)(2) provides that later activities that have been described adequately under a Program EIR will not require additional environmental documents. When necessary, new environmental documents, such as a subsequent or supplemental EIR or negative declaration would focus on the project-specific environmental impacts of later activities.

When considering approval of subsequent actions under the proposed General Plan 2045, the City would utilize this Draft EIR as the basis for determining potential environmental effects and the appropriate level of environmental review, if any, of the subsequent action. Projects or actions subsequent to this Draft EIR may include, but are not limited to:

– Infrastructure Master Plans (water, sewer, and other infrastructure);
– Proposed land use changes analyzed in this Draft EIR;
– Resident and Business Relocation Assistance Programs;
– Community Benefits Program;
– Future Specific Plan, Planned Unit Development, or Master Plan approvals, including the future Master Plan for the Barrel District;
– Pedestrian and Bike Master Plans;
– Circulation Projects in the Capital Improvement Program including the Fair Share Contribution for New Development;
– Parks and Recreation Master Plan updates;
– Open Space and/or Conservation Plans, including open space concept diagram revisions and the Public Space Acquisition Program;
– Development Plan approvals, such as tentative subdivision maps, variances, use permits, and other land use related permits;
– Development Agreements;
– Permit issuances and other approvals necessary for public and/or private development projects; and
– Permit issuances or other approvals necessary for implementation of the General Plan 2045.

These programs or actions would be consistent with this General Plan 2045 Draft EIR, including the Gateway Area Plan. The Office of Planning and Research provides guidance on evaluating later activity to determine whether it is eligible for consideration under a Program EIR. The City will use OPR guidance in coordination with CEQA Statute and Guidelines in evaluating projects and actions subsequent to the General Plan 2045. Streamlining environmental review of subsequent actions is governed by CEQA Statute Section 21083.3 and 21094.5, and CEQA Guidelines Section 15168(c) and 15168(d).

Other Public Agency Permits and Approvals

The City's approval of the proposed General Plan 2045 would not require any permits or approvals by other public agencies. Actions subsequent to the General Plan 2045 that support implementation of the General Plan may require permits or approvals by other public agencies. Subsequent actions may require the following permits and/or approvals:

- **U.S. Army Corps of Engineers**
  Section 404 of the Clean Water Act (applicable to fill within jurisdictional waterways and wetlands)
- **State Water Resources Control Board**
  Construction General Permit (applicable to certain construction activities)
- **North Coast Regional Water Quality Control Board**
  National Pollutant Discharge Elimination System, Report of Waste Discharge (applicable to activities that affect state jurisdictional waterways and wetlands),
  Section 401 of the Clean Water Act Water Quality Certification (applicable to activities that affect jurisdictional waterways and wetlands)
- **California Department of Fish and Wildlife**
  Lake and Streambed Alteration Agreement (applicable to activities that affect a lake, streambed or riparian corridor)
  Incidental Take Permit, Consistency Determination or Memorandum of Understanding for compliance with the California Endangered Species Act
- **U.S. Fish and Wildlife Service and or the National Marine Fisheries Service**
  Biological Opinion or Letter of Concurrence, for Endangered Species Act consultation (applicable to activities that adversely affect federally listed species)
- **Humboldt County Local Agency Formation Commission (Humboldt Local Agency Formation Commission)**
  Approval (applicable to alteration of public agency boundaries such as Annexations, Urban Service Boundaries, and Sphere of Influence)
  Applicable to alteration of public agency boundaries such as Annexations, Urban Service Boundaries, and Sphere of Influence
- **California Department of Transportation (Caltrans)**
  Encroachment Permit (applicable to activities that encroach within state highway facilities)
- **Humboldt County**
  Encroachment Permit (applicable to activities that encroach within unincorporated Humboldt County)

2.11 AB 52 and SB 18 Consultation

The CEQA requires lead agencies to determine if a proposed Project would have a significant effect on tribal cultural resources. The CEQA Guidelines define tribal cultural resources as: (1) a site, feature, place, cultural landscape, sacred place, or object with cultural value to a California Native American Tribe that is listed or eligible for listing on the California Register of Historical Resources, or on a local register of historical resources as defined in PRC Section 5020.1(k); or (2) a resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant according to the historical register criteria in PRC Section 5024.1(c), and considering the significance of the resource to a California Native American tribe.

Prior to sending a formal AB 52/SB 18 consultation letter, the City met with the Tribal Historic Preservation Officers (THPOs) of the Wiyot Tribe, Bear River Band of the Rohnerville Rancheria, and Blue Lake Rancheria on January 19, 2022 to discuss the Gateway Area Plan Draft and provide information regarding the City's upcoming General Plan Update. At this meeting, the City and THPOs discussed updating relevant archeological mapping and City / Tribal contracting in addition to broader policy discussions.

To complete the AB 52 and SB 18 consultations required for this Draft EIR, the City sent notification letters to the THPOs of the Wiyot Tribe, Bear River Band, and Blue Lake Rancheria on March 25, 2022. At that time, all three THPOs expressed interest in providing further comment on the General Plan 2045. The City committed to re-engage the THPOs once the project description for the General Plan 2045 EIR was finalized, as well as the draft update to the City's Historic Preservation Element of the General Plan. Once the EIR project description was finalized, the City re-engaged the THPOs and sent requests for continued consultation on March 23 and 24, 2023. At that time, only the Wiyot Tribe chose to continue to consult and a meeting to discuss the General Plan 2045 was set for May 5, 2023.

In their responses, the Wiyot tribe recommended an emphasis on requesting Wiyot tribal cultural monitors for monitoring projects as well as an interest in continued collaboration between governments to further City and tribal housing goals. This request has resulted in updated policies and implementation measures in the General Plan 2045. The City sent the Wiyot Tribe, Bear River Band, and Blue Lake Rancheria tribes AB 52/SB 18 closure letters on July 20, 2023.

3.0 Community Environment

3.1 Introduction

The General Plan 2045 Community Environment Chapter refers to the resources and infrastructure that contribute to the wellbeing of the community. These include resources that influence the character of the community as well as public health and safety.

This Draft EIR analyzes the potential effects of the adoption and implementation of the General Plan 2045 on the environment under the applicable environmental resource categories listed in the CEQA Initial Study Checklist (Appendix G of the 2023 CEQA Guidelines). Draft EIR Chapter 3, Community Environment, addresses environmental resource areas potentially impacted by the General Plan 2045 in the following sections:

- 3.2 Aesthetics
- 3.3 Air Quality
- 3.4 Cultural Resources
- 3.5 Greenhouse Gas Emissions
- 3.6 Hazards and Hazardous Materials
- 3.7 Land Use and Planning
- 3.8 Noise
- 3.9 Population and Housing
- 3.10 Public Services and Recreation
- 3.11 Tribal Cultural Resources
- 3.12 Utilities and Service Systems

For each environmental resource area, the section describes the existing environmental and regulatory setting, discusses the environmental impacts associated with the adoption and implementation of the General Plan 2045, identifies feasible mitigation measures to reduce or eliminate those impacts, and provides conclusions on significance.

3.2 Aesthetics

This section evaluates the potential impacts related to aesthetics and visual resources that could occur from implementation of the General Plan 2045. To provide the basis for this evaluation, the Setting section describes the existing scenic resources and visual character for the region and City limits (study area), and the Regulatory Framework section describes the regulatory background that applies to implementation of the General Plan 2045. The Impact Analysis section establishes the thresholds of significance, evaluates aesthetic and visual impacts, and identifies the significance of impacts.

3.2.1 Study Area

For impact assessment related to aesthetics, the City limits and surrounding areas mentioned in the General Plan 2020 and proposed General Plan 2045 was used as the study area (see Figure 2-1 – City of Arcata Planning Areas). The primary focus of this section is the City limits due to the proposed scope of infill development which will occur within City limits.

3.2.2 Setting

Regional Visual Character

Humboldt County is a densely forested mountainous and rural county with about 110 miles (177 km) of coastline (more than any other county in the state), situated along the Pacific coast in northern California's rugged Coast Mountain Ranges. Humboldt County contains picturesque scenery and is well known for its endemic redwood trees and foggy coastal climate. The rural character of the county is defined by the topography and the views afforded as a result of those natural landforms. With nearly 1,500,000 acres of combined public and private forest in production, Humboldt County alone produces 20 percent of total volume and 30 percent of the total value of all forest products produced in California. Humboldt County contains over 40 percent of all remaining old growth coast redwood forests, the vast majority of which are protected or strictly conserved within national, state, and local forests and parks. Numerous large watersheds containing scenic rivers and tributary streams are located in Humboldt County, which provide habitat for wildlife, recreation, and drinking water. Humboldt County also contains sweeping vistas of oak woodlands and meadows that are largely utilized for ranching of cattle, goats, and sheep, which support the local meat and cheese industry. Humboldt County’s varied and extensive Pacific Ocean coastline allows for a wide range of scenic vistas from SR 101 and from beaches, state parks, and Coastal Access points.

Visual Character of the Study Area

The City is a quaint, coastal city containing a dense and compact urban core centered around the Plaza and Downtown, with a series of varied and dispersed residential neighborhoods extending into the hills and bordering agricultural areas. Residences exist consistently throughout the study area, and industrial land uses are concentrated in certain portions of the study area (such as the Gateway Area and West End / Aldergrove Employment Center located in the northern portion of the City). Numerous Victorian-era homes and Victorian-era architectural buildings exist within Arcata, showcasing the area’s historic Victorian-era roots of economic prosperity and expansion, predominantly due to gold mining and logging. For the most part, buildings are small in scale and only a few buildings are three stories or more in height, although taller buildings exist within the Cal Poly Humboldt campus, as well as in the Creamery District and on the Plaza. Arcata is a vibrant town for artistic expression, as demonstrated by the numerous community events that offer the public opportunities to shop for produce, jewelry, homeware, clothing, and other goods from local producers, artists, and vendors, as well as view art and theater performances, listen to live music, and dance. Arcata is generally bordered to the southwest and west by Humboldt Bay and the Pacific Ocean, to the north by the Mad River and to the east and south by redwood forest. Extensive agricultural lands exist along the City’s western fringe in the area known as the Arcata Bottom, which extends outside of City limits west to the Mad River Slough and the Manila Dunes. The City

contains a variety of scenery including redwood forest, riparian, agriculture and bayfront, a variety of urban, suburban, and industrial neighborhoods, and views of expansive pastures and open space in the adjacent Arcata Bottoms.

According to the General Plan 2020, numerous coastal and non-coastal scenic highways, designated by the City, exist within the study area including:

- 7th Street and Bayside Road, from 7th Street overcrossing to Crescent Drive
- Bayside Cutoff, from SR 101 to Old Arcata Road
- Old Arcata Road, from Bayside Cutoff to Crescent Drive (portion within the study area, which excludes the lower approximately 0.35 mile)
- Samoa Blvd, from Crescent Drive to Manila (portion within the study area)
- Janes Road, from 11th Street to Foster Avenue
- SR 101, from the southerly City boundary to the Mad River (portion within the study area, which excludes the northern 0.85 mile)
- South I Street, from Samoa Blvd South
- South G Street, from H Street to SR 101
- All public roads west of the City in the Arcata Bottoms (predominantly outside of the study area)
- Fickle Hill Road (lower 0.20 mile)
- Golf Course Road (lower 0.20 mile)
- L.K. Wood Blvd from the St. Louis Road overcrossing to 14th Street

Caltrans operates the Scenic Highway Program, which is further described in Section 3.2.3 (Regulatory Framework). State Route 299 from SR 101 to Highway 96 is considered eligible to be a State Scenic Highway, of which the lower 1.5 miles of Highway 299 is within the study area (Caltrans 2019).

Visual Character of the Gateway Area

Currently, the Gateway Area contains a mixture of uses, including heavy- and light-industrial, retail, residential, and others, with a disjointed sense of identity. The Gateway Area once provided easy access to railways connecting Arcata to lumber mills along the Samoa Peninsula and the City of Eureka. As such, it was a prime location for industrial uses and continues to be the location of various industrial companies such as Industrial Electric, Humboldt Wholesale, Wing Inflatables, AmeriGas, and numerous auto repair and detailing shops. However, interspersed with these industrial uses are historic homes, boutique shops, condominiums, theaters, gyms, pubs, and restaurants.

Visual Character of Remaining Infill Opportunity Zones

Valley West Opportunity Zone

The visual character of the Valley West Opportunity Zone (33.9 acres) can be described as predominantly commercial. It contains a shopping center, visitor-servicing businesses along Valley West Boulevard, a mix of commercial and industrial businesses along Giuntoli Lane, and surrounding residential areas. Its location between two freeways makes this area the major highway-oriented visitor-serving area of the City. Most of the hotel and motel rooms and franchise restaurants in the City are located on Valley West Boulevard. The Valley West Area is near Carlson Park, the City's only access to the Mad River.

Craftsman's Mall / St. Louis Opportunity Zone

This area is near Cal Poly Humboldt's campus and is surrounded by lower density residential zoning districts. The Craftsman's Mall / St. Louis Opportunity Zone is approximately 41.8 acres, of which 10.5 acres are owned by Cal Poly Humboldt and are planned to contain new student housing and amenities. The area also includes a lumber mill, located adjacent to the Cal Poly Humboldt project site, that is in full operation. Scattered low-density housing and open space exists throughout the northern portion of this area, and moderately dense housing (with

some vacant areas) exists throughout the southern portion. The future Annie and Mary Trail, located along the Northwestern Pacific railroad tracks, will traverse the northern portion of this opportunity zone.

Downtown Opportunity Zone

The Downtown Opportunity Zone is in the City's center of commerce. The Downtown is near Cal Poly Humboldt, the Plaza, the Arcata Ball Park, shopping, restaurants, the Creamery District (located within the Gateway Area), and three grocery stores. The Downtown and surrounding near Downtown areas encompass over 53.3 acres comprising a variety of land use designations. This area is generally built out; however, it is considered an Infill Opportunity Zone because it contains some parcels that have significant potential for redevelopment with modified zoning, as well as several smaller parcels that could either be redeveloped, modified, or rebuilt if the zoning allowed more flexibility. The Downtown Opportunity Zone contains predominantly businesses at its core with residential houses and apartments surrounding the business core.

3.2.3 Regulatory Framework

Federal

The National Historic Preservation Act of 1966, administered by the National Park Service based on the Secretary of the Interior's standards for the protection and preservation of historic places, established a formal process and institutions to protect and preserve resources of national importance.

State

California Scenic Highway Program

Caltrans manages the California Scenic Highway Program to preserve and protect scenic highway corridors from change which would diminish the aesthetic value of lands adjacent to highways. No State-designated scenic highways or scenic highway view sheds are located in the Project vicinity; however, State Route 299 from SR 101 to Highway 96 is considered eligible to be a State Scenic Highway, of which the western 1.5 miles of Highway 299 is within the study area (Caltrans 2023).

California Coastal Act

The California Coastal Act was enacted by the State Legislature in 1976 and is the primary law that governs the decisions of the California Coastal Commission. The California Coastal Act outlines, among other things, standards for development within the Coastal Zone. The majority of the study area is outside of the Coastal Zone; however, the Coastal Zone exists within a 79-acre area within the western central portion of the study area, between the City boundary and 27th Street, Alliance Road, and Spear Avenue. This area is under "Local" jurisdiction, which is regulated by the City of Arcata's Local Coastal Program. The southern portion of the study area - the approximately 2,790-acre area located south of Samoa Blvd, and west of Old Arcata Road (which includes approximately 1,250 acres of Baylands) - is also within the Coastal Zone and is predominantly within the "State" jurisdiction, which is regulated by the California Coastal Act and enforced by the California Coastal Commission. There are also portions of this southern Coastal Zone area within the "Appeal" jurisdiction, which is regulated by the local municipality (the City of Arcata's Local Coastal Program) but is appealable to the California Coastal Commission, as well as areas under "Local" jurisdiction.

The following text includes Coastal Act regulations relevant to aesthetic resources.

Section 30251

(Scenic and Visual Qualities) under Article 6 (Development) of the California Coastal Act, states, "the scenic and visual qualities of coastal areas shall be considered and protected as a resource of public importance. Permitted development shall be sited and designed to protect views to and along the ocean and scenic coastal areas, to minimize the alteration of natural landforms, to be visually compatible with the

character of surrounding areas, and, where feasible, to restore and enhance visual quality in visually degraded areas."

Local

This section includes the City's existing General Plan 2020 policies, City Local Coastal Program policies, and the proposed General Plan 2045 policies related to aesthetic resources.

City of Arcata General Plan 2020

The City of Arcata General Plan 2020 addresses aesthetic resources and community design in its Resource Conservation and Management Element. The following policies from the Arcata General Plan 2020 were used to analyze the difference in existing versus proposed policies in the General Plan 2045.

Policy D-1: Overall Community Design Character

Objective. *Maintain a community with diversity and quality in the built environment; with small-scale structures that are harmonious with their neighborhood context; and with a sharp physical and visual distinction between the urban area and the surrounding open space lands.*

Applicable sub-policies:

- ***D-1a. Maintain small scale of building.*** *Buildings shall be designed to maintain the small-scale character of the community.*
  1. *This may be accomplished by breaking larger developments into smaller buildings rather than constructing a single large, monolithic building.*
  2. *This shall be accomplished by avoiding large, unbroken expanses of walls and roof planes.*
  3. *This shall be accomplished by providing articulation in building mass, surfaces, rooflines, wall planes, and facades, and including architectural ornamentation.*
- ***D-1b. Emphasize Arcata Plaza area as the main community focal point.*** *Buildings fronting on streets around the Arcata Plaza shall be multi-story. Architectural and other design elements shall emphasize the importance of the Arcata Plaza as the community's main focal point for commerce, entertainment, and special events. Designs shall promote pedestrian access and continuity of retail space at the street level. Parking should be accommodated off-site to the extent practicable.*
- ***D-1c. Promote quality and diversity of design compatible with neighborhood context****. Site and building design shall be harmonious with the neighborhood context, including existing structures. Within new subdivisions, diversity in building appearance rather than repetitive designs is encouraged.*
- ***D-1d. Preserve natural landforms and landscape features.*** *Site designs shall have the minimum disturbance necessary to natural conditions such as existing contours and vegetation, and shall preserve, to the maximum extent practicable, any unusual natural features.*
- ***D-1e. Promote energy efficiency and solar access.*** *Site and building design shall emphasize energy efficiency and solar orientation.*
- ***D-1f. Create buffers between incompatible land uses.*** *At boundaries between different land-use designations, and where different and incompatible land-uses are adjacent, buffer areas shall be incorporated into site design for new development. Buffers may consist of additional setbacks, landscaping, and visual and noise barriers such as fences or walls.*
- ***D-1g. Provide for bicycles, pedestrians, and transit in design.*** *Design of commercial, industrial, and multi-family housing shall incorporate provisions for bicycle and pedestrian circulation, and bus transit. Facilities should be located and designed so that these alternative travel modes are fully interconnected.*
- ***D-1h. City edges****. The development pattern shall be managed to retain the sharply demarcated physical and visual separation of Arcata from the urbanized areas of Eureka and McKinleyville. This shall be accomplished by:*
  1. *Restricting development in surrounding open space lands to very low density (minimum parcel size*

from twenty to sixty acres).

2. *Requiring that construction in hillside areas shall be sited so that it does not intrude above the ridgeline.*
3. *Retaining existing vegetation, providing landscape screening, and shielding exterior lighting to minimize visible impacts of any development on prominent sites or in open space areas, especially hillside sites visible from State Route 101.*

- ***D-1i. Renewable green building.*** *Site and building design shall incorporate green building concepts including maximizing use of recycled materials and recycling, energy efficiency, solar access, insulation, energy efficiency, use of toxic-free materials, natural lighting, native landscaping, permeable surfaces around structures, and minimizing construction waste generation.*

Policy D-2: Downtown (Central-commercial) Design

Objective. *Maintain and continue to develop a built environment which accentuates the Plaza and surrounding downtown lands designated in the Commercial-Central use category as the commercial and cultural hub of the city, maintains the historical flavor of building and site design, integrates bicycle and pedestrian facilities, and which incorporates appropriate trees and other "softscape" elements.*

Applicable sub-policies:

- ***D-2a. Design of Arcata Plaza.*** *The basic historical pattern or design of the Plaza shall be retained, including the symmetrical arrangement of pathways, the open expanse of lawn, and the central focal point of the McKinley statue.*
- ***D-2b. Streetscape design****. Future changes to public street rights-of-way in the downtown shall focus on improving amenities and safety for pedestrians, bicycles, and reasonable and safe vehicle access. The following design features should be considered in future improvement projects:*
  1. *Increase the width of sidewalks.*
  2. *Demarcate pedestrian crosswalks with pavement marking or special paving materials or colors.*
  3. *Provide or improve bike lanes, where appropriate.*
  4. *Incorporate street trees in appropriate locations.*
  5. *Use special paving materials or patterns for sidewalks at key locations or intersections.*
  6. *Provide landscape screening between parking lots and the street.*
  7. *Provide street and parking lot lighting that is adequate for safety but that is not overly bright.*
  8. *Establish a uniform lighting fixture and post (or pole) design for streetlights.*
  9. *Establish a uniform design for various items of “street furniture,” such as benches, trash receptacles, water fountains, etc.*
  10. *Require undergrounding of utilities and elimination of poles and overhead wires.*
- ***D-2c. Alleys.*** *The existing alleys in the downtown shall be retained and should be improved as multi-functional accessways. Businesses are encouraged to use alleys for secondary entries. Enhancements should emphasize amenities and safety for pedestrians, such as improved surfacing, lighting, landscaping, and enclosures for garbage and recycling receptacles where space permits.*
- ***D-2d. Street trees****. The City shall encourage the installation of street trees within the downtown area. The City shall develop a comprehensive street tree planting and maintenance program which includes the following components:*
  1. *Identification of streets where trees may be installed.*
  2. *Standards for the location of street trees; generally, locations will either be in wells located between on-street parallel parking areas, in cutouts within the sidewalk where the sidewalk is of sufficient width (7 feet or more), or in containers where the preceding locations are not workable.*
  3. *Standards for spacing between street trees (usually 20 to 35 feet on center).*
  4. *Specification of a list of acceptable tree species and the appropriate streets and locations for each species.*
  5. *Standards for size of trees and specifications for their installation (e.g. size of well, staking,*

materials).

6. *Identification of responsibilities, procedures, and standards for tree maintenance. Where space is insufficient for street trees, trees may be incorporated into the landscape design on private property adjacent to the street property line.*

- ***D-2e. Design criteria for new structures and additions.*** *The height, scale, and mass (volume) of new buildings and additions to existing buildings shall be compatible with other buildings in the immediate vicinity. Each building shall have an entry from the sidewalk to the street-level floor. Building elevations shall be articulated: long, continuous, unbroken wall and roof planes should be avoided. The visual organization and proportions of building elevations — including the size, spacing and shape of window and door openings — should be consistent with neighboring buildings. Architectural detailing and ornamentation, such as cornices, eaves, recessed or covered entryways, and awnings, are encouraged. Design review applications shall include depiction of buildings on adjoining lots, either in elevation drawings or photographs.*
- ***D-2f. Design criteria for vacant lots on Arcata Plaza****. In addition to the criteria in D-2e, the following criteria shall also apply to development on vacant parcels with frontage on streets surrounding the Plaza:*
  1. *All buildings shall have a minimum height of two stories to create a sense of enclosure for the City's central open space and focal point.*
  2. *All floors of buildings should be parallel to and at the street parcel line.*
  3. *Any building located at a corner or intersection shall incorporate architectural features at the ground floor which emphasize pedestrian circulation, such as building cut-offs, walk-through arcades, pedestrian spaces, or similar elements.*
  4. *Parking is encouraged to be provided off-site; if any on-site parking is provided, it shall be accessed from the rear.*
  5. *Loading docks shall not be required.*
- ***D-2g. Design criteria for remodeling existing facades (storefronts).*** *In remodeling facades, the distinguishing original qualities or character of a building, structure, or site and its environment shall not be destroyed. The removal or alteration of any historic material or distinctive architectural features shall be avoided whenever possible. Deteriorated architectural features shall be repaired rather than replaced whenever practicable. Storefronts shall be designed to fit inside the original opening and not extend beyond it. Contemporary design for alterations and additions to existing structures shall not be prohibited when such alterations and additions do not destroy significant historical or architectural character of the property. The size and proportions of any additions shall be compatible with the original building.*
- ***D-2h. Site design, including parking areas****. The placement of new buildings and building additions on a site should be compatible with site layout on neighboring properties. In general, buildings should be sited immediately adjacent to the sidewalk and any onsite parking should be placed to the rear of the building. Parking areas shall be separated from the street and sidewalk by a landscape buffer of at least six feet. Trees that reach a mature height of at least twenty feet should be included in the interior of all parking lots with more than two parking spaces. Pedestrian spaces, circulation areas, or gathering areas are encouraged as design elements.*
- ***D-2i. Design of signs.*** *Permanent signs in the Central-Commercial area shall be oriented to pedestrians rather than automobile traffic, and shall conform to the following criteria:*
  1. *Signs shall be placed so that they do not obscure other building elements such as windows, cornices, or decorative details.*
  2. *Size, materials, style, and color shall complement the building façade and shall be compatible with the surrounding area.*
  3. *Copy shall be limited to icons, logos, business information, and hours of operation (rather than advertising copy).*
  4. *Flush-mounted signs with copy in a specifically designated horizontal band is the preferred type; monument and hanging (cantilevered) signs may be allowed, provided that the latter has a vertical*

clearance of at least 7.5 feet and an encroachment permit is obtained.

5. *Pole signs shall be prohibited, except for public traffic, directional and safety signs.*
6. *When lighted, signs shall be designed to minimize glare and with the minimum amount of illumination necessary to make the sign legible; neon signs with distinctive designs are acceptable. Plastic-faced internally lit signs should be discouraged.*
7. *At the time of any future alterations of an existing sign, the sign shall be required to be modified to conform in its entirety to these policies. Alterations shall mean any change to the structure, area, or height of a sign, but shall not mean a change in copy.*

- ***D-2j. Incorporation of amenity features in new development**. Any new development shall incorporate an appropriate combination of project enhancements in lieu thereof. Potential enhancements include, but are not limited to, the following: special paving materials in parking lots, special architectural features, public art, including sculpture and murals flower beds, outdoor spaces for public use, window boxes, street trees or street furniture courtyards, fountains or other water features, awnings, secondary pedestrian access from alleys, planted wall trellises, balconies or decks on upper floors, recessed entryways, sidewalk and/or entry mosaics or decorative tile.*

Policy D-3: Scenic Routes, Resources, and Landscape Features

***Objective**. Identify and protect scenic routes, resources and landscape features. Retain natural features, coastal scenic resources, and scenic vistas as important aesthetic components of the built environment and visual and associative links to nature. Minimize impairment and obstructions of scenic views to the minimum necessary to allow reasonable development.*

Applicable sub-policies:

- ***D-3a. Designation of coastal scenic highways**. The following coastal scenic highways are hereby designated:*
  1. *7th Street and Bayside Road, from 7th Street overcrossing to Crescent Drive*
  2. *Bayside Cutoff, from State Route 101 to Old Arcata Road*
  3. *Old Arcata Road, from Bayside Cutoff to Crescent Drive*
  4. *Samoa Blvd. (State Route 255), from Crescent Drive to Manila*
  5. *Janes Road, from 11th Street to Foster Avenue*
  6. *State Route 101, from the southerly City boundary to the Mad River*
  7. *South I Street, from Samoa Blvd.*
  8. *South G Street, from H Street to State Route 101*
  9. *All public roads west of the City in the Arcata Bottoms*
- ***D-3b. Designation of non-coastal scenic highways**. The following non-coastal scenic highways are hereby designated:*
  1. *Fickle Hill Road*
  2. *Jacoby Creek Road*
  3. *Golf Course Road*
  4. *L.K. Wood Blvd. from the St. Louis Road overcrossing to the 14th Street*
- ***D-3c. Design policy for projects affecting scenic highways**. The following standards shall apply to any development which affects scenic highways:*
  1. *Billboards or other off-premises signs are prohibited.*
  2. *Landscape planting along State Route 101 shall not interrupt scenic views to the bay or eastward across agricultural lands*
  3. *New development or redevelopment in the industrial area of South "G" Street shall provide dense landscape screens along all perimeter lot lines visible from State Route 101.*
  4. *The City shall work jointly with the County of Humboldt, Caltrans, and the Coastal Commission to enhance scenic views along scenic highways, particularly State Route 101 and 255 corridors.*

- ***D-3d. Scenic entryways.*** *The appearance of the following additional entryways should be enhanced with appropriate landscaping and entry signs or structures:*
  1. *Samoa Blvd. (State Route 255) between Jackson Ranch Road and K Street*
  2. *State Route 101 between Bayside cutoff and Samoa Blvd.*
  3. *State Route 101 between the Mad River and Giuntoli Lane*
  4. *State Route 299 from North Bank Road to Giuntoli Lane*
  5. *Old Arcata Road from Bayside Cutoff to Jacoby Creek Road*

  These public improvements may include uniform landscaping, pedestrian enhancements, and directional signing.
- ***D-3e. Arcata Bay – Open waters, shoreline, and tidal marshes.*** *Proposed land uses and development shall not significantly alter the natural appearance or landforms of the waters, shoreline, and tidal marshes of Arcata Bay, which are designated in the natural resource land-use category. Where these resources are visually degraded, developments shall be required to restore or enhance their appearance. Development within the area bounded by Samoa Blvd., Butcher's Slough and Gannon Slough shall include local native plant landscaping, screenings and other measures to ensure compatibility with scenic coastal resources and with the educational, recreational, wildlife and other uses of the Humboldt Bay National Wildlife Refuge and the Arcata Marsh and Wildlife Sanctuary.*
- ***D-3f. Bay and ocean views.*** *Views of Arcata Bay and the Pacific Ocean from vantage points along public streets in hillside areas of Arcata shall not be blocked by development. Any impairment or partial obstruction of these ocean views from new development shall be the minimum necessary to allow reasonable development.*
- ***D-3g. Wooded hillsides.*** *Views of wooded hillsides forming the City's eastern edge from vantage points along public streets west of the State Route 101 should not be blocked by development.*
- ***D-3h. Farmlands and open countryside.*** *Views of farmlands and open countryside — in the Arcata Bottom, along the State Route 101 south of Samoa Boulevard, north of Giuntoli Lane, and along State Route 255 west of the city, should be protected. New development should be sited and designed to minimize any impairment of such views.*
- ***D-3i. Preservation of hedgerows (windrows, or rows of trees).*** *Preservation of the following windrows, hedgerows, or groves of trees shall be encouraged:*
  1. *The cypress windrows separating Arcata Heights from the Sunset neighborhood.*
  2. *The trees along the north and western edges (Alliance Road) of the Sunset neighborhood.*
  3. *The trees on the small knoll adjacent to State Route 101 south of Spear Avenue.*
  4. *The windrow of trees adjacent to the west side of the State Route 101 between 7th and 14th Streets.*
  5. *Windrows in the Arcata Bottom.*
  6. *The row of trees along the westerly side of State Route 101 at the State Route 299 interchange.*
  7. *The groves of eucalyptus and other trees which line Bayside Road between Union Street and Crescent Way.*
  8. *The elm trees on J Street between 14th and 16th Streets.*
  9. *Redwood Grove at 7th and Union, and Bayside Road to be left intact.*
- ***D-3j. Streamside riparian areas.*** *Creeks or drainage channels and any associated riparian vegetation shall be retained in a natural state and incorporated into site design as a visual asset to development which adjoin them.*

Policy D-4: Subdivision Design

Objective. *Achieve subdivision design which accommodates orderly growth; assures proper development of land and access to lots; promotes open space retention; ensures adequate circulation, utilities, and services; preserves existing landforms; and retains significant vegetation.*

Applicable sub-policies:

- ***D-4a. Design of roadways and subdivision improvements.*** *New subdivisions shall comply with the following criteria:*
  1. *Unless it is demonstrated to be infeasible, all new lots shall have frontage on a public street or improved alley. Where direct access is infeasible, the number of lots or units to be served by a common access driveway easement shall be based on accessway design meeting all, but not limited to, these requirements: public safety access, ingress, egress, parking, utilities, drainage, and environmental issues.*
  2. *The arrangement of proposed streets shall conform to the Transportation Plan, where possible. When not shown on the Street Plan, the design shall provide for the appropriate connections to existing streets. Cul-de-sacs should be avoided where possible.*
  3. *The subdivision design may utilize narrow or "skinny" streets and various traffic calming approaches; alleys are encouraged for access to garages.*
  4. *Gated subdivision streets shall be prohibited in order to maintain a sense of community.*
  5. *Use of natural drainage techniques in subdivision design is encouraged. In general, curbing and gutters are appropriate for street drainage, safety and delineation and protection of pavement edge. Where curbing is not required, some other type of edge definition and stabilization shall be furnished.*
  6. *Natural drainage patterns shall be preserved to minimize potential slippage and flooding. Building site grading shall be contoured to direct water away from structures.*
  7. *No lighting shall be allowed that results in illumination above the tree canopy.*
  8. *Sidewalks and bikeways shall be provided; sidewalks may be furnished on one side of the street only. In planned developments, additional sidewalks and bikeways may be located away from the street.*
  9. *Illumination of streets shall be unobtrusive and the lowest intensity compatible with safety.*
  10. *Landscaping shall be provided as part of subdivision design; plantings shall include street trees or an equivalent number of trees planted on individual lots adjacent to the street frontage.*
  11. *Where subdivisions abut a major street or railroad, or include more than one land-use or housing type, landscape buffers shall be included at appropriate locations to create a visual screen and minimize any adverse impacts.*
- ***D-4b. Lot patterns.*** *Lot boundaries should be regular in shape and lots should either have direct access to a public street or to an access easement which connects to a public street. Clustering of lots with common open space areas and/or common parking lots is encouraged.*
- ***D-4c. Grading and hillside subdivisions.*** *In hillside areas, subdivision design and grading shall minimize disturbance to natural landforms, not destroy visual quality, nor create conditions that could increase the risk of landslides, flooding, or erosion. Designs shall comply with the following criteria:*
  1. *Street layout should in general be parallel to topographic contours to reduce the extent of cut and fill slopes.*
  2. *Long, continuous, or unbroken manufactured slopes should be avoided.*
  3. *Graded slopes should be contoured by varying slope increments and undulating banks vertically and horizontally; building pad elevations should be varied to avoid the appearance of monotonous, flat, level pads.*
  4. *Generally, slopes greater than 2:1 (horizontal: vertical) should be avoided.*
  5. *Permitted densities shall be adjusted in designated hillside areas such that the steeper the slope, the less the allowed density; in such areas, at least fifty percent of each new lot shall be retained as ungraded "natural area."*
  6. *Along ridgelines, new development or lighting which would extend above the tree canopy shall be prohibited.*
  7. *Parallel on-street parking should not be provided on steep street segments; in such areas, alternative designs for on-street parking shall be required.*

- ***D-4d. Retention of natural features****. Design of subdivisions shall be based upon an analysis of the natural conditions and features of the site. To the maximum extent practicable, development shall be located to preserve natural features and avoid areas of environmental sensitivity, including but not limited to: wetlands, significant or mature trees or stands of trees, creekside riparian habitat areas, floodplain areas, and areas with slopes greater than thirty percent. Residential structures, including decks and balconies, shall not extend into significant natural areas.*
- ***D-4e. Open space and parks.*** *New residential subdivisions shall either be required to dedicate land for public parks or stormwater detention facilities, provide commonly owned and maintained park or open space lands for use by residents of the subdivision, pay a fee in-lieu thereof, or some combination of the foregoing.*

Policy D-5: Residential Design

Objective. *Create residential living environments which meet the needs of residents, are aesthetically pleasing, provide for personal safety and privacy, promote social interaction, maintain continuity with the community's past, and provide for leisure needs. Blend residential design objectives with neighborhood conservation area objectives expressed in the Historical Preservation Element.*

Applicable sub-policies:

- ***D-5a. Multi-family housing design.*** *Within each neighborhood where multi-family is allowed by the Land-Use Element, multi-unit housing designs should comply with the following criteria:*
  1. *Buildings should maintain the scale and character of other residential structures in the immediate vicinity and avoid abrupt changes in height and bulk between structures.*
  2. *Buildings should be grouped compactly to provide more usable open space.*
  3. *Building elevations should be articulated and long, continuous wall and roof planes should be avoided. Architectural features such as bay windows, balconies, porches, and similar elements are encouraged.*
  4. *Features should be incorporated into site and architectural designs which provide maximum exposure to sunlight and protection from rainstorms and other adverse climatic conditions (such as covered entryways).*
  5. *Site and building design shall incorporate features to mitigate noise from nearby noise sources (see Noise Element).*
  6. *Sufficient useable outdoor open space should be provided to accommodate the recreation and leisure needs of the residents, of the development, and individual households.*
  7. *Individual units should be designed to be readily distinguishable from one another from the exterior.*
  8. *Parking should be designed to protect the privacy of residents and prevent intrusion of noise and lights from vehicles.*
  9. *Parking lots shall be landscaped with trees that reach a mature height of at least twenty feet and shall be visually screened from the street by solid walls, fences, or a planted landscape buffer of at least six feet in width. Site design should incorporate safety features that maintain visibility and provide security lighting.*
  10. *Service and storage areas, such as for recycling and garbage, shall be screened by fencing or walls; appropriate landscape planting and setbacks from adjacent properties shall be provided.*
- ***D-5b. Single-family residential design.*** *The intent in single-family residential design shall be to allow maximum flexibility consistent with maintaining existing community character. Maintaining character means architectural style consistency, structures proportional to the site and surroundings, and harmony with the design of adjacent buildings. Good design respects its neighbors, is properly sited for privacy and solar access, minimizes disturbance of natural site conditions, and is landscaped to complement the streetscape, including street trees where appropriate.*

  Design of single-family house on existing lots in hillside areas shall adhere to the following additional criteria:

1. *Disturbance of existing landforms (cut and fill) shall be minimized.*
2. *Terrain-adaptive architectural designs which fit into the contour of the hillside are encouraged, including:*
   a. *Reduced-footprint design with multi-level structures;*
   b. *Multiple "step-up" or "step-down" structures;*
   c. *Stilt houses, with enclosure or area underneath the building.*
3. *Significant trees and drainageways should not be disturbed.*
4. *Development should be confined to portions of a site which are less steeply sloped.*
5. *Garages should be located under or over the structure depending on whether the lot is uphill or downhill from the street.*
6. *The scale and character of buildings should be matched with the terrain, scale, and character of the surrounding neighborhood.*

Policy D-6: Design of Commercial and Industrial Development

Objective. Create commercial centers and industrial areas which are functional, suited to the needs of the particular businesses, responsive to site conditions, and compatible with the neighborhood context.

- ***D-6a. Design of commercial development.*** *The following criteria shall apply to design of new commercial development, except for the Plaza area (which is addressed in Policy D-2):*
  1. *To encourage pedestrian access buildings should be sited so that entries and front facades face the public sidewalk; loading docks and vehicular entrances shall be located to the side or rear.*
  2. *When located adjacent or near to residential areas, buildings should respect the residential character by avoiding long, uninterrupted expanses of wall and roof planes, and by incorporating architectural features such as covered entries or porches, cupolas, towers, arbors or pergolas, etc. which add variety and interest to larger buildings.*
  3. *Pedestrians and bikes should be accommodated through appropriate location of walkways and rain-sheltered entrances to buildings.*
  4. *Drive-through service windows for restaurants shall be restricted to the Valley West area.*
  5. *Where commercial development abuts residential or other non-commercial uses, appropriate visual and noise buffers shall be included in the site design, such as increased setbacks or landscaped screening.*
  6. *Service and storage areas shall be screened by fencing and appropriate landscape plantings.*
  7. *The siting and design of buildings shall promote energy-efficiency and solar access, and shall minimize impacts on other nearby uses.*
  8. *Parking areas are encouraged to be provided to the rear or side of buildings and include trees that reach a mature height of at least twenty feet whenever feasible.*
  9. *Noise impacts shall be minimized through acoustical features in building design and on site sound attenuation.*
- ***D-6b. Design of industrial development.*** *In addition to the criteria stated in Policy D-6a, the following criteria shall also apply to new industrial development:*
  1. *Building facades that include regional materials (e.g., locally produced wood, stone and recycled products) are encouraged. Prefabricated and manufactured materials may be used only where they are compatible with surrounding development.*
  2. *Outdoor storage areas, including storage of trucks and equipment, shall be screened from view from adjacent streets and parcels by appropriate fencing and landscaping.*
- ***D-6c. Design of institutional development****. Since institutional uses—such as churches, schools, government facilities, and others—are frequently located within residential areas, their design shall be reviewed for compatibility with the adjacent residential neighborhood. In addition, the City requests that HSU, school districts, and other institutional entities adhere to the following criteria, which shall apply to design of any facilities within Arcata:*

1. *Long, uninterrupted expanses of wall and roof planes should be avoided and architectural features which add interest and variation, such as porches, cupolas, towers, arbors or pergolas, etc., should be incorporated.*
2. *Appropriate buffers and screening should be provided between institutional uses and adjacent residential uses, including increased setbacks, fencing, and landscaping.*
3. *The massing of buildings and the visual organization of facades, including the proportion of window and door openings to total wall surface, exterior materials and colors, and architectural detailing and ornamentation, should be designed to harmonize with any adjacent residential uses.*
4. *Appropriate setbacks and landscaped buffers should be provided to minimize noise and visual impacts.*

- ***D-6d. Design of signs.*** *The following criteria shall apply to all signs, except those located within the Central-Commercial Area use category:*
  1. *Signs shall be placed so that they do not obscure other building elements such as windows, cornices, or decorative details.*
  2. *Size, materials, style and color shall complement the building facade and shall be compatible with the surrounding area.*
  3. *Copy shall be limited to icons, logos, services identification, and hours of operation (rather than advertising copy) except as required by law or ordinance.*
  4. *Flush-mounted signs and monument signs are the preferred types; no more than one free-standing sign may be allowed per business street frontage (including alleys), and freestanding signs shall not exceed fifteen feet in height.*
  5. *Pole signs are discouraged; when permitted, such signs shall not exceed fifteen feet in height.*
  6. *Signs shall not be of a height or design which is intended to be read from the State Routes 101 or 299, except for in the commercial visitor-serving district.*
  7. *When lighted, signs shall be designed to minimize glare and with the minimum amount of illumination necessary to make the sign legible; neon signs are acceptable.*
  8. *All off-premises (or off-site) business identification and advertising signs are prohibited.*
  9. *The planned sign program is encouraged whenever there are multiple businesses on a site; no more than three signs may be allowed per parcel except through approval of a planned sign program permit. The planned sign program shall require harmony in shape, placement, materials, and other appropriate design elements for all signs on the site.*
  10. *At the time of any future alterations of a lawfully permitted existing sign, except for a change in copy, the entire sign shall be modified as necessary to conform to these policies.*

Policy D-7: Landscape Design

Objective. Promote landscape designs which are appropriate for the climate zone and the specific site conditions, integrate harmoniously with the scale and architecture of buildings on the site, improve the overall aesthetic appearance of the city and its neighborhoods, and serve to protect the general safety and welfare.

Applicable sub-policies:

- ***D-7a. Landscape plans required.*** *A landscape plan drawn to scale shall be required for all new development subject to discretionary review by the City. The plan shall identify existing and proposed trees, shrubs, groundcovers, and other landscape elements. Native species are encouraged for all new landscaping.*
- ***D-7b. Planting area required.*** *A minimum landscape planting area shall be required in all commercial, industrial, and multi-family residential land-use zones; these shall be contained in the zoning ordinance and expressed as a percent of site area. [Revised by Ordinance No. 1377, September 2008]*
- ***D-7c. Parking lot landscaping.*** *All parking areas, other than single family residential, containing two or more parking spaces shall be landscaped. Landscaping shall include a minimum of a six-foot wide screen or buffer between the parking area and any public street. Trees that reach a mature height of at*

least twenty feet shall be provided within the parking area at a ratio of one or more trees to each five parking spaces.

- ***D-7d. Site design criteria.*** *Landscaping shall be an integral part of site development, connecting site design elements, enhancing the site identify, and creating a pleasing appearance. Landscape designs shall conform to the following criteria:*
  1. *Existing natural site vegetation should be incorporated, to the extent appropriate.*
  2. *Coverage by impervious surfaces should be minimized in order to reduce runoff.*
  3. *Cut and fill slopes shall be landscaped for erosion prevention.*
  4. *Landscaping should include trees adjacent to the public street right of way, where appropriate.*
  5. *Consideration should be given to native plant species and those non-invasive exotics which have demonstrated adaptability to local climate.*
  6. *Where a development borders a major street, railroad, or different land-use type, a landscape buffer shall be provided to create a visual screen, promote privacy, and to shield the development from any adverse external effects, and to shield neighboring properties from any adverse effects of the development. The buffer may include fencing, berms, plantings, or a combination thereof. The appearance of fences from public streets should be softened with plant materials.*
  7. *The design for a particular site should harmonize with the surrounding landscape, including the landscape design of adjacent lots.*
  8. *Site design should incorporate safety features such as maintaining visibility and providing security lighting.*
- ***D-7e. Upgrade of non-conforming landscape****. When improvements are made to structures on sites where landscaping is non-conforming, landscaping should be required to be upgraded if feasible.*
- ***D7-f. Maintenance of required landscaping.*** *All required landscape plantings shall be properly maintained to assure survival; any non-surviving plants shall be replaced.*

Policy OS-1: Overall Open Space System

Objective. Designate, maintain, and enhance the quality, and increase the amount of permanently protected open space in the Arcata Planning Area, including: natural resource areas; resource production areas; outdoor recreation areas; and areas subject to health and safety hazards. These areas are to be protected, linked together in a network wherever practical for accessibility, managed for resourced production and maintained for enjoyment by City residents and visitors.

Applicable sub-policies:

- ***OS-1a. Designation of open space lands with native biotic resources and ecosystems.*** *The native biotic resources of the forested western slopes of Fickle Hill, river and creek riparian zones, the Arcata and Aldergrove Marshes, and Arcata Bay tidelands and sloughs are unique ecosystems that have important habitat values in addition to their other open space values. These areas as designated on Map OS-a shall be protected as open space for their resource values.*
- ***OS-1b. Open Space Plan Map****. The areas designated as open space are shown on Figure OS-a. Generally, these lands are designated as A-E, NR, or PF on the land use map. Other lands, where identified open space resources have been preserved through easements or other means, are also subject to this element's policies.*
- ***OS-1f. Designation of lands with scenic, aesthetic, historic, and cultural value.*** *The City has scenic routes, including State Route 101 and Samoa Boulevard; vistas, including the forested slopes of Fickle Hill and the Arcata Bottoms, and areas of historic and cultural value, such as the Plaza. The open and natural characteristics of these areas shall be maintained. Policies for retaining scenic vistas and landscape features are included in the Community Design Element of the General Plan.*

City of Arcata Local Coastal Plan

The following policies within the City of Arcata's Local Coastal Plan (1989) that regulate aesthetic resources include the following.

IV. Development Constraints

IV-14: The City shall identify the following areas as Coastal Scenic Areas:

a. Arcata Bay tideland and water areas

b. All land designated as Natural Resource Protection on the Land Use Map

c. All land between Highway 101 and Old Arcata Road designated Agriculture Exclusive on the Land Use Map

d. All land on the western Arcata plain designated Agriculture Exclusive on the Land Use Map

Proposed City of Arcata General Plan 2045

The following policies from the proposed City of Arcata General Plan 2045 Design Element and Gateway Area Plan address aesthetics:

Policy D-1: Overall Community Design

Objective. *Maintain community diversity and quality in the built environment; with structures and other physical features harmonious with their neighborhood context; and with a physical and visual transition between urban area and the surrounding open space lands.*

Applicable sub-policies:

- ***D-1a. Building characteristics.*** *Building design shall consider established City characteristics and planned features and shall offset the neighborhood impact of increased heights and new uses in some areas of the community. This shall be accomplished by:*
  1. *Breaking the massing of larger developments through setbacks rather than constructing a single large, monolithic building.*
  2. *Avoiding large, unbroken expanses of wall and roof planes.*
  3. *Providing articulation in building mass, surfaces, rooflines, wall planes, and facades, and including distinctive architectural features and ornamentation.*
  4. *Parking Lot Locations. Disallow the placement of parking lots along street frontages in the interest of maintaining continuous building frontages along the primary commercial streets and improving walkability. Parking lots and structures must be located behind buildings, or otherwise located subordinate and obscured by design features.*
  5. *Custom Standards Along Designated Streets. Plan for custom use, development, and design standards along designated streets with the objective of generating a more welcoming and vibrant city.*
  6. *Main Building Entrances. Require main building entries to be visually prominent and oriented to a public street or pathway.*
  7. *Pedestrian Connections. Required pedestrian walk paths to connect entrances directly to a public sidewalk.*
  8. *Pedestrian-Friendly Design. Require parking location and design to not detract from pedestrian-friendly streetscapes, walkable neighborhoods, and active and inviting mixed-use districts. Locate parking facilities away from building frontages in the rear of the lot unless determined infeasible in unique circumstances.*
  9. *Minimize Visual Dominance. Screen parking facilities for limited visibility from the street frontage with landscaping, art, or other visually appealing methods.*
  10. *Varied and interesting Facades. Create street-facing building facades that are varied and interesting with human-scale design details.*
  11. *Articulation. Incorporate architectural elements that reduce the box-like appearance and perceived mass of buildings.*
  12. *360-Degree Design. Provide for buildings designed as a unified whole with architectural integrity on all sides of the structure.*

13. *Quality Materials. Ensure quality materials that maintain their appearance over time.*
14. *Design Details. Promote design details and materials compatible with the existing neighborhood design.*

- ***D-1b. Emphasize Arcata Plaza area as the central community focal point.*** *Architectural and other design elements shall emphasize the importance of the Arcata Plaza as a City center for commerce, entertainment, and special events. Designs shall promote pedestrian access and retail space at the back of sidewalk. Parking should be accommodated off-site to the extent practicable.*
- ***D-1c. Promote quality and diversity of design compatible with neighborhood context.*** *Site and building design shall consider neighborhood context, including existing structures, especially when increased structure heights and coverages are proposed. Within new development, diversity in structure facades and materials, rather than repetitive designs is encouraged. Allow for and encourage complementary diversity in building forms and creativity in project design as long as projects support a pedestrian-friendly environment and other General Plan goals. Provide for human-scale and pedestrian-friendly building massing where large buildings are broken into smaller volumes that fit into the surrounding neighborhood.*
- ***D-1d. Preserve natural landforms and landscape features.*** *Site designs shall have the minimum disturbance necessary to natural conditions such as existing contours and native landscape and shall preserve, to the maximum extent practicable, any unusual natural features.*
- ***D1e. Promote energy efficiency and solar access.*** *Site and building design shall emphasize energy efficiency, solar orientation and consider shading of adjacent structures, balancing development needs with solar access.*
- ***D1f. Create buffers between incompatible land uses.*** *At boundaries between different land-use designations, and where different land-uses are adjacent, buffer areas shall be incorporated into site design. Buffers may consist of additional setbacks, landscaping, and visual and noise barriers such as fences or walls. Provide for sensitive transition from the public realm to the private realm. Require buildings to incorporate massing strategies to minimize impacts on adjacent uses.*
- ***D-1g. Provide for bicycles, pedestrians, and transit in design.*** *Design shall incorporate provisions for bicycle and pedestrian circulation, and transit. Facilities should be located and designed so that these alternative travel modes are fully interconnected.*
- ***D-1h. City edges.*** *Development patterns shall be designed to have distinctive physical and visual separations from adjacent communities. This shall be accomplished by:*
    1. *Restricting development in surrounding open space lands to very low density (minimum parcel size from twenty to sixty acres).*
    2. *Requiring that construction in hillside areas shall be sited so that it does not protrude above the ridgeline.*
    3. *Retaining existing vegetation, providing landscape screening, and shielding exterior lighting to minimize visible impacts on prominent sites or in open space areas, especially on hillsides visible from State Route 101.*
- ***D-1i. Renewable green building****. Site and building design shall incorporate green building concepts including recycled materials use, energy efficiency, solar access, insulation, energy efficiency, use of toxic-free materials, natural lighting, native landscaping, permeable surfaces around structures, and minimizing construction waste disposal.*

Policy D-2: Downtown (Central-commercial) Design

Objective. *Maintain and continue to develop a built environment which: accentuates the Plaza and surrounding downtown as the commercial and cultural hub of the city, consider historical building and site features, integrates bicycle and pedestrian facilities, and incorporates appropriate trees and other "landscape" elements.*

- ***D-2a. Arcata Plaza design.*** *The basic historic pattern of Plaza design shall be retained, including the symmetrical pathways arrangement, open lawn expanses, as a community focal point.*

- ***D-2b. Streetscape design.*** *Future changes to public street rights-of-way in the downtown shall include amenities such as street furniture, access and safety for pedestrians and bicycles, including the possibility of "car free" streets. The following design features should be considered in future improvement projects:*
  1. *Increase the width of sidewalks.*
  2. *Demarcate pedestrian crosswalks with pavement marking or special paving materials or colors.*
  3. *Provide or improve bike lanes, with an emphasis on protected bike lanes, where appropriate.*
  4. *Incorporate street trees in appropriate locations.*
  5. *Use special paving materials or patterns for sidewalks at key locations or intersections.*
  6. *Provide landscape screening between parking lots and the street, with preference for parking associated with new buildings behind, or away from street frontage.*
  7. *Provide shielded and directional street and parking lot lighting adequate for safety but that is not overly bright.*
  8. *Consider the possibility of "car free" streets.*
  9. *Strongly encourage undergrounding of utilities to eliminate poles and overhead wires.*
- ***D-2c. Alleys.*** *The existing alleys in the downtown shall be retained and should be improved as multi-functional accessways. Businesses are encouraged to use alleys for secondary entries. Enhancements should emphasize amenities and safety for pedestrians, such as improved surfacing, lighting, landscaping, and enclosures for garbage and recycling receptacles where space permits.*
- ***D-2d. Street trees.*** *The City shall maintain a street trees program with the following components:*
  1. *Identification of streets where trees may be installed.*
  2. *Siting standards, either in wells located between on-street parallel parking areas, in cutouts within the sidewalk where the sidewalk is of sufficient width (7 feet or more), or in containers where the preceding locations are not workable.*
- ***D-2e. Design criteria for new structures and additions.*** *The height, scale, and mass (volume) of new buildings and additions to existing buildings shall take into account other buildings in the immediate vicinity. Each building shall have an entry from the sidewalk to the street-level floor. Building elevations shall be articulated: long, continuous, unbroken wall and roof planes should be avoided. The visual organization and proportions of building elevations — including the size, spacing and shape of window and door openings — should be consistent with neighboring buildings. Architectural detailing and ornamentation, such as cornices, eaves, recessed or covered entryways, and awnings, are encouraged. Design review applications shall include depiction of buildings on adjoining lots, either in elevation drawings or photographs.*
- ***D-2f. Design criteria for remodeling existing facades (storefronts).*** *Distinguishing original qualities or character of a building, structure, or site and its environment shall not be destroyed. The removal or alteration of any historic material or distinctive architectural features shall be avoided whenever possible. Deteriorated architectural features shall be repaired rather than replaced whenever practicable. Storefronts shall be designed to fit inside the original opening and not extend beyond it. Contemporary design for alterations and additions to existing structures shall not be prohibited when such alterations and additions do not destroy significant historical or architectural character of the property. The size and proportions of any additions shall be compatible with the original building.*
- ***D-2g. Site design, including parking areas.*** *The placement of new buildings and building additions on a site should be compatible with site layout on neighboring properties. In general, buildings should be sited immediately adjacent to the sidewalk and any onsite parking should be placed to the rear of the building. Parking areas shall be the minimum necessary and be separated from the street and sidewalk by a landscape buffer. Trees that reach a mature height of at least twenty feet should be included in the interior of all parking lots with more than two parking spaces. Pedestrian spaces, circulation areas, or gathering areas are encouraged as design elements.*
- ***D-2h. Incorporation of amenity features in new development*** *(no change to policy text, rather just updated number due to removal of Policy D-2i [Design of signs]).*

Policy D-3: Scenic Routes Resources, and Landscape Features

- ***D-3a. Design policy for projects affecting scenic routes and State Routes.*** *The following standards shall apply to any development which affects scenic routes, as well as views from State Routes 101, 255, and 299:*
  1. *Billboards or other off-premises freeway-oriented signs are prohibited.*
  2. *Landscape planting along State Route 101 shall not interrupt scenic views to the bay or eastward across agricultural lands.*
  3. *New development or redevelopment in the area of South "G" Street shall provide dense landscape screens along all perimeter lot lines visible from State Route 101.*
  4. *The City shall work jointly with the County of Humboldt, Caltrans, and the Coastal Commission to enhance scenic views along scenic highways, particularly State Route 101 and 255 corridors.*
- ***D-3b. City entryways.*** *The appearance of the following additional entryways, while not scenic resources, should be enhanced with appropriate landscaping and entry signs or structures: (no change to locations)*

Policy D-4: Subdivision Design

- ***D-4a. Design of roadways, subdivision, and redevelopment site improvements.*** *New subdivisions and infill or redevelopment site design shall provide orderly arrangement of complete streets that minimize impacts on natural landforms and habitats and that create connectivity between existing neighborhoods and recreational areas using pedestrian oriented development and principles of Crime Prevention Through Environmental Design. The following criteria shall be required and or encouraged as appropriate:*
  1. *Proposed street alignments including sidewalks and bikeways shall conform to the relevant Transportation and Road Safety Plans, wherever possible. Unless it is demonstrated to be infeasible, all new lots shall have frontage on a public street or improved alley, or publicly accessible courtyard or open space.*
  2. *Gated subdivision streets shall be prohibited in order to maintain a sense of community.*
  3. *Natural drainage patterns shall be preserved to minimize potential slippage and flooding. Building site grading shall be contoured to direct water away from structures.*
  4. *Appropriate landscaping and illumination shall be applied to enhance safety and provide attractive screening and distinctions between spaces; illumination of streets shall be unobtrusive and the lowest intensity compatible with safety, complying with night sky standards wherever possible.*
  5. *Where existing streets are extended or new streets established, aim to keep the length of new blocks to no more than 300 feet.*
  6. *Block Layout. When establishing new streets and extending existing streets, connect to the existing block layout and complete grid system in a manner that also protects and enhances natural resources.*
  7. *Mid-Block Passageways. For blocks longer than 300 feet, provide for passageways mid-block through new development for convenient bike/ped through access. Passageway shall be an integral part of a project and be configured to provide safe access to rear parking lots, commercial storefronts, restaurants, and mid-block pathways.*

Policy D-5: Residential Design

- ***D-5a. Multi-family housing design.*** *Within each neighborhood where multi-family is allowed by the Land Use Element, multi-unit housing designs should comply with the following criteria:*
  1. *Buildings should maintain the scale and massing allowed in the City's zoning ordinances.*

  (no changes to remaining bulleted text within Policy D-5a, just new numbering).

Policy D-6: Commercial and Industrial Design

Objective. *Create functional commercial centers and industrial areas, suited to staff and customer needs, responsive to site conditions, and compatible with the neighborhood context.*

- ***D-6b. Design of mixed-use development.*** *In addition to the criteria stated in Policy D-6a (no proposed changes to text), the following criteria shall also apply to new mixed-use development:*
  1. *Ensure the design provides for internal compatibility and privacy between the residential and non-residential uses on the site.*
  2. *Ensure that new development is human-scaled and supports a pedestrian-friendly public realm. Buildings should be located at or close to the sidewalk.*
  3. *Provide for sensitive transition from the public realm (sidewalk) to the private realm (residences).*
  4. *Encourage outdoor dining, publicly-accessible courtyards, window-shopping areas, and other pedestrian-friendly uses in spaces between building walls and the sidewalks.*
  5. *Encourage convenient pedestrian access from the public street into the non-residential portions of the project, through such means as courtyards, plazas, walkways, and street furniture.*
  6. *Require main building entries to be visually prominent and oriented to a public street or pathway.*
  7. *Locate parking facilities away from building frontages in the rear of the lot.*
  8. *Encourage non-residential uses to be located above the first floor or behind ground-floor commercial, except in limited applications.*
  9. *Ensure that the residential units are of a residential character.*

  No changes to text within Policies D-6c through D-6e, rather just updated numbering due to proposed inclusion of Policy D-6b (above).

Policy D-7: Landscape Design

Objective. *Promote landscape designs emphasizing native plants, that may be complemented by non-invasive/non-toxic species, when they integrate harmoniously with the scale and architecture of buildings and improve the overall aesthetic appearance of the city and its neighborhoods.*

- ***D-7a. Landscape plans.*** *A landscape plan drawn to scale shall be required for all new development subject to discretionary review by the City. The plan shall identify existing and proposed landscape and hardscape elements. Native species encouraged in all landscaping.*
- ***D-7b. Planting area.*** *A minimum landscape planting area shall be required in all commercial, industrial, and multi-family residential land-use zones; and expressed as a percent of site area.*
- ***D-7f. Maintenance of required landscaping.*** *All required landscape plantings shall be properly maintained to assure survival with plant replacements as needed for first five years.*

City of Arcata Local Coastal Program

As mentioned above, portions of the study area are within the Local jurisdiction of the Coastal Zone, which are regulated by the City of Arcata's Local Coastal Program. The goals and policies within the City of Arcata Local Coastal Program relevant to aesthetics include the following:

Policy K-1. The City shall identify the following areas as Coastal Scenic Areas:

- *Arcata Bay tideland and water areas;*
- *All land designated as Natural Resources Protection on the Land Use Map;*
- *All land between Highway 101 and Old Arcata Road Designated Agriculture Exclusive on the Land Use Map; and*
- *All land on the western Arcata plain designated Agriculture Exclusive on the Land Use Map*

Policy K-5. The City shall designate the following routes as Scenic Routes and shall establish guidelines to retain their scenic features:

- *Old Arcata Road from 7th Street Overcrossing to Crescent Drive*

3.2.4 Evaluation Criteria and Significance Thresholds

Implementation of the General Plan would cause a significant impact related to aesthetics resources, as defined by Appendix G in the CEQA Guidelines if it would:

- Have a substantial adverse effect on a scenic vista;
- Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a State Scenic Highway;
- Substantially degrade the existing visual character or quality of the site and its surroundings or if located in an urbanized area, conflict with applicable zoning and other regulations governing scenic quality; or
- Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area.

3.2.5 Methodology

The visual impact analysis evaluates the physical changes that would occur within the study area as a result of adoption and implementation of the General Plan 2045. The impact analysis in this section is based, in part, upon visual simulations of potential development scenarios within the Gateway Area that could occur within the planning horizon. Visual changes and associated effects of the development scenario within the Gateway Area were demonstrated by identifying visual resources (viewsheds) before and after implementation of the proposed development scenarios. The primary viewshed considered comprises views from the Wildberries parking lot facing towards Humboldt Bay, which is where the Gateway Area Infill Opportunity Zone is located. Potential visual impacts associated with the development scenario involving multi-story buildings were also evaluated.

3.2.6 Impacts and Mitigation Measures

Impact AES-a: Would adoption and implementation of the General Plan 2045 have a substantial adverse effect on a scenic vista?

Gateway Area and Other Infill Opportunity Zones

Development within the Gateway Area over the course of the planning horizon is anticipated to include up to 500 new dwelling units. For the purposes of this analysis, building story height is projected to range from five stories within the Gateway Neighborhood District, six stories within the Gateway Corridor District, seven stories in the Gateway Hub District, to eight stories within the Gateway Barrel District as described in Section 2.6.1 (Project Description). These districts are shown in Figure 2-2 (General Plan Use Designations within the Gateway Area).

A scenic vista can be described as a picturesque scene of open space with little or no intrusions. Policy D-3a in the General Plan 2020 Design Element designates views from the SR 101 corridor, from the southern city boundary to the Mad River, as a coastal scenic highway. This project will be visible to northbound and southbound traffic on SR 101 when traveling to the south of the St. Louis Road Overcrossing. Policy D-3b in the General Plan 2020 Design Element designates views from L.K. Wood Blvd, from the St. Louis Road Overcrossing to 14th Street, as a non-coastal scenic highway. This project will be visible to northbound and southbound traffic on L.K. Wood Blvd when traveling to the north of Sunset Avenue and the south of the St. Louis Road Overcrossing.

Views of the Gateway and Downtown Infill Opportunity Zones are most visible from high elevation areas in the City such as along 14th Street, along Samoa Blvd facing northwest towards Manila, and immediately adjacent to the Gateway Area. Scenic vistas most likely to be affected by implementation of the General Plan 2045 due to development within the Gateway Area include views looking south and east towards Humboldt Bay and the mountains from 14th Street at the intersections with G, H, I, J, and K Streets (i.e., “the top of the hill”). Images 3.2-1 through 3.2-3 depict existing conditions using Google Earth imagery. Figures 3.2-1 (A&B), and 3.2-2 (A&B) depict what a full build out scenario in the Gateway Area could look like from two locations located at the top of the hill.

Figures 3.2-1 through 3.2-3 illustrate 500 new dwelling units with businesses and offices on the first floor of each building. These figures depict how this particular scenario of development would look at the street level and from an aerial perspective; however, it should be noted that these figures are purely illustrative for the purposes of this analysis and development will likely occur in other scenarios within the confines of allowable development per district. Figures 3.2-1 through 3.2-3 include views of the Gateway Area from the following locations and elevations. Existing views at each location are provided below as Images 3.2-1 through 3.2-3.

– Figure 3.2-1A: 13th & H Streets at approximately 10 feet above ground level.
– Figure 3.2-1B: 13th & H Streets at approximately 100 feet above ground level.
– Figure 3.2-2A: 14th & K Streets at approximately 10 feet above ground level.
– Figure 3.2-2B: 14th & K Streets at approximately 100 feet above ground level.
– Figure 3.2-3A: Samoa Blvd & SR 101 ramp at approximately 10 feet above ground level.
– Figure 3.2-3B: Samoa Blvd & SR 101 ramp at approximately 100 feet above ground level.

Development in remaining Infill Opportunity Zones would result in modest changes to development patterns in the near-term but may significantly change the look and feel of commercial corridors, the Downtown area, and the Valley West / North Arcata area in particular by the end of the planning period (2045). These changes would occur gradually and are not currently envisioned to include multi-story buildings over 70 feet. Development in remaining Infill Opportunity Zones is not in close proximity to identified scenic vistas that would be impacted by midrise development.

As shown between existing conditions and the schematic, views of Humboldt Bay and the mountains could be altered to include buildings within the Gateway Area as part of the viewscape in the urbanized foreground. Views from K Street (Figure 3.2-2A) would be impacted more than views from H street (Figure 3.2-1A) due to zoning code of the Gateway Area, which allows the tallest buildings to occur west of L Street. This choice of land use boundary code will preserve views and neighborhood character to the extent feasible, while still enabling development of multi-story buildings within the Gateway Area. Views of the Bay and mountains would remain visible from both K and H Streets, however, would also include views of the buildings (under this development scenario).

Views of the Bay and mountains would still be visible around the buildings and would still be visible from other locations throughout the City. Five and six story buildings are proposed to be permitted in the southern Gateway Area (within the Gateway Corridor and Gateway Neighborhood districts, see Figure 2-2), which could impact views from G, H, and I Streets at the top of the hill. The potential impacts to scenic vistas from development of five and six story buildings viewed from the top of the hill at G, H, and I Streets is not considered significant because views of the Bay would only be partially blocked, and the Bay would still be visible. In addition, current zoning allows for four story buildings within these sightlines. Four story buildings would similarly partially obscure views and add new structures to the existing viewscape; as such, baseline and proposed five and six-story projects would have substantially similar aesthetic impacts.

Similarly, potential impacts to scenic vistas from development of seven and eight story buildings viewed from the top of K Street would not be significant because views of the Bay would still remain largely intact. H Street is a major southbound thoroughfare and development of seven and eight story buildings at the western edge (downhill side) of H Street is prohibited, which will maintain the viewscape as much as possible. Therefore, a less than significant impact to scenic vistas would occur from implementation of the General Plan 2045.

Views of the agricultural land south of the City limits along Samoa Boulevard would not be modified by proposed development in the Gateway Area because those views are currently not visible from within City limits.

Image 3.2-1. Existing View of Southbound H Street.

Image 3.2-2. Existing View of Southbound K Street

Image 3.2-3. Existing View of Northwest Bound Samoa Blvd

Remaining Study Area

Development outside of the Infill Opportunity Zones is not anticipated to be substantially different from existing development. The most significant changes to land use code are within the Gateway Area with minimal changes to development standards outside of the Gateway Area. Therefore, development outside of the Gateway Area is anticipated to resemble existing development and it is unlikely that future proposed development under the General Plan 2045 outside the Gateway Area would adversely affect a scenic vista. A less than significant impact would occur.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact AES-b: Would adoption and implementation of the General Plan substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

According to the California Scenic Highway Mapping System, there are no designated State Scenic Highway in the project vicinity. Highways 101 and 299 are listed as “Eligible State Scenic Highways-Not Officially Designated” (Caltrans 2023); however, an eligible state highway can only become officially designated through a process in which the local governing body applies to Caltrans for scenic highway approval, adopts a Corridor Protection Program identifying and defining highly scenic and natural features as viewed from the highway, and receives notification that the highway has been officially designated a State Scenic Highway by the Caltrans Director.

In the case of the 101 and 299 corridors, the portions running through City limits that are likely to be modified as a result of the General Plan 2045 are unlikely to be designated due to their urban character, as the City’s strategy is to protect scenic natural areas and emphasize development within existing developed areas. Future development is anticipated to be concentrated within the Infill Opportunity Zones and have no ability to substantially damage scenic resources directly as changes will be limited to concentrating additional urban features within existing urbanized areas throughout the City’s Infill Opportunity Zones adjacent to these highways (Downtown Infill Opportunity Zone, Craftsman’s Mall Opportunity Zone, Valley West Infill Opportunity Zone).

The proposed development associated with the General Plan 2045 does not have the potential to substantially damage any scenic resources within City limits such as landmark trees, rock outcroppings, or historic buildings, which will receive the same protections as under current City policy. Therefore, the proposed project will not substantially damage scenic resources within a State Scenic Highway. No impact would occur.

Mitigation Measures: No mitigation is necessary

Level of Significance: No impact

Impact AES-c: In non-urbanized areas, would adoption and implementation of the General Plan substantially degrade the existing visual character or quality of public view of the site and its surroundings? (Public Views are those that are experienced from publicly accessible vantage point). If the General Plan applies to an urbanized area, would the adoption and implementation of the General Plan conflict with applicable zoning and other regulations governing scenic quality?

Gateway Area and Other Infill Opportunity Zones

As described in impact question (a), the emphasis on infill densification will result in modest changes to development patterns in the near-term but may significantly change the look and feel of the Gateway Area, commercial corridors, the Downtown area, and the Valley West / North Arcata areas in particular by the end of the planning period (2045).

This intentional plan to build upwards, as opposed to outwards, is desired by the City to promote conservation of natural resources, such as agricultural land and wetlands that surround the City limits, and this priority is reinforced in both current and proposed zoning. Development in other Infill Opportunity Zones would not include multi-story buildings (greater than 70 feet) and would, therefore, resemble existing development throughout City limits. The adoption and implementation of the General Plan 2045 is the overarching guidance for the implementation of zoning and other regulations governing scenic quality and would, therefore, not constitute a conflict. All development would be in compliance with applicable zoning and other regulations governing scenic quality, which are designed to enhance the architectural environment of the City. A less than significant impact would occur.

Remaining Study Area

The focus of growth over the planning period is within the Infill Opportunity Zones, however, some development is anticipated to occur outside of these zones. Development outside of the Gateway Area would resemble existing development and would, therefore, not substantially degrade the existing visual character or quality of public view. Applicable zoning and other regulations governing scenic quality are not anticipated to be substantially modified in ways that would substantially degrade the existing visual character of the City. All development would be in compliance with applicable zoning and other regulations governing scenic quality. Therefore, a less than significant impact would occur.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact AES-d: Would adoption and implementation of the General Plan create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Gateway Area and Other Infill Opportunity Zones

The Gateway Area is anticipated to contain high density, multi-story development over the course of the planning period. Therefore, this development will create new sources of light. All outdoor lighting would need to comply with General Plan 2045 policies, particularly Policy D-2b: Streetscape design, which states that shielded and directional street and parking lot lighting that is adequate for safety but not overly bright should be considered in future improvement projects. Unique to the Gateway Area is the proposed multi-story development, which would result in views of potentially lit up windows at multiple stories as compared to current conditions (an absence of that type of development). Nighttime views of lit windows would be inconsistent because it is anticipated that curtains and blinds would be utilized.

Theoretical build out of the Gateway Area Plan, which assumes up to 3,500 dwelling units may be created, is not expected to occur in this planning horizon. Rather, development of approximately 500 dwelling units within the Gateway Area is anticipated to occur. Development within the Gateway Area involving high density multi-story building(s) would modify the existing aesthetic character of area, which is discussed in question (a), however, would not introduce a new source of substantial light or glare due to the encouraged use of outdoor light shielding. Nighttime views of lit windows would be inconsistent because it is anticipated that curtains and blinds would be utilized. Proposed development is not anticipated to cause substantial glare because of the overcast climate and, therefore, lack of direct sunlight that could cause glare. Although new light would be visible as compared to existing conditions, the new light sources within this planning period is not considered substantial given the Gateway Area is within the City footprint and is not within an undisturbed area. A less than significant impact would occur.

Remaining Study Area

Proposed development within the remaining study area would be similar to existing development and would incorporate policies from the General Plan 2045, such as considering shielded lighting in new development. Due to the absence of high density, multi-story buildings in the remaining study area, and anticipated development to look similar to existing development, no new substantial sources of light or glare would occur. No impact would occur.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

3.2.7 Cumulative Impacts

Impact AES-C-1: Would adoption and implementation of the General Plan contribute to a cumulatively significant impact to visual resources?

The adoption and implementation of the General Plan 2045 is inherently allowing for cumulative change within the study area. The incremental development that is anticipated to occur will modify visual resources within the City. However, views of scenic vistas would persist, although be modified, and the existing industrial setting of the Gateway Area would be enhanced to a more urban space. The proposed General Plan 2045 encourages smart growth development that is anticipated to make the City feel and appear more urban. This is not incidental, rather it is by design and, therefore, is not considered a cumulative impact because the intent of the General Plan 2045 is to implement smart growth design principles which include building upwards as opposed to outwards. With adherence to applicable federal, state, and local regulations governing aesthetic resources and compliance with the proposed General Plan 2045 policies indicated above, the potential risks associated with aesthetic resources in the study area would be less than significant. As such, cumulative impacts would be less than significant.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

3.3 Air Quality

This section evaluates potential impacts related to air quality during construction and operation of the Project. To provide the basis for this evaluation, the Setting section describes the air basin setting. The Regulatory Framework section describes the regulatory background that applies to the Project. The Impact Analysis section establishes the thresholds of significance, evaluates potential air quality impacts, and identifies the significance of impacts.

3.3.1 Study Area

The study area for air quality impacts includes the City limits and the North Coast Air Basin.

3.3.2 Setting

North Coast Air Basin

The study area is located in Humboldt County in the North Coast Air Basin, which is comprised of Del Norte, Humboldt, Mendocino, and Trinity Counties, as well as the northern and western portion of Sonoma County. The study area is located within the North Coast Unified Air Quality Management District (NCUAQMD), which regulates air quality at the regional level, including Humboldt, Del Norte, and Trinity counties.

Climate

The local climates, or sub-climates, within the North Coast Air Basin are affected by elevation and proximity to the Pacific Ocean. Humboldt County contains sub-climates that are created by local topography and proximity to the ocean. The study area is located proximal to the Pacific Ocean (Humboldt Bay) and is influenced by coastal fog throughout the year. Precipitation within the County is seasonal, with 90 percent of the annual precipitation occurring between October and April. During the winter, moderate temperatures, frequent fog, and moderate to heavy precipitation cause inversions, which impact air quality. Inversions are created when warm air traps cool air near the ground surface and hinders vertical dispersion. Humboldt County commonly experiences two types of inversions, vertical and horizontal, that affect the vertical depth of the atmosphere through which pollutants can be mixed. Vertical air movement is important in spreading pollutants through a thicker layer of air. Horizontal movement is important in spreading pollutants over a wider area. Upward dispersion of pollutants is hindered wherever the atmosphere is stable, that is, where warm air overlies cooler air below (Humboldt County 2017).

Sensitive Receptors within the Study Area

Sensitive receptors are people who are particularly susceptible to the adverse effects of air pollution. California Air Resources Board (CARB) has identified the following people most likely to be affected by air pollution: children, the elderly, the acutely ill, and the chronically ill, especially those with cardio-respiratory diseases. Sensitive receptor locations include residences, schools, playgrounds, childcare centers, retirement homes, hospitals, and medical clinics. The study area, including infill opportunity zones, is largely developed with urban uses. Sensitive receptor locations within and immediately adjacent to the study area include residences, multiple schools, community gardens, parks, and the Mad River Community Hospital.

Sensitive Receptors within the Gateway Area

The Gateway Area is developed in a mix of urban uses, including heavy- and light-industrial, retail, residential and other uses. Numerous sensitive receptor locations are present within and immediately adjacent to the Gateway Area, including residences, Arcata High School, a portion of Arcata Rail-with-Trail, and community gardens.

Existing Air Quality – Criteria Air Pollutants

The CARB and the U.S. Environmental Protection Agency (EPA) currently focus on the following criteria air pollutants as indicators of ambient air quality: ozone, carbon monoxide (CO); nitrogen dioxide, sulfur dioxide; lead, and particulate matter (PM). Table 3.3-1 summarizes state and federal ambient air quality standards. The study area is in attainment for lead, sulfur dioxide, and nitrogen dioxide; therefore, those pollutants are not further discussed. The following section discusses the remaining criteria pollutants - PM, ozone, and CO - for which PM is of greatest concern in the region (NCUAQMD 2023).

Table 3.3-1 Relevant California and National Ambient Air Quality Standards and Attainment Status

Pollutant	Averaging Time	California Standards		National Standards	
		Standard	Humboldt County Status	Standard	Humboldt County Status
Ozone	8-hour	0.070 ppm (137 µg/m^3)	Attainment	0.070 ppm (137 µg/m^3)	Unclassified/ Attainment
	1-hour	0.09 ppm (180 µg/m^3)	Attainment	None	NA
Carbon Monoxide	1-hour	20 ppm (23 mg/m^3)	Attainment	35 ppm (40 mg/m^3)	Unclassified/ Attainment
	8-hour	9.0 ppm (10 mg/m^3)	Attainment	9 ppm (10 mg/m^3)	
Nitrogen Dioxide	1-hour	0.18 ppm (339 µg/m^3)	Attainment	0.100 ppm (188 µg/m^3)	Unclassified/ Attainment
	Annual	0.030 ppm (57 µg/m^3)	Attainment	0.053 ppm (100 µg/m^3)	
Sulfur Dioxide	1-hour	0.25 ppm (655 µg/m^3)	Attainment	0.075 ppm (196 µg/m^3)	Unclassified
	24-hour	0.04 ppm (105 µg/m^3)	Attainment	0.14 ppm (365 µg/m^3)	
	Annual	None	NA	0.030 ppm (56 µg/m^3)	
Respirable Particulate Matter (PM_{10})	24-hour	50 µg/m^3	Nonattainment	150 µg/m^3	Unclassified
	Annual	20 µg/m^3	Attainment	None	
Fine Particulate Matter ($PM_{2.5}$)	24-hour	None	NA	35 µg/m^3	Unclassified/ Attainment
	Annual	12 µg/m3	Attainment	12.0 µg/m^3

Notes:
ppm = parts per million
mg/m^3 = milligrams per cubic meter
µg/m^3 = micrograms per cubic meter

Particulate Matter

Particulate matter is a complex mixture of tiny particles that consists of dry solid fragments, solid cores with liquid coatings, and small droplets of liquid. These particles vary greatly in shape, size, and chemical composition, and can be made up of many different materials such as metals, soot, soil, and dust. Particles 10 microns or less in diameter are defined as respirable particulate matter or PM_{10}. Fine particles are 2.5 microns or less in diameter ($PM_{2.5}$) and, while also respirable, can contribute significantly to regional haze and reduction of visibility. Inhalable particulates come from smoke, dust, aerosols, and metallic oxides. Although particulates are found naturally in the air, most particulate matter found in Humboldt County is emitted either directly or indirectly by unpaved road dust, managed burning and disposal, and residential fuel combustion. Extended exposure to PM can increase the risk of chronic respiratory disease (BAAQMD 2017). PM exposure is also associated with increased risk of premature deaths, especially in the elderly and people with pre-existing cardiopulmonary disease. In children,

studies have shown associations between PM exposure and reduced lung function and increased respiratory symptoms and illnesses.

Ozone

Ground-level ozone is the principal component of smog. Ozone is not directly emitted into the atmosphere, but instead forms through a photochemical reaction of reactive organic gases (ROG) and nitrogen oxides (NOx), which are known as ozone precursors. Ozone levels are highest from late spring through autumn when precursor emissions are high and meteorological conditions are warm and stagnant. Motor vehicles create the majority of ROG and NO_X emissions in California. Exposure to levels of ozone above current ambient air quality standards can lead to human health effects such as lung inflammation, tissue damage, and impaired lung function. Ozone exposure is also associated with symptoms such as coughing, chest tightness, shortness of breath, and the worsening of asthma symptoms (BAAQMD 2017). The greatest risk for harmful health effects belongs to outdoor workers, athletes, children, and others who spend greater amounts of time outdoors during periods of high ozone levels, typically during the summer.

Carbon Monoxide

CO is a non-reactive pollutant that is toxic, invisible, and odorless. It is formed by the incomplete combustion of fuels. The largest sources of CO emissions are motor vehicles, wood stoves, and fireplaces. CO is directly emitted to the atmosphere, where levels are strongly influenced by meteorological factors such as wind speed and atmospheric stability. The health threat from elevated ambient levels of CO is most serious for those who suffer from heart disease, like angina, clogged arteries, or congestive heart failure; however, high levels of CO can affect even healthy people. People who breathe high levels of CO can develop vision problems, reduced ability to work or learn, reduced manual dexterity, and difficulty performing complex tasks. At extremely high levels, CO is poisonous and can cause death.

Toxic Air Contaminants

Toxic air contaminants (TACs) are a broad class of compounds known to cause morbidity or mortality (usually because they cause cancer or serious illness) and include, but are not limited to, the criteria air pollutants listed in Table 3.3-1. TACs are found in ambient air, especially in urban areas, and are caused by industry, agriculture, fuel combustion, and commercial operations (e.g., dry cleaners). TACs are typically found in low concentrations, even near their source (e.g., diesel particulate matter near a freeway). As noted below in Section 3.3.3, because chronic exposure can result in adverse health effects, TACs are regulated at the regional, state, and federal level. The identification, regulation, and monitoring of TACs is relatively new compared to that for criteria air pollutants that have established ambient air quality standards.

TACs are regulated or evaluated on the basis of risk to human health rather than comparison to an ambient air quality standard or emission-based threshold. Diesel particulate matter, which is a component of diesel exhaust, is the predominant TAC in urban air with the potential to cause cancer. A 10-year research program (CARB 1998) demonstrated that diesel particulate matter from diesel-fueled engines is a human carcinogen and that chronic (long-term) inhalation exposure to diesel particulate matter poses a chronic health risk. It is estimated to represent about two-thirds of the cancer risk from TACs (based on the statewide average).

According to the CARB, diesel exhaust is a complex mixture of gases, vapors, and fine particles. This complexity makes the evaluation of health effects of diesel exhaust a complex scientific issue. Some of the chemicals in diesel exhaust, such as benzene and formaldehyde, have been previously identified as TACs by the CARB, and are listed as carcinogens either under the State's Proposition 65 or under the federal Hazardous Air Pollutants program. California has adopted a comprehensive diesel risk reduction program, and recently adopted new regulations requiring the retrofit and/or replacement of construction equipment, on-highway diesel trucks, and diesel buses in order to lower $PM_{2.5}$ emissions and reduce statewide cancer risk from diesel exhaust (see Section 3.3.3 below).

TACs are measured for their increased cancer risk and non-cancer risk on sensitive receptors. Sensitive receptor locations exist where an identifiable subset of the general population (children, asthmatics, the elderly, and the

chronically ill) that is at greater risk than the general population to the effects of air pollutants are likely to be exposed. These locations include residences, schools, playgrounds, childcare centers, retirement homes, hospitals, and medical clinics.

Odor

Odors are generally regarded as a nuisance or annoyance rather than a health hazard, although individuals can have a strong physical response to specific odors. Odor intensity depends on the concentration of the substance in the air. The ability to detect odors varies considerably among the population. The detection of odors is subjective; where some individuals have the ability to smell minute quantities of specific substances, others may not have the same sensitivity but may have sensitivities to odors of other substances. Reactions to odors vary significantly as well.

3.3.3 Regulatory Framework

The federal Clean Air Act of 1977 governs air quality in the United States. In addition to being subject to federal requirements, air quality in California is also governed by more stringent regulations under the California Clean Air Act.

As noted above, because chronic exposure can result in adverse health effects, TACs are regulated at the regional, state, and federal level. The identification, regulation, and monitoring of TACs is relatively new compared to that for criteria air pollutants that have established ambient air quality standards. Specifically, TACs are regulated or evaluated on the basis of risk to human health rather than comparison to an ambient air quality standard or emission-based threshold.

Federal

The EPA is responsible for enforcing the federal Clean Air Act and for establishing the National Ambient Air Quality Standards. The National Ambient Air Quality Standards are required under the federal Clean Air Act and subsequent amendments.

State

In California, the CARB, which is part of the California EPA, is responsible for meeting the state requirements of the federal Clean Air Act, administering the California Clean Air Act, and establishing the California Ambient Air Quality Standards. The California Clean Air Act, as amended in 1992, requires all air districts in the state to endeavor to achieve and maintain the California Ambient Air Quality Standards. CARB regulates mobile air pollution sources, such as motor vehicles. It is responsible for setting emission standards for vehicles sold in California and for other emission sources, such as consumer products and certain off-road equipment. CARB oversees the functions of local air pollution control districts and air quality management districts, which in turn administer air quality activities at the regional and county level.

California Coastal Act

The following policies of the California Coastal Act regulate air quality.

> ***Section 30253. New Development shall:***
>
> *Be consistent with requirements imposed by an air pollution control district or the State Air Resources Control board as to each particular development.*

California Diesel Risk Reduction Program

CARB identified particulate emissions from diesel-fueled engines as TACs in August 1998. Following the identification process, CARB was required by law to determine if there is a need for further control, which led to the risk management phase of the program.

For the risk management phase, CARB formed the Diesel Advisory Committee to assist in the development of a risk management guidance document and a risk reduction plan. With the assistance of the Diesel Advisory Committee and its subcommittees, CARB developed the Risk Reduction Plan to Reduce Particulate Matter Emissions from Diesel-Fueled Engines and Vehicles and the Risk Management Guidance for the Permitting of New Stationary Diesel-Fueled Engines. The Diesel Advisory Committee approved these documents on September 28, 2000, paving the way for the next step in the regulatory process: the control measure phase. The adopted Diesel Risk Reduction Plan contains goals to reduce diesel particulate matter emissions by 75 percent by 2010 and 85 percent by 2020.

During the control measure phase, specific statewide regulations designed to further reduce diesel particulate matter emissions from diesel-fueled engines and vehicles have and continue to be evaluated and developed. The goal of each regulation is to make diesel engines as clean as possible by establishing state-of-the-art technology requirements or emission standards to reduce diesel particulate matter emissions. Multiple Airborne Toxic Control Measures have since been adopted, reducing diesel particulate matter emissions for mobile sources such as Diesel-fueled transport refrigeration units and transport refrigeration unit generator sets, and commercial vehicles.

Local

The entire study area is subject to and regulated by the NCUAQMD. Most of the study area is within City limits. Therefore, this section includes City of Arcata General Plan and City's Local Coastal Program policies for the portions of the Project within City limits and within the Coastal Zone.

North Coast Unified Air Quality Management District

The NCUAQMD, one of 35 air districts in California, has jurisdiction over Humboldt, Del Norte, and Trinity counties. The NCUAQMD's primary responsibility is for controlling air pollution from stationary sources and maintaining healthful air quality throughout the tri-county jurisdiction. The NCUAQMD has permit authority over most types of stationary emission sources and can require stationary sources to obtain permits, impose emission limits, set fuel or material specifications, or establish operational limits to reduce air emissions. The NCUAQMD monitors air quality, enforces local, state and federal air quality regulations for counties within its jurisdiction, inventories and assesses the health risks of TACs, and adopts rules that limit pollution.

Humboldt County is listed as "attainment" or "unclassified" for all the federal and state ambient air quality standards except for the state 24-hour particulate (PM_{10}) standard (Table 3.3-1). The NCUAQMD has not formally adopted significance thresholds that would apply to the proposed Project. For construction emissions, the NCUAQMD has indicated that emissions are not considered regionally significant for projects whose construction would be of relatively short duration (i.e., lasting less than one year). For project construction that lasts more than one year or that involves above average construction intensity in volume of equipment or area disturbed, construction emissions may be compared to stationary source thresholds (NCUAQMD 2023).

Construction activities are subject to Rule 104 (Prohibitions) Section D (Fugitive Dust Emission), which requires reasonable precautions be taken to prevent PM from becoming airborne. These precautions include but are not limited to: 1) covering open bodied trucks when used for transporting materials likely to give rise to airborne dust; and 2) the use of water during the grading of roads or the clearing of land.

Finally, Rule 110 - New Source Review And Prevention of Significant Deterioration establishes the pre-construction review requirements for new and modified stationary sources of air pollution. This Project does not include any new stationary sources; therefore, Rule 110 would not apply.

City of Arcata General Plan 2020

The City of Arcata General Plan 2020 addresses air quality in its Air Quality Element. The City's Air Quality Element has specific goals and related policies that address reducing stationary and mobile sources of air pollutants. The policies within the City of Arcata General Plan 2020 that regulate air quality include the following:

Air Quality Element

AQ-2: Mobile Sources of Air Pollutants

Objective. *Improve air quality by reducing emissions from transportation sources, particularly motor vehicles, and other mobile sources. Reduce vehicle miles of travel and encourage shifts to alternative modes of travel.*

Applicable sub-policies:

- ***AQ-2a: Implement land use measures to reduce vehicle trips, miles traveled, and air pollutant emissions.*** *Implement or encourage the land use and development measures which reduce motor vehicle travel as outlined in the transportation element. These measures are also effective in reducing mobile sources of air pollutants.*

- ***AQ-2b: Implement transportation measures to reduce vehicle trips, miles traveled, and air pollutant emissions****. Implement or encourage the following measures to reduce vehicle miles traveled and provide alternatives to the single occupant motor vehicle, as outlined in the Transportation Element.*

  1. *Provide as direct and safe a travel route as possible for all travel modes.*
  2. *Implement and support public education programs explaining the negative impacts of single occupant vehicle use, and encourage the development of employer-based measures to reduce employee automobile travel.*

- ***AQ-2c: Reduce or minimize the creation of "hot spots" or localized places of concentrated automobile emissions.*** *Implement or encourage the following measures to reduce hot spots, which occur where groups of vehicles are required to idle (e.g., at congested intersections, driveways, and drive-through facilities).*

  1. *Minimize the delay and congestion at unsignalized and signalized intersections to reduce emissions from idling vehicles. Attempt to achieve this through reducing automobile travel, minor capacity improvements, or fine-tuning of intersection operations. Discourage major capacity improvements at intersections, minimize new signalized intersections, or any other improvement which discourages walking, bicycling, or transit use.*
  2. *Minimize or restrict land uses with drive-through facilities located in areas of concentrated traffic or near congested intersections.*
  3. *Construction of projects with large parking lots or high volume driveways shall identify traffic impacts and provide evidence that project design will optimize internal circulation and minimize delay. Ensure that mitigation measures balance the needs of automobiles, pedestrians, bicyclists, and transit riders.*

- ***AQ-2d: Design Arcata's highest traveled arterials to minimize stopping.*** *Recognize that automobiles are most efficient and less polluting at constant, moderate speeds between 25 and 35 miles per hour. Minimize idling delay, excessive congestion, and excessive speeds with the following measures:*

  1. *Eliminate traffic bottlenecks with traffic flow improvements (such as re-allocating turning lanes, or converting all-way stop control to roundabouts or two-way stop control), without impacting the safety of pedestrians, bicyclists, or transit facilities.*
  2. *Review access plans for commercial driveways to ensure designs minimize idling vehicles and concentrations of traffic. For larger projects, require multiple driveways rather than single driveways and consider turn restrictions where delays to existing driveways could be significant.*

- ***AQ-2e:*** *Recognize that poor air quality is caused by the combination of high pollutant emissions and meteorological conditions which do not allow for dispersal of pollutants. The City shall coordinate a joint effort with the NCUAQMD to minimize the impact of high pollutant incidents and notify the public about meteorological conditions that contribute to poor air quality. The joint effort shall include employing the following measures:*

1. *Require traffic and construction site dust control measures at construction projects. Require measures which reduce emissions from construction activity and maximize efficiency of traffic flow during inversion conditions.*

- ***AQ-2f: Enforce air quality control measures and monitoring at construction sites.*** *Construction emissions shall be controlled because, although they are temporary in nature, they can often be the greatest air quality impact of a project. Require the following control measures for construction activities when necessary:*

  1. *Water all active construction areas twice per day and use erosion control measures to prevent water runoff containing silt and debris from entering the storm drain system.*
  2. *Cover trucks hauling soil, sand and other loose material.*
  3. *Pave, water, or apply non-toxic soil stabilizers on unpaved access roads and parking areas.*
  4. *Sweep paved access roads and parking areas daily.*
  5. *Sweep streets daily if visible material is carried onto adjacent public streets.*

  For larger construction sites (four acres or greater) require the following measures when necessary in addition to those above:

  1. *Hydroseed or apply non-toxic soil stabilizers to inactive construction areas.*
  2. *Enclose, cover, water, or apply non-toxic soil binders to open materials stockpiles.*
  3. *Limit traffic speeds to 15 mph on unpaved access roads.*
  4. *Install erosion control measures to prevent silt runoff onto public roadways.*
  5. *Replant vegetation in disturbed areas within 30 days after project completion.*

  For construction sites near sensitive receptors, require the following measures when necessary, in addition to those above:

  1. *Install wheel washers for exiting trucks, or wash all equipment leaving site.*
  2. *Install wind breaks, or plant trees/vegetation at windward sides of construction areas, or avoid removing existing vegetation which acts as a windbreak.*
  3. *Suspend excavation and grading activity when winds exceed 25 mph.*
  4. *Limit area subject to excavation, grading, and other construction activities at any one time.*

Public Safety Element

- ***PS-6d Siting of facilities handling hazardous waste****. Businesses and agencies that use, store, or produce hazardous materials shall train employees and other users in safe handling and storage procedures, and shall post current Occupational Safety and Health Act (OSHA) and Humboldt County hazardous materials requirements. Businesses shall also comply with Federal "community right-to-know" regulations. The City shall consider proximity to sensitive receptors, such as schools, hospitals and other health care facilities, day care centers, and other immobile populations, when reviewing new facilities and businesses involved in these activities.*

Design Element

- ***D-1f Create buffers between incompatible land uses.*** *At boundaries between different land-use designations, and where different and incompatible land-uses are adjacent, buffer areas shall be incorporated into site design for new development. Buffers may consist of additional setbacks, landscaping, and visual and noise barriers such as fences or walls.*

Proposed City of Arcata General Plan 2045

The General Plan 2045 contains the following policies that may contribute to reducing air pollutant emissions or air quality impacts to sensitive receptors.

Air Quality Element

AQ-1: Point and Area Sources of Air Pollutants

Objective. *Improve air quality by reducing emissions from stationary point sources of air pollution (e.g., equipment at commercial and industrial facilities), and stationary area sources (e.g., wood-burning fireplaces and gas-powered lawn mowers), which cumulatively emit large quantities of emissions.*

Applicable sub-policies:

- ***AQ-1a: Reduce emissions from stationary point sources: commercial and industrial.*** *Coordinate with energy providers to develop incentive programs encouraging the use of less polluting, energy efficient designs and equipment in commercial and manufacturing uses. Encourage commercial and industrial uses to self-enforce emissions reductions by maintaining and repairing equipment, correcting leaks, installing control devices, and minimizing accidental releases. Coordinate with the District to establish buffer zones between point sources and the public, particularly sensitive receptors such as schools, hospitals, and convalescent facilities.*
- ***AQ-1b: Reduce emissions from stationary area sources: residential, commercial, and industrial.*** *Limit wood-burning fireplace installations in new construction to low -emitting, State and EPA certified fireplace inserts or woodstoves, pellet stoves, or natural gas fireplaces. New construction retrofits must comply with energy efficient construction codes to reduce energy consumption including high-efficiency windows, water heaters, and furnaces. Prohibit Woodburning and Gas Hearths and Fireplaces in New Residential Development.*
- ***AQ-1c: Coordination between the District and Arcata Fire Protection District.*** *The City will encourage Arcata Fire Protection District officials to coordinate with the District to develop procedures for identifying, monitoring, and informing the public of high pollutant incidents related to fires and accidental or intentional releases of toxic or unknown materials. Coordination should encompass current air quality levels, meteorological conditions (stagnant air), prevailing wind directions, location of nearby sensitive receptors, potentially affected land uses, and types of potential toxic materials. Coordination and required permits are particularly important during the planning and implementation of controlled burns.*
- ***AQ-1d: Review of development projects for emissions reductions.*** *Evaluate new construction plans to reduce point and area sources of pollution. Consult with the District during the environmental review process to ensure that:*

  1. *Air quality impacts of development projects are assessed using analytical methods and significance criteria for emission rates approved by the District.*
  2. *Air quality mitigation is feasible, workable, monitorable, and cost effective.*
  3. *Impacts of projects that may be individually insignificant, but cumulatively significant are minimized or mitigated.*
  4. *Innovative measures are incorporated into the project design to reduce air quality impacts.*
  5. *The City shall require air filtrations systems at new sensitive receptor buildings to be designed and constructed with air filters rated at a minimum efficiency reporting value (MERV) 13 or higher.*

  Encourage the District to enforce these measures and their related policies.

AQ-2: Mobile Sources of Air Pollutants

Objective. *Improve air quality by reducing emissions from transportation sources, particularly motor vehicles, and other mobile sources. Reduce vehicle miles of travel and encourage shifts to alternative modes of travel.*

Applicable sub-policies:

- ***AQ-2a: Implement land use measures to reduce vehicle trips, miles traveled, and air pollutant emissions.*** *Implement or encourage the land use and development measures which reduce motor*

vehicle travel as outlined in the Transportation Element. These measures are also effective in reducing mobile sources of air pollutants.

- ***AQ-2b: Implement transportation measures to reduce vehicle trips, miles traveled, and air pollutant emissions.*** *Implement or encourage the following measures to reduce vehicle miles traveled and provide alternatives to the single occupant motor vehicle, as outlined in the Transportation Element.*

  1. *Provide as direct and safe a travel route as possible for all travel modes.*
  2. *Implement and support public education programs explaining the negative impacts of single occupant vehicle use, and encourage the development of employer-based measures to reduce employee automobile travel.*
  3. *Require A&MRTS and encourage other fleet operators to convert vehicles to run on less polluting alternative fuels at the earliest feasible time (See Policy RC-8a).*

- ***AQ-2c: Reduce or minimize the creation of "hot spots" or localized places of concentrated automobile emissions.*** *Implement or encourage the following measures to reduce hot spots, which occur where groups of vehicles are required to idle (e.g., at congested intersections, driveways and drive-through facilities).*

  1. *Minimize the delay and congestion at unsignalized and signalized intersections to reduce emissions from idling vehicles. Attempt to achieve this through reducing automobile travel, minor capacity improvements, or fine-tuning of intersection operations. Discourage major capacity improvements at intersections, minimize new signalized intersections, or any other improvement which discourages walking, bicycling, or transit use.*
  2. *Minimize or restrict land uses with drive-through facilities located in areas of concentrated traffic or near congested intersections.*
  3. *Construction of projects with large parking lots or high-volume driveways shall identify traffic impacts and provide evidence that project design will optimize internal circulation and minimize delay. Ensure that mitigation measures balance the needs of automobiles, pedestrians, bicyclists, and transit riders.*

- ***AQ-2d: Design Arcata's highest traveled arterials to minimize stopping.*** *Recognize that automobiles are most efficient and less polluting at constant, moderate speeds between 25 and 35 miles per hour. Minimize idling delay, excessive congestion, and excessive speeds with the following measures:*

  1. *Encourage Caltrans to coordinate traffic signals on Samoa Boulevard to maximize progression.*
  2. *Eliminate traffic bottlenecks with traffic flow improvements (such as re-allocating turning lanes, or converting all-way stop control to roundabouts or two-way stop control), without impacting the safety of pedestrians, bicyclists, or transit facilities.*
  3. *Review access plans for commercial driveways to ensure designs minimize idling vehicles and concentrations of traffic. For larger projects require multiple driveways rather than single driveways and consider turn restrictions where delays to existing driveways could be significant.*
  4. *Encourage and support law enforcement's efforts to expeditiously manage traffic incidents.*

- ***AQ-2e: Recognize that poor air quality is caused by the combination of high pollutant emissions and meteorological conditions that do not allow for dispersal of pollutants.*** *The City shall coordinate a joint effort with the District to minimize the impact of high pollutant incidents and notify the public about meteorological conditions that contribute to poor air quality. The joint effort shall include employing the following measures:*

  1. *Implement added air pollution control measures during predictable meteorological events of stagnant air. Inform the public of high pollutant incidents and encourage measures which minimize impacts, such as limiting use of wood-burning fireplaces, gas powered equipment, and avoiding non-essential vehicle travel.*
  2. *Promote and encourage employer-based and project-based Transportation Demand Measures (such as subsidized bus fare, flexible work hours, indoor bike storage, and incentives to carpool) to*

reduce automobile travel, particularly during periods of poor air quality.

3. *Support and encourage local industrial and commercial efforts to reduce emissions and particulate pollution from industrial plants and trucks, particularly during periods of poor air quality.*
4. *Require traffic and construction site dust control measures at construction projects. Require measures which reduce emissions from construction activity and maximize efficiency of traffic flow during inversion conditions.*

- ***AQ-2f: Enforce air quality control measures and monitoring at construction sites.*** *Construction emissions shall be controlled because, although they are temporary in nature, they can often be the greatest air quality impact of a project. Require the dust and erosion control measures for construction activities.*

- ***AQ-2g: Enforce air quality control measures and monitoring for agricultural operations.*** *Air emissions from agricultural operations, including field burning, airborne soils, and over-spray from herbicide applications, shall be controlled and monitored through air quality standards, as well as adherence to the Land Use Code.*

AQ-3: Regional Air Quality Standards, monitoring, and education

Objective. *Participate in regional efforts to improve and monitor air quality and meet air quality goals, coordinate transportation and land use development planning with the North Coast Unified Air Quality Management District, and educate the public.*

Applicable sub-policies:

- ***AQ-3a: Air quality standards and monitoring.*** *Identify potential emission sources of airborne toxins from mobile and stationary sources. This may be in coordination with the California Air Resource Board and the District, as appropriate. Enforce rigid high standards to restrict fumes, smoke, dust, or other environmental pollutants from stationary sources of pollution.*

- ***AQ-3b: Develop and distribute material to educate the public on air quality issues.*** *Work with Humboldt State University, the California Air Resources Board, and the District to develop educational material regarding air quality, impact of air quality on people, plants and animals, and what citizens can do to improve air quality. The City will make this information available.*

- ***AQ-3c: Cooperation in enforcement activities and programs.*** *Cooperate with the District in implementing and enforcing the district's rules and programs. Consider joint implementation of programs between the City and the district such as:*

  1. *A voluntary wood-burning-devices dryness certification program.*
  2. *Free cordwood moisture checks.*
  3. *Brochures on wood burning.*
  4. *Conversion of conventional wood burning devices to EPA certified devices.*
  5. *Use of district non-compliance funds for low-cost replacements.*

  Develop land use ordinances and guidelines for new residential development to limit wood burning devices. Use District strategies to identify improper wood burning device use, improperly dried fuel, and faulty equipment, and provide education to violators or take enforcement action.

- ***AQ-3d: Indoor air pollution.*** *Factors such as sealed building interiors, inadequate ventilation, non-openable windows, and use of building materials that release toxic substances contribute to indoor air pollution. To maximize indoor air quality, the installation of openable windows and adequate ventilation systems, the use of pollution-reducing houseplants, as well as the selection of non-toxic building materials and interior finishes, is encouraged in all new buildings and in the retrofitting of existing buildings.*

- ***AQ-3e: Greenhouse gas reduction.*** *Many of the chemicals of concern for air quality are also greenhouse gases. The City shall work locally and regionally to develop plans and programs to reduce or reverse greenhouse gas emissions to meet State and Federal greenhouse gas reduction goals.*

AQ-4: Odor

Objective. *Minimize public exposure to noxious odors from industrial, manufacturing, processing, and food and beverage production operations.*

Applicable sub-policies:

- ***AQ-4a: Odor controls.*** *Identify potential sources of noxious odors and regulate those sources to avoid adverse affects on adjacent sensitive receptors. Noxious odors are defined as foul smelling airborne emissions that are sufficiently concentrated to cause physical discomfort to those inhabiting adjacent areas. Regulations imposed to reduce effects of these odors shall include limiting hours for odor emissions, periodic monitoring, and filtering to reduce concentrations.*

Public Safety Element

- ***PS-6d: Siting of facilities handling hazardous waste.*** *Businesses and agencies that use, store, or produce hazardous materials shall train employees and other users in safe handling and storage procedures, and shall post current Occupational Safety and Health Act (OSHA) and Humboldt County hazardous materials requirements. The Cit shall consider proximity to sensitive receptors, such as schools, hospitals and other health care facilities, day care centers, and other immobile populations, when reviewing new facilities and businesses involved in these activities.*

Design Element

- ***D-1f: Create buffers between incompatible land uses.*** *At boundaries between different land-use designations, and where different land-uses are adjacent, buffer areas shall be incorporated into site design. Buffers may consist of additional setbacks, landscaping, and visual and noise barriers such as fences or walls. Provide for sensitive transition from the public realm to the private realm. Require buildings to incorporate massing strategies to minimize impacts on adjacent uses.*

City of Arcata Local Coastal Program

There are no applicable policies in the City of Arcata Local Coastal Program that address air quality.

3.3.4 Evaluation Criteria and Significance Thresholds

For the purpose of this Draft EIR, the evaluation criteria and significance thresholds summarized below are used to determine if the Project would have a significant effect related to air quality. The Project would cause a significant impact related to air quality, as defined by Appendix G of the CEQA Guidelines, if it would:

- Conflict with or obstruct implementation of the applicable air quality plan;
- Result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is nonattainment under an applicable federal or state ambient air quality standard;
- Expose sensitive receptors to substantial pollutant concentrations; or
- Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

The NCUAQMD does not have established CEQA significance criteria to determine the significance of impacts that would result from projects such as the proposed Project; however, the NCUAQMD does have criteria pollutant significance thresholds for new or modified stationary source projects proposed within the NCUAQMD's jurisdiction. NCUAQMD has indicated that it is appropriate for lead agencies to compare proposed construction emissions that last more than one year to its stationary source significance thresholds, which are:

- NOx – 40.0 tons per year
- ROG – 40.0 tons per year
- PM_{10} – 15.0 tons per year
- $PM_{2.5}$ – 10.0

- CO – 100 tons per year

If an individual project's emission of a particular criteria pollutant is within the thresholds outlined above, the project's effects concerning that pollutant are considered to be less-than significant (NCUAQMD 2023). Impacts related to construction dust are considered significant if dust control measures are not implemented.

The NCUAQMD does not have formally adopted thresholds of significance for fugitive, dust-related PM emissions above and beyond Rule 104, Section D, which does not provide quantitative standards. Therefore, for the purposes of analysis, this document uses the Bay Area Air Quality Management District (BAAQMD) approach to determining significance for fugitive dust emissions from Project construction. The BAAQMD bases the determination of significance for fugitive dust on a consideration of the control measures to be implemented. If all appropriate emissions control measures recommended by BAAQMD are implemented for a project, then fugitive dust emissions during construction are not considered significant. BAAQMD recommends a specific set of "Basic Construction Measures" to reduce emissions of construction-generated PM_{10} to less than significant. Without incorporation of these Basic Construction Measures, the Project's construction-generated fugitive PM_{10} (dust) would result in a potentially significant impact.

Additionally, the NCUAQMD does not have adopted thresholds or guidance for assessing odor impacts. The NCUAQMD has stated that they would not comment adversely on the use of thresholds of significance from the BAAQMD for projects within Humboldt County. As stated by CEQA Guidelines Section 15064.7 (Thresholds of Significance) and 15064(b)(2), lead agencies may use thresholds on a case-by-case basis. For the purposes of analysis, this document uses the BAAQMD approach to assessing the significance of odor impacts. The BAAQMD has provided justification and substantial evidence in support of their adopted odor threshold of significance and impact analysis approach; the justification and substantial evidence remain applicable and valid for the Project location within Humboldt County.

3.3.5 Methodology

The California Emissions Estimator Model (CalEEMod) version 2022.1.1.12 was used to estimate air pollutant emissions from project operation (Appendix C). For the purposes of the modeling, the General Plan 2045 planning horizon of 2045 was used to estimate emissions that may be generated by the land use development and growth described in this Draft EIR Section 2.8, General Plan Buildout Projections. Project-specific land use entries, energy intensity factors, and other parameters are detailed within Appendix C.

Additionally, construction related emissions are discussed qualitatively. Impacts related to construction dust are considered significant if dust is allowed to leave the site.

3.3.6 Impacts and Mitigation Measures

Impact AQ-a: Would adoption and implementation of the General Plan 2045 conflict with or obstruct implementation of the applicable air quality plan?

To address nonattainment for PM_{10}, the NCUAQMD adopted a Particulate Matter Attainment Plan in 1995. This plan presents available information about the nature and causes of PM_{10} standard exceedances and identifies cost-effective control measures to reduce PM_{10} emissions to levels necessary to meet California Ambient Air Quality Standards. However, the NCUAQMD states that the plan, "should be used cautiously as it is not a document that is required in order for the District to come into attainment for the state standard" (NCUAQMD 2023).

Construction

NCUAQMD Rule 104 Section D requires the handling, transporting, or open storage of materials in such a manner that does not allow unnecessary amounts of PM to become airborne. Reasonable precautions shall be taken to prevent PM from becoming airborne, including, but not limited to: 1) covering open bodied trucks when

used for transporting materials likely to give rise to airborne dust; and 2) the use of water during the grading of roads or the clearing of land.

Therefore, compliance with applicable NCUAQMD PM_{10} rules is applied as the threshold of significance for the purposes of analysis. NCUAQMD Rule 104 Section D, Fugitive Dust Emissions, is applicable to the Project.

If not managed properly, dust generated during construction could leave the Project site, creating an impact to neighboring properties. General Plan 2045 includes the following sub-policies that reduce fugitive dust generation from construction activities: AQ-2e, AQ-2f.

With implementation of the air quality policies listed above, the construction anticipated under the General Plan 2045 would result in a less than significant impact for fugitive dust generation and, therefore, would not conflict with the applicable air quality plan.

Operation

Operation of the Project is not anticipated to include the handling, transporting, or open storage of materials in which fugitive PM (dust) may become airborne. Additionally, the City public roadways, bike paths, and other public facilities for transport under the City's jurisdiction are primarily paved, and travel on the paved roads would not result in substantial fugitive dust generation. Due to the absence of handling, transport, or open storage of materials that would generate fugitive PM, or unpaved public roads, operation of the Project is not expected to conflict with NCUAQMD's Rule 104 Section D. No impact from operation of the Project would result.

Therefore, project operations would result in no impact for conflicting with an applicable air quality plan.

Summary

As shown above, the Project includes measures for reducing fugitive PM_{10} emissions during construction, which is consistent with NCUAQMD Rule 104 and, therefore, would not conflict with the 1995 Particulate Matter Attainment Plan. Project operations would not conflict with air quality plan; Project operations would result in no impact.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact AQ-b: Would adoption and implementation of the General Plan 2045 result in a cumulatively considerable net increase in any criteria pollutant for which the Project region is nonattainment under an applicable federal or state ambient air quality standard?

As noted above, Humboldt County is designated nonattainment of the State's PM_{10} standard. The County is designated attainment for all other state and federal standards. Potential impacts of concern will be exceedances of state or federal standards for PM_{10}. Localized PM_{10} is of concern during construction because of the potential to emit fugitive dust during earth-disturbing activities.

Construction

For construction equipment emissions, the NCUAQMD has indicated that emissions are not considered regionally significant for projects whose construction would be of relatively short duration, lasting less than one year. For project construction lasting more than one year or that involves above average construction intensity in volume of equipment or area disturbed, construction emissions may be compared to the stationary source thresholds.

Buildout under General Plan 2045 would occur over a period of time and is dependent on market conditions and specific development proposals. Individual projects may include construction over 12 months to complete or require above average intensity with regard to equipment and area disturbed. Additionally, multiple development

projects could undertake construction at the same time. Site-specific development proposals and construction parameters are not known at this time. Therefore, short-term construction emissions could exceed the NCUAQMD's thresholds of significance. This impact is potentially significant.

Operation

Development accommodated by the General Plan 2045 would generate operational emissions from on-road vehicles and area sources. Operational emissions were estimate using CalEEMod as described in Section 3.3.5. Annual operational emissions estimates are shown in Table 3.3-2. As shown in the table, the Project's operational emissions would exceed the NCUAQMD's stationary sources emission thresholds for ROG, CO, and PM_{10}. Therefore, the Project's operational impact from emissions would be significant.

Table 3.3-2 Operational Regional Pollutant Emissions (2045)

Parameter	Emissions (tons per year)				
	ROG	NO_x	CO	PM_{10}	$PM_{2.5}$
Gateway Area Plan	4.8	1.6	14.8	1.5	0.3
Remaining Infill Development	44.0	14.0	152.0	16.8	7.3
Total General Plan 2045	**48.8**	**15.6**	**166.8**	**18.3**	**7.6**
Threshold of Significance	40.0	40.0	100	15.0	10.0
Significant Impact? (Yes/No)	*Yes*	*No*	*Yes*	*Yes*	*No*

The primary sources of ROG and CO emissions are on-road mobile vehicle emissions. The primary source of PM_{10} emissions is from woodburning and gas hearths in residential development.

Implementation of the following General Plan 2045 policies and sub-policies identified in Section 3.3.3 could reduce regional criteria air pollutant emissions by reducing single-passenger vehicle trips and vehicle miles traveled, supporting the transition to decarbonized on-road mobile sources, and increasing active and public transit infrastructure. However, even with implementation of the General Plan 2045 policies and sub-policies, the impact would remain significant.

Mitigation Measures:

Mitigation Measure AQ-1: Prohibit Woodburning and Gas Hearths and Fireplaces in New Residential Development

The City shall prohibit the installation of woodburning or gas hearths or fireplaces in all new residential development.

Mitigation Measure AQ-1 reduces PM_{10} and $PM_{2.5}$ emissions from residential hearths and fireplaces. As shown in Table 3.3-3, with implementation of Mitigation Measure AQ-1, PM_{10} emissions would be reduced to a level that is below the threshold of significance. However, ROG and CO emissions would continue to exceed the thresholds.

Table 3.3-3 Mitigated Operational Regional Pollutant Emissions (2045)

Parameter	Emissions (tons per year)				
	ROG	NO_x	CO	PM_{10}	$PM_{2.5}$
Gateway Area Plan	4.8	1.3	14.7	1.5	0.3
Remaining Infill Development	39.9	10.3	115.0	11.5	2.1
Total General Plan 2045	**44.7**	**11.6**	**129.7**	**13.0**	**2.4**
Threshold of Significance	40.0	40.0	100	15.0	10.0
Significant Impact? (Yes/No)	*Yes*	*No*	*Yes*	*No*	*No*

Level of Significance: Significant and unavoidable impact

Construction activities associated with buildout of the General Plan 2045 could generate short-term emissions that exceed the NCUAQMD's thresholds of significance. Additionally, operation of land use development under the General Plan 2045 could exceed the NCUAQMD's thresholds of significance. Application of General Plan 2045 policies and sub-policies would contribute to reduce criteria pollutants from construction and operation. Incorporation of Mitigation Measure AQ-1 would further reduce operational emissions of PM_{10} and $PM_{2.5}$ through prohibiting woodburning and gas hearths and fireplaces in new residential development. Implementation of the policies and mitigation may reduce the construction and operational air quality impacts of future individual projects to a level that is less than significant. However, the construction and operation of the overall land use development anticipated by the General Plan 2045 would remain significant and unavoidable.

Impact AQ-c: Would adoption and implementation of the General Plan 2045 expose sensitive receptors to substantial pollutant concentrations?

Activities occurring near sensitive receptors should receive a higher level of preventative planning. Sensitive receptors include school-aged children (schools, daycare, playgrounds), the elderly (retirement community, nursing homes), the infirm (medical facilities/offices), and those who exercise outdoors regularly (e.g., public and private exercise facilities, parks).

Construction

Construction activity for development of individual projects may temporarily increase localized concentrations of diesel particulate matter or $PM_{2.5}$ in proximity to a sensitive receptor. Diesel particulate matter from equipment exhaust and $PM_{2.5}$ pose potential health impacts to nearby receptors if those receptors have prolonged exposure to substantial emissions. As required by the California airborne toxics control measure Title 13 CCR Section 2485, construction contractors would be required to minimize idling times for trucks and equipment to five minutes, as well as to ensure that construction equipment is maintained in accordance with manufacturer's specifications.

The detailed information required to assess the significance of potential health risks to sensitive receptors from construction of individual projects is not available, and quantification of the potential risk is not applicable for the program-level analysis of this document. Subsequent to approval of the General Plan 2045, individual development projects would undergo environmental review. The dose to which receptors are exposed is the primary factor affecting health risk from TACs. Dose is a function of the concentration of a substance or substances in the environment and the duration of exposure to the substance. Although detailed information is not available at this time, construction emissions of future development could expose sensitive receptors to substantial TACs. The construction impact would be potentially significant.

Operation

Operation of development accommodated by the General Plan 2045 could generate new sources of TACs or $PM_{2.5}$ from area or stationary sources, or locate sensitive receptors within close proximity to existing sources of TACs or $PM_{2.5}$. Therefore, the General Plan 2045 could expose sensitive receptors to substantial levels of pollutants. The operational impact would be potentially significant.

Land uses with a known risk for generating substantial TACs or PM2.5 emissions include urban and rural roadways, distribution centers, dry-cleaning operations, and gas dispensing facilities. CARB has published the Air Quality and Land Use Handbook: A Community Health Perspective (Land Use Handbook) that provides CARB's recommendations regarding the siting of new sensitive land uses near facilities that are associated with health risks, particularly from air toxic emissions. The Land Use Handbook has siting guidance for freeways, distribution centers, rail yards, ports, refineries, chrome plating facilities, dry cleaners, and gasoline dispensing facilities. Although this guidance is for siting new locations of sensitive receptors, the facility distance and size guidance may be used as a screening level to identify when additional analysis is warranted during environmental review. The Land Use Handbook advisory recommendation for relevant land uses is to avoid siting new sensitive land uses within:

- 500 feet of a freeway, urban roads with 100,000 vehicles/day, or rural roads with 50,000 vehicles/day
- 1,000 feet of a distribution center (more than 100 trucks per day, more than 40 trucks with operating transport refrigeration units per day, or where transport refrigeration unit operations exceed 300 hours per week)
- 300 feet of any dry-cleaning operation
- 500 feet for dry cleaning operations with two or more machines
- Within the same building for dry cleaning operations that use perc dry cleaning operations
- 300 feet of a large gas dispensing facilities (throughput of 3.6 million gallons per year or greater)
- 50 feet of typical gas dispensing facilities

The traffic data for the existing conditions and with Project at the horizon year (2045) show that no roadways or highway segments would exceed the CARB screening level of 100,000 vehicles per day. Table 3.3-2 provides the three roadway segments with the highest traffic under existing and horizon scenarios. As shown in the table, none of the highest-traffic intersections would exceed the applicable screening levels under existing or horizon. Therefore, impacts to sensitive receptors from roadways and highway segment would be less than significant.

Table 3.3-4 Road Segment Annual Average Daily Traffic and the CARB Screening Level for Freeways and Urban Roads

Road Segment			Average Annual Daily Traffic	
Road Name	From	To	Existing	Horizon Year 2045
SR 101	SR 255/Samoa Blvd	14th Str	42,000	54,300
SR 101	14th Str	Sunset Ave	35,000	46,400
SR 101	Sunset Ave	SR 299 E.	44,000	57,600
Applicable Screening Level			100,000	100,000
Exceed Screening Level?			No	No

Mitigation Measures:

Mitigation Measure AQ-2: Implement Construction Screening and Reduction of TACs Emissions

The City shall require applicants for development projects that would be located within 1,000 feet of an existing sensitive receptor to identify the construction schedule and, for projects that would require more than 12 months of construction, implement the following minimization measures to reduce potential TACs (toxic air contaminants) emissions. Measures to reduce risk from construction emission may include, but are not limited to:

- During construction, use construction equipment rated as US EPA Tier 4 Interim for equipment of 50 horsepower or more.
- During construction, use construction equipment fitted with Level 3 Diesel Particulate Filters for all equipment of 50 horsepower or more.

Mitigation Measure AQ-3: Implement Enhanced Evaluation between Incompatible Land Uses

The City shall implement an enhanced evaluation of incompatible land uses to reduce the potential exposure of sensitive receptors to substantial air pollutants for land use developments that would locate sources of air pollutants or sensitive receptors in closer proximity than the distances recommended in California Air Resources Board's Land Use Handbook of:

- 1,000 feet of a distribution center (more than 100 trucks per day, more than 40 trucks with operating transport refrigeration units per day, or where transport refrigeration unit operations exceed 300 hours per week)
- 300 feet of any dry-cleaning operation
- 500 feet for dry cleaning operations with two or more machines
- Within the same building for dry cleaning operations that use perc dry cleaning operations
- 300 feet of a large gas dispensing facilities (throughput of 3.6 million gallons per year or greater)
- 50 feet of typical gas dispensing facilities

For projects that would result in sensitive receptors being closer than the screening distances above, the project applicants shall submit a Health Risk Assessment to the City Planning Department prior to project approval. The Health Risk Assessment shall be prepared pursuant to the latest Office of Environmental Health and Hazard Assessment policies and guidance and use the following quantitative performance measures:

- Result in an excess cancer risk level of less than 10 in a million;
- Result in a non-cancer hazard index less than 1.0 (acute or chronic); and
- Result in an incremental increase of less than 0.3 $\mu g/m^3$ annual average $PM_{2.5}$.

If the Health Risk Assessment demonstrates that the development project would meet all performance measures above, no other action is required. If the Health Risk Assessment shows the development project would not meet all necessary performance measures, the applicant shall identify, quantify, and implement project design features or other measures to reduce the impact to the satisfaction of the City. The applicant shall provide quantification to the City to demonstrate that the project achieves the performance measures.

Mitigation Measure AQ-4: Electrify Loading Docks

The City shall require the electrification of all new loading docks to facilitate plug-in capability and encourage trucks to utilize grid power to deliver goods.

Mitigation Measure AQ-5: Require Enhanced Air Filtration at New Sensitive Receptors

The City shall require air filtrations systems at new sensitive receptor buildings to be designed and constructed with air filters rated at a minimum efficiency reporting value 13 or higher.

Level of Significance: Significant and unavoidable impact. The buildout of the General Plan 2045 may expose sensitive receptors to substantial concentrations of TACs or $PM_{2.5}$. Environmental review of development projects by the City would minimize health risks. Additionally, implementation of General Plan policies and Mitigation Measures AQ-2 through AQ-5 would further reduce the potential for exposing sensitive receptors to substantial TACs or $PM_{2.5}$. However, implementation of the General Plan 2045 may generate long-term TACs. Although individual projects may be less than significant, the total development anticipated by the General Plan 2045 would contribute to higher generation of TACs and $PM_{2.5}$. Therefore, the impact remains significant and unavoidable.

Impact AQ-d: Would adoption and implementation of the General Plan 2045 result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Construction

Minor odors from the use of equipment during construction of future development would be intermittent and temporary and would dissipate rapidly from the source with an increase in distance. This impact is less than significant.

Operation

As stated in Section 3.3.4, the NCUAQMD does not have adopted thresholds or guidance for assessing potential odor impacts. The BAAQMD's 2022 Air Quality Guidelines (adopted in 2023) identifies the following plan-level assessment guidance:

> *For a long-range plan to have a less-than significant impact related to odors, the locations of existing and planned odor sources should be identified for the plan area. In addition, the plan should ensure that new receptors are not sited near an odor source.*

Land uses associated with adverse odor include wastewater treatment plants, sanitary landfills, composting facilities, asphalt batch plants, and similar land uses. BAAQMD has developed a list of recommended odor screening distances for specific odor-generating facilities (BAAQMD 2023). No new or substantially expanded sources of adverse odor are anticipated by the General Plan 2045. Additionally, the General Plan 2045 is not anticipated to result in a substantial increase in receptors near existing sources of adverse odor. Therefore, impacts would be less than significant.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

3.3.7 Cumulative Impacts

Impact AQ-C-1: Would adoption and implementation of the General Plan 2045 contribute to a cumulatively significant impact to air quality?

By its nature, air pollution is largely a cumulative impact, in that individual projects are rarely sufficient in size to result in nonattainment of ambient air quality standards. Instead, a project's individual emissions may contribute to cumulative adverse air quality impacts. The NCUAQMD's stationary source thresholds, applied to the construction and operation of the General Plan 2045, take into account the Air Basin's attainment status, continued attainment of the standards, and attainment of the daily PM_{10} California Ambient Air Quality Standards. Therefore, the stationary source thresholds, when used as regional thresholds of significance for criteria and precursor air pollutants, are the emission levels for which a project's individual emissions would be cumulatively considerable. If a project exceeds the identified regional significance thresholds, its emissions would be cumulatively considerable, resulting in significant adverse air quality impacts to the region's existing air quality conditions. Finally, consistency with an attainment plan is a cumulative analysis, as it analyzes a project in regard to an adopted plan that is based on growth projections for the region. Therefore, the plan-level analysis above for Impacts AQ-a and AQ-b also would constitute the cumulative impact analysis, and no additional cumulative impacts analysis is required. As shown in Impact AQ-a, the project would not conflict with or obstruct implementation of the applicable air quality plan during construction or operation. As shown in Impact AQ-b, the project would result in a cumulatively considerable net increase of a nonattainment criteria pollutant through operational generation ROG, CO, and PM_{10}. Implementation of Mitigation Measure AQ-1 would reduce the PM_{10} impacts to less than significant. However, operation of development accommodated by the General Plan 2045 would still exceed the thresholds of significance for ROG and CO. Therefore, the General Plan 2045 would result in a cumulatively considerable emissions of nonattainment criteria pollutants after incorporation of Mitigation Measure AQ-1.

As detailed in Impact AQ-c, the Project may expose sensitive receptors to substantial pollutant concentrations during construction or operation of land use development accommodated by the General Pan 2045. Implementation of Mitigation Measures AQ-2, AQ-3, AQ-4 and AQ-5 would reduce this impact. However, the

Project would result in a significant and unavoidable impact for construction and operational impact for exposure of sensitive receptors to substantial pollutant concentrations after incorporation of mitigation.

In summary, the General Plan 2045 would result in a cumulatively considerable impact for construction and operational criteria pollutants, and cumulatively considerable construction and operational sensitive receptor impact.

Mitigation Measures:

Mitigation Measure AQ-1: Prohibit Woodburning and Gas Hearths and Fireplaces in New Residential Development

Mitigation Measure AQ-2: Implement Construction Screening and Reduction of TACs Emissions

Mitigation Measure AQ-3: Implement Enhanced Buffer between Incompatible Land Uses

Mitigation Measure AQ-4: Electrify Loading Docks

Mitigation Measure AQ-5: Require Enhanced Air Filtration at New Sensitive Receptors

Level of Significance: Significant and unavoidable impact

3.4 Cultural Resources

This section evaluates potential impacts related to historic and cultural resources resulting from adoption and implementation of the General Plan 2045. To provide the basis for this evaluation, the Setting section describes the cultural resource setting. The Regulatory Framework section describes the regulatory background that applies to the General Plan 2045. The Impact Analysis section establishes the thresholds of significance, evaluates potential impacts to cultural resources, and identifies the significance of impacts.

Of the comment letters received in response to the Notice of Preparation circulated for the proposed General Plan 2045, a comment letter was received from the Native American Heritage Commission regarding AB 52 and SB 18 protocols to protect tribal cultural resources. There were no additional comments specific to cultural resources.

3.4.1 Study Area

For impact assessment related to cultural and historic resources, the City limits were used as the study area (see Figure 2-1 – City of Arcata Planning Areas).

3.4.2 Setting

Pre-Settlement Historic Context

Since time immemorial, before the arrival of European-American settlers in 1850, Arcata and the Humboldt Bay region were the home of the Wiyot. An Algonquian-speaking people, the Wiyot resided in settlements along the lower Mad River and Eel Rivers as well as other local streams, and along Humboldt Bay and on the hills and ridges or lands in between. Their way of life was shaped by the bountiful surroundings of forested hills, streams and rivers, the Pacific Coast, and protected marshes and sloughs of Humboldt Bay, which generously provided for generations of subsistence and cultural needs.

Traditional Native American culture was disrupted by Euro-American settlement and U.S. government policy. This produced significant depopulation and relocation of Native Californians from most of the lands they occupied, and these actions, combined with cultural intolerance, have led to the displacement of the Wiyot community and their inability to engage in many traditional cultural practices; however, affected Native American populations have not disappeared; rather, they have adapted to these new pressures.

Today, the Wiyot people are federally recognized in the Wiyot Tribe Reservation, the Bear River Band of the Rohnerville Rancheria, and the Blue Lake Rancheria. These tribes are actively involved in various tribal economic projects and in the revitalization of cultural traditions such as language, basket weaving, ceremonies, and reclaiming ancestral lands. It is the City's goal to support and encourage Tribal efforts to revitalize cultural traditions and invest in the cultural and physical health and well-being of Tribal members as a key component of the cultural and physical health of the Arcata community.

Settlement Historic Context

After the start of the California Gold Rush, from 1850 to 1860, Wiyot territory became the center of the largest concentrations of European settlers in California, north of San Francisco. The settlers utilized Humboldt Bay as a major shipping point for supplies to the gold mines on the Trinity, Klamath, and Upper Sacramento Rivers. In addition, the establishment of the redwood timber industry, and homesteading of the Eel River and Arcata Bottom for ranching and farming purposes, brought more people into the area. The influx of new settlers brought violence, including the Indian Island Massacre of February 26, 1860, which nearly destroyed the entire Wiyot population.

There are currently 32 recorded archaeological sites in the Arcata planning area. Most sites are situated along the margins of Humboldt Bay, along the edges of marshes and sloughs, and in the Arcata Bottom area. Sites also tend to be located at the base of hills and on mid-slope terraces near sources of water.

Data collected by L. L. Loud (1918) identified a number of Wiyot habitation and resource procurement sites in the Arcata planning area. According to the Arcata General Plan, the most likely location for additional (unrecorded) archaeological sites is a band approximately 1,000 meters wide along the Humboldt Bay shoreline and the Mad River. There is also the possibility of encountering archaeological resources elsewhere in the Arcata planning area.

Arcata represents one of the last settled areas in United States history and has historic resources dating back to the early 1850s. There are historical structures and sites throughout the central core of Arcata, on the lower slopes of Fickle Ridge, and in the Arcata Bottom (City of Arcata 2008).

Historic Resources in the Study Area

As of 2022, nine National Register buildings have been designated and counting: the Arcata Hotel (on the Plaza), the Whaley House (14th and H Streets), the Chapman House (974 10th Street), the Jacoby Building (791 8th Street), the Phillips House (71 E. Seventh Street), Arcata's Pythian Castle (1100 H Street), the Stone House (902 Fourteenth Street), the Schorlig House (1050 12th Street), and the Keiser House (1022 10th Street). The Jacoby Building is listed as a California Historical Landmark, as are the historical sites of Camp Curtis and the Arcata Mad River Railroad Company. The Northwestern Pacific Railway Line is considered potentially historic by Caltrans. There are 96 local historic landmarks within the study area which are listed in Table HP-1 of the Arcata General Plan 2020.

Historic Resources of the Gateway Area

A Historic Resources Inventory within the Gateway Area was prepared to document historic resources in coordination with development of the Gateway Area Plan and Form-Based Code. The Inventory was completed in February 2023 by G. Takano and is attached to this Draft EIR as Appendix D.

Local level historic landmarks are distinguished as Arcata structures or sites with special character or special historic, architectural, or aesthetic interest or value. The criteria used to determine local level historic landmarks include:

- The building or site is particularly representative of a distinct architectural period, type, style, or way of life.
- The building is of a type or style which was once common but is now rare.
- The building is at least 50 years old.
- The building or site is connected with a person or event important to local history.
- The architect or builder is famous or well-recognized.
- The building's style, construction method, or materials are unusual or significant.
- The overall effect of the design or building details are beautiful or unusual.
- The building contains original materials or workmanship of high or unusual value.

Based upon this criteria, the following 17 sites within the Gateway Area are recommended to be subject to applicable citywide preservation policy:

- 467 G Street
- 1088 N Street
- 1112 7th Street
- 1136 7th Street
- 1162 7th Street
- 1296 11th Street
- 1168 10th Street
- 1498 10th Street
- 1320 10th Street
- 1285 11th Street
- 1164 11th Street
- Northwestern Pacific Railroad Company Railway Line
- 1102 12th Street
- 900~940 Samoa Blvd
- 1288 9th Street
- 1380 9th Street
- 1116 11th Street

For the purposes of this EIR and City's Form-Based Code, these 17 sites will be compiled with the 96 designated historical sites (as shown on Table HP-1 of the Arcata General Plan 2020) to all be considered under the City's preservation policies.

Cultural Resources in the Study Area

A cultural resources report was not prepared to accompany this EIR. The City assumes that cultural resources may be encountered during excavation work, particularly in areas without previous development, and includes policies in the current and proposed General Plan to manage incidental discoveries of cultural resources.

3.4.3 Regulatory Framework

Historical and cultural resources in California, including historic resources, are protected and/or regulated by federal, state, and local laws and policies. Those applicable to the General Plan 2045 are summarized below.

Federal

Section 106 of the National Historic Preservation Act

Section 106 of the National Historic Preservation Act requires that, before beginning an undertaking, a federal agency, or projects that require a federal permit or utilize federal funds, must take into account the effects of the undertaking on historic properties and afford the Advisory Council on Historic Preservation and other interested parties an opportunity to comment on these actions.

Section 106 of the National Historic Preservation Act prescribes specific criteria for determining whether a project would adversely affect a historic property, as defined in 36 Code of Federal Regulations (CFR) 800.5. An impact is considered significant when prehistoric or historic archaeological sites, structures, or objects listed in or eligible for listing in the National Register of Historic Places are subjected to the following effects:

– physical destruction of or damage to all or part of the property
– alteration of a property
– removal of the property from its historic location
– change of the character of the property's use or of physical features within the property's setting that contribute to its historic significance
– introduction of visual, atmospheric, or audible elements that diminish the integrity of the property's significant historic features
– neglect of a property that causes its deterioration
– transfer, lease, or sale of the property

Cultural resource significance is evaluated in terms of eligibility for listing in the National Register of Historic Places. National Register of Historic Places significance criteria applied to evaluate the cultural resources for this Project are defined in 36 CFR 60.4 as follows: *"The quality of significance in American history, architecture, archaeology, engineering, and culture is present in districts, sites, buildings, structures, and objects that possess integrity of location, design, setting, materials, workmanship, feeling, association, and:*

A. that are associated with events that have made a significant contribution to the broad patterns of our history; or
B. that are associated with the lives of persons significant in our past; or
C. that embody the distinctive characteristics of type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
D. that have yielded, or may be likely to yield, information important in prehistory or history."

Specific regulations regarding compliance with Section 106 state that, although the tasks necessary to comply with Section 106 may be delegated to others, the federal agency is ultimately responsible for ensuring that the Section 106 process is completed according to statute.

State

California Environmental Quality Act

Historical resources are defined as buildings, sites, structures, or objects, each of which may have historic, architectural, archaeological, cultural, or scientific importance. Under CEQA, a project that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect on the environment. (PRC Section 21084.1). Demolition, replacement, substantial alteration, and relocation are actions that would change the significance of a historical resource (CEQA Guidelines Section 15064.5). The following steps are normally taken in a cultural / historic resources investigation to comply with CEQA:

- Identify historical resources, including archaeological resources, as defined in CEQA Guidelines Section 15064.5 within a study area;
- Evaluate the significance of the cultural resources based on established thresholds of significance;
- Evaluate the impacts of a project on historical resources; and
- Develop and implement measures to mitigate the impacts of the project on historical resources, including significant archaeological resources.

Because the Project is located on non-federal land in California, it is also necessary to comply with state laws pertaining to the inadvertent discovery of human remains of Native American origin. The procedures that must be followed if burials of Native American origin are discovered on non-federal land in California are described in the Impacts and Mitigation Measures section below.

Pursuant to CEQA Guidelines Section 15064.5 (a) the term “historical resources” includes the following:

- A resource listed or determined to be eligible by the State Historical Resources Commission for listing, in the California Register of Historical Resources (PRC §5024.1, 14 CCR, §4850 et seq.).
- A resource included in a local register of historical resources, as defined in PRC Section 5020.1 (k) or identified as significant in a historical resource survey meeting the requirements of PRC Section 5024.1 (g), shall be presumed historically or culturally significant. Public agencies must treat any such resource as significant unless the preponderance of evidence demonstrates that it is not historically or culturally significant.
- Any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California may be considered to be a historical resource, provided the lead agency’s determination is supported by substantial evidence in light of the whole record. Generally, a resource shall be considered by the lead agency to be “historically significant” if the resource meets the criteria for listing on the California Register of Historical Resources (PRC §5024.1, Title 14 CCR, §4852) including the following:
    1. Is associated with events that have made a significant contribution to the broad patterns of California’s history and cultural heritage;
    2. Is associated with the lives of persons important in our past;
    3. Embodies the distinctive characteristics of type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
    4. Has yielded, or may be likely to yield, information important in prehistory or history.
- The fact that a resource is not listed in or determined to be eligible for listing in the California Register of Historical Resources, not included in a local register of historical resources (pursuant to PRC §5020.1(k)), nor identified in a historical resources survey (meeting the criteria in PRC §5024.1(g)) does not preclude a

lead agency from determining that the resource may be a historical resource as defined by PRC Section 5020.1(j) or 5024.1.

Historical resources eligible for listing in the California Register of Historical Resources must meet one of the criteria of significance described above and retain enough integrity to convey the reasons for their significance. Integrity under California Register of Historical Resources guidelines is defined as the authenticity of an historical resource's physical identity evidenced by the survival of characteristics that existed during the resource's period of significance. Integrity is evaluated with regard to the retention of location, design, setting, materials, workmanship, feeling, and association.

CEQA applies to archaeological resources when: (1) the archaeological resource satisfies the definition of a historical resource; or (2) the archaeological resource satisfies the definition of a "unique archaeological resource." A unique archaeological resource is an archaeological artifact, object, or site that has a high probability of meeting any of the following criteria:

1. The archaeological resource contains information needed to answer important scientific research questions and there is a demonstrable public interest in that information.
2. The archaeological resource has a special and particular quality such as being the oldest of its type or the best available example of its type.
3. The archaeological resource is directly associated with a scientifically recognized important prehistoric or historic event or person.

California Coastal Act

The Project Area is within the Coastal Zone. The California Coastal Act contains policies relevant to cultural resources. The following Coastal Act sections are relevant to this analysis:

Public Resources Code Section 30116 Sensitive coastal resource areas

"Sensitive coastal resource areas" means those identifiable and geographically bounded lands and water areas within the coastal zone of vital interest and sensitivity. "Sensitive coastal resource areas" include the following:

(d) Archaeological sites referenced in the California Coastline and Recreation Plan or as designated by the State Historic Preservation Officer.

Public Resources Code Section 30244 Archaeological or paleontological resources

Where development would adversely impact archaeological or paleontological resources as identified by the State Historic Preservation Officer, reasonable mitigation measures shall be required.

Office of Historic Preservation

The California State Office of Historic Preservation is responsible for administering federally and state mandated historic preservation programs to further the identification, evaluation, registration, and protection of California's irreplaceable archaeological and historic resources under the direction of the State Historic Preservation Officer and the State Historical Resources Commission.

The Office of Historic Preservation reviews and comments on federally sponsored projects pursuant to National Historic Preservation Act Section 106, and state programs pursuant to PRC Sections 5024 and 5024.5, which provide policies and plans for preserving and maintaining all state-owned historical resources or eligible historical resources. The Office of Historic Preservation also reviews and comments on local government and state projects pursuant to CEQA.

A variety of programs have been created by the Office of Historic Preservation in order to manage historic resources and to determine eligibility for classification as a historic resource. The programs that Office of Historic Preservation administers include: the National Register of Historic Places, California Register of Historical Resources, California Historical Landmarks, and the California Points of Historical Interest. Each program has

different eligibility criteria and procedural requirements; the eligibility criteria listed through the National Register of Historic Places and California Register of Historical Resources (mentioned above) are used to evaluate significance of potential cultural resources within this Project.

The California Register of Historical Resources criteria is nearly identical to the federal National Register of Historic Places criteria and are used in tandem as “1/A” or “2/B” when identifying impacts in Section 3.4.6 (Impacts and Mitigation Measures). There is a slight difference in meaning between the California Register of Historical Resources and National Register of Historic Places regarding Criterion 3 (Criterion C in the National Register of Historic Places), which would be accounted when determining impacts and significance in Section 3.4.6 (Impacts and Mitigation Measures).

California Public Resources Code

As part of the determination made pursuant to PRC Section 21080.1, the lead agency must determine whether a project would have a significant effect on archaeological resources.

Several sections of the PRC protect cultural resources. Under Section 5097.5, no person shall knowingly and willfully excavate upon, or remove, destroy, injure, or deface, any historic ruins, burial grounds, archaeological site, inscriptions made by humans, rock art, or any other archaeological, or historical feature situated on public lands, except with the express permission of the public agency that has jurisdiction over the lands. Violation of this section is a misdemeanor.

PRC Section 5097.98 states that if Native American human remains are identified within a project area, the landowner must work with the Native American Most Likely Descendant as identified by the Native American Heritage Commission to develop a plan for the treatment or disposition of the human remains and any items associated with Native American burials with appropriate dignity. These procedures are also addressed in Section 15046.5 of the CEQA Guidelines. Section 30244 of the PRC requires reasonable mitigation for impacts on paleontological and archaeological resources that occur as a result of development on public lands, which can be considered applicable to the portions of the Project located within the Caltrans right of way.

On September 25, 2014, AB 52 was signed, which included amendments to PRC Section 5097.94. AB 52 requires tribal cultural resources to be considered under CEQA. AB 52 requires lead agencies to provide notice to Native American tribes that are traditionally and culturally affiliated with the geographic area of a proposed project if they have requested notice of projects proposed within that area. See Section 3.11 (Tribal Cultural Resources) for more information on AB 52 compliance and tribal cultural resources.

California Health and Safety Code

California Health and Safety Code Section 7050.5 prohibits disinterring, disturbing, or removing human remains from a location other than a dedicated cemetery. Section 7050.5 also requires that construction or excavation be stopped in the vicinity of discovered human remains until the Coroner can determine whether the remains are those of a Native American. If determined to be Native American, the Coroner must contact the California Native American Heritage Commission.

California Native American Historical, Cultural and Sacred Sites Act

This Act applies to both state and private lands. The Act requires that upon discovery of human remains, that construction or excavation activity cease and that the county Coroner be notified. If the remains are of a Native American, the Coroner must notify the Native American Heritage Commission. The Native American Heritage Commission then notifies those persons most likely to be descended from the Native American remains. The Act stipulates the procedures the descendants may follow for treating or disposing of the remains and associated grave goods.

Local

This section includes the City’s existing General Plan 2020 policies, City Local Coastal Program policies, and the proposed General Plan 2045 policies related to cultural and historic resources.

City of Arcata General Plan 2020

The Arcata General Plan 2020 contains guidelines for cultural resources within the Historic Preservation Element. The General Plan has developed specific goals and related policies that address cultural and archaeological resources within the City. The following policies are applicable to the proposed General Plan 2045:

Policy H-1: Historic Landmarks

Objective. *Designate and preserve significant structures and sites that are representative of the City's social and physical development; that are reminders of past eras, events, and persons important in local, state or national history; which provide significant examples of architectural styles of the past; or which are unique and irreplaceable assets to the City, and the neighborhood in which the structure or site is located.*

Applicable sub-policies:

- ***H-1a: National Register and State Historic Landmarks designation.*** *The City encourages owners of eligible structures to request National Register and State Historical Landmarks designations for their properties. As of 1998, three National Register sites have been designated: the Arcata Hotel (on the Plaza), the Whaley House (14th and H Streets), and the Schorlig House (1050 12th Street). The Jacoby Storehouse is among the State Registered Historical Landmarks.*
- ***H-1b: Local Historic Landmarks designations.*** *Structures or sites having special character or special historic, architectural, or aesthetic interest or value shall be designated as local Historic Landmarks. Such structures or sites shall be protected from demolition and inappropriate alterations. Locally designated Historic Landmarks are shown in Figure HP-a and are listed in Table HP-1, at the end of the Element. An updated inventory of structures and sites eligible for designation as a Local Historic Landmark shall be maintained by the City. One or more of the following criteria shall be required for a structure or site to be eligible for listing:*
  1. *The building or site is particularly representative of a distinct architectural period, type, style, or way of life.*
  2. *The building is of a type or style which was once common but is now rare.*
  3. *The building is at least 50 years old.*
  4. *The building or site is connected with a person or event important to local history.*
  5. *The architect or builder is famous or well-recognized.*
  6. *The building's style, construction method, or materials are unusual or significant.*
  7. *The overall effect of the design or building details are beautiful or unusual.*
  8. *The building contains original materials or workmanship of high or unusual value.*
- ***H-1c: Historic Landmarks (HL) combining zone.*** *The City shall formally designate Historic Landmarks with a special combining zone in the Land Use Code. The zone shall serve as a disclosure of the importance of the structure and of the limitations placed on its alteration or demolition. The request for designation may be initiated by the owner, City Council, Planning Commission, or the Historic and Design Review Commission. If initiated by the City, the owner shall be notified and be able to contest the process.*
- ***H-1d: Discretionary review and approval requirements for demolition.*** *See policy H-5.*
- ***H-1e: Design review approval for alterations and additions.*** *The following types of changes to a structure designated by the HL combining zone shall not be permitted without first obtaining approval of the Historic and Design Review Commission:*
  1. *Any exterior modifications or alterations, including changes in materials.*
  2. *Interior alterations that would affect the exterior appearance.*
  3. *Any addition to the designated structure.*
  4. *Construction of a new building on a parcel with a designated Historic Landmark.*
- ***H-1f: Design criteria for alterations of and additions to local Historic Landmarks.*** *At the discretion of the Community Development Director and/or Historic and Design Review Commission, an owner proposing any construction or alteration that may affect the historical character of the structure may be*

required to obtain an analysis of the proposed changes by a cultural resources consultant or other knowledgeable professional to determine the impact on the building's historical features. In modifying historic structures, the distinguishing original qualities or character of the building shall not be destroyed. The removal or alteration of any historic material or distinctive architectural feature shall be avoided whenever possible. Whenever practicable deteriorated architectural features shall be repaired or restored rather than replaced. Contemporary design for additions are not prohibited when such additions are compatible with and do not destroy the historical or architectural character of the property.

- ***H-1g: Preservation Incentives.*** *To encourage property owners to obtain local Historic Landmark designation, the City will provide the following incentives or assistance:*
  1. *Exemption from the requirements to provide any additional off-street parking, except for additions 200 or more square feet in size.*
  2. *Exemption, for nonconforming uses, from Land Use Code limitations pertaining to non-conforming structures and site conditions.*
  3. *Compliance with the State Historic Building Code and portions of the Uniform Code for Building Conservation, rather than the current edition of the Uniform Building Code.*
  4. *Conservation easements for facades that may provide tax advantages to the donor.*
  5. *Establishment of a Mills Act program, by the City, which would provide property tax reductions for historic properties subject to program criteria.*
  6. *Façade rehabilitation grants or loans, through the Community Development Agency, for designated historic commercial structures.*
- ***H-1h: Historical Landmarks on the Humboldt State University Campus.*** *The City encourages HSU to initiate procedures for the recognition and protection, in compliance with Public Resources Code Section 5024, of historic structures and other historic resources on the campus. The following structures, located on the HSU campus, are hereby identified as local Historic Landmarks.*
  1. *Founders Hall*
  2. *Gist Hall*
  3. *Nelson Hall*
  4. *Jenkins Hall*
- ***H-1i: Historic and Design Review Commission (HDRC).*** *The City Council shall create a Historic and Design Review Commission consisting of persons having knowledge, by virtue of training or experience, of Arcata's social and building history or of design and building. The Commission shall promote public involvement and education in preserving Arcata's heritage of older buildings.*

Policy H-2: Noteworthy Structures

Objective. *Identify and encourage retention of structures which could qualify as historical landmarks, but are not currently designated. Although some of these structures may lack the level of significance attached to designated landmarks, they have an architectural or design character which represents particular building styles or eras in the City's development, and they contribute to the overall character and historical texture of a neighborhood.*

Applicable sub-policies:

- ***H-2a: Noteworthy structures list.*** *The City shall direct the Historic and Design Review Commission to recommend and keep current a "Noteworthy Structures" list, and encourage retention of these structures. Noteworthy structures are those which may not have complete documentation as to their historical or architectural merit but which have notable characteristics. In order to be eligible for listing, a structure should have one of the following attributes:*
  1. *Representative of a particular architectural style*
  2. *Representative of a period in the City's historical development*
  3. *Associated with social history of the City*
  4. *Of unusual or special design character*

- ***H-2b: Incentives, list preparation, notification, and future landmark designation.*** *Those properties listed as noteworthy structures shall be eligible for the following incentives and assistance:*
  1. *Exemption from the requirements to provide any additional off-street parking, except for additions 200 or more square feet in size.*
  2. *Exemption, for nonconforming uses, from Land Use Code limitations pertaining to non-conforming structures and site conditions.*
  3. *Compliance with the State Historic Building Code and portions of the Uniform Code for Building Conservation, rather than the current edition of the Uniform Building Code.*
  4. *Conservation easements for facades that may provide tax advantages to the donor.*
  5. *Façade rehabilitation grants or loans, through the Community Development Agency, for designated historic commercial structures.*

  The Historic and Design Review Commission shall notify the owners of property being considered for placement on the list. Those owners shall be given the opportunity to contest and appeal the listing. There shall also be a procedure established for properties to be removed from the list. The owners of properties listed as having noteworthy structures are encouraged to apply for Historic Landmark designation.
- ***H-2c: Noteworthy structures on Humboldt State University Campus.*** *The Wagner House located on campus is hereby identified as a noteworthy structure. The City requests that all structures of historic value be preserved and protected from demolition and from alterations or additions that are incompatible with their historical character. Noteworthy structures on the HSU campus will be added to the noteworthy structures list developed by the City pursuant to H-2a.*
- ***H-2d: Design review approval.*** *Design Review Commission review and approval, with input from the Historic and Design Review Commission, shall be required for all exterior alterations to noteworthy structures, when or if alterations require a building permit, including changes in types of materials and additions.*
- ***H-2e: Design criteria for alterations and additions****. Prior to approval of any exterior change, the Design Review Commission shall make findings of fact that the alteration or addition is compatible with and does not destroy the historical or architectural character of the property and the immediate neighborhood.*
- ***H-2f: Demolition controls.*** *See policy H-5.*

Policy H-3: Arcata Plaza Area Historic District

Objective. *Protect and preserve the Arcata Plaza and the older structures that border the adjacent streets and help define the Plaza's character, for the unique historical, architectural, aesthetic, and economic values that it represents to the city.*

Applicable sub-policies:

- ***H-3a: Arcata Plaza Historic District.*** *The Plaza Area has a special character and unique historical, aesthetic and cultural interest and significance to the residents and businesses of Arcata. Reflecting its central place in Arcata's heritage and identity, the Plaza Area, as shown on Figure HP-a, is hereby designated as a local historic district.*
- ***H-3b: Historic District combining zone.*** *The Plaza Area Historic District shall, by ordinance pursuant to the Land Use Code, be designated within the Landmark Historic District Combining Zone. Structures within the Historic District shall receive the same protections as are provided to individually-designated Historic Landmarks.*
- ***H-3c: Controls on demolition.*** *Policy H-5 applies.*
- ***H-3d: Design review approval.*** *Review and approval by the Design Review Commission shall be required for all exterior alterations of and additions to structures located within the Plaza Area Historic District.*
- ***H-3e: Design criteria for alterations and additions.*** *[policies D-2e and D-2g shall apply.]*

- ***H-3f: Regulatory and other incentives for preservation.*** *In addition to the regulatory and other incentives in H-1g, the following shall also apply:*
  1. *The City Council, with help of the Historic and Design Review Commission and the Historical Sites Society of Arcata, shall develop a commemorative plaque program to provide special identification of historical structures.*
  2. *Non-conforming uses that have historical value will be allowed to continue.*
- ***H-3g: Arcata Plaza as a historic site.*** *The Arcata Plaza Historic District includes at its center the city park known as the Arcata Plaza. The following principal features of the Plaza, which define its historic character, shall be preserved:*
  1. *The generally symmetrical pattern of walkways*
  2. *The open nature of the Plaza and the absence of buildings within it.*
  3. *The Women's Christian Temperance Union drinking fountain on "H" Street*
  4. *The existing Plaza palm trees*

  (modified via Resolution 189-43)

Policy H-4: Neighborhood Conservation Areas (NCAs) and Specific Plans Districts (SPDs)

Objective. *Designate the Central Arcata, Arcata Heights, Bayview, and Bayside areas as Neighborhood Conservation Areas and assure that new construction, modifications or alterations of noteworthy structures, and significant changes to other structures are harmonious with the existing character of these neighborhoods.*

Applicable sub-policies:

- ***H-4a: Neighborhood Conservation Areas.*** *The following NCAs, with the boundaries shown in Figure HP-b are hereby established:*
  1. *Bayview Conservation Area*
  2. *Arcata Heights Conservation Area*
  3. *"Central" Conservation Area*
- ***H-4b: Demolition controls.*** *see policy H-5*
- ***H-4c. Design review.*** *All structures located within an NCA, including single-family houses, historic structures identified in specific plans, and existing structures with exterior alterations or renovation of more than 25 percent of the floor and/or exterior wall area, shall be subject to approval. Prior to approval, the finding must be made that the design will be compatible with the existing character of the NCA.*
- ***H-4d. Rehabilitation assistance programs.*** *Any City-sponsored or assisted rehabilitation programs shall give priority to qualifying structures within the boundaries of NCAs. Such rehabilitation shall be consistent with the architectural and aesthetic character of the area and the individual structure.*
- ***H-4e: Design criteria for alterations and additions.*** *Prior to approval of any exterior change requiring a building permit, the Design Review Commission shall make a finding that the alteration or addition is compatible with and does not destroy the historical or architectural character of the property and the surrounding neighborhood conservation area.*
- ***H-4f: Specific Plan Districts.*** *The following Specific Plan Districts, with boundaries shown in Figure HP-b and HP-c, are hereby established:*
  1. *Bayside Specific Plan District*
  2. *"South of Samoa" (SOS) Specific Plan District*

  Specific Plans prepared for these Districts will include preservation measures for historic and noteworthy structures.

To date, the City has not designated Bayside as an NCA, nor has it prepared a specific plan for the Bayside Specific Plan District.

Policy H-5: Controls on Demolition of Structures

Objective. *To prevent the premature demolition of existing buildings without first evaluating whether they are contributory to the historical or architectural character of the City or neighborhood and to consider the potential for preservation of those found to contribute to such character.*

Applicable sub-policies:

- ***H-5a: Discretionary demolition review required.*** *No building within the City shall be demolished, in whole or in part, without review and approval by the Historic and Design Review Commission prior to issuance of a Demolition Permit. A Notice of Proposed Demolition shall be provided to all property owners within a 300-foot radius and to the Historical Sites Society of Arcata. Prior to its decision, the HLC shall consider the recommendations of the Historical Sites Society of Arcata or its designated representative. For partial demolitions, the applicant shall be required to submit a demolition plan showing those portions to be demolished and those to be retained. The following findings shall be required to approve demolition permit:*
  1. *The building does not contribute to the historical or aesthetic character of the neighborhood or the City.*
  2. *Although the building does have historical or aesthetic merit, it:*
  3. *has sustained substantial damage to key structural components, and*
  4. *there are no feasible alternatives to demolition of the building. Bayview Conservation Area*
  5. *Arcata Heights Conservation Area*
  6. *"Central" Conservation Area*
- ***H-5b: Waiting period for demolition of designated landmarks.*** *Any approved demolition permit for designated historical landmarks shall be automatically subject to a delay of 180 days before the building permit for demolition may be issued by the City.*
- ***H-5c. Deconstruction of older buildings.*** *In those instances where demolition is authorized, it is encouraged that the buildings be deconstructed and that building components, fixtures, and materials be salvaged for future re-use.*

Policy H-6: Public Participation, Information and Education Policy

Objective. *Promote public awareness of the City's historical heritage and resources, provide information and education about the methods and techniques to protect and enhance the quality of these resources, and encourage public participation in preserving Arcata's historical heritage.*

Applicable sub-policies:

- ***H-6a: Role of Historical Sites Society of Arcata (HSSA).*** *The City shall send notice to the HSSA on all matters pertaining the preservation of historical resources. These include, but are not limited to, requests for comments on proposed Historic Landmarks, additions to the list of noteworthy structures, and proposed alteration or demolition of such structures.*

  The HSSA may submit its comments to the Historic and Design Review Commission. In consultation with the HSSA and the HLC, the Community Development Department shall prepare a brochure which provides guidelines and federal standards for restoration, alteration, and additions to historical landmark and noteworthy structures. The HSSA is also designated as the organization to oversee the operation of Phillips House Museum of the City of Arcata.
- ***H-6b: Commemorative plaques for historical structures.*** *In order to provide greater recognition and identification of designated historical landmark structures and to comply with federal standards, a commemorative plaque program should be developed. The HSSA is encouraged to be the lead organization for this effort.*
- ***H-6c. Informational guides and walking tours.*** *The City encourages the HSSA and Arcata Chamber of Commerce to prepare informational guides or walking tour guides for Arcata's most significant historical resources. The purposes of the tour guide(s) are to promote appreciation of the community's heritage sites and contribute to Arcata's tourism attractions.*

- ***H-6d. Brochure on benefits and advantages for designating historical landmarks.*** *The Arcata Community Development Department shall prepare an informational brochure which describes the benefits and advantages of having structures or sites designated as local Historic Landmarks.*

Policy H-7: Archaeological and Cultural Resources

Objective. Protect and preserve Native American and Euro-American archaeological sites and cultural resources within the City of Arcata.

Applicable sub-policies:

- ***H-7a: Cultural Resources Project Review.*** *As part of the environmental and project review process, the City of Arcata shall enter into a Memorandum of Agreement (MOA) with the Northwest Information Center of the Historical Resources Information System of the State of California. Under the MOA, all proposed discretionary projects under the California Environmental Quality Act shall be subject to cultural resources sensitivity review by the Northwest Information Center. In order to provide a context for city projects, for the evaluation of cultural significance and for the interpretation of the results of cultural resources project reviews, the City of Arcata shall contract for a general prehistoric, ethnographic, and historic overview of the city and its environs.*
- ***H-7b: Archaeological Surface Reconnaissance.*** *If the cultural resources project review determines that the project is located in an area with a high probability of archaeological resources, an archaeological survey by a professional archaeologist or other qualified expert shall be performed.*
- ***H-7c: Mitigation of potential impacts on archaeological resources.*** *If the results of the surface reconnaissance show that the project area contains a resource of cultural significance, and it is demonstrated that a project would cause damage to such a resource, the City may require reasonable efforts to be made to permit any or all of these resources to be preserved in place or left in an undisturbed state. Examples of other treatment include, but are not limited to the following:*
  1. *Modifying the project to avoid portions of the site with archaeological resources.*
  2. *Providing or conveying easements or other deed restrictions*
  3. *Capping or covering archaeological resources with a soil layer before construction*
  4. *Planning open space to incorporate archaeological sites*
- ***H-7d: Monitoring of Construction.*** *In appropriate circumstances, when archaeological resources are likely to be present at a construction site, monitoring of excavation and other soil disturbing activities by archaeological and/or Native American observers shall be required.*
- ***H-7f: Discovery of archaeological resources.*** *Upon discovery of archaeological or paleontological materials, all grading or other land-disturbing construction activities at the site shall be suspended until the nature of the cultural resources has been ascertained and the appropriate disposition method determined.*

Proposed City of Arcata General Plan 2045

The following policies within the proposed General Plan 2045 that regulate cultural or historic resources include the following.

Policy H-1: Designated Historic Landmarks

Objective. *Designate and preserve significant buildings, structures, and sites that are representative of the city's social and physical development; that are reminders of past eras, events, and persons important in local, state, or national history; which provide significant examples of architectural styles of the past; or which are unique and irreplaceable assets to the city, and the neighborhood in which the building, structure or site is located. Support property owners' efforts to preserve, restore, and adapt use of significant structures and sites for continuing significance.*

Applicable sub-policies:

- ***H-1a: National Register and State Historic Landmarks designations.*** *The City encourages owners of eligible buildings, structures or sites to request National Register and State Historical Landmarks*

designations for their properties. As of 2022, nine National Register buildings have been designated and counting: the Arcata Hotel (on the Plaza), the Whaley House (14th and H Streets), the Chapman House (974 10th Street), the Jacoby Building (791 8th Street), the Phillips House (71 E. Seventh Street), Arcata's Pythian Castle (1100 H Street), the Stone House (902 Fourteenth Street), the Schorlig House (1050 12th Street) and the Keiser House (1022 10th Street). The Jacoby Building is listed as a California Historical Landmark, as are the historical sites of Camp Curtis and the Arcata Mad River Railroad Company.

- ***H-1b: Local Historic Landmarks designations.*** *Buildings, structures, or sites having special character or special architectural, or aesthetic interest or value may be designated as local Historic Landmarks. Such buildings, structures or sites shall be protected from demolition and inappropriate alterations. Locally designated Historic Landmarks are shown in Figure HP-a and are listed in Table HP-1, at the end of the Element. An updated inventory of buildings, structures and sites that are designated or potentially historic shall be set by the City Council and maintained by the City. In addition to overall high integrity and exhibiting exceptional preservation, one or more of the following criteria shall be required for a structure or site to be eligible for listing:*
  1. *The building, structure, or site is particularly representative of a distinct architectural period, type, style, or way of life.*
  2. *The building or structure is of a type or style which was once common but is now rare.*
  3. *The building, structure, or site is at least 50 years old.*
  4. *The building, structure or site is associated with a person or event important to local history.*
  5. *The architect or builder is famous or well-recognized.*
  6. *The building's style, construction method, or materials are unusual or significant.*
  7. *The overall effect of the design or building details are beautiful or unusual.*
  8. *The building contains original materials or workmanship of high or unusual value.*
- ***H-1c: Historic Landmarks (:HL) combining zone.*** *The City shall formally designate Historic Landmarks with a special combining zone in the Land Use Code. The zone shall serve as a disclosure of the importance of the structure and of the limitations placed on its alteration or demolition. The request for designation may be initiated by the owner, City Council, Planning Commission, or the Historic and Design Review Commission. If initiated by the City, the owner shall be notified and be able to contest the process.*
- ***H-1d: Design review approval for alterations and additions.*** *The following types of changes to a structure designated by the HL combining zone shall not be permitted without first obtaining approval of the appropriate Review Authority:*
  1. *Any exterior modifications or alterations, including changes in materials.*
  2. *Interior alterations that would affect the exterior appearance.*
  3. *Any addition to the designated structure.*
  4. *Construction of a new building on a parcel with a designated Historic Landmark.*
- ***H-1e: Design criteria for alterations of an additions to local Historic Landmarks.*** *At the discretion of the appropriate Review Authority, an owner proposing any construction or alteration that may affect the historical character of the structure may be required to obtain an analysis of the proposed changes by a cultural resources consultant or other knowledgeable professional to determine the impact on the building's historical features.*

  In modifying historic structures, the distinguishing original qualities or character of the building as described in the parcel's :HL ordinance shall not be destroyed. The removal or alteration of any historic material or distinctive architectural feature shall be avoided whenever possible. Whenever practicable deteriorated architectural features shall be repaired or restored rather than replaced. Contemporary designs for additions are not prohibited when such additions are compatible with and do not destroy the historical or architectural character of the property.
- ***H-1f: Historic Landmarks on the Cal Poly Humboldt campus.*** *The City encourages HSU to initiate procedures for the recognition and protection, in compliance with Public Resources Code Section*

5024, of historic structures and other historic resources on the campus. The following structures, located on the HSU campus, are hereby identified as local Historic Landmarks.

1. *Founders Hall.*
2. *Gist Hall.*
3. *Nelson Hall.*
4. *Jenkins Hall.*

Policy H-2: Potentially Historic Buildings

Objective. *Identify and encourage retention of buildings, structures or sites that could qualify as historical landmarks but are not currently designated. Apply similar review procedures and rehabilitation incentives to potentially historic structures as are applied to :HL properties.*

- ***H-2a: Potentially historic buildings list.*** *The City shall maintain a current "Potentially Historic Buildings" list and encourage retention of these structures. Potentially historic structures are those which may not have complete documentation as to their historical or architectural merit but have been identified as having notable characteristics, with an emphasis on aesthetic characteristics. In addition to overall high integrity, the building, structure or site should have one of the following attributes in order to be eligible for listing:*
  1. *Representative of a particular architectural style identified herein (Settlement, Victorian, Transitional, Modern).*
  2. *Representative of a period in the city's historical development as identified in the City's Context Statement.*
  3. *Associated with social history of the City as identified in the City's Context Statement.*
  4. *Of unusual or special design character.*

  The City shall notify the owners of property being considered for placement on the list. Those owners shall be given the opportunity to contest and appeal the listing. There shall also be a procedure established for properties to be removed from the list. The owners of properties listed as having potentially historic structures are encouraged to apply for Historic Landmark designation.
- ***H-2b: Potentially Historic buildings on Cal Poly Humboldt's campus.*** *The City requests that all structures of historic value be preserved and protected from demolition and from alterations or additions that are incompatible with their historical character. Potentially historic structures on the HSU campus will be added to the potentially historic structures list developed by the City pursuant to H-2a.*
- ***H-2c: Design criteria for alterations and additions.*** *Prior to approval of any exterior change, the Review Authority shall make findings of fact that the alteration or addition maintains the historic integrity of the resource, and is compatible with and does not destroy the historical or architectural character of the property and the immediate neighborhood.*
- ***H-2d: Design review approval****. Design Review and approval shall be required from the appropriate review authority for all exterior alterations to structures, when or if alterations require a building permit, including changes in types of materials and additions. The review authority may request a recommendation from the Historic Landmarks Committee prior to its decision on the project.*

Policy H-3: Arcata Plaza Area Historic District

Objective. *Protect and preserve the Arcata Plaza and the older structures that border the adjacent streets and help define the Plaza's character, for the unique historical, architectural, aesthetic, and economic values that it represents to the city.*

- ***H-3a: Arcata Plaza Historic District.*** *The Plaza Area has a special character and unique historical, aesthetic and cultural interest and significance to the residents and businesses of Arcata. Reflecting its central place in Arcata's heritage and identity, the Plaza Area, as shown on Figure HP-a, is hereby designated as a local historic district.*
- ***H-3b: Landmark Historic District combining zone.*** *The Plaza Area Historic District shall, by ordinance pursuant to the Land Use Code, be designated within the Landmark Historic District*

Combining Zone. Structures within the Historic District shall receive the same protections as are provided to individually-designated Historic Landmarks.

- ***H-3c: Design review approval.*** *Review and approval by the Design Review Authority shall be required for all exterior alterations of and additions to structures located within the Plaza Area Historic District.*
- ***H-3d: Arcata Plaza as a historic site.*** *The Arcata Plaza Historic District includes at its center the city park known as the Arcata Plaza. The following principal features of the Plaza which define its historical character shall be preserved:*
  1. *The generally symmetrical pattern of walkways.*
  2. *The open nature of the Plaza and the absence of buildings within it.*
  3. *The Women's Christian Temperance Union drinking fountain on H Street.*
  4. *The existing Plaza palm trees.*

Policy H-4: Neighborhood Conservation Areas (NCAs)

Objective. *The Central Arcata, Arcata Heights, Bayview, and Bayside areas are Neighborhood Conservation Areas. Ensure that new construction, modifications or alterations of historic structures, and significant changes to other structures are harmonious with the existing character of the Central Arcata, Arcata Heights, and Bayview neighborhoods.*

Applicable sub-policies:

- ***H-4a: Neighborhood Conservation Areas****. Arcata's NCAs, with the boundaries shown in Figure HP-b, are:*
  1. *Bayview Conservation Area.*
  2. *Arcata Heights Conservation Area.*
  3. *"Central" Conservation Area.*
- ***H-4b: Design review.*** *All structures located within an NCA shall be subject to design review and approval. Prior to approval of any exterior change requiring a building permit, the Design Review Authority shall make a finding that the alteration or addition is compatible with established and planned neighborhood elements and does not destroy the historical or architectural elements character of the property.*

Policy H-5: Controls on Demolition and Relocations of Historic Structures

Objective. *To prevent the premature demolition of existing buildings without first evaluating whether they are historically significant, and to consider the potential for preservation of those found to contribute to such character.*

Applicable sub-policies:

- ***H-5a: Discretionary demolition review required.*** *No building within the City shall be demolished, in whole or in part, without review and approval by the Review Authority prior to issuance of a Demolition Permit. The Review Authority shall consider the recommendations of the Historic Landmarks Committee unless a project is determined to not be a potentially historic resource. Demolition or relocation projects within an :HL combining zone, or for potentially historic resources eligible for listing shall be reviewed and noticed in accordance with City Design Review and Public Hearing procedure.*

  Prior to its decision, the Review Authority shall consider the recommendations of the Historical Sites Society of Arcata or its designated representative. For partial demolitions, the applicant shall be required to submit a demolition plan showing those portions to be demolished and those to be retained. The following findings shall be required to approve demolition permit:
  1. *The building is not historically significant, based on criteria outlined for potentially historic structures.*
  2. *Although the building does have historical or aesthetic merit, it:*
     a. *has sustained substantial damage to key structural components, and*

b. there are no feasible alternatives to demolition of the building.

- ***H-5b: Required delay of Action for demolition of designated landmarks.*** *Any approved demolition or relocation permit for designated historical landmarks shall be automatically subject to a delay of 180 days before the building permit for demolition may be issued by the City, unless a waiver to the delay granted by the Review Authority.*
- ***H-5c: Deconstruction of older buildings.*** *In those instances where demolition is authorized, it is encouraged that the buildings be deconstructed and that building components, fixtures, and materials be salvaged for future re-use.*

Policy H-6: Incentives, Information and Education

Objective. *Promote public awareness of the City's historical heritage and resources, provide information and education about the methods and techniques to protect and enhance the quality of these resources, and encourage public participation in preserving Arcata's historical heritage.*

Applicable sub-policies:

- ***H-6a: General incentives for historic structures and sites.*** *Those properties listed as Historic Landmark or as Potentially Historic structures or sites shall be eligible for the following incentives and assistance:*
  1. *Exemption from the requirements to provide any additional off-street parking, except for additions 200 or more square feet in size.*
  2. *Exemption, for nonconforming uses, from Land Use Code limitations pertaining to non-conforming structures and site conditions.*
  3. *Compliance with the State Historic Building Code and portions of the Uniform Code for Building Conservation, rather than the current edition of the Uniform Building Code.*
  4. *Conservation easements for facades that may provide tax advantages to the donor.*
  5. *At the option of the City, façade rehabilitation grants or loans for designated historic commercial structures, to the extent available and as approved by the City.*
- ***H-6b: Specific incentives for structures and sites within the :HL district.*** *The City Council may grant any or all of the following rehabilitation incentives to a site or structure that is designated within the :HL combining zone, in addition to the general incentives listed above.*
  1. ***Adaptive Reuse in Residential Zones****. In order to encourage the economic viability and preservation of Historic Landmark Structures in the residential zoning districts, Historic Landmark Structures within the :HL combining zone may pursue occupancy by land uses that are not otherwise allowed within the primary residential zoning district.*
  2. ***Fee Waivers.*** *Permit fee waivers or reductions as granted by City Council.*
  3. *Mills Act Property Tax Abatement Program. Acceptance of a Mills Act agreement between the City and property owner, which provides property tax reductions for historic properties subject to program criteria.*
  4. ***State and Federal Incentives.*** *Other incentives may include Federal Rehabilitation Tax Credits, and the California Heritage Fund Grant Program.*
  5. ***Other Incentives.*** *Other incentives deemed necessary to encourage preservation, as approved by the City Council.*
- ***H-6c: Public Information and Education.*** *The City shall work in partnership with the Historic Landmarks Committee, Planning Commission, and Historic Sites Society as appropriate to promote education and appreciation of the community's heritage sites, and contribute to Arcata's tourism attractions. City staff shall continue to update informational materials describing the advantages of having structures or sites designated as local Historic Landmarks or as potentially historic structures.*
- ***H-6d: Role of Historical Sites Society of Arcata (HSSA).*** *The City shall send notice to the HSSA on all matters pertaining to the preservation of historical resources. These include, but are not limited to, historical educational opportunities for the community, requests for comments on proposed Historic*

Landmarks, additions to the list of potentially historic structures, and proposed alteration or demolition of such structures. The HSSA may submit its comments to the Review Authority.

Policy H-7: Archaeological and Cultural Resources and Wiyot Tribal History

Objective. *Protect, preserve and enrich Native American and Euro-American archeological sites and cultural resources within the City of Arcata. Preserve and enrich Native American and Euro-American archeological sites and cultural resources within the City of Arcata, particularly resources related to Wiyot Tribal history. Adopt a series of policies that ensure pre-project consultation and review as well as collaborative government to government relations with the Wiyot Tribe, Bear River Band, and Blue Lake Rancheria.*

Applicable sub-policies:

- ***H-7a: Cultural Resources Project Review.*** *As part of the environmental and project review process, all proposed discretionary projects under the California Environmental Quality Act shall be subject to cultural resources sensitivity review by the local area Tribal Historical Preservation Officers (THPOs) or their designated representatives, and the Northwest Information Center. If the cultural resources project review determines that the project is located in an area with a high probability of archaeological resources, an archaeological survey by a professional archaeologist or other qualified expert shall be performed to the satisfaction of the THPOs or their designated representatives.*

  If the results of reconnaissance show that the project area contains a resource of cultural significance, and if it is demonstrated that a project will cause damage to such a resource, the City shall confer with appropriate agency and governmental partners. In the case of sites potentially containing resources of tribal cultural significance, all local Tribal Historic Preservation Officers or their designated representatives shall be notified. This consultation may require reasonable efforts to be made to permit any or all of these resources to be preserved in place or left in an undisturbed state. Examples of other treatment include, but are not limited to, the following:

  1. *Formally evaluating the site / find to determine its eligibility for the California Register of Historical Resources.*
  2. *Modifying the project to avoid portions of the site with archaeological resources.*
  3. *Providing or conveying easements or other deed restrictions.*
  4. *Capping or covering archaeological resources with a soil layer before construction.*
  5. *Planning open space to incorporate archaeological sites.*
- ***H-7b: Inadvertent Archaeological Discoveries and associated mitigations.*** *Standard Operating Procedures for handling "post-review" of inadvertent archeological discoveries shall be adopted for all phases and aspects of work carried out by or for the City of Arcata and will be housed in the City's Land Use Code Chapter 9.53, Historic Resource Preservation. This protocol shall be developed in partnership with, and approved by, local Tribal Historic Preservation Officers and/or their respective Tribal Councils. The intent of these procedures will generally be to stop work upon discovery, evaluate the discovery with support from qualified archeologists and THPOs or their designees, consult with the Tribes and other interested parties on survey findings, determine significance, and if resources are determined significant per the California Register of Historical Places, avoid or minimize direct or indirect impacts to significant archaeological or Native American discoveries.*

City of Arcata Local Coastal Program

There are no policies in the City of Arcata Local Coastal Program specific to protection of cultural or archaeological resources.

3.4.4 Evaluation Criteria and Significance Thresholds

Under criteria based on Appendix G of the CEQA Guidelines, the Project would be considered to have a significant impact on cultural resources if it would result in any of the following:

– Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5;

– Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5; or
– Disturb any human remains, including those interred outside of formal cemeteries.

3.4.5 Methodology

The primary study completed to analyze the General Plan 2045 is a Historic Resources Inventory (Takano 2023), which focused on historic resources within the Gateway Area. Archaeological resources investigations included tribal consultation under AB 52, which is discussed in Section 3.11 (Tribal Cultural Resources) of this EIR.

3.4.6 Impacts and Mitigation Measures

Impact CR-a: Would adoption and implementation of the General Plan cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?

As discussed in Section 2.6.1, the City is developing a targeted infill zoning ordinance for the Gateway Area centered on a form-based code. The form-based code will introduce new mixed use and residential uses into existing residential, commercial mixed-use and industrial areas with four new zoning districts intended to guide the creation of new mixed-use activity centers and high-quality neighborhoods in the Gateway Area. The form-based code will establish standards relating to building form, character, and streetscape, a new community benefit program, and a streamlined permitting process intended to reduce project-specific discretionary decision-making by relying on objective design standards.

Relevant sections of the CEQA guidelines outlining a framework for analyzing potential impacts on built environment historical resources in the study area include the following:

– Substantial adverse change in the significance of an historical resource means physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired (Section 15064.5(b)(1)).
– The significance of an historical resource is materially impaired when a project:
    - Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the California Register of Historical Resources (Section 15064.5(b)(2)(A)).

A resource is materially impaired when a project demolishes or materially alters in an adverse manner those physical characteristics that convey its historical significance. Under CEQA, projects following the Secretary of the Interior's Standards for the Treatment of Historic Properties are generally considered mitigated to a less than significant impact. CEQA requires the lead public agency to mitigate any impacts through enforceable measures included in project permits, agreements, or other measures. Impacts can be direct, indirect, and cumulative. Impacts have the potential to diminish a historical resource's historic integrity, i.e., the physical characteristics that convey its significance. Historic integrity is assessed with regard to the retention of the historical resources' characteristics of location, setting, design, materials, workmanship, feeling, and association.

The Secretary of the Interior's Standards for the Treatment of Historic Properties provide guidance on the preservation and protection of cultural resources listed in or eligible for listing in the National Register of Historic Places. This is also used for properties listed in or eligible for listing in the California Register of Historical Resources, and lead agencies use the Secretary of the Interior's Standards for the Treatment of Historic Properties for other CEQA historical resources. Four types of treatments, Preservation, Rehabilitation, Restoration, and Reconstruction, comprise the Secretary of the Interior's Standards for the Treatment of Historic Properties. Rehabilitation is the most relevant treatment to assess this Project. Rehabilitation is defined as "the act or process of making possible a compatible use for the property through repair, alterations, and additions while preserving those portions or features which convey its historical, cultural, or architectural values." The Secretary of the Interior's Standards for the Treatment of Historic Properties for rehabilitation are:

1. A property will be used as it was historically or be given a new use that requires minimal change to its distinctive materials, features, spaces, and spatial relationships.
2. The historic character of a property will be retained and preserved. The removal of distinctive materials or alteration of features, spaces, and spatial relationships that characterize a property will be avoided.
3. Each property will be recognized as a physical record of its time, place, and use. Changes that create a false sense of historical development, such as adding conjectural features or elements from other historic properties, will not be undertaken.
4. Changes to a property that have acquired historic significance in their own right will be retained and preserved.
5. Distinctive materials, features, finishes, and construction techniques or examples of craftsmanship that characterize a property will be preserved.
6. Deteriorated historic features will be repaired rather than replaced. Where the severity of deterioration requires replacement of a distinctive feature, the new feature will match the old in design, color, texture, and, where possible, materials. Replacement of missing features will be substantiated by documentary and physical evidence.
7. Chemical or physical treatments, if appropriate, will be undertaken using the gentlest means possible. Treatments that cause damage to historic materials will not be used.
8. Archeological resources will be protected and preserved in place. If such resources must be disturbed, mitigation measures will be undertaken.
9. New additions, exterior alterations, or related new construction will not destroy historic materials, features, and spatial relationships that characterize the property. The new work shall be differentiated from the old and will be compatible with the historic materials, features, size, scale and proportion, and massing to protect the integrity of the property and its environment.
10. New additions and adjacent or related new construction will be undertaken in such a manner that, if removed in the future, the essential form and integrity of the historic property and its environment would be unimpaired.

Implementation of the General Plan 2045 has the potential to result in the physical demolition, destruction, relocation, or alteration of known historical resources within the study area (City limits).

Gateway Area and Other Infill Opportunity Zones

There are 17 sites in the Gateway Area that are to be considered under the City's preservation policies, and potentially additional locally significant historic resources in the remaining Infill Opportunity Zones. It is possible that historically significant structures may be demolished under the anticipated development within the Gateway Area and Infill Opportunity Zones. Two specific properties with known potential for demolition or alteration are listed below.

1. Within the General Plan 2045 planning period, multiple structures on the west side of the California Central Creameries Plant property (the "Creamery Building") at 1251 9th St. (APN 021-173-002) will be authorized for demolition as described in the Gateway Code. These would likely include three detached structures, cement landscaping and smokestack structures, and storage facilities. The California Central Creameries Plant is a designated historical site and demolition of any of the buildings on the parcel previously determined to be historic would result in a significant impact to historic resources, which is an unmitigable impact, and thus a significant unavoidable impact.
2. Similarly, the building located at 1320 10th Street (APN 021-171-017) has been identified in the Gateway Plan as potentially historic and is anticipated to be significantly altered or demolished within the General Plan 2045 planning period. Demolition or a significant alteration not in keeping with the Secretary of the Interior's Standards for Rehabilitation of Historic Structures is an unmitigable impact, and thus a significant unavoidable impact.

Proposed General Plan Policy H-5 and sub-policies H-5a, H-5b, and H-5c provide controls on potential demolition and relocation of historic structures to prevent premature demolition without evaluation of their historical significance. Under proposed Policy H-5a, no building within the City shall be demolished without review and approval by the Review Authority prior to issuance of a Demolition Permit. The Review Authority shall consider the recommendations of the Historic Landmarks Committee (HLC) unless the building is determined to not be a potentially historic resource. Demolition or relocation within a HL combining zone (or potentially historic resource eligible for listing) would be reviewed and noticed in accordance with City Design Review and public hearing procedures. A Demolition Permit may be granted to demolish a historic resource if it has sustained substantial damage to key structural components and there are no feasible alternatives to demolition of the building. Under proposed Policy H-5b, a granted Demolition Permit would be automatically delayed by 180 days (unless waived), and under policy H-5c the re-use of materials within the demolished building is encouraged when feasible.

Although there are review requirements in place via proposed policy, local historic landmarks (including the Northwestern Pacific Railway Line) may be demolished under proposed General Plan 2045 policy. Any other buildings proposed for demolition identified as significant or potentially significant historic resources within the Gateway Area Plan would be required to be evaluated at the time that the project is proposed, which would trigger subsequent evaluation and a subsequent EIR. The demolition of the two properties identified above, one of which is a local historic landmark, would result in a significant impact to historic resources, which is an unmitigable impact, and thus a significant unavoidable impact.

Remaining Study Area

The same analysis is consistent for the remaining study area with the exception that development is not anticipated to occur as rapidly as within the Gateway Area or other Infill Opportunity Zones. However, historic resources may be demolished. Existing and proposed General Plan policies are in place to protect these resources, and independent CEQA evaluation will occur.

Mitigation Measure: Not feasible

Level of Significance: Significant and unavoidable impact

Impact CR-b: Would adoption and implementation of the General Plan cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?

In the absence of a cultural resources report, archaeological resources are assumed to be present within the study area. While this EIR does not analyze project-specific actions, it does analyze the proposed form-based code that is intended to streamline development within the Gateway Area, and proposed policies of the General Plan 2045 that would apply throughout City limits. All excavation projects carry the risk of unearthing sensitive archaeological resources, which would result in a potentially significant adverse impact.

Proposed Policy H-7 and sub-policies H-7a and H-7b would protect Native American and Euro-American archaeological sites and cultural resources, particularly resources related to the Wiyot Tribal history. Sub-policy H-7a states that all discretionary projects under CEQA would be subject to cultural resource sensitivity review. If the review determines that the project is in an area with a high probability of archaeological resources, then an archaeological survey would be conducted. For non-discretionary projects, staff review and application of the existing Archeologic Sensitivity Map developed in conjunction with the local area Tribal Historic Preservation Officers ensure projects with the potential to cause a substantial adverse change to the significance of a tribal cultural resource are identified and appropriate measures for consultation, reconnaissance, and treatment are considered as part of project review.

Policy H-7a requires tribal cultural resource sensitivity review for all proposed all proposed discretionary projects under CEQA, and outlines a process for consultation, reconnaissance, and treatment if the project is determined to be located in an area with a high probability of archaeological and/or cultural significance. Policy H-7b provides procedures for inadvertent archeological discoveries and associated mitigations, with a general intent to stop work upon discovery, evaluate the discovery with support from qualified archaeologists or Tribal Historic

Preservation Officer, consult with tribes and other interested parties, determine significance, and if resources are determined significant per the California Register of Historical Resources, avoid or minimize direct or indirect impacts to significant archaeological or Native American discoveries.

With adoption of the General Plan 2045 and implementation of Policy H-7 and sub-policies H-7a and H-7b, the impact associated with the potential inadvertent discovery of archaeological resources would be reduced to a less-than-significant level.

Mitigation Measure: No mitigation is necessary

Level of Significance: Less than significant impact

Impact CR-c: Would adoption and implementation of the General Plan disturb any human remains, including those interred outside of formal cemeteries?

Inadvertent discovery of human remains has the potential to result in a significant impact to cultural resources. Text included in sub-policy H-7a and in the City's adopted Land Use Code detailed procedures for incidental discoveries of archaeological resources, which is consistent with the City's standard protocol for inadvertent discovery of human remains.

As included in the City's standard protocol, if human remains are discovered during project construction, work within the discovery location plus nearby areas reasonably suspected to overlie human remains, would cease (PRC Section 7050.5). The Humboldt County Coroner and designated tribal representatives would be contacted by the project Archaeologist to determine if the cause of death must be investigated. If the Coroner determines that the remains are of Native American origin, it is necessary to comply with state laws regarding the disposition of Native American burials, which fall within the jurisdiction of the California Native American Heritage Commission (PRC Section 5097). In this case, the Coroner would contact Native American Heritage Commission. The descendants or Most Likely Descendants of the deceased would be contacted, and work would not resume until they have made a recommendation to the landowner or person responsible for excavation work with direction regarding appropriate means of treatment and disposition, with appropriate dignity, of the human remains and any associated grave goods, as provided in PRC Section 5097.98.

Given the inclusion of inadvertent discovery in sub-policy H-7a and implementation of the City's standard protocol for inadvertent discovery of human remains, the potential impact would be less than significant.

Mitigation Measure: No mitigation is necessary

Level of Significance: Less than significant impact

3.4.7 Cumulative Impacts

Impact CR-C-1: Would adoption and implementation of the General Plan contribute to a cumulatively significant impact to cultural resources?

The cumulative effects analysis examines the current Project effects taken together with effects of past projects and known projects in the foreseeable future. Future projects considered for cumulative impacts are identified in Table 1-1. All projects need to comply with federal, state, and local regulations regarding the protection of historic and cultural resources. However, as a result of the policies in the proposed General Plan which, under certain conditions, allows for demolition of historic resources, a significant impact could potentially occur within City limits throughout the planning horizon. If historic resources were demolished under a project listed in Table 1-1 or in an unknown future project, the historical integrity of the region could degrade. Therefore, implementation of General Plan 2045 has the potential to contribute to a cumulatively significant impact to historic resources in conjunction with the other development proposed in Table 1-1 and unknown future development to occur throughout the planning horizon that may include the demolition of historic resources.

Policies are in place under the proposed General Plan 2045 to protect cultural resources, including pre-project review and procedures for inadvertent discovery of archaeological resources. These inadvertent discovery procedures are standard in excavation projects and would be implemented in the projects listed in Table 1-1 and future unknown projects. Therefore, implementation of General Plan 2045 would not cause a cumulative adverse impact to cultural resources, including archaeological materials and human remains.

Mitigation Measures: Not feasible (historic resources); no mitigation proposed (cultural resources)

Level of Significance: Significant and unavoidable impact (historic resources). Less than significant impact (cultural resources)

3.5 Greenhouse Gas Emissions

This section evaluates the potential greenhouse gas (GHG) emissions impacts during construction and operation of the Project. The GHG analysis below discusses GHG and consistency with the state of California's 2022 Climate Change Scoping Plan. If the Project meets the criteria laid out in applicable GHG emissions plans, policies, and regulations, then its impact for that category may be considered less than significant.

3.5.1 Study Area

The CEQA Guidelines generally address GHG emissions as a cumulative impact due to the global nature of climate change (PRC § 21083(b)(2)). As the California Supreme Court explained, "because of the global scale of climate change, any one project's contribution is unlikely to be significant by itself" (Cleveland National Forest Foundation v. San Diego Assn. of Governments (2017) 3 Cal. 5th 497, 512). Because of the global nature of GHG, and the state-wide application of CEQA, the study area for GHG impacts is the State of California.

3.5.2 Environmental Setting

Climate and Meteorology

The proposed Project is located in the western portion of Humboldt County, California, which is in the jurisdiction of the North Coast Air Basin. The coastal zone of Humboldt County experiences wet, cool winters, and dry, mild foggy summers. Coastal summer highs range from the mid-60s to 70s, with lows from the upper 40s to mid-50s. In the winter, highs range from the low 40s to high 50s, with lows in the 30s and 40s. The coastal zone experiences a number of frosty nights in winter and early spring, though snowfall and hard freezes are rare.

Global Climate Change – Greenhouse Gases

Gases that trap heat in the atmosphere are referred to as GHGs because they capture heat radiated from the sun as it is reflected back into the atmosphere, much like a greenhouse. The accumulation of GHGs has been implicated as the driving force for global climate change. The primary GHGs are carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), ozone (O_3), and water vapor (H_2O).

While GHGs in the atmosphere are naturally occurring, the emission rate of CO_2, CH_4, and N_2O has been accelerated by human activities. Emissions of CO_2 are largely by-products of fossil fuel combustion, whereas CH_4 results from off-gassing associated with such activities as agricultural practices and landfills. Other GHGs include hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride, which are generated during certain industrial processes. GHGs are typically reported in "carbon-dioxide-equivalent" measures (CO_2e).

There is international scientific consensus that human-caused increases in GHGs have contributed, and would continue to contribute, to climate change. Potential climate change impacts in California may include, but are not limited to, a decrease in snowpack, sea level rise, and a greater number of extreme heat days per year, high ozone days, large forest fires, and drought years. Secondary effects are likely to include impacts on agriculture, changes in disease vectors, and changes in habitat and biodiversity.

The U.S. EPA reports U.S. GHG emissions for 2021 as 6,340 million metric tons (MMT) of CO_2e. The transportation sector accounts for 28 percent, followed by the electricity sector at 25 percent and the industrial sector at 23 percent. Commercial and residential fuel use and the agricultural sector accounted for the remaining 23 percent (EPA 2023).

The California Air Resources Board (CARB) estimated that in 2022 California produced about 369.2 MMT of CO_2e. The transportation sector was the highest source at 38 percent of the state's total GHGs, followed by the industrial sector at 23 percent, and electricity generation (both in-state and out-of-state) at 16 percent. Commercial and residential fuel use, recycling and waste, high global warming potential, and agricultural sectors accounted for the remaining 23 percent of the state's total GHG emissions (CARB 2022a). CARB uses the

Intergovernmental Panel on Climate Change (IPCC) 2007 Fourth Assessment Report (AR4) global warming potentials for the state's 2000-2022 emissions inventory.

GHGs normally associated with the proposed Project include the following listed below. Global Warming Potential (GWP) is a measurement of the heat absorbed by any GHG in the atmosphere, as a multiple of the heat that should be absorbed by the same mass of CO_2. All GWP are given as 100-year GWP. Unless otherwise noted, all GWPs and information presented below were obtained from the 2007 IPCC AR4:

Water Vapor (H_2O). Although water vapor has not received the scrutiny of other GHGs, it is the primary contributor to the greenhouse effect. Natural processes, such as evaporation from oceans and rivers, and transpiration from plants, contribute 90 percent and 10 percent of the water vapor in our atmosphere, respectively. The primary human-related source of water vapor comes from fuel combustion in motor vehicles; however, it does not contribute a significant amount (less than one percent) to atmospheric concentrations of water vapor. The IPCC has not determined a GWP for water vapor.

Carbon Dioxide (CO_2). Carbon dioxide is primarily generated by fossil fuel combustion in stationary and mobile sources. Due to the emergence of industrial facilities and mobile sources in the past 250 years, fossil fuel combustion has driven the largest increase in CO_2 emissions (EPA 2023). Carbon dioxide is the most widely emitted GHG and is the reference gas (GWP of 1) for determining GWP for other GHGs (IPCC 2007).

Methane (CH_4). Methane is emitted from biogenic sources, incomplete combustion in forest fires, landfills, manure management, and leaks in natural gas pipelines. The United States' top three methane sources are landfills, natural gas systems, and enteric fermentation (flatulence produced by livestock digestion). Methane is the primary component of natural gas, used for space and water heating, steam production, and power generation. The GWP of methane is 25 (IPCC 2007).

Nitrous Oxide (N_2O). Nitrous oxide is produced by both natural and human-related sources. Primary human-related sources include agricultural soil management, animal manure management, sewage treatment, mobile and stationary combustion of fossil fuels, adipic acid production, and nitric acid production. The GWP of nitrous oxide is 298 (IPCC 2007).

In addition to the four major GHGs discussed above (excluding water vapor), many other compounds have the potential to contribute to the greenhouse effect. Some of these substances were previously identified as stratospheric ozone (O_3) depletors; therefore, their gradual phase-out is currently in effect. The following is a listing of these compounds:

Hydrochlorofluorocarbons (HCFCs). HCFCs are solvents, similar in use and chemical composition to chlorofluorocarbons (CFCs). The main uses of HCFCs are for refrigerant products and air conditioning systems. As part of the Montreal Protocol, all developed countries that adhere to the Montreal Protocol are subject to a consumption cap and gradual phase out of HCFCs. The United States is scheduled to achieve a 100-percent reduction to the climate ac by 2030. The GWP of HCFCs range from 90 for HCFC-123 to 1,800 for HCFC-142b (IPCC 2007).

1,1,1 trichloroethane. 1,1,1 trichloroethane or methyl chloroform is a solvent and degreasing agent commonly used by manufacturers. The GWP of methyl chloroform is 146 times that of carbon dioxide (IPCC 2007).

Chlorofluorocarbons (CFCs). CFCs are used as refrigerants, cleaning solvents, and aerosols spray propellants. CFCs were also part of the EPA's Final Rule (57 Federal Register (FR) 3374) for the phase-out of O_3 depleting substances. Currently, CFCs have been replaced by hydrofluorocarbons (HFCs) in cooling systems and a variety of alternatives for cleaning solvents. Nevertheless, CFCs remain suspended in the atmosphere contributing to the greenhouse effect. CFCs are potent GHGs with 100-year GWP ranging from 3,800 for CFC 11 to 14,400 for CFC 13 (IPCC 2007).

The Project area is an urbanized area surrounded by adjacent agricultural land, undeveloped riverine floodplains, and estuarine wetlands located further west. Although agricultural activities do generate GHG emissions, the amount of active agricultural operations within the Project region (Humboldt County) is limited. The majority of GHGs emitted from the Project region are from transportation and use of electricity at residences. Vehicle trips

throughout the County are associated with traveling between Arcata and Eureka, and for residents traveling to their respective homes within the study area. No other major sources of GHG emissions exist in the Project region.

3.5.3 Regulatory Framework

Federal

The federal government granted California authority under the federal Clean Air Act to implement its own vehicle emissions standards under a specified 'waiver of preemption', subject to review and approval by the EPA. The federal 2019 Safer Affordable Fuel-Efficient Vehicles Rule Part One: One National Program Rule (SAFE-1) rescinded California's authority to implement its own GHG emissions standards and zero emission vehicle sales mandate. Subsequently, the EPA reconsidered the action and restored California's authority to implement the GHG standards and zero emission vehicle sales mandate as part of California's Advanced Clean Car program.

Council on Environmental Quality

On February 18, 2010, the Council on Environmental Quality provided a draft guidance memorandum for public consideration and comment on the ways in which federal agencies can improve their consideration of the effects of GHG emissions and climate change in evaluations of proposals for federal actions under the National Environmental Policy Act (CEQ 2010). The Council on Environmental Quality updated that draft in 2014 and provided a final guidance on August 2, 2016 (CEQ 2016). However, the Council on Environmental Quality replaced the 2016 final guidance with the 2019 Draft GHG Guidance. The Council on Environmental Quality then rescinded the 2019 Draft GHG Guidance and committed to review, revise, and update its 2016 GHG Guidance in accordance with Executive Order 13990. This did not automatically restore the 2016 Final GHG Guidance, and Council on Environmental Quality's announcement of the rescission encouraged agencies to consider "all available tools and resources" when analyzing GHG emissions and climate change in their National Environmental Policy Act reviews, including the 2016 Guidance "as appropriate and relevant."

On January 9, 2023, the Council on Environmental Quality issued a notice on the National Environmental Policy Guidance on Consideration of Greenhouse Gas Emissions and Climate Change for public review and comment. As of the date of this Draft EIR, the Council on Environmental Quality has not formally adopted the 2023 guidance. The draft guidance applies a "rule of reason' approach that requires agencies to conduct assessments that are proportional to the project's impacts. Assessment to include both direct and indirect emissions in cost assessments.

For comparison, the EPA's Greenhouse Gas Reporting Program requires mandatory reporting for 'large' industrial sources of GHG to report GHG data and defines large industrial sources as those that emit more than 25,000 $MTCO_2e$ per year.

State

Statewide Emission Reduction Goals

Executive Order S-3-05

In 2005, the Governor of California signed Executive Order S-3-05, which established GHG emission reduction targets to reduce emissions as follows:

– By 2010, reduce GHG emissions to 2000 levels,
– By 2020, reduce GHG emissions to 1990 levels, and
– By 2050, reduce GHG emissions to 80 percent below 1990 levels.

The Secretary of the California EPA (Secretary) was designated to coordinate oversight of the multi-agency efforts made to meet the targets.

The Secretary must also submit biannual reports to the governor and California Legislature describing the progress made toward the emissions targets, the impacts of global climate change on California's resources, and mitigation and adaptation plans to combat these impacts. To comply with the executive order, the Secretary created the California Climate Action Team, made up of members from various state agencies and commissions. The team released its first Climate Action Team Report in March 2006, with its most recent S-3-05-mandated Climate Action Team Report released in 2010. The report proposes to achieve the targets by building on the voluntary actions of California businesses, local governments, and communities and through state incentive and regulatory programs.

Assembly Bill 32, California Global Warming Solutions Act of 2006

In 2006, the Governor of California signed the Global Warming Solutions Act of 2006 (AB 32), committing California to reducing GHG emissions to 1990 levels by 2020. The statute requires the CARB to track emissions through mandatory reporting, determine the 1990 emission levels, set annual emissions limits that would result in meeting the 2020 target, and design and implement regulations and other feasible and cost-effective measures to ensure that statewide GHG emissions would be reduced to 1990 levels by 2020. CARB calculated the 2020 emissions limit as 431 MMT CO_2e. Projected business-as-usual emissions for 2020 are 509 MMT CO_2e. California's emissions fell below the required emissions limit starting in 2014 (CARB 2023).

Executive Order B-30-15

On April 29, 2015, the Governor of California announced EO B-30-15 and established the 2030 target of reducing GHG emissions to 40 percent below 1990 levels. The emission reduction target is an interim-year goal to provide substantial progress toward the ultimate goal of reducing emissions by 80 percent below 1990 levels by 2050.

Senate Bill 32 and Assembly Bill 197

Senate Bill (SB) 32, passed in 2016, extended the goals of AB 32 and codifies the GHG reduction target of 40 percent below 1990 levels by year 2030, consistent with EO B-30-15. The companion bill to SB 32, AB 197, provides additional direction to CARB in developing each update to the Climate Change Scoping Plan (see below).

Executive Order B-55-18

Signed in 2018, EO B-55-18 sets a statewide goal of achieving carbon neutrality by 2045.

Renewable Energy Portfolios

Renewable Portfolio Standard

California's Renewable Portfolio Standard requires retail sellers of electric services to increase procurement from eligible renewable energy resources to 33 percent of total retail sales by 2020. The 33 percent standard is consistent with the Renewable Portfolio Standard goal established in the Scoping Plan.

Senate Bill 350

The passage of Senate Bill 350 in 2015 updated the Renewable Portfolio Standard to require the amount of electricity generated and sold to retail customers per year from eligible renewable energy resources to increase to 50 percent by December 31, 2030. The bill made other revisions to the Renewable Portfolio Standard program and to certain other requirements on public utilities and publicly owned electric utilities.

Senate Bill 100

California's Renewable Portfolio Standard was further strengthened in 2018 by the passage of Senate Bill 100, which increases the Renewable Portfolio Standard requirement to 60 percent by 2030 and requires renewable energy and zero-carbon resources supply 100 percent of electric retail sales to end-use customers by 2045, speeding up the state's timeline for moving to carbon-free power sources.

Senate Bill 1020 (100% Clean Electric Grid)

Senate Bill 1020 was passed in 2022 and contains the following goals for delivering eligible renewable energy resource and zero-carbon resources of electric energy to end users:

– 90 percent by 2035
– 95 percent by 2040
– 100 percent by 2045

Additionally, SB 1020 requires all state agencies procure 100 percent of electricity from renewable energy and zero-carbon resources by 2035.

On-road Vehicles

Assembly Bill 1007 (State Alternative Fuels Plan)

AB 1007, (Pavley, Chapter 371, Statutes of 2005) required the California Energy Commission to prepare a state plan to increase the use of alternative fuels in California (State Alternative Fuels Plan). The California Energy Commission prepared the State Alternative Fuels Plan in partnership with CARB and in consultation with other state, federal, and local agencies. The final State Alternative Fuels Plan, published in December 2007, attempts to achieve an 80-percent reduction in GHG emissions associated with personal transportation, even as California's population increases.

Executive Order N-79-20

This executive order from Governor Newsom, signed on September 23, 2020, requires sales of all new passenger vehicles to be zero-emission by 2035 and additional measures to eliminate harmful emissions from the transportation sector. CARB will develop regulations to mandate that 100 percent of in-state sales of new passenger cars and trucks are zero-emission by 2035 – a target which would achieve more than a 35 percent reduction in GHG emissions and an 80 percent improvement in oxides of nitrogen emissions from cars statewide. In addition, the CARB will develop regulations to mandate that all operations of medium- and heavy-duty vehicles shall be 100 percent zero emission by 2045 where feasible, with the mandate going into effect by 2035 for drayage trucks.

Additionally, Executive Order N-79-20 directs CARB to develop emission reduction strategies for off-road vehicles (details provided below.)

Advanced Clean Cars

First adopted in 2012, the Advanced Clean Cars I was adopted by CARB to include low emission vehicle and zero emission vehicle regulations for on-road vehicle model years 2015-2025.

The Advanced Clean Cars II regulations were adopted by CARB in 2022 and include the next set of low emission vehicle and zero emission vehicle standards for model years 2026-2035. These standards are anticipated to assist in meeting the federal ambient air quality ozone standards and California's carbon neutrality targets. By 2035 all new passenger cars, trucks and SUVs sold in California will be zero emissions.

Senate Bill 375

SB 375 (codified in the Government Code and the PRC) took effect in 2008 and provides a new planning process to coordinate land use planning, regional transportation plans, and funding priorities in order to help California meet the GHG reduction goals established in AB 32. Senate Bill 375 requires metropolitan planning organizations to incorporate a Sustainable Communities Strategy in their Regional Transportation Plans that will achieve GHG emissions reduction targets by reducing vehicle miles traveled from light-duty vehicles through the development of more compact, complete, and efficient communities.

CARB, in consultation with metropolitan planning organizations, provided each affected region with reduction targets for passenger car and light truck regional emissions for 2020 and 2035. CARB is also charged with

reviewing each metropolitan planning organization's Sustainable Communities Strategy for consistency with its assigned targets. If metropolitan planning organizations do not meet the GHG reduction targets, transportation projects may be ineligible for funding programmed after January 1, 2012. Pursuant to SB 375, CARB established emission reduction targets for California's 18 metropolitan planning organization regions for the year 2020 and 2035. Humboldt County is not one of the metropolitan planning organization regions that require emissions reductions targets and, as such, does not have an assigned emission reduction goal.

Off-road Vehicles

CARB adopted the In-Use Off-Road Diesel-fueled Fleets Regulation (Off-Road Regulation) in 2007, initially focused on emissions standards for new engines to reduce regional criteria air pollutant, ozone precursor, and diesel particulate matter emissions from off-road equipment. The regulation was further updated with amendments in 2009, 2010, and most recently in 2022, to address all self-propelled off-road diesel vehicles 25 horsepower (hp) or greater used in California and most two-engine vehicles. Among the requirements, the regulation imposes limits on idling and requires a written idling policy.

The Governor's Executive Order N-79-20 directs CARB to develop and propose strategies to achieve 100 percent zero-emission from off-road vehicles and equipment operations in the state by 2035 where feasible. In November 2022, CARB approved amendments to the Off-Road Regulation. The amendments will require fleets to phase-out use of the oldest and highest polluting off-road diesel vehicles in California, prohibit the addition of high-emitting vehicles to a fleet, and require the use of R99 or R100 renewable diesel in off-road diesel vehicles. The amendments phase-in start in 2024 through the end of 2036. The amendments further reduce air pollutant emissions from engines, as well as reduce energy consumption by off-road equipment.

Assembly Bill 3232 Building Decarbonization

AB 3232, signed in 2018, requires the California Energy Commission to assess how to reduce GHG emissions from the state's existing building stock by 40 percent below 1990 levels by 2030, in line with the state's overall GHG emissions limit (SB 32 by Senator Pavley, 2016). The California Building Decarbonization Assessment was approved by the California Energy Commission and published in August 2021.

California Building Energy Efficiency Standards

California's Building Energy Efficiency Code, known as Title 24, is designed to reduce wasteful and unnecessary energy consumption in newly constructed and existing buildings. Title 24 regulates how each new home and business is built or altered in California. It includes requirements for the structural, plumbing, electrical, and mechanical systems of buildings, and for fire and life safety, energy conservation, green design, and accessibility in and about buildings. Two sections of Title 24 – Part 6, the California Energy Code, and Part 11, the California Green Building Standards Code or CALGreen Code – contain standards that address GHG emissions related to construction.

The California Energy Commission updates the Building Energy Efficiency Standards (Title 24, Parts 6 and 11) every three years by working with stakeholders in a public and transparent process. The version in effect at the time of this document is the 2022 Title 24. Buildings whose permit applications are applied for on or after January 1, 2023 must comply with the 2022 Building Energy Efficiency Standards.

Part 6 California Energy Code

The 2022 Energy Code includes goals that would increase building energy efficiency, contribute to California's GHG reduction goals, enable pathways for all-electric buildings, reduce new building impacts on the electricity grid, promote demand flexibility and self-utilization of solar energy generation, and provide tools for local government reach codes.

The Energy Code is divided into three basic sets: a mandatory requirement that applies to all buildings, a set of performance standards that vary by climate zone and building type, and a set of alternatives to performance standards. Mandatory requirements for residential buildings include measures to support future electrification of appliances (cooktops, space heating, clothes dryers, and water heaters) when gas equipment is installed, future

solar electric installation, and future energy storage system-ready measures. Electrical infrastructure must be provided and reserved to the equipment location for the future installation of electrical appliances.

Part 11 CALGreen Code

CALGreen became a mandatory code beginning January 1, 2011. The code takes a holistic approach to green building by including minimum requirements in the areas of planning and design, energy efficiency, water efficiency and conservation, material conservation and resource efficiency, and environmental quality. The CALGreen code has minimum mandatory standards and two additional tiers of voluntary measures intended to achieve greater levels of efficiency that result in lower levels of GHG emissions. Local governments must enforce the minimum standards and can choose to adopt either Tier 1 or Tier 2 standards to achieve greater positive environmental impacts. CALGreen does not limit the authority of local agencies to make necessary changes based on local climate or topography considerations.

Mandatory requirements for new nonresidential construction include bicycle parking, electric vehicle charging stations, electric vehicle charging readiness requirements for warehouses, grocery stores, and retail stores with planned off-street loading spaces, water efficiency measures, lighting efficiency measures, prohibitions of use of CFCs and halons in heating, ventilating, and air conditioning, refrigeration and fire suppression equipment, and refrigerant leak reduction measures.

Residential mandatory requirements include electric vehicle charging support infrastructure (with exceptions for accessory dwelling units and junior accessory dwelling units without additional parking facilities).

Senate Bill 1383

Adopted in 2016, Senate Bill 1383 contains multiple emission reduction goals for short-lived climate pollutants, including CH_4 and hydrofluorocarbons (HFCs). Per SB 1383, emissions must be reduced to the following levels by 2030 (as compared to 2013 levels):

- 40 percent reduction in total CH_4 emissions (including a separate 40 percent reduction in dairy and livestock emissions);
- 40 percent reduction in HFC emissions;
- 50 percent reduction in anthropogenic black carbon emissions; and
- 50 percent reduction of organic waste disposal from 2014 levels by 2020, and 75 percent by 2025, including recovery of at least 20 percent of edible food for human consumption.

As stated within the CARB's 2022 Scoping Plan (discussed in the following pages), achieving the 75 percent organic waste disposal reduction target of SB 1383, and maintaining that level of disposal in subsequent years, would bring annual landfill emissions in 2030 to just below the 2013 baseline.

Climate Change Scoping Plan

In December 2008, pursuant to AB 32, CARB adopted the Climate Change Scoping Plan (Scoping Plan), which outlined measures to attain the 2020 GHG emissions limit. The Scoping Plan estimated that implementation of identified measures would result in a reduction of 105.3 MMT CO_2e from various sectors. AB 32 requires CARB to update the Scoping Plan at least every five years. The Scoping Plan was updated in 2017, and more recently in 2022.

The 2022 Scoping Plan identifies a path to meet the SB 32 GHG, as well as reducing anthropogenic GHG emissions to 85 percent below 1990 levels by 2045, and achieving carbon neutrality by 2045 or earlier, consistent with AB 1279. The 2022 Scoping Plan includes measures to move to a zero-emissions (decarbonized) transportation sector and phasing out the use of natural gas in residential and commercial buildings. The 2022 Scoping Plan would also reduce emissions of short-lived climate pollutants and includes mechanical CO_2 removal and carbon capture and sequestration actions, as well as natural working lands management and nature-based strategies. The plan's measures are identified in Table 2-2 and Table 2-3 of the 2022 Scoping Plan. The measures are statewide and programmatic in nature. The 2022 Scoping Plan is largely advisory, as CARB does not directly regulate many of the sectors identified by the plan's measures.

The 2022 Scoping Plan states that local action by municipalities can support and amplify efforts to reduce GHGs. Local government decisions play a critical role in supporting state-level measures to contain the growth of GHG emissions associated with the transportation system and the built environment. Local actions, provided in Appendix D of the 2022 Scoping Plan, are not required by statutory or gubernatorial direction, and are not binding, but contain guidance and information regarding actions that other jurisdictions may choose to take that complement the 2022 Scoping Plan measures. However, 2022 Scoping Plan Appendix D, Local Actions, identifies local government actions that are crucial for assisting California to attain the state's climate goals. Within 2022 Scoping Plan Appendix D, CARB identifies the following as priority areas for local jurisdictions to focus on: transportation electrification, vehicle miles traveled reduction, and building decarbonization. The appendix also contains recommendations for setting local GHG emission reduction targets in local climate action plans, and methodologies for evaluating plan-level and project-level consistency with the state's climate goals in a CEQA-required GHG analysis. The first recommended methodology consists of evaluating the attributes of the plan or project to determine consistency with the Scoping Plan, using the attributes identified in Table 3.5-1.

Table 3.5-1 2022 Scoping Plan Appendix D – Key Residential and Mixed-Use Project Attributes that Reduce GHGs

Priority Area	Key Project Attribute
Transportation Electrification	Provides EV charging infrastructure that, at minimum, meets the most ambitious voluntary standard in the California Green Building Standards Code at the time of project approval
VMT Reduction	Is located on infill sites that are surrounded by existing urban uses and reuses or redevelops previously undeveloped or underutilized land that is presently served by existing utilities and essential public services (e.g., transit, streets, water, sewer)
	Does not result in the loss or conversion of natural and working lands
	Consists of transit-supportive densities (minimum of 20 residential dwelling units per acre), or Is in proximity to existing transit stops (within a half mile), or Satisfies more detailed and stringent criteria specified in the region's SCS
	Reduces parking requirements by: – Eliminating parking requirements or including maximum allowable parking ratios (i.e., the ratio of parking spaces to residential units or square feet); or – Providing residential parking supply at a ratio of less than one parking space per dwelling unit; or – For multifamily residential development, requiring parking costs to be unbundled from costs to rent or own a residential unit.
	At least 20 percent of units included are affordable to lower-income residents
	Results in no net loss of existing affordable units
Building Decarbonization	Uses all-electric appliances without any natural gas connections and does not use propane or other fossil fuels for space heating, water heating, or indoor cooking

Source: CARB 2022b

Notes: Per the 2022 Scoping Plan, recommendations in Appendix D focus primarily on climate action plans and local authority over new residential development. It does not address other land use types (e.g., industrial) or air permitting.

Refrigerants

As part of the California Global Warming Solutions Act of 2006 (AB 32) the CARB adopted a regulation in 2009 creating the Refrigerant Management Program to reduce GHG emissions from stationary sources through refrigerant leak detection and monitoring, leak repair, system retirement and retrofitting, reporting and recordkeeping, and proper refrigerant cylinder use, sale, and disposal.

California's Significant New Alternatives Policy, founded on SB 1013 and the CARB's hydrofluorocarbon (HFC) regulations specify prohibitions on use of certain HFCs in air conditioning equipment, chillers, cold storage, and

other end-use refrigerated systems. CARB's current HFC regulations include global warming limits for refrigerants in new refrigeration and air conditioning equipment.

Starting in 2022, the Refrigerant Management Program requires facilities with refrigeration systems containing more than 50 pounds of high-GWP refrigerant to conduct and report periodic leak inspections, promptly repair leaks; and keep service records on site. Additionally, newly adopted regulations by CARB require new stationary refrigeration installations and cold storage warehouses to use refrigerants with a GWP of 150 or less. According to the CARB, the 150-GWP cap is expected to cut emissions reduction per facility by more than 90 percent.

California Coastal Act

The following policies of the California Coastal Act regulate air pollution which may contain GHGs.

> ***Section 30253. New Development shall:***
>
> *Be consistent with requirements imposed by an air pollution control district or the State Air Resources Control Board as to each particular development.*

Regional and Local

The entire study area is subject to and regulated by the North Coast Unified Air Quality Management District (NCUAQMD). The study area is within the City, with the western portion of the study area within the Coastal Zone. Therefore, this section includes City of Arcata General Plan and the City's Local Coastal Program policies.

North Coast Unified Air Quality Management District

The NCUAQMD is a regional environmental regulatory agency with jurisdiction over Humboldt County. The NCUAQMD enforces local, state, and federal air quality regulations and air quality permits. In 2011, NCUAQMD adopted Rule 111 (Federal Permitting Requirements for Sources of Greenhouse Gases) into the District rules and thus established a threshold above which New Source Review and federal Title V permitting applies. Rule 111 also established federally enforceable limits on GHG emissions for stationary sources. This Project does not include any new stationary sources; therefore, Rule 111 would not apply.

The NCUAQMD has not adopted regulations regarding the evaluation of GHG emissions in a CEQA document, or established CEQA significance criteria specific to evaluating the effects of project related GHG emissions.

RePower Humboldt – The Redwood Coast Energy Authority's Comprehensive Action Plan for Energy

The Redwood Coast Energy Authority (RCEA) is a Joint Powers Authority and Community Choice Aggregator recognized by Humboldt County as the regional energy authority and tasked with countywide strategic energy planning implementation, and education.

RCEA's 2019 Update to the Comprehensive Action Plan for Energy (also called "RePower Humboldt") is an action plan to develop and implement sustainable energy initiatives in the county. RCEA will address Humboldt County's supply-side energy needs through its existing Community Choice Energy program and development of new programs and initiatives. RePower Humboldt includes the following goals (RCEA 2019):

- By 2025 100 percent of RCEA's power mix will be from a combination of state-designated renewable energy sources—solar, wind, biomass, small hydroelectric, and geothermal—and state-designated net-zero-carbon-emission existing large hydroelectric facilities.
- By 2030 Humboldt County will be a net exporter of renewable electricity and RCEA's power mix will consist of 100 percent net-zero-carbon-emission renewable sources.

Humboldt Regional Draft Climate Action Plan

Humboldt County is working on preparing a multi-jurisdictional Climate Action Plan (CAP) with all jurisdictions within the county; however, the county does not have an adopted CAP. An updated draft Regional CAP was released for public review on April 7, 2022.

The baseline inventory for the region, including the City, is 2015. As detailed within the Draft Regional CAP, emissions sources loosely follow population within the county, with unincorporated Humboldt County generating approximately 61 percent of the regional GHG emission, followed by the cities of Eureka (18 percent) and Arcata (12 percent) (Humboldt 2022). The Draft Regional CAP states that a key outcome of the plan is:

> *… to reduce greenhouse gas emissions to 40% below 1990 levels* [by 2030] *consistent with statewide targets. Achieving this goal will improve the chances our region can meet the state's longer term goal to become carbon neutral by 2045.*

Redwood Coast Energy Authority

RCEA's 2019 Update to the Comprehensive Action Plan for Energy ("RePower Humboldt") is an action plan to develop and implement sustainable energy initiatives in the county. RCEA will address Humboldt County's supply-side energy needs through its existing Community Choice Energy program and development of new programs and initiatives. RePower Humboldt includes the following goals (RCEA 2019):

– By 2025 100 percent of RCEA's power mix will be from a combination of state-designated renewable energy sources—solar, wind, biomass, small hydroelectric, and geothermal—and state-designated net-zero-carbon-emission existing large hydroelectric facilities.
– By 2030 Humboldt County will be a net exporter of renewable electricity and RCEA's power mix will consist of 100 percent net-zero-carbon-emission renewable sources.

According to the RCEA's reported 2021 Power Content Label, 33 percent of energy delivered under their 'RePower' program in 2021 was from eligible renewable resources, and another 10.5 percent from large hydroelectric facilities. For the RCEA's 'RePower+' program, 100 percent of energy delivered in 2021 was generated by eligible renewable resources. The RCEA currently anticipates achieving their 2025 and 2030 energy goals (RCEA 2023).

City of Arcata Community Greenhouse Gas Reduction Plan

The City developed a Community Greenhouse Gas Reduction Plan in 2006 which set a GHG emissions target of 20 percent below 2000 GHG levels by 2010. The plan was developed in part by analyzing an inventory of community-wide GHG emissions that was conducted in 2000. Since the Arcata Community Greenhouse Gas Reduction Plan was adopted in 2006 and is based on GHG inventories using outdated methodologies, it does not contain reduction goals that are consistent with the goals set forth in AB 32 and SB 32. Additionally, the plan's emission reduction goals and planning were not extended to years beyond 2020. As such, the plan does not provide CEQA review streamlining benefits for development projects within the City and is not relevant to projects in the City.

As of early 2019, the City's efforts towards creation of a Greenhouse Gas Reduction Plan would be put towards a Regional CAP, which is currently under development. An updated community GHG inventory was prepared for baseline year 2015 by the RCEA.

City of Arcata General Plan 2020

The following policies from the General Plan 2020 regulates GHGs, also see Section 3.3 (Air Quality) for additional policies that regulate air quality:

> ***RC-8: Energy Resources Management***
>
> ***Objective.*** *Reduce the net emissions of greenhouse gases from Arcata; reduce other negative impacts of energy production and use including risks from nuclear power, air emissions, fuel spills, and wildlife and habitat destruction; reduce energy costs to the city and its residents, and increase the percent of energy purchases from sources within our region; increase the city's and nation's energy security and reduce our vulnerability to changes in energy availability and price; increase public awareness of energy issues and encourage and energy conservation ethic; monitor the cost and effectiveness of Arcata's actions so we and others can learn from them; and implement Arcata's Advisory Proposition B.*

- ***RC-8a: Encouragement of appropriate energy alternatives.*** *In making energy purchases, the City shall consider how suppliers meet the objectives of this policy. The City shall choose suppliers that provide good tradeoffs among these objectives, giving due consideration to investment in energy conservation as an alternative use of energy funds.*

  In addition, the City shall attempt to purchase at least 10% of its electrical energy (in energy units, not cost) from renewable sources within Humboldt County by the year 2020.

  The City shall take measures to encourage the availability to, and use by, residents of energy suppliers that best meet the objectives of this policy. The City shall convert City vehicle fleets to a mix of fuels that best meets the objectives of this policy.
- ***RC-8b: Encouragement of energy efficiency and conservation.*** *The City shall coordinate with energy suppliers and agencies to educate residents, property owners, and business operators about the need for and benefits of conserving energy. The City shall maintain and distribute current information about building insulation; energy efficient appliances, lighting, and heating; other conservation measures and materials; and home power alternatives.*

  The City shall continuously seek and implement cost-effective steps to reduce City energy use. The City shall attempt to reduce the City's total consumption of purchased energy by at least 20% (in energy units, not cost) by the year 2010.

  The City shall adopt the goals of the national "Energy Star Program" (or its successor programs) for all City construction projects and all construction projects assisted by grants for which the City is an applicant. These goals include achieving a minimum of 15% greater energy efficiency than would a building designed with existing Title 24 standards.

  Explore and, if appropriate, adopt energy efficiency standards for existing residential and commercial buildings upon substantial remodel. Consider requiring energy efficiency inspections, disclosure, and retrofits at change of ownership based on cost-effective and commercially available energy efficiency measures.
- ***RC-8c: Promotion of energy efficiency in transportation.*** *The City shall give strong consideration to energy conservation and the goals of this policy in all transportation and traffic management decisions. It is City policy to reduce the need for motor vehicle trips within the city and between the city and other destinations, and to reduce per-trip energy consumption; this policy applies to trips by residents, non-residents, and city staff. Such measures as bike and pedestrian paths, public transportation, parking and traffic management, and encouraging use of alternative-fueled vehicles shall be used to make these reductions.*
- ***RC-8d: Restoration for Greenhouse Gases Absorption.*** *Foster and restore forests and other terrestrial ecosystems that offer significant carbon mitigation potential.*

Advisory Proposition B (approved by Arcata Voters April 8, 1980)

"In accordance with America's renewed determination to be energy self reliant, be it resolved that the citizens of Arcata and their City government are committed to the enactment of conscientious energy conservation measures and the accelerated development and active promotion of safe and economical alternative renewable energy sources for our community.

Be it further resolved that the City government of Arcata support complete independence from nuclear power including the permanent closure of the Humboldt Bay nuclear power plant and its replacement by safe, clean and efficient generating sources more compatible with the resources and health and safety of the Northcoast, such as conservation, solar power and generation from wood waste."

Applicable sub-policies:

- ***RC-8d: Restoration for Greenhouse Gases Absorption.*** *Foster and restore forests and other terrestrial ecosystems that offer significant carbon mitigation potential.*

City of Arcata Local Coastal Program

There are no applicable policies in the City of Arcata Local Coastal Program that address GHG emissions.

Proposed City of Arcata General Plan 2045

The General Plan 2045 contains the following policies that may contribute to reducing impacts to energy resources.

Policy AQ-1: Point and Area Sources of Air Pollutants

Objective. *Improve air quality by reducing emissions from stationary point sources of air pollution (e.g., equipment at commercial and industrial facilities), and stationary area sources (e.g., wood-burning fireplaces and gas-powered lawn mowers), which cumulatively emit large quantities of emissions.*

- ***AQ-1a Reduce emissions from stationary point sources: commercial and industrial.*** *Coordinate with energy providers to develop incentive programs encouraging the use of less polluting, energy efficient designs and equipment in commercial and manufacturing uses. Encourage commercial and industrial uses to self-enforce emissions reductions by maintaining and repairing equipment, correcting leaks, installing control devices, and minimizing accidental releases. Coordinate with the District to establish buffer zones between point sources and the public, particularly sensitive receptors such as schools, hospitals, and convalescent facilities.*
- ***AQ-1b Reduce emissions from stationary area sources: residential, commercial, and industrial****. Limit wood-burning fireplace installations in new construction to low -emitting, State and EPA certified fireplace inserts or woodstoves, pellet stoves, or natural gas fireplaces. New construction retrofits must comply with energy efficient construction codes to reduce energy consumption including high-efficiency windows, water heaters, and furnaces. Prohibit Woodburning and Gas Hearths and Fireplaces in New Residential Development.*
- ***AQ-1c Coordination between the District and Arcata Fire Protection District****. The City will encourage Arcata Fire Protection District officials to coordinate with the District to develop procedures for identifying, monitoring, and informing the public of high pollutant incidents related to fires and accidental or intentional releases of toxic or unknown materials. Coordination should encompass current air quality levels, meteorological conditions (stagnant air), prevailing wind directions, location of nearby sensitive receptors, potentially affected land uses, and types of potential toxic materials. Coordination and required permits are particularly important during the planning and implementation of controlled burns.*
- ***AQ-1d Review of development projects for emissions reductions****. Evaluate new construction plans to reduce point and area sources of pollution. Consult with the District during the environmental review process to ensure that:*
    1. *Air quality impacts of development projects are assessed using analytical methods and significance criteria for emission rates approved by the District.*
    2. *Air quality mitigation is feasible, workable, monitorable, and cost effective.*
    3. *Impacts of projects that may be individually insignificant, but cumulatively significant are minimized or mitigated.*
    4. *Innovative measures are incorporated into the project design to reduce air quality impacts.*
    5. *The City shall require air filtrations systems at new sensitive receptor buildings to be designed and constructed with air filters rated at a minimum efficiency reporting value (MERV) 13 or higher.*
    6. *Encourage the District to enforce these measures and their related policies.*

Policy AQ-2: Mobile Sources of Air Pollutants

Objective*. Improve air quality by reducing emissions from transportation sources, particularly motor vehicles, and other mobile sources. Reduce vehicle miles of travel and encourage shifts to alternative modes of travel.*

- ***AQ-2a Implement land use measures to reduce vehicle trips, miles traveled, and air pollutant emissions****. Implement or encourage the land use and development measures which reduce motor vehicle travel as outlined in the Transportation Element. These measures are also effective in reducing mobile sources of air pollutants.*

- ***AQ-2b Implement transportation measures to reduce vehicle trips, miles traveled, and air pollutant emissions****. Implement or encourage the following measures to reduce vehicle miles traveled and provide alternatives to the single occupant motor vehicle, as outlined in the Transportation Element.*
  1. *Provide as direct and safe a travel route as possible for all travel modes.*
  2. *Implement and support public education programs explaining the negative impacts of single occupant vehicle use, and encourage the development of employer-based measures to reduce employee automobile travel.*
  3. *Require A&MRTS and encourage other fleet operators to convert vehicles to run on less polluting alternative fuels at the earliest feasible time (See Policy RC-8a).*
- ***AQ-2c Reduce or minimize the creation of "hot spots" or localized places of concentrated automobile emissions****. Implement or encourage the following measures to reduce hot spots, which occur where groups of vehicles are required to idle (e.g., at congested intersections, driveways and drive-through facilities).*
  1. *Minimize the delay and congestion at unsignalized and signalized intersections to reduce*
  2. *emissions from idling vehicles. Attempt to achieve this through reducing automobile travel, minor capacity improvements, or fine-tuning of intersection operations. Discourage major capacity improvements at intersections, minimize new signalized intersections, or any other improvement which discourages walking, bicycling, or transit use.*
  3. *Minimize or restrict land uses with drive-through facilities located in areas of concentrated traffic*
  4. *or near congested intersections.*
  5. *Construction of projects with large parking lots or high volume driveways shall identify traffic*
  6. *impacts and provide evidence that project design will optimize internal circulation and minimize delay. Ensure that mitigation measures balance the needs of automobiles, pedestrians, bicyclists, and transit riders.*
- ***AQ-2d Design Arcata's highest traveled arterials to minimize stopping****. Recognize that automobiles are most efficient and less polluting at constant, moderate speeds between 25 and 35 miles per hour. Minimize idling delay, excessive congestion, and excessive speeds with the following measures:*
  1. *Encourage Caltrans to coordinate traffic signals on Samoa Boulevard to maximize progression.*
  2. *Eliminate traffic bottlenecks with traffic flow improvements (such as re-allocating turning lanes, or converting all-way stop control to roundabouts or two-way stop control), without impacting the safety of pedestrians, bicyclists, or transit facilities.*
  3. *Review access plans for commercial driveways to ensure designs minimize idling vehicles and concentrations of traffic. For larger projects require multiple driveways rather than single driveways and consider turn restrictions where delays to existing driveways could be significant.*
  4. *Encourage and support law enforcement's efforts to expeditiously manage traffic incidents.*
- ***AQ-2e Recognize that poor air quality is caused by the combination of high pollutant emissions and meteorological conditions that do not allow for dispersal of pollutants.*** *The City shall coordinate a joint effort with the District to minimize the impact of high pollutant incidents and notify the public about meteorological conditions that contribute to poor air quality. The joint effort shall include employing the following measures:*
  1. *Implement added air pollution control measures during predictable meteorological events of stagnant air. Inform the public of high pollutant incidents and encourage measures which minimize impacts, such as limiting use of wood-burning fireplaces, gas powered equipment, and avoiding non-essential vehicle travel.*
  2. *Promote and encourage employer-based and project-based Transportation Demand Measures (such as subsidized bus fare, flexible work hours, indoor bike storage, and incentives to carpool) to reduce automobile travel, particularly during periods of poor air quality.*
  3. *Support and encourage local industrial and commercial efforts to reduce emissions and particulate pollution from industrial plants and trucks, particularly during periods of poor air quality.*

4. *Require traffic and construction site dust control measures at construction projects. Require measures which reduce emissions from construction activity and maximize efficiency of traffic flow during inversion conditions.*

- ***AQ-2f Enforce air quality control measures and monitoring at construction sites**. Construction emissions shall be controlled because, although they are temporary in nature, they can often be the greatest air quality impact of a project. Require the dust and erosion control measures for construction activities.*
- ***AQ-2g Enforce air quality control measures and monitoring for agricultural operations.** Air emissions from agricultural operations, including field burning, airborne soils, and over-spray from herbicide applications, shall be controlled and monitored through air quality standards, as well as adherence to the Land Use Code.*

Policy AQ-3: Regional Air Quality Standards, Monitoring, and Education

***Objective**. Participate in regional efforts to improve and monitor air quality and meet air quality goals, coordinate transportation and land use development planning with the North Coast Unified Air Quality Management District, and educate the public.*

- ***AQ-3a Air quality standards and monitoring.** Identify potential emission sources of airborne toxins from mobile and stationary sources. This may be in coordination with the California Air Resource Board and the District, as appropriate. Enforce rigid high standards to restrict fumes, smoke, dust, or other environmental pollutants from stationary sources of pollution.*
- ***AQ-3b Develop and distribute material to educate the public on air quality issues**. Work with Humboldt State University, the California Air Resources Board, and the District to develop educational material regarding air quality, impact of air quality on people, plants and animals, and what citizens can do to improve air quality. The City will make this information available.*
- ***AQ-3c Cooperation in enforcement activities and programs**. Cooperate with the District in implementing and enforcing the district's rules and programs. Consider joint implementation of programs between the City and the district such as:*
  1. *A voluntary wood-burning-devices dryness certification program.*
  2. *Free cordwood moisture checks.*
  3. *Brochures on wood burning.*
  4. *Conversion of conventional wood burning devices to EPA certified devices.*
  5. *Use of district non-compliance funds for low-cost replacements.*
  6. *Develop land use ordinances and guidelines for new residential development to limit wood burning devices. Use District strategies to identify improper wood burning device use, improperly dried fuel, and faulty equipment, and provide education to violators or take enforcement action.*
- ***AQ-3d Indoor air pollution.** Factors such as sealed building interiors, inadequate ventilation, non-openable windows, and use of building materials that release toxic substances contribute to indoor air pollution. To maximize indoor air quality, the installation of openable windows and adequate ventilation systems, the use of pollution-reducing houseplants, as well as the selection of non-toxic building materials and interior finishes, is encouraged in all new buildings and in the retrofitting of existing buildings.*
- ***AQ-3e Greenhouse gas reduction.** Many of the chemicals of concern for air quality are also greenhouse gases. The City shall work locally and regionally to develop plans and programs to reduce or reverse greenhouse gas emissions to meet State and Federal greenhouse gas reduction goals.*

Policy AQ-4: Odor

***Objective.** Minimize public exposure to noxious odors from industrial, manufacturing, processing, and food and beverage production operations.*

- ***AQ-4a Odor controls**. Identify potential sources of noxious odors and regulate those sources to avoid adverse effects on adjacent sensitive receptors. Noxious odors are defined as foul smelling airborne emissions that are sufficiently concentrated to cause physical discomfort to those inhabiting adjacent*

areas. Regulations imposed to reduce effects of these odors shall include limiting hours for odor emissions, periodic monitoring, and filtering to reduce concentrations.

Policy PF1-1: Water Supply And Delivery

Objective. *Manage the City's potable water resources to ensure adequate quantities for community use, to promote water conservation, to maintain water quality, and not to deplete source supplies.*

- ***PF-1c: Water conservation.*** *The City shall use a combination of economic incentives, educational programs, and auditing to promote water conservation and shall remain in compliance with Humboldt Bay Municipal Water District policy regarding its Five-Stage Water Rationing System. Continue to encourage the use of infrastructure and practices that promote efficient water and energy use such as rain barrels, green roofs, and retention structures. Encourage reduced water demand by requiring water-conserving design and equipment in new construction and encouraging the retrofitting of existing development with water-conserving devices, along with water capture and conservation practices.*

  Water rates will continue to be higher for consumption above baseline usage. Information about conservation devices such as flow restrictors, and practices such as off-peak irrigation, will be made available to the public. Building and site development permits that require connections to the City's water system shall incorporate water conservation design features and best management practices.

  The City shall also implement water conservation measures through the water, wastewater, and drainage master plans, and through leak detection and inflow and infiltration (I/I) reduction programs.

  In response to water shortages, the City will work cooperatively with the regional water supplier and the supplier's other municipal customers to implement an effective water shortage contingency plan that defines response actions based on the severity of the water shortage. End use prohibitions shall be determined based on current conditions, recommendations of a regional task force, and historic water use data and trends, and will be considered for mandatory penalties, charges and other escalating enforcement actions including education and outreach, issuing a verbal/written warning, penalty assessment, and water service termination. The City may consider imposing sharply graduated excessive use rates and/or excessive use fines, additional forms of water rationing, warnings, and physical flow restrictions to water users who fail to respond to less severe sanctions.
- ***PF-5f: Energy conservation and decarbonization of City facilities****. Continue reducing City facility energy consumption, including conservation and weatherization measures exceeding building code standards, electric only appliances/ HVAC/ water heating systems and renewable energy sources. Consider Greenhouse Gas Reduction measures in all new facility, renovations, site design and connectivity decisions. Develop and implement City practices to increase electrification equity and affordability for all residents.*

Policy PF-6: Integrated Waste Management

Objective*. Reduce solid waste generation at the source; maximize re-use and repair of appropriate items and material; promote composting and recycling; and properly transport non-recyclable solid waste to approved disposal sites. Coordinate with regional bodies to develop effective regional solid waste management systems. Ensure new development is adequately sited and designed, including adequate physical space for solid waste bins.*

- ***PF-6a: Source reduction.*** *Source reduction and materials re-use are the most cost-effective ways to minimize solid waste. Source reduction, or waste prevention, reduces the growing costs of collection, recycling, and disposal systems. Source reduction and re-use shall be promoted through educational programs and incentives. Examples of effective source reduction and re-use activities that shall be promoted are:*
  1. *Backyard composting, landscaping with low water needs, and grass mulching.*
  2. *Purchasing durable re-usable goods instead of disposable items (e.g., cloth diapers, rechargeable batteries).*
  3. *Repairing equipment and appliances.*
  4. *Purchasing goods from second-hand stores, flea-markets and swap meets.*
  5. *Reducing the use of packaging by buying in bulk or purchasing fresh food at farmers markets.*

6. *Moving away from using paper copies for as much City business as possible by working with electronic mail, forms, and agendas, and re-using of scrap paper if possible, if copying is necessary.*
7. *Reusable coffee cups and beverages provided in dispensers.*
8. *Termination of unwanted mail.*
9. *Incentives such as on-call garbage collection and differential solid waste fees shall be used to encourage source reduction.*

- ***PF-6b: Recycling.*** *The City's recycling program shall continue and expand, unless a more efficient and cost-effective method of collecting and reusing materials is identified. The City shall continue to contract for recycling, collection, and processing, in order to help meet and exceed the State diversion goal. The following programs shall also be promoted:*

  1. *Collection of commercial corrugated cardboard.*
  2. *Collection of office paper.*
  3. *Collection of organic waste.*
  4. *City procurement policies and practices reflecting State requirements for purchasing recycled content paper products.*
  5. *Implementation of density bonuses for buildings designed to promote recycling.*
  6. *The City's active involvement in the Humboldt County Recycling Market Development Zone.*
  7. *Public education to "close the loop" and buy locally-made products with recycled content.*
  8. *Public education on recycling that includes self-haul services for recyclable materials not collected curbside.*
  9. *Support for the development and expansion of recycling-based manufacturing.*

  In order to minimize increases in solid waste volumes and maximize the amount of material returned to productive use, the City shall continue these programs with a target of reducing landfill volumes as specified in the Zero Waste Action Plan.

Policy RC-8: Energy Resources Management

Objective. *Reduce energy use through conservation and efficiency practices, reduce energy costs to the city and its residents, and increase the percent of energy purchases from renewable sources; increase energy security and reduce our vulnerability to outages and increased price; increase public awareness of energy issues and encourage an energy conservation ethic.*

The City will actively participate in Redwood Coast Energy Authority's primary guiding document the Humboldt County Comprehensive Action Plan for Energy (CAPE) and RePower Humboldt, a community-wide effort to define a vision and Strategic Plan for achieving energy independence and energy security in Humboldt County.

- ***RC-8a: Encouragement of appropriate energy alternatives.*** *The City will participate in Redwood Coast Energy Authority's Community Choice Energy (CCE) program, supporting renewable energy purchases over non-renewable sources.*
- ***RC-8b: Encouragement of energy efficiency and conservation.*** *The City shall disseminate Redwood Coast Energy Authority information to educate residents, property owners, and business operators about the need for and benefits of conserving energy. This includes information about building insulation; energy efficient appliances, lighting, and heating; other conservation measures and materials; and home power alternatives.*

  The City shall continuously seek and implement cost-effective steps to reduce City energy use. The City shall adopt national "Energy Star Program" goals (or its successor programs) for all City construction projects and all construction projects assisted by grants for which the City is an applicant. These goals include achieving a minimum of 15% greater energy efficiency than would a building designed with existing Title 24 standards.

  Explore and, if appropriate, adopt energy efficiency standards for existing residential and commercial buildings upon substantial remodel. Consider requiring energy efficiency inspections, disclosure, and

retrofits at change of ownership based on cost-effective and commercially available energy efficiency measures.

- ***RC-8c: Promotion of energy efficiency in transportation.*** *Reduce motor vehicle trips within the city and between the city and other destinations, and reduce per-trip energy consumption; this policy applies to trips by residents, non-residents, and city staff. Such measures as bike and pedestrian paths, public transportation, shared parking, and alternative-fueled vehicles shall be used to make these reductions.*
- ***RC-8d: Restoration for Greenhouse Gases Absorption.*** *Foster and restore forests and other terrestrial ecosystems that offer significant carbon mitigation potential, consistent with the Humboldt County Climate Action Plan.*
- ***RC-8e: City Electrification Ordinance.*** *Prepare and pass an 'all electric' Ordinance that phases out natural gas infrastructure and use.*

Policy PS-8: Climate and Resiliency

Objective. *The City will continue to support and monitor research about the nature of all hazards in Arcata, including research on prediction and warning systems, community vulnerability and consequences assessments, and improvements to building performance and resilience. The City will continue to pursue efforts that minimize Arcata's contribution to climate change by reducing greenhouse gas emissions and protecting people, the built environment, and the natural environment from the impacts of climate change.*

- ***PS-8a: Land Use and Urban Development.*** *Compact urban development has co-beneficial climatic effects, including reducing greenhouse gases, preserving habitats, producing healthy vibrant communities, and facilitating opportunities for environmental justice. The City shall support land use policies and activities that promote compact, climate-friendly design, such as infill development, densification, and regenerative building design. City projects and private developments shall be designed to consider multi-benefit solutions that mitigate hazard risk and support the City's climate goals.*

  Urban design and development will be informed by the latest climate science to determine how to best protect and modify existing public and private infrastructure and assets and how to design new infrastructure and assets. Urban design and development should also take environmental justice considerations into account, working to eliminate disparities and burdens related to all hazards and the climate crisis for all Arcatans.
- ***PS-8b: Greenhouse Gas Reduction.*** *City actions shall reduce local contributions towards climate change by mitigating greenhouse gases and increasing carbon sequestration. The City shall update relevant plans and policies periodically to meet State and local climate goals.*
  1. *Encourage reduction in greenhouse gas emissions, by providing alternatives to use of gas-powered vehicles. Such alternatives include public transit, alternatively fueled vehicles, bicycle and pedestrian routes, and bicycle- and pedestrian-friendly development design.*
  2. *Encourage and facilitate investments in renewable energy and green technology.*
  3. *Prioritize nature-based solutions that restore ecosystem function and maximize ecological benefits to plants, animals, and people.*
- ***PS-8c: Regional Collaboration.*** *The City shall continue to participate in regional multi-agency efforts to coordinate climate mitigation and adaptation and ensure Arcata becomes more resilient to the threats of climate change.*

Policy D-1: Overall Community Design

Objective. *Maintain community diversity and quality in the built environment; with structures and other physical features harmonious with their neighborhood context; and with a physical and visual transition between urban area and the surrounding open space lands.*

- ***D-1e: Promote energy efficiency and solar access.*** *Site and building design shall emphasize energy efficiency, solar orientation and consider shading of adjacent structures, balancing development needs with solar access.*

- ***D-1k: Pedestrian Priority and Accessibility in Streetscape Design.*** *Ensure that streetscape design and improvements prioritize pedestrian circulation that promote walkability and support a car-free lifestyle and accessibility for all ambulatory modes and abilities. Require new development to consider the needs of a diverse range of abilities; for example, position obstructions to path-of-travel to the curb line or other less obtrusive locations wherever feasible.*
- ***D-1g: Provide for bicycles, pedestrians, and transit in design****. Design shall incorporate provisions for bicycle and pedestrian circulation, and transit. Facilities should be located and designed so that these alternative travel modes are fully interconnected.*
- ***D-8n. Incentivize Mixed Use as a Community Amenity.*** *Incentivize mixed-use projects that have a ground-floor nonresidential (retail, office, light industrial, or other job-creation component) through the Gateway Area community benefit program where not otherwise required by the form-based code.*

Policy D-2: Downtown (Central – Commercial) Design

Objective. *Maintain and continue to develop a built environment which: accentuates the Plaza and surrounding downtown as the commercial and cultural hub of the City, consider historical building and site features, integrates bicycle and pedestrian facilities, and incorporates appropriate trees and other "landscape" elements.*

- ***D-2d: Street trees.*** *The City shall maintain a street trees program with the following components:*
  1. *Identification of streets where trees may be installed.*
  2. *Siting standards, either in wells located between on-street parallel parking areas, in cutouts within the sidewalk where the sidewalk is of sufficient width (7 feet or more), or in containers where the preceding locations are not workable.*

Policy D-8: Community Benefits Program

Objective: *Ensure new development benefits the community generally while streamlining approval and accountability in the development planning process.*

- ***D-8j: Incentivize Active and Alternative Transportation as a Community Amenity.*** *Through the community benefit program, allow increased development intensity and simplified development processes for projects that provide on-site active and alternative transportation amenities, such as car share/bike share, free electric vehicle charging stations, employee showers, on-site covered and secure indoor bike parking, bus passes for residents and/or employees, dedication of parcel frontage to transportation uses, charging stations for e-bikes, shared parking, and related amenities that stimulate non- motorized and zero-carbon transportation options above and beyond current requirements of state law.*
- ***D-8k: Sustainable and Green Buildings as a Community Amenity.*** *Through the Gateway Area community benefit program, allow increased development intensity and simplified development processes for projects that provide designated levels of sustainable and green building features.*
- ***D-8l: Incentivize Energy Efficiency and Electrification as Community Amenities.*** *Through the community benefit program, allow increased development intensity and simplified development processes for projects that exceed Title 24 and other State or local energy efficiency requirements and all new construction to be electric only, with limited commercial cooking exceptions.*

Policy CM-1: Balanced Transportation System with Choice of Modes

Objective. *Create and maintain a balanced transportation system with choice of bus transit, bicycle, and pedestrian as well as private automobile modes. Reduce the percentage of trips that are made by automobile and provide the opportunity and facilities to divert trips from automobiles to other modes. In planning for improvements to the overall circulation system, design the system to accommodate the planned amount of growth outlined in other policies. Ensure the circulation system supports a functioning, safe, sustainable multi-modal network. Support increased demands for all efficient forms of mobility emphasizing alternative modes pedestrians, bicycles, and other non-motorized or shared transit options, then vehicles, and trucks, in an effort to induce demand of multimodal transit alternatives and implement transportation demand management strategies, in keeping with citywide Circulation Element policies.*

- ***CM-1a: Complete Streets.*** *The City shall direct the design, construction, reconstruction, repair and maintenance efforts on the City's streets, bridges, pathways, and sidewalks, creating a comprehensive, integrated transportation network that is safe, accessible, comfortable, accommodating, and welcoming to users of all ages, races, ethnicities, incomes, and physical abilities, and all modes of transportation, particularly those walking, rolling, biking, and using transit, and in doing so the City shall apply a Complete Streets framework in all applicable and feasible transportation projects to allow the safe, comfortable, convenient and accessible use of streets for all street users. Throughout the City, design sidewalks and street crossings for maximum accessibility. Accessibility features may include but are not limited to widening sidewalks, requiring high-visibility/striped crosswalks, installing bulb-outs, pedestrian activated crossing signals, and aligning ramps with path-of-travel. Where the urban grid pattern is interrupted or incomplete, evaluate opportunities to continue the circulation block patterns with new connections that consist of entirely non-vehicular active transportation facilities.*
- ***CM-1b: Investment in alternative modes****. In order to provide a realistic and cost-effective balance between travel modes, the City shall emphasize investment in alternative modes (bikeways, etc.) as a priority over increasing vehicular capacities of streets.*
- ***CM-1c: Interconnections and transfers between travel modes.*** *The City shall provide and maintain a Transit Center to facilitate interconnection and transfers between bus routes and systems. As funding permits, Transit Center facilities shall be improved to encourage its use as a multi-modal transfer point. Pedestrian and bicycle amenities shall be provided at other locations which serve as modal transfer points such as bus stops and park-and-ride lots.*
- ***CM-1d: Intercity travel.*** *The City shall coordinate with Humboldt County and Caltrans to provide adequate facilities for vehicles, buses, and bicycles to serve intercity demand. Joint efforts may include transportation improvements outside of Arcata which serve intercity travel, such as bicycle links, timed-transfer bus stops, park-and-ride lots, and regional transit service and development of park-and-ride lots in Arcata to reduce intercity vehicular travel.*
- ***CM-1i: Balanced Transportation System.*** *Create and maintain a balanced transportation system with choice of bus transit, bicycle, and pedestrian as well as car sharing and private automobile modes. Reduce the percentage of trips that are made by automobile and provide the opportunity, incentives, and facilities to divert trips from automobiles to other modes. Provide negative incentives, such as parking meters, permit parking, time limited parking, carpool incentives, and other targeted parking measures that encourage alternative modes utilizing "induced demand" strategies.*
- ***CM-1j: Mobility Infrastructure that Supports Car-free Lifestyle.*** *Plan and implement the mobility and circulation infrastructure to support a car-free lifestyle, increase pedestrian safety, reduce greenhouse gas emissions, and minimize vehicle miles traveled.*

Policy CM-2: Travel Demand Management

Objective. *Reduce the percentage of automobiles and reduce the annual vehicle-miles of travel.*

- ***CM-2a: Land use development patterns.*** *The City encourages and supports travel demand management efforts. The City shall promote land use and development patterns that encourage walking, bicycling and transit use. In recognition of the link between land use and transportation, the land use plan shall discourage low density, homogenous land-use patterns that foster automobile travel and are impractical to serve with transit. Land use planning shall emphasize high density and mixed land- use patterns which translate into higher transit and pedestrian travel in the downtown and neighborhood commercial areas. Infill, redevelopment, and reuse of underutilized property at higher densities shall be encouraged prior to outward expansion of City boundaries. The following land use measures are emphasized:*
  1. *Mixed-use neighborhood centers within transit corridors which include housing and commercial services near employment.*
  2. *Land use patterns which maximize linking trip opportunities by assembling uses, thus allowing people to take care of a variety of daily needs with a single trip.*
  3. *Clustering of higher density housing and incorporation of residential units on upper floors of commercial buildings.*
  4. *Integration of new housing into neighborhood shopping centers, including Sunny Brae, Westwood,*

and Valley West.

5. *Pedestrian-oriented land use and urban design, including the following elements:*
    a. *Pedestrian-scale block patterns.*
    b. *Incorporate pedestrian and bicycle amenities into public and private projects.*
    c. *Design streets for multi-modal use.*
    d. *Integrate transit stop facilities into public and private projects.*
    e. *Orient buildings and houses to the street.*
    f. *Provide attractively landscaped streets and buffers.*
    g. *Preserve existing and historic urban fabric.*
    h. *Eliminate blank wall facades.*
    i. *Incorporate bicycle routes and enhancements in public and private projects.*
6. *A fixed urban services boundary to reduce sprawl and infrastructure costs.*
7. *Focused growth along existing or planned transit corridors rather than extension of transit to serve new isolated development.*
8. *Prevention of large areas of single uses. Isolated single-use developments at the edge of the City could encourage automobile travel for commuting and errands.*
9. *Provision of convenience retail and services in ground floor space in the downtown to accommodate the needs of employees and reduce the need for mid-day automobile trips.*
10. *Adopt and maintain zoning regulations that allow for a mix of land uses in order to reduce vehicle trips and the overall need for automobile use.*

- ***CM-2b: Consider Non-motorized Campus Layouts****. For areas that have incomplete block patterns and/or are currently lacking in vehicular roadways (such as the Barrel District), consider providing limited to no new facilities for motorized vehicles. Instead, consider creating a campus layout with vehicular access on the perimeter and robust non-motorized facilities throughout the interior. Plan for the infrastructure that would be required for these areas to serve as key park and ride/transit hubs. Where new vehicular roadways are constructed within currently roadless areas (such as the Barrel District), provide for a wide right-of-way whose cross section includes ample on-street parking, narrow vehicle lanes, bike lanes, sidewalks in excess of six feet, street trees, and enhanced pedestrian crossings at least every 300 feet.*

Policy CM-3: Bus Transit Policy

Objective: *Maintain a bus transit system which connects and serves major commercial and employment areas within Arcata, Cal Poly Humboldt, public schools, and higher density residential areas. Increase average citywide transit mode share of daily person trips to 12% from the 2020 level of 3%.*

- ***CM-3b: Regional transit service.*** *Short- and long-range transit plans shall be coordinated with the regional transit service provided by the Redwood Transit System. The City supports regional transit plans which improve service and timed transfers, and reduce headways for intercity travel. In the interest of enhanced coordination and efficiency for local and regional service, the City shall continually evaluate alternatives to existing services including potential mergers with the Humboldt Transit Authority or other service providers.*
- ***CM-3c: Bus route system****. Public transportation is both a civil right and a critical climate solution, and should be designed to provide service competitive with automobile travel in terms of access, convenience and comfort. Potential improvements to the transit system should be assessed according to the best available evidence of both need and existing and induced demand. In order to increase safety and access to basic needs, work with relevant transit agencies, major employers, key user groups, and area schools to plan for enhanced public transit and school bus lines and new stops to both accommodate the new growth and serve existing community needs.*
- ***CM-3d: Transfers between routes and systems.*** *The public transit system shall provide convenient transfers between routes, other transit services, and other modes of travel such as bike share locations with racks for one-way trip use. The Arcata Transit Center shall serve as the primary multi-modal*

transfer station. Bus stops should be located near municipal parking lots or future park-and-ride lots. The A&MRTS and Redwood Transit System schedules shall be coordinated to provide a timed-transfer system at key stops.

- ***CM-3e: Bus stops.*** *Existing bus stops should be improved and new bus stops on future routes should be designed with appropriate amenities and features. Design elements include either bus stop lanes or bus turnouts. Bus stop design amenities which increase rider comfort and feeling of safety and encourage walking and bicycling are emphasized, including shelters, benches, lighting, shade trees, signs, information kiosks, waste receptacles, paved surfaces, facilities for disabled and alter-abled riders, and secure bicycle parking. Prioritize covered seating at all bus stop locations wherever feasible. Bus stop areas should be consistently maintained and cleaned, including vandalism repair and graffiti removal. Developers shall be required to provide bus stops and amenities on their frontage if the property is located on an existing or future bus route and is an appropriate location for a stop. Pedestrian, bicycle, and handicapped rider access should be provided to neighborhood bus stops.*
- ***CM-3g: Transit implications of new development.*** *The engineering department and A&MRTS shall evaluate proposed new development projects and make recommendations prior to project approval regarding transit improvements and road designs.*

Policy CM-4: Circulation Maps and Context Sensitive Street Design Policy

Objectives. *Plan the circulation network consistent with Figure T-k and Figure T-i to create Complete Streets solutions that are appropriate to individual contexts; that best serve the needs of all people using streets and that support the land-use, climate, safety, and environmental quality targets and policies of the City and which:*

1. *efficiently utilizes existing facilities and reduces need for investment in new or expanded street and highway facilities or capacities;*
2. *improves connectivity of streets to provide for direct routes between origins and destinations;*
3. *has a high quality of regular maintenance and repair; and*
4. *to the extent feasible, maintains a level of service which minimizes delays, acknowledging LOS is not a high priority of the City in street design*

Policy CM-5: Bicycle and Pedestrian Facilities

Objective. *Create a complete, interconnected bikeway system and pedestrian network. Increase the percentages of person trips via walking and bicycling, which serves the full range of mobility needs.*

- ***CM-5c: Bicycle parking facilities.*** *Secure bicycle parking facilities shall be provided at important activity centers, civic facilities, apartment complexes, employment centers, shopping centers, major bus stops, and schools. Bicycle parking facilities include racks, lockers, and bollards.*

  Developers shall be required to provide a minimum number of bicycle parking devices at convenient and visible ground-floor locations within the development. Bicycle parking should be located in an interior location near an entrance whenever feasible. The required number of bicycle parking spaces shall be calculated as a proportion of the number of users.

  Designate locations for public, outdoor bike lockers coordinated with public transit stops accessible in the public right-of-way.
- ***CM-5d: Pedestrian network enhancements.*** *Prioritize implementation of improved pedestrian facilities and enhancements linking residential areas with important destinations such as health care, education, employment, shopping, and recreation with priority given to neighborhoods with the greatest need (disadvantaged communities, etc.) The following pedestrian improvements and safety enhancements should be considered in future planning for these areas:*
  1. *Close sidewalk gaps.*
  2. *Install vertical curbs to keep vehicles from parking on sidewalks.*
  3. *Reduce street crossing distance with curb extensions and smaller curb radii.*
  4. *Use on-street parking as a pedestrian buffer.*
  5. *Install textured crosswalks.*

6. *Provide adequate street lighting focused on crossings.*
7. *Restrict parking near crosswalks to improve sight distance.*
8. *Install rumble strips on approaches to crosswalks.*
9. *Plant street trees or place street trees in planters in the parking lane.*
10. *Relocate intersection stop bars five feet back from crosswalks to improve driver and pedestrian visibility.*
11. *Install wayfinding signage where appropriate.*
12. *In all newly created roadways, incorporate curb extensions ("bump outs") or other design features to increase pedestrian visibility and safety at crosswalks, calm traffic speeds, and provide space for rain gardens, tree planting, street furnishings, and other amenities.*
13. *Connect the City to the Downtown/Plaza core with safe and attractive pedestrian friendly walking routes that incorporate art and street lighting.*

- ***CM-5e: Pedestrian pathways and multi-use trails.*** *Pedestrian pathways or multi-use trails for the exclusive use of non-motorized transportation modes should be provided. Pathways may be long facilities located along corridors or short facilities providing direct access through development projects or connecting areas not directly accessible by streets. Pathways should be planned to serve the full range of mobility needs for people of all ages, races, ethnicities, incomes, and physical abilities. The following shall apply to pedestrian pathways or multi-use trails:*

1. *Easement or right of way dedication. Dedication of easements or rights of way for pathways through new private developments may be required.*
2. *Cooperation with local and regional agencies and jurisdictions. The City shall cooperate with other agencies to establish and maintain off-street pathways and trails utilizing creek, utility, and railroad right of way.*
3. *Other Locations. Other potential locations for multi-use paths are within the North Coast Railroad right of way from Giuntoli Lane to Samoa Boulevard, along the west side of Samoa Boulevard/Old Arcata Road east of State Route 101, and along the perimeter of Arcata Bay towards Manila.*
4. *Create separated walk/bike lanes in multi-use trails with explanatory signage on placement and how to safely pass, as deemed necessary based on increased use in future.*
5. *Provide sidewalks or multi-modal trails on both sides of all streets.*
6. *Support ride share in various modes (car, bike, etc.) through public and private infrastructure, and encourage systems designed to provide access to shared facilities. Improvements and programs should include public options, such as bike share racks or carpool parking, public-private partnerships for vehicle share, and private facilities or programs, such as project-based car share.*
7. *In general, retain the current total linear feet of Class I trails within the City, even if current facilities must be realigned or relocated to other routes. In limited circumstances, the City shall retain the discretion to allow an applicant to demonstrate removal or relocation of Class I Trail sections would improve active transportation access and connectivity. Collaborate with the Great Redwood Trail Agency and other landowners and agencies to retain and expand the Class I trail and Class 4 bikeways throughout the City.*
8. *Reduce vehicle trips from other parts of the City by creating pedestrian and bicycle-friendly corridors that draw residents and visitors to enter the various neighborhoods via means other than motorized vehicles. Fulfill the potential of the existing and planned Class I trails by planning for expanded connections that will draw bikes/peds from between activity centers.*

- ***CM-5f: Sidewalks.*** *A continuous and interconnected system of sidewalks shall be provided throughout the City. The existing standard right of way of most arterials, collectors, and local streets (fifty feet) permits a five-foot sidewalk in each direction, the minimum width to comply with ADA requirements. Some commercial areas in downtown Arcata should have wider sidewalks to accommodate higher levels of pedestrian traffic and window-shopping. The following standards shall apply to sidewalks:*

1. *Sidewalk continuity. Gaps in existing sidewalks should be closed to provide a continuous pathway. Cul-de-sacs should be discouraged because they disrupt pedestrian connectivity.*
2. *Sidewalk widths. New development projects shall be required to construct or reconstruct sidewalks along the property frontage in accordance with adopted City standards. Explore sidewalk widening*

strategies that include land dedication or easements to create unobstructed accessible pedestrian pathways.

3. *Sidewalk Requirements. Where adequate width exists to maintain ADA clearance, sidewalk pedestrian amenities should be provided in the downtown commercial area. These include benches, bicycle parking, pedestrian-scale lighting, street trees, flower boxes, trash receptacles, drinking fountains, and awnings. Private development projects shall be required to include sidewalk improvements; other landowners are encouraged to provide improvements.*
4. *Sidewalk Maintenance. Sidewalk facilities shall be systematically inspected and maintained to clean and repair damaged surfaces and remove impediments such as poles, newspaper racks, and other obstructions that interfere with pedestrian flow.*

- ***CM-5i: Pedestrian-friendly Streetscapes.** Ensure that streetscape design and improvements prioritize pedestrian circulation that promote walkability and support a car-free lifestyle and accessibility for all ambulatory modes.*

Policy CM-6: Parking Supply and Parking Management

***Objective:** Manage parking to reduce the incentive for single occupancy vehicle use.*

- ***CM-6a: Downtown parking.** The following shall apply to parking within the Downtown area:*
  1. *Smart Meter System. The City shall explore implementing a smart parking meter system in the Downtown area to manage parking demand while generating revenue to support public transit and/or active transportation.*
  2. *In-lieu fee for on-site parking. Payment of a fee in-lieu of providing required parking spaces should be required in the Central Commercial District or for Landmark Historic Structures. Fees collected shall be used exclusively to fund municipal off-street parking lots or alternative travel mode facilities.*
  3. *On-site parking standards. The City should reduce or eliminate the parking standards applicable within the downtown area. New development is encouraged to pay in-lieu fees rather than provide parking on-site within the immediate Plaza area. Any on-site parking in the downtown should be located to the rear or side of buildings. Park and ride, car shares, downtown parking benefits districts, and other measures to encourage alternative transportation shall be considered.*
- ***CM-6c: Parking standards for new development.** The City's should continue to specify maximum parking requirements for new development and eliminate minimum parking requirements. Parking lots should be located, where feasible, to the rear or side of commercial and multi-family residential buildings.*
- ***CM-6d: Shared or joint-use parking for commercial development.** Reductions in the individual use parking requirements should be considered where two or more uses provide joint parking. Developers of projects with appropriate land uses for effective shared parking are encouraged to provide joint parking facilities. Examples of compatible land uses include office buildings and any use that generates primarily an evening parking demand such as restaurants and theaters.*

Policy LU-1: Overall Development Plan

***Objective:** Establish a pattern of development that concentrates activity and amenities in a pattern of centers, clusters and mixes of uses to support the City's focus on infill development and active transportation. Provide an overall land use arrangement that concentrates city-wide uses and functions in these areas with an emphasis on areas within walking distance of the central Plaza Area, Cal Poly Humboldt, and existing neighborhood and employment centers which provide a mix of commercial services, residential uses, and community facilities.*

To the maximum extent feasible, the City shall strive through its land use decisions to promote community health for all neighborhoods, with particular attention to those that have been identified as lacking in amenities such as transit, clean air, grocery stores, bike lanes, parks, and other components of a healthy community.

- ***LU-1d: Reduce Parking Maximums in the Most Walkable Areas of the City.*** *Reduce maximum allowable parking requirements within Infill Opportunity Zones to promote walkable communities. Minimize vehicle parking requirements and maximize walk, bike, and transit infrastructure.*

Proposed City of Arcata General Plan 2045 Gateway Area Plan Element

Policy Chapter 1: Land Use

Objective. *Establish an overall land use arrangement that promotes mixed-use, multi-story buildings with a clear emphasis on high-density housing that is equitable, environmentally sustainable, and compatible with the envisioned neighborhood character. Allow for a broad diversity of non-residential uses that support a pedestrian/bicycle-friendly environment, contribute to a car-free lifestyle, and meet the physical, social, and economic needs of residents.*

- ***GA-1a: Land Use Targets.*** *Aim to achieve a mix of residential and non-residential uses in each land use subarea that supports the full range of services to Gateway Area residents, workforce, and visitors. Estimated long-term targets to balance uses are shown in Table 5.*

Policy Chapter 6: Open Space and Conservation

- ***GA-6e: Bike/ped Connections.*** *Establish new off-street bike/ped connections to connect open spaces and activity centers in the Gateway area. Enhance connections between the Plan Area and parks and open space destinations near to the Plan Area, such as Arcata Plaza, Shay Park, and Arcata Marsh.*

Policy Chapter 7: Mobility

Objective. *Prepare for a substantially realigned transportation network within the Gateway Area that significantly enhances bicycle and pedestrian facilities while also creating a more efficient vehicular circulation pattern with better north-south and east-west connections for all modes of travel. Seamlessly link the Gateway Area to key destinations throughout the City via non-motorized facilities to support opportunities for a car-free lifestyle.*

- ***GA-7a: Design Mobility System per Plan Figures****. Design and construct the mobility and circulation system of the Plan Area per Figure 8 and Figure 9 and the Cross Section and Intersection Design Concepts above, as well as in accordance with the Open Space, Streetscape, and Site Development sections of this Area Plan. In the engineering design stage of implementing the above cited Figures/Concepts, allow for deviations and alterations such as:*
  1. *Throughout the entire Plan Area, sidewalk widths may increase beyond six feet, especially on the north sides of east-west streets where expanded sidewalks on the sunny side of the street would allow welcomed outdoor seating, and at well-traveled pedestrian boulevards to ensure a clear path of travel. Adjusting sidewalk widths will necessitate adjustments to the dimensions of other features, such as drive lanes, parking lanes, bike lanes, outdoor seating, street furniture, and the like. On-street parking lanes may need to be eliminated.*
  2. *Throughout the entire Plan Area, on-street parking angles may be adjusted as need to be either parallel, perpendicular, angled-in, or reversed angled-in. Adjusting parking angles may necessitate adjustments to the dimensions of other features, such as sidewalks, drive lanes, bike lanes, etc.*
  3. *Outside of City rights-of-way, the alignments and widths of Class I trails (i.e., separated shared use paths) may need to be adjusted based on environmental constraints, community needs, the availability of right-of-way, and other factors. Seek opportunities in public rights-of-way to daylight creeks using bridges when reconstructing bike/bed infrastructure.*
  4. *The trail within the Q Street right-of-way south of 10th Street may eventually need to be converted into a full vehicular roadway with a cross-section similar to other two-way roads proposed within the Plan Area.*
  5. *The final design of transportation facilities within the Barrel District may change substantially, but should follow the parameters outlined in Policies CM-2b and GA-5b.*
  6. *Where available, pursue Opportunities for "green streets" infrastructure in streets/public right of ways, and provide for storm water features off-site (i.e., "storm water banks"). Consider opportunities to improve storm water drainage for the Jolly Giant Creek watershed.*

Policy Chapter 8: Streetscape

Objective. *Create high-quality streetscapes that are visually interesting and provide safe and comfortable places for people to walk and gather. Provide for a streetscape design that visually unites the Gateway Area and promotes a cohesive sense of place.*

- ***GA-8b: Landscaping.*** *Install street trees and other landscaping consistent with the standard for the applicable street typology as identified in Chapter 7 (Mobility). Use planting techniques that extend the life and health of the trees.*

Policy Chapter 9: Design and Architectural Standards

Objective*. Ensure site design offers a mix of vibrant, mixed-use neighborhood structures with active and inviting public spaces. Provide for visual interest in walkable neighborhoods with street-level activity and public gathering places that support a car-free lifestyle.*

Policy Chapter 11: Infrastructure and Services

Objective. *Provide sustainable infrastructure that serves the planned growth of the Gateway Area.*

- ***PF-6h: Plan Utility Infrastructure to Accommodate Envisioned Growth.*** *In planning for improvements to the overall utility infrastructure, including wastewater and electrical demand, design the systems to accommodate the planned amount of growth outlined in other policies and consider the impacts of locating new infrastructure on potential future habitat restoration sites. Plan for future infrastructure needs due to conversion of uses (e.g., electrification). Infrastructure will be developed over time as needed, and the City's Capital Improvements Program (CIP) will reflect near term infrastructure needs through the annual update process.*
- ***PF-1c: Water Conservation Infrastructure.*** *Continue to encourage the use of infrastructure and practices that promote efficient water and energy use such as rain barrels, green roofs, and retention structures. Encourage reduced water demand by requiring water-conserving design and equipment in new construction and encouraging the retrofitting of existing development with water-conserving devices, along with water capture and conservation practices. Evaluation Criteria and Significance Thresholds*

The Project would cause a significant impact related to GHG emissions, as defined by the Appendix G of the CEQA Guidelines, if it would:

– Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment; or

– Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs.

3.5.4 Methodology

GHG emissions, by their nature, represent a cumulative impact. No single project could generate enough GHG emissions to noticeably change the global average temperature. Instead, GHG emissions contribute, on a cumulative basis, to the significant adverse environmental impacts of global climate change. Therefore, the Project analysis is discussed in the context of the cumulative impact.

Operational emissions were estimated using CalEEMod version 2022.1.1.12, as described in Chapter 3.3, Air Quality, of this Draft EIR. The Project's operation GHG impact was evaluated qualitative against the Bay Area Air Quality Management District's (BAAQMD's) recommended threshold of significance for plan-level CEQA analysis. The Project's operations were further evaluated for consistency with the State's *2022 Climate Change Scoping Plan*.

Thresholds of Significance

There are currently no applicable federal, state, or local significance thresholds pertaining to construction activities. Additionally, there are currently no applicable federal, state, or local adopted significance thresholds for

operational activities. CEQA Guidelines Section 15064.4, subdivision (c), gives the lead agency "discretion to select the model or methodology it considers most appropriate to enable decision makers to intelligently take into account the project's incremental contribution to climate change." Furthermore, CEQA Guidelines Section 15064.7, subdivision (c), provides:

> *When adopting or using thresholds of significance, a lead agency may consider thresholds of significance previously adopted or recommended by other public agencies or recommended by experts, provided the decision of the lead agency to adopt such thresholds is supported by substantial evidence.*

Therefore, the General Plan 2045's GHG impacts were analyzed using the following thresholds and approaches.

- **Construction:** Qualitative approach in accordance with Section 15064.4(a)(2) of the CEQA Guidelines; and
- **Operation:** BAAQMD adopted operational threshold for local long-range plans (BAAQMD 2023)

The rational and substantial evidence in support of the operational threshold of significance evaluated is provided as follows.

BAAQMD Plan-Level Threshold

On April 20, 2022, the BAAQMD adopted new project and plan-level thresholds of significance for assessing climate impacts under CEQA. The BAAQMD did not adopt thresholds of significance for construction-generated emissions. As provided by the BAAQMD:

> *GHG emissions from construction represent a very small portion of a project's lifetime GHG emissions. The proposed thresholds for land use projects are designed to address operational GHG emissions which represent the vast majority of project GHG emissions (BAAQMD 2022).*

Subsequently, the BAAQMD updated their CEQA Air Quality Guidelines, including the recommended threshold and methodology for assessing plan-level impacts. The BAAQMD provides the following plan-level thresholds of significance for local long-range plans (such as general plans):

1. Meet state's goals to reduce emissions to 40 percent below 1990 levels by 2030 and carbon neutrality by 2045; or
2. Be consistent with a local GHG reduction strategy that meets the criteria under State CEQA Guidelines Section 15183.5(b)

It should be noted that the BAAQMD adopted the recommended plan-level thresholds prior to CARB adopting the 2022 Scoping Plan. The 2022 Scoping Plan (the implementing tool of AB 32) sets the path for California to achieve carbon neutrality by 2045 or sooner. Therefore, consistency with the state's 2022 Scoping Plan serves to assess the General Plan 2045's consistency with a plan adopted for the purpose of reducing GHG emissions and for assessing if a project would generate emissions that may have a significant impact on the environment.

There are no applicable regional or local plans that have been adopted for the purpose of reducing GHG emissions.

3.5.5 Impacts and Mitigation Measures

Impact GHG-a, b: **Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment, or conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?**

GHG emissions can be reduced to some degree by improved coordination of land use and transportation planning at the City, county and subregional level, and other measures to reduce automobile use. Energy conservation measures also can contribute to reductions in GHG emissions. In 2006, the City developed a community-wide Greenhouse Gas Inventory as well as a Community Greenhouse Gas Reduction Plan; this Plan focused on six action areas including energy efficiency, renewable energy, sustainable transportation, waste and consumption reduction, carbon sequestration and other methods, and cross-cutting approaches. Arcata's GHG

inventory has since been updated in the 2010 Greenhouse Gas Emissions Inventory of Government Operations and the 2015 Community Greenhouse Gas Emissions Inventory. However, the plan does not contain an emission reduction goal applicable to the planning horizon of 2045.

Construction

Project construction activities would result in a temporary increase in GHG emissions, including exhaust emissions from on-road trucks, worker commute vehicles, and off-road heavy-duty machinery. Construction would require clearing, earthmoving, and delivery equipment as used for similar projects and which have been accounted for in the state's emission inventory and reduction strategy for both on- and off-road vehicles. Emissions during construction would not be a considerable contribution to the cumulative GHG impact given that construction would be temporary, of short duration, and would not require a large fleet of earthmoving equipment and soil-off hauling beyond the normal equipment and activities related to such projects. Therefore, the Project's construction-related emissions would be less than significant.

Operation

CARB Scoping Plan

As detailed in Section 3.5.3, Regulatory Framework, 2022 Scoping Plan Appendix D, Local Actions, contains CARB's recommended actions for local governments to assist California to attain the state's climate goals. Within 2022 Scoping Plan Appendix D, CARB identifies the following as priority areas for local jurisdictions to focus on: transportation electrification, vehicle miles traveled reduction, and building decarbonization.

The 2022 Scoping Plan appendix also contains recommended methodologies for evaluating plan-level consistency with the state's climate goals in a CEQA-required GHG analysis. The first recommended methodology consists of evaluating the attributes of the plan or project to determine consistency with the Scoping Plan, using the attributes identified in Table 3.5-2.

Table 3.5-2 General Plan 2045 Consistency with 2022 Scoping Plan Priority Areas for Local Land Use Agencies

CARB-Recommended Key Project Attribute	General Plan 2045 Consistency Evaluation
Priority Area 1: Transportation Electrification	
Provides EV charging infrastructure that, at minimum, meets the most ambitious voluntary standard in the California Green Building Standards Code at the time of project approval	**Inconsistent**. The Gateway Area Plan Element contains Policy D-8J which would allow increased development intensity for projects that provide free EV charging stations. However, the General Plan 2045 does not include policies to include or increase electric vehicle charging infrastructure in new development anticipated by the plan, or throughout the community. Implementation of Mitigation Measure GHG-1, EV Charging Infrastructure, would bring the General Plan 2045 into consistency with this CARB-recommended key project attribute. Relevant General Plan 2045 Policies D-8j Incentivize Active and Alternative Transportation as a Community Amenity.
Priority Area 2: VMT Reduction	
Is located on infill sites that are surrounded by existing urban uses and reuses or redevelops previously undeveloped or underutilized land that is presently served by existing utilities and essential public services (e.g., transit, streets, water, sewer)	**Consistent.** Growth anticipated by the General Plan 2045 would occur entirely within the City limits, and primarily on existing urbanized lands. Residential development would occur using existing vacant parcels, accessory dwelling units and small lot splits, apartments, student housing, and infill. The public services and utilities infrastructure is assessed in Section 3.12, Utilities and Service Systems, of this Draft EIR. As shown in Section 3.12, Impacts UTL-a through UTL-e, the growth anticipated by the General Plan 2045 would be appropriately served by existing utilities and essential public services.
Does not result in the loss or conversion of natural and working lands	**Consistent.** Growth anticipated by the General Plan 2045 would occur entirely within the City limits, and primarily on existing urbanized lands. See Section 5.2, Agriculture and Forest Resources, of this Draft EIR for additional details for impacts to natural and working lands.

CARB-Recommended Key Project Attribute	General Plan 2045 Consistency Evaluation
Consists of transit-supportive densities (minimum of 20 residential dwelling units per acre); or Is in proximity to existing transit stops (within a half mile); or Satisfies more detailed and stringent criteria specified in the region's SCS	**Consistent.** Growth anticipated by the General Plan 2045 would primarily be in form of using existing vacant parcels, accessory dwelling units and small lot splits, apartments, student housing, and infill at transit-supportive densities and/or within proximity to existing transit stops. See General Plan 2045 Circulation Element, and policies: There is no applicable regional SCS. <u>Relevant General Plan 2045 Policies</u> RC-8c Promotion of energy efficiency in transportation. PS-8a Land Use and Urban Development. D-1g Provide for bicycles, pedestrians, and transit in design. CM-1c Interconnections and transfers between travel modes. CM-1i Balanced Transportation System. CM-1j Mobility Infrastructure that Supports Car-free Lifestyle. CM-2a Land use development patterns. CM-3b Regional transit service. CM-3c Bus route system. CM-3e Bus stops. CM-3g Transit implications of new development. GA-1a Land Use Targets. GA-7a Design Mobility System per Plan Figures. CM-3d Transfers between routes and systems. D-8j Incentivize Active and Alternative Transportation as a Community Amenity.
Reduces parking requirements by: – Eliminating parking requirements or including maximum allowable parking ratios (i.e., the ratio of parking spaces to residential units or square feet); or – Providing residential parking supply at a ratio of less than one parking space per dwelling unit; or – For multifamily residential development, requiring parking costs to be unbundled from costs to rent or own a residential unit	**Consistent.** The Gateway Area Plan Element and form-based code do not require parking minimums, and language in the Circulation and Mobility Element has been modified to further manage parking with the intent of reducing the incentive for single occupancy use, specifically by modifying parking standards for new development to eliminate minimum parking requirements. <u>Relevant General Plan 2045 Policies</u> CM-6a Downtown Parking. CM-6c Parking Standards for new development. CM-6d Shared or joint-use parking for commercial development. LU-1d Reduce parking maximums in the most walkable areas of the city.
At least 20 percent of units included are affordable to lower-income residents	**Consistent.** As demonstrated in the City's existing 2019 Housing Element, the City has planned for a total 408 lower income units (extremely low, very low, and low-income units), and a total of 781 units. Therefore, 52 percent of the total planned units are for lower-income residents.
Results in no net loss of existing affordable units	**Consistent.** Growth that would be accommodated by the General Plan 2045 would be primarily in the form of using existing vacant parcels, accessory dwelling units, and small lot splits, apartments, student housing, and infill.
Priority Area 3: Building Decarbonization	
Uses all-electric appliances without any natural gas connections and does not use propane or other fossil fuels for space heating, water heating, or indoor cooking	**Consistent.** General Plan policy RC-8e, City Electrification Ordinance, includes preparing and passing an 'all electric' ordinance that phases out natural gas infrastructure and use. Additionally, 2022 Title 24 requirements include mandatory measures to support future electrification of appliances through installation of electrical infrastructure at locations of gas appliance in new development. Through

CARB-Recommended Key Project Attribute	General Plan 2045 Consistency Evaluation
	implementation of General Plan policy RC-8e, the City would prohibit installation of gas appliances and result in a full conversion of appliances to electric-only. Relevant General Plan 2045 Policies PF-5f Energy conservation and decarbonization of City facilities. RC-8e City Electrification Ordinance.

Source: CARB 2022b

Notes: Recommendations in Appendix D of the 2020 Scoping Plan focus primarily on climate action plans and local authority over new residential development. It does not address other land use types (e.g., industrial) or air permitting.

As shown in the table above, General Plan 2045 would be consistent with several key project attributes recommended by CARB for consistency with the 2022 Scoping Plan. However, the General Plan 2045 would be inconsistent with the electric vehicle charging infrastructure recommended attribute. As a result, the Project may generate a potentially significant impact. Implementation of Mitigation Measure GHG-1would bring the Project into consistency with CARB-recommended key project attributes and, therefore, consistency with the 2022 Scoping Plan and the state's goal of carbon neutrality by 2045 or sooner.

RCEA RePower Humboldt

Grid energy would come from either PG&E or RCEA, both of which have met and exceeded the state's Renewable Portfolio Goal of providing 33 percent of energy from specified eligible-renewable resources and are both required to achieve a 60 percent renewables goal by 2030 and be 100 percent carbon-free by 2045. The RCEA has further committed to achieving a 100 percent renewable and net-zero carbon emissions sources by 2030. The General Plan 2045's consistency with the 2019 RePower Humboldt Plan is provided in Table 3.5-3.

Table 3.5-3 General Plan 2045 Consistency with RCEA 2019 RePower Humboldt

RCEA Energy Goals	General Plan 2045 Consistency Evaluation
Regional Planning and Coordination	
Achieve net-zero GHG emissions countywide by 2030	**Not applicable.** Countywide net-zero GHG emissions will not be met by any local jurisdiction under RCEA as its purview is a countywide effort not specific to the City. City policy updates do support this goal to the extent feasible as discussed elsewhere in this document, including (but not limited to) policies for energy conservation and decarbonization of City facilities
By 2030 fully establish Humboldt County as an energy secure community that can affordably and reliably meet its local energy needs with local renewable resources and has the robust local capabilities and infrastructure necessary to effectively respond to energy emergencies or disruptions in energy supply	**Not applicable.** The City is not an electricity utility or energy provider. This goal applies to RCEA and PG&E's electricity generation, utilities infrastructure, and delivered energy, which are outside the City's jurisdiction.
Build the clean energy sector into a cornerstone of the local economy through a breadth of strategies that include innovation, research and development, local energy-related business development, and establishing Humboldt Bay as the primary west coast hub for the offshore wind energy industry	**Not applicable.** The City is not an electricity utility or energy provider. This goal applies to RCEA and PG&E's electricity generation, utilities infrastructure, and delivered energy, which are outside the City's jurisdiction.
Integrated Demand Side Management	
Support the widespread installation of customer solar photovoltaic energy systems, with a target to increase installations to a rate of one system every day for the next decade	**Consistent.** New development accommodated by the General Plan 2045 would be subject to the 2022 (or subsequent) Title 24 requirements, which include solar and battery storage readiness.

RCEA Energy Goals	General Plan 2045 Consistency Evaluation
and reach 30MW of customer solar installed by 2025 and 50MW installed by 2030	
Make energy efficiency and conservation services available to every household and business in the county by 2030	**Not applicable.** The City is not an electricity utility or energy provider. This goal applies to RCEA, PG&E, and State electricity generation, utilities infrastructure, and delivered energy, which are outside the City's jurisdiction.
Expand existing energy efficiency, conservation and electrification programs to reduce GHG emissions from fossil fuel use in buildings by 20 percent by 2030 and maintain a trajectory to reduce emission from natural gas by 90 percent by 2050	**Not applicable.** The City is not an electricity utility or energy provider. This goal applies to RCEA, PG&E, and State Agencies. However, implementation of General Plan 2045 policy RC-8e would prohibit installation of gas appliances and result in a full conversion of appliances to electric-only. Relevant General Plan 2045 Policies PF-5f Energy conservation and decarbonization of City facilities. RC-8e City Electrification Ordinance.
Develop a network of community microgrids and renewable-energy back-up power systems across the county to reduce GHG emissions and to provide energy	**Not applicable.** The City is not an electricity utility or energy provider. This goal applies to RCEA, PG&E, and State Agencies. However, new development accommodated by the General Plan 2045 would be subject to the 2022 (or subsequent) Title 24 requirements, which include solar and battery storage readiness.
Low-Carbon Transportation	
Accelerate the adoption of EVs, with a target of over 6,000 EVs on the road in Humboldt County by 2025 and 22,000 vehicles by 2030. Develop public, workplace, and residential electric vehicle charging infrastructure necessary to support these countywide EV targets	**Inconsistent.** The Gateway Area Plan Element contains Policy D-8j which would allow increased development intensity for projects that provide free EV charging stations. However, the General Plan 2045 does not include policies to include or increase EV charging infrastructure in new development anticipated by the plan, or throughout the community. Implementation of Mitigation Measure GHG-1, EV Charging Infrastructure Ordinance, would bring the General Plan 2045 into consistency with this RCEA 2019 RePower Humboldt goal. Relevant General Plan 2045 Policies D-8j. Incentivize Active and Alternative Transportation as a Community Amenity.
Work with other local public entities to reduce VMT in Humboldt County by at least 25 percent by 2030	**Consistent.** Growth anticipated by the General Plan 2045 would occur entirely within the City limits, and primarily on existing urbanized lands. Residential development would occur using existing vacant parcels, accessory dwelling units, and small lot splits, apartments, student housing, and infill. The VMT is assessed in Section 4.2 (Transportation) of this Draft EIR. As shown in Section 4.2, Impact TR-b, the General Plan 2045 would result in an improved land use diversity score as compared to existing conditions, resulting a reduced VMT as compared to existing conditions.
By 2030 reduce GHG emissions from transportation by over 65 percent through reductions in VMT, improved vehicle efficiency, the adoption of EVs, and, where determined to be an effective emissions-reduction strategy, the use of biofuels as a bridge to a full transition to zero-emissions vehicles. Maintain a trajectory of emissions reduction to eliminate the use of fossil fuels by 2050	**Consistent.** As shown in the preceding row, the General Plan 2045 would result in a reduction of VMT as compared to existing conditions. However, improved vehicle efficiency, adoption of EVs, and use of alternative fuels is outside the control and jurisdiction of the City. As shown in the regulatory setting, the Advanced Clean Cars regulations include a requirement that all new passenger cars, trucks, and SUVs sold in California must be zero emissions vehicles.
Energy Generation and Utility Services	
By 2025, 100 percent of RCEA's power mix will be from a combination of state-designated renewable energy sources—solar, wind, biomass, small hydroelectric, and geothermal—and state-designated net-zero-	**Not applicable.** The City is not an electricity utility or energy provider.

RCEA Energy Goals	General Plan 2045 Consistency Evaluation
carbon-emission existing large hydroelectric facilities	
By 2030, Humboldt County will be a net exporter of renewable electricity and RCEA's power mix will consist of 100 percent local, net-zero-carbon-emission renewable sources	**Not applicable.** The City is not an electricity utility or energy provider.
Humboldt County can effectively respond to regional and local disruptions to energy supply and distribution systems through modernization of the local electric grid, the deployment of local distributed energy resources, and the development of community microgrids	**Not applicable.** The City is not an electricity utility or energy provider.

Source: RCEA 2019

As shown in the table above, General Plan 2045 would be consistent with several goals from the RCEA's 2019 RePower Humboldt plan. However, the General Plan 2045 would not be consistent with the following: accelerated development of EV adoption. Implementation of Mitigation Measures GHG-1 would bring the project into consistency with RCEA's 2019 RePower Humboldt plan to the extent feasible.

Mitigation Measures:

Mitigation Measure GHG-1: EV Charging Infrastructure Ordinance

The City shall include a policy in the General Plan 2045 to prepare and pass an electric vehicle (EV) charging infrastructure ordinance requiring, at a minimum, implementation of 2022 Title 24 Part 11 (CALGreen Code) Voluntary Tier 2 EV Charging Infrastructure for residential and non-residential development. The City shall review and update ordinance on a triennial basis, consistent with the CALGreen Code's update schedule, to reflect updates to the CALGreen Code Voluntary Tier 2 measures.

Level of Significance: Less than significant impact with mitigation

3.5.6 Cumulative Impacts

Impact GHG-C-1: Would the Project contribute to a cumulatively significant impact to Greenhouse Gas Emissions?

GHG impacts are inherently cumulative in nature, as identified by the BAAQMD, the Sacramento Metropolitan Air Quality Management District (SMAQMD), the California Air Pollution Control Officers Association, and other expert agencies (BAAQMD 2022, SMAQMD 2021, CAPCOA 2008). An individual project's generation of GHG would not significantly affect the climate; projects adversely affect climate through cumulatively contributing GHG into the atmosphere. The Project's cumulative contribution to GHG impacts is addressed above. However, as identified in Impact GHG Sections (a) and (b), the Project would not conflict with the AB 32 GHG reduction goals, the state's *2022 Climate Change Scoping Plan.* Therefore, the Project's contribution to the cumulative impact is not cumulatively considerable.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

3.6 Hazards and Hazardous Conditions

This section evaluates the potential impacts of the proposed General Plan 2045 on human health and the environment due to exposure to hazardous materials or conditions within the City. A Technical Memorandum (Tech Memo) focused on the approximate 138-acre Gateway Area was prepared to assist the City as a component of their environmental due diligence. The Gateway Area was prioritized for this Environmental Database Review search to facilitate ministerial permit review for high-density development in this area plan.

The Tech Memo included a property description, review of historical records, Sanborn Fire Insurance maps, historical aerial photographs, City directories, historical topographic maps, and an Environmental Database Review (Database Review) (GHD 2022). A Database Review includes data from publicly available regulatory agency information maintained by federal, state, and local government agencies and includes a wide variety of information including records of known or potentially contaminated sites, landfills and other disposal sites, and underground storage tank records for both leaking and registered underground storage tanks. The Database Review is attached to this Draft EIR as Appendix E.

Potential hazardous materials within areas of the City outside the Gateway Area, including the three other Infill Opportunity Zones (Valley West, Craftsman's Mall / St Louis, and Downtown), were analyzed using publicly available hazardous materials databases – particularly the State Water Resources Control Board's (SWRCB's) GeoTracker – previous reports and historical accounts to inform the analysis of the proposed General Plan 2045 on these areas.

Of the comment letters received in response to the Notice of Preparation circulated for the proposed General Plan 2045, there were no comments specific to hazardous waste. Comments related to hazards associated with air emissions, sea level rise, fire suppression capacity, and wildfire are addressed in Sections 3.3 (Air Quality), 3.12 (Utilities and Service Systems), 5.3 (Biological Resources), and 5.7 (Wildfire), respectively.

To provide the basis for this evaluation, the Setting section describes the local setting within the City. The Regulatory Framework section describes the regulatory background that applies to hazards and hazardous conditions, and the Impact Analysis section establishes the thresholds of significance, evaluates potential hazard-related impacts, and identifies the significance of impacts.

3.6.1 Study Area

For impact assessment related to hazards and hazardous conditions, the City limits were used as the study area (see Figure 2-1 – City of Arcata Planning Areas).

3.6.2 Setting

Definition of Hazardous Materials

A material is considered hazardous if it appears on a list of hazardous materials prepared by a federal, state, or local agency, or if it has characteristics defined as hazardous by such an agency. Factors that influence the health effects of exposure to hazardous materials include the dose to which the person is exposed, the frequency of exposure, the exposure pathway, and individual susceptibility. Exposure to hazardous materials, either through direct handling or through contaminated soils and/or groundwater, can lead to serious adverse health effects. As such, the proper management and disposal of these materials are highly regulated under federal, state, and local regulatory programs (discussed in Section 3.6.3).

CCR defines a hazardous material as a substance that, because of physical or chemical properties, quantity, concentration, or other characteristics, may either: (1) cause an increase in mortality or an increase in serious, irreversible, or incapacitating illness; or (2) pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported or disposed of, or otherwise managed (Title 22 CCR Section 66260.10). Hazardous materials are classified according to four properties: toxicity, ignitability,

corrosivity, and reactivity (Title 22 CCR Chapter 11, Article 3), which are defined in Title 22 CCR Sections 66261.20-66261.24.

Site Description

Aerial imagery of the study area using publicly available Google Earth was reviewed to evaluate past uses for potential sources of contamination (e.g., mill operations, auto body shops) that may be present and spanned between 1984 and 2022. Imagery specific to the Gateway Area spanned between 1941 and 2022 and review of said imagery was conducted as a component of the Database Review and is presented separately below.

Study Area General Description

At the end of the 19th century and into the mid-20th century, numerous logging mills existed throughout Humboldt Bay, some of which are within the present-day City limits. Logging in Humboldt County began in 1850 and the dramatic expansion of the lumber industry expanded with the arrival of railroads in the 1870s, particularly the Arcata and Mad River Railroad which was used through the early 1900s (Wilson 2001). Chemicals typically used at logging mills to preserve wood include: cadmium, chromium, lead, and pentachlorophenol. In present day, the City contains areas of industrial, agricultural, residential, commercial, and natural resource park lands. Hazardous materials can be found in all of these areas, however, to a lesser degree within natural resource and park lands.

Currently, the two major industrial areas in the City are the Aldergrove Industrial Park / West End Industrial Area, and the South Samoa Blvd industrial area. These areas are designated for heavy industry in the existing General Plan and are planned to remain as the City's major general industrial areas under the proposed General Plan 2045. In addition, there are light industrial uses along South G Street, Giuntoli Lane, between K and M Streets west of the Downtown area, and a few smaller industrial areas in other parts of the City.

Use of herbicides, insecticides and other chemical substances, as part of agricultural operations and public facility management, can cause localized buildup to toxic levels. The City has eliminated the use of herbicides in public facility management and has stopped Caltrans from using certain herbicides along state roadways in the City (City of Arcata 2001). The former North Coast Railroad Authority has also ceased using herbicides in Arcata (City of Arcata 2001).

In addition to industrial uses, hazardous materials in smaller quantities are also stored, used, and disposed of in commercial operations, in households, and in public facility management. There are currently regulatory, inspection, and information programs in place for the safe storage, use, and disposal of these materials. Such hazardous chemicals commonly encountered include: household cleaners (acids and bases), engine oil (heavy hydrocarbons, flammable), anti-freeze (toxic), oil-based paints and related cleaners (flammable, toxic), biocides (neurotoxins), chemical fertilizers (toxic, flammable), etc. The City's Environmental Services Department conducts outreach efforts to encourage the use of non-hazardous alternatives to common household hazardous waste.

In case of spill or accident, appropriate Emergency Response Plans are activated. In particular, the state of California requires all local government agencies to use a Standardized Emergency Management System, developed under State Bill 1841, in multi-jurisdictional or multi-agency responses to be eligible for state reimbursement of response-related personnel costs. Consequently, the City is responsible for training emergency response personnel in Standardized Emergency Management System implementation. The Standardized Emergency Management System uses the Incident Command System. This aspect, as well as the Community Emergency Response Team (CERT) program coordinated by Humboldt County provide emergency preparedness in the community and are discussed in detail in Section 3.10 (Public Services and Recreation) of this Draft EIR.

Historical Use of the Gateway Area and Surrounding Area

Historical aerial photographs were reviewed as part of the Database Review in order to evaluate historic uses and potential sources of contamination (e.g., mill operations, auto body shops). Aerial photographs of the Gateway Area for the years 1941, 1954, 1957, 1969, 1972, 1974, 1983, 1989, 1993, 2005, 2009, 2012, and 2016 (available from the Database Review) were reviewed. The specific details observed within the Gateway Area and

adjoining properties are dependent on the scale and quality of the aerial photographs reviewed. The aerial photographs were reviewed at a scale of one-inch equals approximately 625 feet. The following is a summary of observations based on a review of the aerial photographs:

1941: The 1941 aerial photograph depicts the site as being developed agricultural and light industrial land with multiple structures including two lumber mills, logging decks, and dairy operations present. Undeveloped and/or cultivated land is depicted on adjoining properties west and south of the Gateway Area. Residential properties are depicted on adjoining properties to the east and north.

1954: The 1954 aerial photograph depicts the Gateway Area and surrounding area as being generally consistent with the 1941 aerial photograph with exception of increased commercial / industrial mill operation development throughout the site. Commercial and residential development appears to have expanded predominantly within the adjoining properties to the west and south of the Gateway Area. Residential properties are depicted on adjoining properties to the east and north.

1957-1974: The 1957, 1969, 1972, and 1974 aerial photographs depict the Gateway Area and surrounding area as remaining consistent with how it appeared in the 1954 aerial photograph. Continued commercial and residential development within the Gateway Area is visible. Residential property development is depicted on the adjoining properties to the north and east. Continued commercial mill operations development are depicted on the adjoining properties south of the Gateway Area site. Residential construction and development are evident on the adjoining properties west of the Gateway Area site.

1983-1993: The 1983, 1989, and 1993 aerial photographs depict the Gateway Area and surrounding area as remaining generally consistent with how it appeared in the 1974 aerial photograph. Evidence of continued development is depicted on the adjoining properties north, south, east, and west of the Gateway Area site.

2005-2016: The 2005, 2009, 2012, and 2016 aerial photographs depict the Gateway Area as remaining consistent with how it appeared in the 1993 aerial photograph. Continued residential and commercial development is depicted on the adjoining properties north, south, east, and west of the Gateway Area site.

Copies of reviewed aerial photographs are presented in Attachment 2 of Appendix E.

Hazardous Materials in the Study Area

Most storage, use, and disposal of hazardous materials in the City is attributed to past and present industrial uses. During past periods of peak timber harvesting and processing, there were numerous small mill sites operating throughout the City. Most of these mill sites have now closed; however, hazardous materials used primarily in wood products processing and auto-related operations have resulted in site and groundwater contamination that remains today.

According to the SWRCB's GeoTracker, there are 11 active and 92 closed sites within the City limits, see Table 3.6-1 below and Figure 3.6-1 SWRCB GeoTracker Cleanup Sites. GeoTracker is a data management system for sites that impact or have the potential to impact water quality in California, with an emphasis on groundwater. Active sites are those that are currently under regulatory review and remediation. Inactive sites are defined as having been investigated and remediated to the satisfaction of the lead oversight agency. Residual contamination at levels that do not pose significant health risks to the current land use may still be present at inactive sites. However, inactive sites can be restricted for future land uses that require completely remediated conditions. For example, an unauthorized release at an industrial property could be remediated to cleanup levels appropriate for future industrial land uses, but the residual levels of contamination after remediation may be too high and pose health risks for other types of future land uses such as residences, schools, or parks.

Table 3.6-1. Open Contamination Sites within the Study Area According to GeoTracker

Site	Address	Site Type	Status
Arcata Community Recycling / former Standard Oil facility	1380 Ninth Street	Cleanup program site	Open – Assessment and interim remedial action
Balabanis House HSU	1 Harpst Street	Leaking Underground Storage Tank (LUST) cleanup site	Open – Assessment and interim remedial action
Fisch Trust Property	1461 M Street	Cleanup program site	Open – Inactive
Ghera Property	987 H Street	Cleanup program site	Open – Assessment and interim remedial action
Little Lake Industries (Arcata Mill)	46 I Street	Cleanup program site	Open – Assessment and interim remedial action
Northcoast Environmental Center	879 Ninth Street	Cleanup program site	Open – Assessment and interim remedial action
Philly Cheese Steak Shop / Former Chevron	1811 G Street	LUST cleanup site	Open – Site assessment
Schmidbauer Arcata Mill (south)	901 O Street	Cleanup program site	Open – Inactive
Bloxhams Shell	1401 G Street	LUST cleanup site	Open – Site assessment
Rogers Garage	1622 Old Arcata Road	Cleanup program site	Open – Assessment and interim remedial action
Zanzi Property	1234 Giuntoli Lane	Cleanup program site	Open – Assessment and interim remedial action

The Cortese List was also consulted to determine whether potentially hazardous sites exist within the study area. The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the state, local agencies, and developers to comply with CEQA requirements in providing information about the location of hazardous materials release sites. There are no active Cortese List sites within City limits.

Hazardous Materials in the Gateway Area

The Database Review prepared for the Gateway Area inventoried databases to identify areas of potentially impacted soil and/or groundwater that may require special handling and disposal during construction or could potentially pose a health exposure risk to construction workers or sensitive receptors. The Database Review provides database information for most of the central portion of the City (the Gateway Area plus up to a one-mile radius).The Database Review contained the results of federal, state, tribal, and local regulatory agency database searches and for each database included an approximate minimum search distance from the search area ranging between the site / adjoining property only to within 1.0 miles of the site (see Table 3.6-2 below for a list of databases searched and the search radii of each database).

Table 3.6-2. Databases and Search Radius Utilized in the Database Review of the Gateway Area

Database	Acronym	Search Radius
Standard Environmental Records		
Resource Conservation and Recovery Act-Large Quantity Generator	RCRA-LQG	Site / Adjoining Property
Resource Conservation and Recovery Act-Small Quantity Generator (RCRA-SQG)	RCRA-SQG	Site / Adjoining Property

Active Underground Storage Tank	UST	Site / Adjoining Property
Additional Environmental Records		
Statewide Environmental Evaluation and Planning System for Underground Storage Tanks	SWEEPS UST	Site / Adjoining Property
Hazardous Substance Storage Container Database	HIST UST	Site / Adjoining Property
Facility Inventory Database of Active and Inactive Underground Storage Tanks	FID UST	Site / Adjoining Property
California Environmental Reporting System above and underground storage tanks	CERS TANKS	Site / Adjoining Property
California Environmental Reporting System Hazardous Waste	CERS HAZ WASTE	Site / Adjoining Property
Environmental Database Review Exclusive Historical Gas Stations	EDR HIST AUTO	Site / Adjoining Property

Sites within the Gateway Area with a recorded hazardous substance occurrence according to the Database Review are shown below in Table 3.6-3. Each location contains the site address, listed entity, and the database from which it was recorded. Additional detail of each database listing abbreviation is described below Table 3.6-3. It should be noted that an occurrence of a site from the Database Review in Table 3.6-3 does not necessarily equate to a hazardous material spill or leak. Many databases, such as the FID UST simply notes the presence of either active or inactive USTs. Where the information is available, the status of the potential hazardous case is presented.

Table 3.6-3. Listed Gateway Area Sites and Status

Site Address	Listed Entity	Database Listing Abbreviation	Status[1]

Summary of Database Listing Abbreviations and Status Results

RCRA – Large Quantity Generator and RCRA – Small Quantity Generator

There are five SQGs and one LQG in the Gateway Area, all reported to have no violations. LQGs generate 1,000 kilograms (2,205 lbs) per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste. LQGs may accumulate waste on-site for 90 days, and there is no limit on the amount of hazardous waste accumulated on-site. SQGs generate more than 100 kilograms (220 lbs), but less than 1,000 kilograms (2,205 lbs) of hazardous waste per month. SQGs may accumulate hazardous waste on-site for 180 days without a permit and the quantity of hazardous materials on-site must never exceed 6,000 kilograms (13,228 lbs) (US EPA 2023).

ENVIROSTOR/Voluntary Cleanup Program

One active site was listed on the Department of Toxic Substance Control's ENVIROSTOR. ENVIROSTOR identifies sites that have known contamination or sites for which there may be reasons to investigate further.

Solid Waste Information System

One site is listed under the SWF/LF database, indicating that it is a solid waste facility, operation, and/or disposal site.

Spills, Leaks, Investigations, and Cleanups

Two active, one inactive, and four closed SLIC sites were identified in the Gateway Area. The SLIC database identifies sites with groundwater contamination unrelated to USTs.

CERS Hazardous Waste

Twelve hazardous waste sites were identified in the Gateway Area, and 18 additional sites within 0.25 mile of the Gateway Area were identified according to CERS. CERS is a statewide web-based system that supports the exchange of Unified Program-required information between local governments and the EPA. Unified Program information includes facility data regarding hazardous material regulatory activities such as hazardous material business plans, site maps, chemical inventories, underground and aboveground storage tanks, hazardous waste generation, and inspection compliance and enforcement actions.

EDR Exclusive Historical Gas Stations

Six historical automobile service stations were identified within the Gateway Area, and four additional sites were detected within 1/8 mile of the Gateway Area according to the Database Review.

Underground Storage Tanks

A UST is defined as "any one or combination of tanks, including pipes connected thereto, that is used for the storage of hazardous substances and that is substantially or totally beneath the surface of the ground." It should be noted that various databases detect the same UST and, therefore, the general number of USTs should be considered by the address rather than the database detections. However, it is possible that multiple USTs may exist at one address, i.e., a gas station.

– *Leaking Underground Storage Tanks*

  One active and 18 inactive LUST sites were identified within the Gateway Area. The inactive sites are remediated to the required level and are considered closed cases. The one active site is associated with the Stimson Lumber Company located at 1423 10th Street. Although current regulations requiring double-wall construction and leak monitoring equipment for USTs should reduce the number of releases in the future, many USTs installed in previous decades have failed, causing petroleum contamination in soils and groundwater. These releases are often discovered during tank removal or upgrade activities.

– *Active Underground Storage Tank*

  Two active USTs were identified in the Gateway Area; however, no leaks are reported at this time.

– *Summary of the Statewide Environmental Evaluation and Planning System, Hazardous Substance Storage Container Database, Facility Inventory Database and California Environmental Reporting System Tanks*

  Ten UST sites were identified within the Gateway Area and 31 additional UST sites were documented within 0.25 mile of the Gateway Area.

Other Hazardous Materials Concerns Related to the Study Area

Aerially Deposited Lead near Major Roadways

Aerially deposited lead is a common hazardous materials issue in developed areas. Soils adjacent to major roadways often contain elevated concentrations of lead. The lead deposition is the result of airborne particulates and surface water runoff associated with tailpipe emissions prior to the time lead was phased out of vehicle fuels.

Studies by Caltrans suggest that hazardous waste levels of lead, if present, are generally found in soils within 30 feet of the edge of the pavement. Properties located adjacent to the roadways may contain elevated concentrations of lead in exposed surface soils, which could pose a health hazard to construction workers and users of the properties. Lead is a state-recognized carcinogen (causes cancer) and reproductive toxicant (causes birth defects or other reproductive harm). Exposure to lead in soil could result in adverse health effects, depending on the duration and extent of exposure.

Lead, Asbestos, and Other Hazardous Materials in Buildings

Hazardous materials are commonly found in building materials that may be affected during demolition and renovation activities associated with redevelopment. Prior to 1978, lead compounds were commonly used in interior and exterior paints. Prior to the 1980s, building materials often contained asbestos fibers, which were used to provide strength and fire resistance. In addition, other common items are present in buildings, such as electrical transformers, fluorescent lighting, electrical switches, heating/cooling equipment, and thermostats that can contain hazardous materials that may pose a health risk if not handled and disposed of properly. The demolition of buildings has the potential to release lead particles, asbestos fibers, and/or other hazardous materials to the air where they may be inhaled by construction workers and the general public. Federal and state regulations govern the demolition of structures where lead or material containing lead is present, as discussed in Section 3.6.3.

Potential Receptors/Exposure

Schools and residences are examples of sensitive receptor locations that could be susceptible to significant effects from exposure to hazardous materials. Therefore, numerous sensitive receptors are within and adjacent to the study area boundary. The sensitivity of potential human receptors in the areas of known or potential hazardous materials contamination is dependent on several factors, the primary factor being an individual's potential pathway for exposure. Exposure pathways include dermal absorption, inhalation, and ingestion of tainted air, water, or food. Depending on the magnitude, frequency, and duration, human exposure to hazardous materials can cause a variety of health effects ranging from short-term acute symptoms to long-term chronic effects. The principal elements of exposure assessments typically include:

– Evaluation of the fate and transport processes for hazardous materials at a given site
– Identification of potential exposure pathways
– Identification of potential exposure scenarios
– Calculation of representative chemical concentrations
– Estimation of potential chemical uptake

Potential Receptors in the Gateway Area and Other Infill Opportunity Zones

Residences exist in all of the Infill Opportunity Zones. The Redwood Coast Montessori Arcata Campus is located at 793 K Street, which is in the proposed G-C District, and the Little Learners Center, a preschool located at 1111 M St., Littler Learners is located in the G-H District. No schools are located in the other Infill Opportunity Zones. However, one school (Arcata Elementary School) is located immediately adjacent to the Craftsman Mall Infill Opportunity Zone.

Fire Hazards

The study area is within the Arcata Fire Protection District. In responding to emergencies, local fire departments work closely with law enforcement, public utilities, the County Office of Emergency Services, and ambulance companies. The State Board of Forestry and Fire Protection classifies lands within the state for the purpose of determining areas in which the financial responsibility of preventing and suppressing fires is primarily the responsibility of the state, referred to as State Responsibility Area (SRA) and classifies other areas such as incorporated cities, urban regions, and agriculture lands as Local Responsibility Area (LRA) and federal lands as Federal Responsibility Area. The portion of the City's Planning Area south and east of the City limits is SRA and consists of timbered hillslopes. The California Department of Forestry and Fire Protection (CAL FIRE) identifies

Fire Hazard Severity Zones (FHSZs) within SRA and recommends FHSZs within LRAs throughout California. The study area is located within a LRA and is ranked as having a moderate fire hazard severity index (the lowest ranked hazard) or is unmapped. Additionally, Sanborn Fire Insurance maps of the Gateway Area assisted in the identification of historical land uses and commonly illustrate the existence and location of underground and aboveground storage tanks, structures, improvements, and facility operations.

Airports

The closest public airports to the study area are Murray Field, located near US 101 in Eureka approximately 3.9 aerial miles south-southwest from the southern boundary of the study area, and the Redwood Coast-Humboldt County airport, located approximately 6.0 aerial miles north from the northern boundary of the study area. There are no private airfields in the study area.

3.6.3 Regulatory Framework

Hazardous materials and hazardous wastes are subject to federal, state, and local laws and regulations intended to protect public health and safety and the environment. The U.S. EPA, U.S. Department of Transportation (DOT), California EPA, and Department of Toxic Substances Control are the primary agencies that enforce these regulations. The main focus of the federal OSHA and California OSHA are to prevent work-related injuries and illnesses, including those from exposures to hazardous materials. CAL FIRE implements fire safety regulations. In accordance with Chapter 6.11 of the California Health and Safety Code Section 25404, et seq., local regulatory agencies enforce many federal and state regulatory programs through the Certified Unified Program Agency program, including:

– State Uniform Fire Code requirements (Section 80.103 of the Uniform Fire Code as adopted by the State Fire Marshal pursuant to Health and Safety Code Section 13143.9); and
– Underground storage tanks (Chapter 6.7 of the Health and Safety Code, Sections 25280 et seq.).

The Certified Unified Program Agency for Humboldt County and the study area is the Humboldt County Division of Environmental Health.

Federal

The primary federal agencies with responsibility for hazardous materials management are the U.S. EPA, Department of Labor – U.S. OSHA, and the U.S. DOT. The section below addresses laws regarding the transport, storage, and use of hazardous materials as overseen by these agencies. Federal laws and regulations that are applicable to hazards and hazardous materials are also presented below.

Resource Conservation and Recovery Act

The federal RCRA regulates the treatment, storage, and disposal of hazardous and non-hazardous wastes. The law mandates that hazardous wastes be tracked from the point of generation to their ultimate fate in the environment. This includes detailed tracking of hazardous materials during transport and permitting of hazardous material handling facilities.

RCRA also provides for a regulatory program designed to prevent releases from USTs. The program establishes tank and leak detection standards, including spill and overflow protection devices for new tanks. The tanks must also meet performance standards to ensure that the stored material will not corrode the tanks. Owners and operators of USTs had until December 1998 to meet the new tank standards. As of 2001, an estimated 85 percent of USTs were in compliance with the required standards.

Comprehensive Environmental Response, Compensation, and Liability Act

The Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA) introduced active federal involvement to emergency response, site remediation, and spill prevention, most notably the Superfund program. CERCLA was intended to be comprehensive in encompassing both the prevention of, and response to, uncontrolled hazardous substances releases. CERCLA deals with environmental response,

providing mechanisms for reacting to emergencies and to chronic hazardous material releases. In addition to establishing procedures to prevent and remedy problems, it establishes a system for compensating appropriate individuals and assigning appropriate liability. It is designed to plan for and respond to failure in other regulatory programs and to remedy problems resulting from action taken before the era of comprehensive regulatory protection.

Hazardous Materials Transportation Act

The Hazardous Materials Transportation Act is the principal statute regulating hazardous materials transportation in the United States. The purpose of the law is to provide adequate protection against the risks to life and property inherent in transporting hazardous materials in interstate commerce. This law gives the U.S. DOT and other agencies the authority to issue and enforce rules and regulations governing the safe transportation of hazardous materials.

Natural Gas Pipeline Safety Act

The Natural Gas Pipeline Safety Act authorizes the U.S. DOT Office of Pipeline Safety to regulate pipeline transportation of natural (flammable, toxic, or corrosive) gas and other gases as well as the transportation and storage of liquefied natural gas. The Office of Pipeline Safety regulates the design, construction, inspection, testing, operation, and maintenance of pipeline facilities. While the federal government is primarily responsible for developing, issuing, and enforcing pipeline safety regulations, the pipeline safety statutes provide for state assumption of the intrastate regulatory, inspection, and enforcement responsibilities under an annual certification. To qualify for certification, a state must adopt the minimum federal regulations and may adopt additional or more stringent regulations as long as they are not incompatible.

State

The primary state agencies that are responsible for overseeing regulations and policies regarding hazardous materials are the California Office of Emergency Services, California EPA, Department of Toxic Substances Control, Caltrans, California Highway Patrol (CHP), SWRCB, and California Air Resources Board (CARB). Several laws governing the generation, transport, and disposal of hazardous materials are administered by these agencies. State and local agencies often have either parallel or more stringent regulations than federal agencies. In most cases, state law mirrors or overlaps federal law and enforcement of these laws is the responsibility of the state or of a local agency to which enforcement powers are delegated. State laws and regulations that are applicable to hazards and hazardous materials are presented below.

California Health and Safety Code

California EPA administers laws and regulations governing the use of hazardous materials and the management of hazardous wastes. Many of these regulations are embodied in the California Health and Safety Code. The code includes regulations that govern safe drinking water, substances control, land reuse and revitalization, remediation, restoration, and methamphetamine contaminated property cleanups.

California Code of Regulations Title 22 and Title 26

Title 22 CCR provides state regulations for hazardous materials, and Title 26 CCR provides regulation of hazardous materials management. In 1996, California EPA established the “Unified Hazardous Waste and Hazardous Materials Management Regulatory Program” (Unified Program) which consolidated the six administrative components of hazardous waste and materials into one program.

For the purposes of this Draft EIR, “hazardous material” is defined as provided in California Health and Safety Code Section 25501:

– Any material that, because of its quantity, concentration, or physical or chemical characteristics, poses a significant present or potential hazard to human health and safety or to the environment if released into the workplace or the environment.

Hazardous materials include, but are not limited to, hazardous substances, hazardous waste, and any material that a handler or the administering agency has a reasonable basis for believing that it would be injurious to the health and safety of persons or harmful to the environment if released into the workplace or the environment.

“Hazardous waste” is a subset of hazardous materials. For the purposes of this Draft EIR, the definition of hazardous waste is essentially the same as that in California Health and Safety Code Sections 25117 and 25141, and in Title 22 CCR Section 66261.2:

– Hazardous wastes are wastes that, because of their quantity, concentration, physical, chemical, or infectious characteristics, may either cause, or significantly contribute to, an increase in mortality or an increase in serious illness, or pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, disposed of, or otherwise managed.

Title 22 CCR categorizes hazardous waste into hazard classes according to specific characteristics of ignitibility, corrosivity, reactivity, or toxicity. Hazardous waste with any of these characteristics is also known as an RCRA waste.

Hazardous materials can be categorized as hazardous non-radioactive chemical materials, radioactive materials, toxic materials, and biohazardous materials. The previous definitions are adequate for non-radioactive hazardous chemicals.

There are countless categories of hazardous materials and hazardous wastes that could be found on any given property based on past uses. Some common examples include agrichemicals (chlorinated herbicides, organophosphate pesticides, and organochlorine pesticides, such as such as Mecoprop, Dinoseb, chlordane, dichloro-diphenyl trichloroethane (DDT), and dichloro-diphenyl dichloroethylene (DDE)), petroleumbased products (oil, gasoline, diesel fuel), a variety of chemicals including paints, cleaners, and solvents, and asbestos-containing or lead-containing materials (e.g., paint, sealants, pipe solder).

State Oversight and Enforcement of Hazardous Materials and Hazardous Waste

In California, the California EPA and Office of the State Fire Marshal are chiefly responsible for regulation, reporting and handling requirements for hazardous materials. The Department of Toxic Substances Control is chiefly responsible for regulation, handling, treatment, and disposal of hazardous waste. The SWRCB regulates discharge of potentially hazardous materials to waterways and aquifers and administers the basin plans for groundwater resources in the various regions of the state. The North Coast Regional Water Quality Control Board (NCRWQCB) oversees surface and groundwater quality in Humboldt County (as well as Del Norte, Glenn, Lake, Marin, Mendocino, Modoc, Siskiyou, Sonoma, and Trinity counties). Programs intended to protect workers from exposure to hazardous materials and from accidental upset are covered under OSHA at both the federal level and the state level, as well as through the California Department of Health Services (DHS). Air quality is regulated through CARB and North Coast Unified Air Quality Management District (NCUAQMD).

State Screening Levels

While there are many regulatory programs, there are fewer standards for determining exposure risks due to contamination. Currently, the NCRWQCB staff utilize the Department of Toxic Substances Control’s Human Health Risk Assessment Note 3 – Department of Toxic Substances Control -Modified Screening Levels to determine preliminary screening levels for soil and indoor air (NCRWQCB 2023). Databases for releases of hazardous materials or hazardous waste include ENVIROSTOR, maintained by Department of Toxic Substances Control, and GeoTracker maintained by SWRCB for underground or aboveground petroleum storage tank releases.

Safe Drinking Water and Toxics Enforcement Act

The Safe Drinking Water and Toxics Enforcement Act, often referred to as Proposition 65, was passed into state law in 1986. The purpose of this act is to protect drinking water sources from toxic contamination, warn people of potential exposure to toxic materials, and require certain government employees to report discharges of toxic materials or threatened discharges from businesses and facilities in their jurisdiction. This law requires the state

of California to develop a list of chemicals known to cause cancer or reproductive damage. The California Office of Environmental Health and Hazard Assessment manages the Proposition 65 List of Chemicals (OEHHA 2023).

State Hazard Mitigation Plan

The State Hazard Mitigation Plan is the official statement of the state's hazard identification, vulnerability analysis, and hazard mitigation strategy. The State Hazard Mitigation Plan is also a federal requirement under the Disaster Mitigation Act of 2000 for the state of California to receive federal funds for disaster assistance grant programs (Cal OES 2023). The State Hazard Mitigation Plan, prepared by the Office of Emergency Services, contains multiple goals and is to guide implementation activities to achieve the greatest reduction of vulnerability, which results in saved lives, reduced injuries, reduced property damages, and protection for the environment. The state Office of Emergency Services is currently working with the California Office of Planning Research to incorporate hazard mitigation planning into General Plan guidelines.

Hazardous Materials Transportation Act

Transportation of hazardous materials on the highways is regulated through the federal DOT and Caltrans. These agencies use a system of placards, labels, and shipping papers required to identify the hazards of shipping each class of hazardous materials. Existing federal and state laws address risks associated with the transport of hazardous materials. These laws include regulations outlined in the Hazardous Materials Transportation Act administered by the DOT. Caltrans is mandated to implement the regulations established by the DOT, which are published as CFR Title 49, commonly referred to as 49 CFR. The CHP enforces these regulations. Regulations of hazardous materials and wastes include the manufacture of packaging and transport containers; packing and repacking; labeling; marking or placarding; handling; spill reporting; routing of transports; training of transport personnel; and registration of highly hazardous material transport.

California Fire Safety Regulations

There are number of state regulations pertaining to fire hazards, including the following.

– **Public Resources Code Fire Safe Regulations**.
  - Earthmoving and portable equipment with internal combustion engines must be equipped with a spark arrestor to reduce the potential for igniting a wildland fire (PRC Section 4442).
  - Appropriate fire suppression equipment must be maintained during the highest fire danger period – from April 1 to December 1 (PRC Section 4428).
  - On days when a burning permit is required, flammable materials must be removed to a distance of 10 feet from any equipment that could produce a spark, fire or flame, and the construction contractor must maintain the appropriate fire suppression equipment (PRC Section 4427).
  - On days when a burning permit is required, portable tools powered by gasoline-fueled internal combustion engines must not be used within 25 feet of any flammable materials (PRC Section 4431).
  - PRC Section 4291 requires annual defensible space of 100 feet to be provided around all structures in or adjoining any mountainous area or land covered with forest, brush, grass, or other flammable material.

– **Wildland-Urban Interface Code.** Chapter 7A of the California Building Code and Chapter R337 of the California Residential Code contain standards associated with the construction of buildings in wildfire prone areas. Chapter 7 includes information related to building materials, systems and/or assemblies to be used in the exterior design and construction of new buildings located within a wildland urban interface area. Section 701A.3.2 requires that new buildings that require building permits must comply with all sections of the chapter if located in any fire hazard severity zone in SRAs, any very-high fire hazard severity zone in LRAs, or any wildland-urban interface fire area designated by the enforcing agency. In 2007, CAL FIRE developed a draft LRA fire hazard severity zone map for Humboldt County in which approximately two-thirds of the City was classified as either a moderate or high (CAL FIRE 2007). In 2008, CAL FIRE determined there were no very high fire hazard severity zones in LRAs in Humboldt County; therefore, they did not produce a Recommended LRA fire hazard severity zone map (CAL FIRE 2008).

- **California Fire Code**. This is the official code for the state of California and all political subdivisions. It is in of Title 24 CCR Part 9 (Title 24 is commonly referred to as the California Building Standards Code). The California Fire Code is revised and published every three years by the California Building Standards Commission. It was most recently published in 2022 (CBSC 2023).
- **Uniform Building Code.** This code may be adopted by counties and local jurisdictions with amendments and provides minimum standards for many aspects of fire prevention and suppression activities. These standards include provisions for access, water supply, fire protection systems, and the use of fire-resistant building materials.
- **California Health and Safety Code**. This code regulates the abatement of fire-related hazards. It also requires that local jurisdictions enforce the Uniform Building Code, which provides standards for fire-resistant building and roofing materials, and other fire-related construction methods.
- **California Code of Regulations**. CCR Title 19 establishes regulations related to fire prevention and engineering measures for new construction.
- **AB 337 (Bates Bill).** In response to the Oakland Hills fire of 1991, this bill was passed in 1992. It requires brush clearance and fire-resistant roof material (Class A, B, or C) to be used on all new construction that is in any fire hazard severity zone.

California Department of Forestry and Fire Protection

CAL FIRE protects the people of California from fires, responds to emergencies, and protects and enhances forest, range, and watershed values providing social, economic, and environmental benefits to rural and urban citizens. CAL FIRE responded to 7,490 wildfire incidents in 2022, which burned a total of 362,455 acres (CAL FIRE 2022).

Pursuant to PRC Sections 4201-4204 and Government Code Sections 51175-89, CAL FIRE has created FHSZ maps for the state that identify areas that are within state or local responsibility areas for preventing or suppressing fires. These maps identify areas of significant fire hazards based on fuels, terrain, weather, and other relevant factors. The FHSZ zones then define the application of various mitigation strategies to reduce risks associated with wildland fires. SRAs were originally mapped by CAL FIRE in 1985 and LRAs in 1996. Within SRAs, the Director of CAL FIRE has designated areas as moderate, high, and very high fire hazard severity zones. Outside of SRAs, but within LRAs the Director of CAL FIRE was charged with recommending the locations of very high fire hazard severity zones. The wildland urban interface is defined in this code as *"a geographical area identified by the state as a 'Fire Hazard Severity Zone' in accordance with the Public Resources Code Sections 4201 through 4204 and Government Code Sections 51175 through 51189, or other areas designated by the enforcing agency to be at a significant risk from wildfires."*

Section 30232 of the California Coastal Act – Oil and Hazardous Substance Spills

Protection against the spillage of crude oil, gas, petroleum products, or hazardous substances shall be provided in relation to any development or transportation of such materials. Effective containment and cleanup facilities and procedures shall be provided for accidental spills that do occur.

Local

The study area equates to the City limits, and the western portion of the study area (bisected by Samoa Blvd and Old Arcata Road) is also located within the Coastal Zone. Therefore, this section includes City of Arcata General Plan and City Local Coastal Program policies.

City of Arcata General Plan 2020

The City of Arcata General Plan 2020 addresses hazards and hazardous resources in its Public Safety Element. The following policies from the Arcata General Plan 2020 were used to analyze the difference in existing versus proposed policies in the Arcata General Plan 2045.

Policy PS-1: Emergency Preparedness

Objective. *Ensure that the City, its residents, businesses, agencies, and organizations are prepared for emergencies or disasters and have effective response and recovery plans in place.*

Applicable sub-policies:

- ***PS-1a: City Emergency Response Plan****. The City shall maintain a comprehensive response plan for emergencies, including seismic events, tsunamis, slope failures, floods, storms, fires, and materials spills or contamination. The plan will provide for timely and coordinated response to emergencies that threaten community residents, property, and vital services. The plan will identify City and other emergency response agencies that should be contacted, and also identify neighborhood resources available for more localized assistance and relief.*
- ***PS-1b: Evacuation routes/transportation facilities.*** *Emergencies such as floods, storms, fires, distantly generated tsunamis, and hazardous materials spills may necessitate immediate evacuation of affected areas. A map of evacuation routes shall be included in City and neighborhood emergency response plans. These plans will also include evacuation methods for residents who are without, or unable to operate, vehicles. An emergency access plan shall be developed for access to the east side of town (east of State Route 101) after a major seismic event.*
- ***PS-1c: Disaster preparedness coordination using the Standardized Emergency Management System.*** *City staff responsible for emergency response shall be trained in Standardized Emergency Management System (SEMS) implementation, which is necessary to receive reimbursement from the State of California for disaster response related costs. This training includes instruction about the Incident Command System (ICS) which is used to manage emergency incidents or non-emergency events.*
- ***PS-1d: Siting and design of critical facilities.*** *Adequate shelter and continued operation of essential services, including communications, medical treatment, water delivery, fire and police services, and key transportation facilities are vital for responding to emergencies. These facilities and services shall be located and designed to withstand disaster impacts and have backup systems, such as emergency generators and water storage (including private and open water sources), that allow for their continuous operation during emergencies. New critical facilities shall not be located in areas with high physical hazards, including high liquefaction potential, flood zones, and tsunami hazards. Critical facilities shall be designed to be functional at peak capacity, following a magnitude 7.7 earthquake in the Mad River fault zone.*
- ***PS-1e: Development & design standards for emergency response.*** *New and renovated structures, as well as streets, driveways, and alleyways, shall be designed to provide adequate entry and exit by emergency vehicles and personnel. This includes visible street numbering, emergency vehicle turn-arounds, accessible building entry points and stairways, lighting, and interior evacuation routes.*
- ***PS-1f: Citizen training/Neighborhood and Business Emergency Services Teams.*** *The City of Arcata Police Department coordinates the organization and training of Neighborhood Emergency Services Teams and Business Emergency Services Teams (NEST and BEST). The NEST program is essential for mobilizing neighborhood response to emergencies. The NEST program shall be expanded to all neighborhoods.*

Policy PS-5: Fire Hazards

Objective. *Minimize risk of personal injury and property damage resulting from structural (urban) and wildland fires.*

Applicable sub-policies:

- ***PS-5b: Review of development for fire safety****. The Arcata Volunteer Fire Department takes an active role in reviewing new development for compliance with fire safety standards. The City shall continue to incorporate Fire Department review to ensure that driveways, turns-arounds, and other access ways*

have sufficient width, vertical clearance, and turn-around space for fire fighting vehicles. Roadways shall have an all-weather surface and grades shall not exceed the Fire Department's maximum slope standards for emergency access.

- ***PS-5c: Water supply (fire flow).*** *The City's fire hydrant system provides the primary source of water for fighting urban fires. The City shall maintain fire hydrant spacing so that no residential structure is more than 500 feet from a hydrant and no commercial or industrial structure is more than 300 feet from a hydrant. Each hydrant shall have adequate fittings and be capable of providing adequate water flows to meet Fire Department standards.*

  The City shall maintain adequate fire flows in its water system. Open-water sources such as ponds, swimming pools, private storage tanks, and reservoirs may be used as a secondary water source by fire-fighting apparatus. These sources shall be equipped with appropriate filtering devices or strainers to prevent clogging of water pumps.

- ***PS-5d: Management of wildland fire hazards****. Wildland fires in forested areas of the City can cause property damage and threaten nearby structures. Buildings in forested areas shall use materials such as non-flammable perimeter vegetation and roofing material to prevent exposure to wildland fires. The City shall encourage the Arcata Fire Department to maintain its mutual aid agreement with the California Department of Forestry and Fire Prevention (CDF) to insure rapid response to wildland fires.*

- ***PS-5e: Fire suppression services.*** *The Arcata Volunteer Fire Department's (AVFD) jurisdiction (shown as District #1 on the AVFD service area map) includes the City's incorporated, sphere of influence, and planning areas, except for an outlying area along Jacoby Creek Road. The AVFD maintains two fire stations to provide rapid response to all fire calls within its service area. They also maintain mutual aid agreements with the CDF and the Eureka Fire Department for rapid response to fires in outlying areas.*

Policy PS-6: Hazardous Materials

Objective. *Minimize the personal injury, property damage, and public health risks associated with the production, use, storage, disposal, and transporting of toxic substances or hazardous materials.*

Applicable sub-policies:

- ***PS-6a: Reduction of hazardous waste (source reduction).*** *There are increasing numbers of environmentally safe materials and substances available that offer alternatives to hazardous materials. Improved water-based paints that replace oil and lead based paints, cellulose insulation materials that replace asbestos, and biodegradable antifreezes that replace glycol-based coolants, are all examples of safer materials and substances currently in use. The City shall request information from County, State, and Federal agencies, as well as manufacturers and suppliers, regarding environmentally safe products and shall have a list of those products available to the public.*

- ***PS-6b: Contaminated sites.*** *There are sites in and around the City where wood product milling and production, vehicle and equipment storage and repair, agricultural production, and other uses may have resulted in site contamination. Materials such as lead based paints may also contribute to contamination. Many of these sites are inactive and may be appropriate for alternative uses. Environmental Site Assessments shall be required prior to development review and approval of potentially contaminated sites, and cleanup is required prior to reuse. The City shall record and map sites with known contamination.*

- ***PS-6c: Use of potentially harmful materials on public lands and rights-of-way.*** *The City of Arcata does not use toxic sprays or substances on vegetation in public lands or rights-of-way, and has been persuasive in stopping State agencies, such as Cal-Trans, from using toxic sprays along State rights-of-way within the City limits. The City shall continue this practice and prohibit other public agencies from using toxic sprays or substances within the City limits (see Resource Conservation and Management Element Policy RC-1i).*

- ***PS-6d: Siting of facilities handling hazardous waste.*** *Businesses and agencies that use, store, or produce hazardous materials shall train employees and other users in safe handling and storage procedures, and shall post current Occupational Safety and Health Act (OSHA) and Humboldt County hazardous materials requirements. Businesses shall also comply with Federal "community right-to-know" regulations. The City shall consider proximity to sensitive receptors, such as schools, hospitals and other health care facilities, day care centers, and other immobile populations, when reviewing new facilities and businesses involved in these activities.*

- ***PS-6e: Household and other small-quantity generators.*** *Households and small businesses accumulate solvents and cleaners, petroleum products, pesticides, and other toxic substances that are potentially hazardous if spilled, released into the atmosphere, or ingested. The City shall maintain a list of toxic substances which should be avoided and publicize collection dates and locations where these substances can be disposed of properly. The City shall coordinate with the County Hazardous Materials Department (Humboldt County) and the State Department of Toxic Substances Control (California Environmental Protection Agency) to ensure that collection sites are accessible to community residents.*

  The City shall also encourage property owners and real estate agents to remove hazardous materials, or disclose their presence, to purchasers as part of property transfers. Property purchasers should have the option of accepting certain materials, such as paint, or requesting removal and cleanup prior to the property transfer.

- ***PS-6f: Hazardous waste management (recycling, treatment, disposal).*** *All commercial and industrial businesses and other operations that use, store, or produce hazardous materials, shall contract with a licensed hauler for pickup and disposal of waste materials, except for individual disposal complying with County, State and Federal requirements. All hazardous materials shall be stored in safe containers and locations, and use of these materials shall be in compliance with County, State and Federal standards.*

- ***PS-6g: Hazardous materials education program.*** *The City shall work with the Humboldt County Health Department and the California Department of Toxic Substances to develop educational materials explaining hazardous materials' impact on people, plants, and animals, and provide information on alternatives to hazardous materials. This information shall be made available to the public.*

Proposed City of Arcata General Plan 2045

All City of Arcata General Plan 2020 policies listed above are carried over into the Arcata General Plan 2045, with the exception of the following policies which contain slight modifications between the Arcata General Plan 2020 and the proposed Arcata Draft General Plan 2045 and the new policies presented below:

Policy PS-1: Emergency Preparedness

Objective. *Ensure that the City, its residents, businesses, agencies, and organizations are prepared for emergencies or disasters and have effective response and recovery plans in place.*

Applicable sub-policies:

- ***PS-1b: Evacuation routes/transportation facilities.*** *Emergencies such as floods, storms, fires, tsunamis, and hazardous materials spills may necessitate immediate evacuation of affected areas. A map of evacuation routes shall be included in City and neighborhood emergency response plans. These plans will include evacuation methods using a variety of available modes for transportation. An emergency access plan shall be developed for access to the east side of town (east of State Route 101) after a major seismic event.*

  While a majority of the neighborhoods in the City have at least two potential evacuation routes in the event of an emergency, there are some areas with only one evacuation route. Residential areas with only one evacuation route include upper Diamond Drive, California Avenue, Fickle Hill Road, Beverly Way, a portion of Beverly Drive, and others in the Grotzman Creek drainage. The City's emergency

operations plan shall identify and include evacuation options for these areas and shall include public education and outreach.

- ***PS-1f: Citizen training/Community Emergency Response Teams.*** *The City of Arcata Police Department, in cooperation with the Humboldt CERT Coalition and the Humboldt County Office of Emergency Service, coordinates the organization and training of the Arcata Community Emergency Services Response Teams (CERT). The CERT program is essential for mobilizing neighborhood response to emergencies. The CERT program shall be expanded to all neighborhoods.*

Policy PS-3: Other Geologic Hazards and Airspace Protection

Objective. *Protect existing and new structures from non-seismic geologic hazards such as unstable slopes and soils. Require that all non-seismic geologic hazards be adequately addressed and mitigated. Ensure new development does not result in hazards to air navigation.*

Applicable sub-policy:

- ***PS-3g: Airspace protection.*** *Inform land use action proponents located below the airspace protection surfaces of California Redwood Coast-Humboldt County Airport, as shown in the Humboldt County ALUCP, of the FAA notification requirements defined in Title 14 of the Code of Federal Regulations, Part 77. Evaluate such land uses to ensure that new development will not result in an obstruction or a potential hazard to aircraft in flight such as uses creating electrical interference, confusing lights, glare, or other disturbances are also restricted from areas beneath the airspace protection surfaces.*

Policy PS-5: Fire Hazards

Objective. *Minimize risk of personal injury and property damage resulting from structural (urban) and wildland fires.*

Applicable sub-policies:

- ***PS-5b: Review of development for fire safety.*** *The Arcata Fire Protection District (AFPD) reviews new development for compliance with fire safety standards. The City shall continue to incorporate review by the District to ensure that buildings and sites adhere to relevant fire and building codes, including sprinklers, vertical clearance, and turn-around space for fire fighting vehicles.*

- ***PS-5c: Water supply (fire flow).*** *The City's fire hydrant system provides the primary source of water for fighting urban fires. The City shall maintain fire hydrant spacing so that no residential structure is more than 500 feet from a hydrant and no commercial or industrial structure is more than 300 feet from a hydrant. Each hydrant shall have appropriate fittings and be capable of providing adequate water flows to meet the California Fire Code requirements.*

  The City shall maintain adequate fire flows in its water system. Open-water sources such as ponds, swimming pools, private storage tanks, and reservoirs may be used as a secondary water source by fire-fighting apparatus. These sources shall be equipped with appropriate filtering devices or strainers to prevent clogging of water pumps.

- ***PS-5d: Management of wildland fire hazards.*** *Fires in the wildland urban interface (WUI) areas of the City can cause property damage and threaten nearby structures. Buildings in WUI areas shall use materials such as non-flammable perimeter vegetation and roofing material to prevent exposure to wildland fires. The City shall support the ongoing implementation of the Humboldt County Community Wildfire Protection Plan (CWPP) and encourage residents in WUI areas to follow its recommendations. The City supports the AFPD in maintaining its mutual aid agreement with the California Department of Forestry and Fire Prevention (CAL FIRE) to insure rapid response to wildland fires.*

- ***PS-5e****:* ***Wildland Fire Risk Reduction and Defensible Space Around Homes.*** *The City will draw on available local and regional guidance and support efforts to reduce wildland fire risk. To do so, the City encourages creating defensible space around homes and other structures in wildlands and the wildland urban interface. The City shall support programs and plans that reduce wildland fire risk.*

The following policies addressing hazardous materials are new to the Arcata General Plan 2045:

Policy PS-1: Emergency Preparedness

Objective: *Ensure that the City, its residents, businesses, agencies, and organizations are prepared for emergencies or disasters and have effective response and recovery plans in place.*

Applicable sub-policies:

- ***PS-1g: Humboldt County Operation Area Hazard Mitigation Plan (Hazard Plan).*** *The 2019 Humboldt County Operational Area HMP and City of Arcata Annex is adopted by reference into the General Plan. General Plan policies and actions shall support its goals and objectives and incorporate policies and programs to address the climate vulnerabilities identified in the City of Arcata Annex.*
- ***PS-1f: Severe Weather Hazards.*** *Ensure that utilities, buildings, and infrastructure in the City can meet vital community needs during and after severe weather.*

Policy PS-8: Climate Adaptation and Resiliency

Objective. *The City will continue to support and monitor research about the nature of all hazards in Arcata, including research on prediction and warning systems, community vulnerability and consequences assessments, and improvements to building performance and resilience. The City will continue to pursue efforts that minimize Arcata's contribution to climate change by reducing greenhouse gas emissions and protecting people, the built environment, and the natural environment from the impacts of climate change.*

- ***PS-8a: Land Use and Urban Development.*** *Compact urban development has co-beneficial climatic effects, including reducing greenhouse gases, preserving habitats, producing healthy vibrant communities, and facilitating opportunities for environmental justice. The City shall support land use activities that promote compact, climate-friendly design, such as infill development, densification, and regenerative building design. City projects and private developments shall be designed to consider multi-benefit solutions that mitigate hazard risk and support the City's climate goals.*

  Urban design and development will be informed by the latest climate science to determine how to best protect and modify existing public and private infrastructure and assets and how to design new infrastructure and assets. Urban design and development should also take environmental justice considerations into account, working to eliminate disparities and burdens related to all hazards and the climate crisis for all people in Arcata.

- ***PS-8b: Greenhouse Gas Reduction.*** *City actions shall reduce local contributions towards climate change by mitigating greenhouse gases and increasing carbon sequestration. The City shall update relevant plans and policies periodically to meet State and local climate goals.*

  1. *Encourage reduction in greenhouse gas emissions, by providing alternatives to use of gas powered vehicles. Such alternatives include public transit, alternatively fueled vehicles, bicycle and pedestrian routes, and bicycle- and pedestrian-friendly development design.*
  2. *Encourage and facilitate investments in renewable energy and green technology.*
  3. *Prioritize nature-based solutions that restore ecosystem function and maximize ecological benefits to plants, animals, and people.*

- ***PS-8c: Regional Collaboration.*** *The City shall continue to participate in regional multi-agency efforts to coordinate climate mitigation and adaptation and ensure Arcata becomes more resilient to the threats of climate change.*
- ***PS-8d: Sea Level Rise.*** *Incorporate consideration of sea level rise and other associated climate impacts into public and private infrastructure and asset design and land use planning. The City shall continue to work with local, regional, state, and federal partners and utilize best available science to maximize the safety, environmental performance and climate adaptability of all new development.*

- ***PS-8e: Food Security and Resilience****. The North Coast has abundant resource lands, agricultural lands, and fishing grounds. The City shall develop partnerships, networks, and systems to promote resilience and redundancy in our local food cultivation, production, distribution, and storage sectors.*
- ***PS-8f: Wildfire Response and Preparedness.*** *Climate change has the potential to affect multiple elements of the wildfire system: fire behavior, ignitions, fire management, and vegetation fuels. California's Fourth Climate Change Assessment - North Coast Regional Report states that "(f)uture wildfire projections suggest a longer fire season, an increase in wildfire frequency, and an expansion of the area susceptible to fire." The City shall continue to work with local, regional and state partners to adapt and improve the City's fire response and preparedness protocols to respond to areas that will become more susceptible to fire over time within the City limits and Planning Area.*
- ***PS-8g: Traditional Ecological Knowledge.*** *The City of Arcata acknowledges the value of Indigenous sciences and knowledge and the need for Indigenous perspectives in responding to the climate change crisis. The City shall work to support Indigenous-led climate adaptation approaches and shall work collaboratively with tribes and tribal governments for mitigation, adaptation, and resilience to climate change. This policy applies to all previous policies in this section.*

City of Arcata Local Coastal Plan

Consistent with Section 30232 of the California Coastal Act (stated above).

City of Arcata Emergency Operations Plan

The City of Arcata Emergency Operations Plan informs the City's response to and recovery from emergencies and disasters as well as outlines coordination among departments and regional partners. The Emergency Operations Plan primarily addresses the following local hazards in the Arcata area: wildfire, major structure fire, extreme weather, flooding, landslides, hazardous materials, oil spill, energy shortage, power outages, earthquake, tsunamis, dam failure, communicable disease outbreak, civil disturbance, and mass casualty incident. The 2021 Emergency Operations Plan update integrated results from the Humboldt County Operational Area Hazard Mitigation Plan (Humboldt County 2020a, 2020b) evaluation of hazards affecting the City.

Humboldt County Operational Area Hazard Mitigation Plan

The Humboldt County Operational Area Hazard Mitigation Plan (HMP) 2019 is a multi-jurisdictional plan to identify and reduce hazards before any type of hazard event occurs (Humboldt County 2020a, 2020b). The HMP aims to reduce losses from future disasters such as dam failure, drought, earthquake, fish losses, flooding, landslide, severe weather, tsunami, and wildfire. The HMP also includes a vulnerability analysis and proposed initiatives designed to minimize future hazard-related damage. The 2019 update was approved by the California Governor's Office of Emergency Services in 2019. In 2020 the Federal Emergency Management Agency (FEMA) determined the HMP is eligible for approval pending adoption by participating jurisdictions. The City adopted the HMP on March 18, 2020 to guide pre- and post-disaster mitigation of the hazards identified.

The HMP included risk assessment modeling that took into account the following:

– Hazard identification and profiling,
– Assessment of the impact of hazards on physical, social, and economic assets,
– Identification of particular areas of vulnerability, and
– Estimates of the cost of potential damage.

Based on the risk assessment, Arcata's hazard risk ranking includes the following hazards and levels of risk:

– High Risk Category: landslides, severe weather, earthquake, and sea level rise;
– Medium Risk Category: wildfire, dam failure, flooding, and tsunami; and
– Low Risk Category: drought.

Other noted jurisdiction-specific vulnerabilities included water storage, aging infrastructure, critical facilities, and emergency shelters.

Humboldt County Emergency Operations Plan

The 2015 Humboldt County Emergency Operations Plan for the Humboldt Operational Area addresses the planned response to extraordinary emergency situations associated with natural disasters, technological incidents, and national security emergencies in or affecting Humboldt County (Humboldt County 2015). The Emergency Operations Plan addresses integration and coordination with other governmental levels when required. The Emergency Operations Plan accomplishes the following:

– Establishes the emergency management organization required to mitigate any significant emergency or disaster affecting Humboldt County.
– Identifies the policies, responsibilities, and procedures required to protect the health and safety of Humboldt County communities, public and private property, and the environmental effects of natural and technological emergencies and disasters.
– Establishes the operational concepts and procedures associated with field response to emergencies, County Emergency Operations Center activities, and the recovery process.

Humboldt County Community Wildfire Protection Plan

The Humboldt County Community Wildfire Protection Plan serves as the guiding document for the work of the Humboldt County Fire Safe Council (Humboldt County 2019). The Community Wildfire Protection Plan contains six goal areas:

1. Wildfire Ignition Prevention: Reduce human-caused wildfire ignitions;
2. Wildfire Preparedness: Increase community resilience and adaptation to wildfire;
3. Disaster Preparedness: Increase resident's ability to effectively prepare for and survive wildfire;
4. Fire Protection: Support fire protection for people, property, communities, and natural resources;
5. Restoration of Beneficial Fire: Restore beneficial fire at the landscape level; and
6. Integrated Planning: Maximize integration of planning efforts to improve community; and ecosystem resilience to wildfire.

The Community Wildfire Protection Plan breaks the county down into 14 planning units in order to gain community feedback and to create individual plans relevant to the particular community. Arcata is located in the Humboldt Bay Planning Unit (Unit 8), which covers all areas within the greater Humboldt Bay Area. The Humboldt Bay Area Plan identifies community assets and values at risk, the wildfire environment, fire protection capabilities, evacuation, community preparedness, wildfire prevention plans, community identified potential projects, and an action plan. The plan states that evacuation routes within the Planning Unit will depend on the location of the community at risk and law enforcement recommendations based on fire behavior, wind patterns, traffic, and ingress of emergency vehicles. Evacuation from within this Planning Unit will take place traveling either north or south along Highway 255.

3.6.4 Evaluation Criteria and Significance Thresholds

Based on Appendix G of the CEQA Guidelines, a hazards or hazardous materials impact is considered significant if implementation of the proposed Arcata General Plan 2045 would do any of the following:

– Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials;
– Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment;
– Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school;
– Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would create a significant hazard to the public or the environment;

- Be located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, where implementation of the plan could result in a safety hazard or excessive noise for people residing or working in the study area;
- Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan; or
- Expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires.

3.6.5 Methodology

A database review covering the Gateway Area was completed to identify and address existing conditions related to hazards and hazardous materials. It should be noted that the database review is in general conformance with the *American Society for Testing Materials* Standard #1527-13 (Standard), Standard Practice for Phase I Environmental Site Assessments (ESAs), however, it does not satisfy all the requirements of a Phase I ESA, because no site reconnaissance, Freedom of Information Act requests, User Questionnaire or key site manager interviews were conducted, in keeping with the high level of review appropriate for citywide policy documents.

3.6.6 Impacts and Mitigation Measures

Impact HAZ-a, b: **Would adoption and implementation of the Arcata General Plan 2045 create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials, or the reasonably foreseeable upset or accident conditions involving release of hazardous materials into the environment?**

Study Area

Current land uses, as well as future land uses under the Arcata General Plan 2045, involve or would involve the generation, transport, use, and disposal of hazardous materials, including but not limited to: petroleum products vehicles and equipment, paints, asphalt materials, concrete curing compounds, and solvents. As discussed in Section 3.6.2, a wide variety of commercial and industrial businesses and residences currently use hazardous materials and each year releases occur, which require regulatory oversight to protect human health and the environment. All construction and demolition activities in the study area would require a pre-project screening (described below) and appropriate permits from federal, state, and local entities. Any projects involving asbestos or lead based paint would also occur in compliance with NCUAQMD Rule 401 and OSHA Construction Safety Orders, which would ensure that hazardous materials impacts would be less than significant.

Sensitive receptors, including children, the elderly, and the infirm, are more susceptible to health effects from hazardous materials than the general population. As previously discussed, hazardous materials must be handled properly to prevent significant releases that could affect sensitive receptors. Schools must be sited to prevent them from being located near hazardous materials sites. Additionally, the federal, state, and local regulations described in Section 3.6.3 address and reduce potential risks associated with hazardous material use, transport, storage, and exposure of hazardous materials to sensitive receptors.

Although hazardous materials releases cannot feasibly be eliminated and potential risk of exposure to sensitive receptors cannot be reduced to zero, no reasonably foreseeable upsets or accidents exist and implementation of existing regulations and policies under the proposed Arcata General Plan 2045 would reduce these potential risks to a less than significant level.

Proposed individual developments within the study area may be required to conduct project-specific environmental screening such as a Phase I ESA to confirm conditions have not changed from what is shown in (or absent from) the database review and/or GeoTracker investigations. If no new potentially significant project-level hazards or hazardous materials are identified during the environmental screening, and the project otherwise qualifies for ministerial streamlining per the Gateway Code, then the project is ministerial per Arcata development

code and qualifies for a CEQA Statutory Exemption per Section 15268. If new or existing potential significant project-level hazards or hazardous materials impacts are identified as compared to the existing database review and/or GeoTracker investigation, the proposed project would require specific mitigation measures prior to being eligible for streamlined ministerial review.

Additionally, individual developments would be required to conduct an asbestos and lead paint survey to determine if demolition and/or construction practices would need to account for the presence of asbestos and lead paint. Due to the routine nature of demolition and general handling of materials containing asbestos and lead paint, the presence of asbestos and lead paint would not necessarily trigger the Project to be considered discretionary, and it may still be considered principally permitted if implemented in accordance with NCUAQMD Rule 401 and OSHA Construction Safety Orders, which would ensure that hazardous materials impacts would be less than significant.

Gateway Area and Other Infill Opportunity Zones

Development is expected to occur within the Infill Opportunity Zones at a faster rate than throughout the remaining City limits. Therefore, the potential for impacts regarding hazardous materials is expected to be higher within these areas. To manage and reduce this risk, the environmental screening mentioned above would be implemented throughout the entirety of the study area, which is anticipated to occur more frequently within the Gateway Area and other Infill Opportunity Zones.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact HAZ-c: Would adoption and implementation of the General Plan emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

There are 16 schools (including Cal Poly Humboldt) within the City, and, as discussed in Section 3.6.2, hazardous materials exist and are presently used within City limits. Existing regulations manage generation, use, storage, transportation, and disposal of hazardous materials, and existing zoning code manages the types of land uses located in the vicinities of schools. Implementation of the General Plan 2045 would not specifically enable the handling or emissions of hazardous waste within one-quarter mile of existing or proposed schools; however, the inherent potential for the handling or emission of hazardous waste within one-quarter mile of a school cannot be eliminated. Existing and future laws covering the transport, use, and disposal of hazardous materials would be implemented to protect sensitive receptors (i.e., school children and adolescents). Additionally, with adherence to applicable federal, state, and local regulations governing hazardous materials and compliance with the existing and proposed General Plans 2020 and 2045 policies listed above in Section 3.6.3, the potential risks associated with hazardous wastes in the study area, including the Gateway Area and other Infill Opportunity Zones, would be less than significant.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact HAZ-d: Would adoption and implementation of the General Plan include site(s) which are included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

The provisions in Government Code Section 65962.5 are commonly referred to as the "Cortese List." A search of the Cortese List (DTSC 2023) was completed to determine if any known hazardous waste sites have been recorded within the study area. No sites within the study area are considered to be on the “Cortese List.”

According to the SWRCB's GeoTracker, there are 11 active cleanup sites within the study area (see Figure 3.6-1). Of that total, five are proposed within infill areas (three in the Gateway Area, and two in the Downtown area). As discussed in impact question HAZ-a, b, proposed individual developments within the study area may be required to conduct project-specific environmental screening such as a Phase I ESA to confirm conditions have not changed from what is shown in (or absent from) the database review and/or GeoTracker investigations. If no new potentially significant project-level hazards or hazardous materials are identified during the environmental screening, and the project otherwise qualifies for ministerial streamlining per the Gateway Code, then the project is ministerial per Arcata development code and qualifies for a CEQA Statutory Exemption per Section 15268. If new or existing potential significant project-level hazards or hazardous materials impacts are identified as compared to the existing database review and/or GeoTracker investigation, the proposed project would require specific mitigation measures prior to being eligible for streamlined ministerial review.

Therefore, although there are no sites currently within the study area that are on the Cortese List, potential new development would be screened to confirm that the site in question is not considered a Cortese List site. If the site is considered a Cortese List site per CEQA Guidelines Section 15300.2(e), it would be considered a discretionary project and permits and/or mitigation measures would be implemented to reduce potential impacts of handling hazardous waste materials to a less-than-significant level.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact HAZ-e: **For areas located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would adoption or implementation of the General Plan result in a safety hazard or excessive noise for people residing or working in the General Plan jurisdictional area (City limits)?**

The study area is not located within an airport land use plan. The northern extent of the City limits is approximately 4 miles from the Redwood Coast-Humboldt airport and the southern extent of the City limits is approximately 3.9 miles from the Murray Field private airport. Due to the anticipated development within City limits, particularly within the Gateway Area, throughout the planning period, the General Plan 2045 proposes Policy PS-3g which states that new development would be reviewed to ensure that no obstructions or potential hazard to aircraft in flight would occur. Potential hazards could include electrical interference, confusing light, glares or other disturbance beneath the airspace protection surface. Due to the absence of an existing airport land use plan that covers the City, uncertainty of whether a future airport land use plan would be created that covers the City, and with inclusion of Policy PS-3g, no impact would occur.

Mitigation Measures: No mitigation is necessary

Level of Significance: No impact

Impact HAZ-f: **Would adoption and implementation of the General Plan impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?**

A component of the General Plan 2045 is to prepare a City Emergency Response Plan (see Policy PS-1a and 1b), which would include a map of evacuation routes, and methods for residents who are without or are unable to operate a vehicle. The emergency access plan would include access to the east side of town (east of US 101) after a major seismic event. Currently the City utilizes their 2021 Emergency Operations Plan, which does not contain specific evacuation routes. The City plans to update their Emergency Operations Plan to provide evacuation routes and methods for residents who are without or are unable to operate a vehicle. Implementation of the General Plan 2045 would not impair or physically interfere with the City's adopted 2021 Emergency Operations Plan. Therefore, no impact would occur.

Mitigation Measures: No mitigation is necessary

Level of Significance: No impact

Impact HAZ-g: Would adoption and implementation of the Arcata General Plan 2045 expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

Study Area

CAL FIRE is required by law to map areas of significant fire hazards based on fuels, terrain, weather, and other relevant factors. These FHSZs influence how people construct buildings and protect property to reduce risk associated with wildland fires. Zones are ranked as moderate, high, or very high based on fuel loading, slope, fire weather, and other relevant factors including areas where winds may be a major cause of wildfire spread. In 2007, CAL FIRE developed a draft LRA FHSZ map for Humboldt County in which approximately two-thirds of the City was classified as either moderate or high (CAL FIRE 2007). The Infill Opportunity Zones are located in either unmapped areas or areas ranked as moderate fire hazard severity. In 2008, CAL FIRE determined there were no very high FHSZs in LRAs in Humboldt County; therefore, they did not produce a recommended LRA FHSZ map (CAL FIRE 2008). The 2007 map was not adopted by the City or Arcata Fire District. Although not adopted, the physical conditions in those areas have a low likelihood of expected fire behavior over a 30 to 50-year period.

Gateway Area and other Infill Opportunity Zones

The Gateway Area is within a developed area with no mapped fire hazard severity. Implementation of the General Plan 2045 would not directly or indirectly expose people or structures to a significant risk, loss, injury, or death involving wildfires due to the low likelihood of wildfire as mapped by the fire hazard severity index. Additionally, all construction would acquire the required permits to protect against hazardous materials related fires. The General Plan 2045 contains Policy PS-5 to minimize the risk of personal injury and property damage resulting from urban and wildland fires. Policies include development and design standards for non-residential and residential buildings to ensure fire safety, development review by Arcata Fire District, and requirements for adequate hydrant water supply for fire flow. Additional policies related specifically to wildland fire hazards include design standards for structures in the wildland urban interface, support for implementation of defensible space around homes, and considerations for City infrastructure and service project review related to climate change exacerbated wildfire hazards. For these reasons, implementation of the General Plan 2045 would not increase the existing risk of wildland fires to people or structures. A less than significant impact would occur.

Areas Outside the Study Area

Areas adjacent to the City are located within the SRA and ranked as having a moderate or high fire hazard severity index. See Section 5.7 – Wildfire for discussion on potential impacts involving wildfires from implementation of the General Plan 2045. This section utilizes the City's Planning Area boundary as the study area, which includes the City's wildland urban interface and portions of the SRAs outside the City limits (see Figure 2-1 – City of Arcata Planning Areas).

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

3.6.7 Cumulative Impacts

Impact HAZ-C-1: Would the adoption and implementation of the General Plan contribute to a cumulatively significant impact to Hazards and Hazardous Conditions?

Impacts associated with hazardous materials are often site-specific and localized. However, for purposes of this cumulative analysis, the geographic context for cumulative hazards impacts would be the study area, which equates to the City limits.

Since the proposed General Plan 2045 takes into account all projected future growth and development within the study area, compliance with all applicable federal, state, and local regulations related to hazardous materials on a project-by-project basis would ensure that the routine transport, use, or disposal of hazardous materials would not result in adverse impacts. All demolition activities in the study area, particularly the Gateway Area, that would involve asbestos or lead based paint would also occur in compliance with NCUAQMD Rule 401 and OSHA Construction Safety Orders, which would ensure that hazardous materials impacts would be less than significant. Additionally, site specific environmental screening would be conducted at sites to confirm the presence or absence of hazardous materials has not changed as compared to the database review and/or GeoTracker investigation conducted in this Draft EIR. Where contaminated soils or groundwater occur, federal and state regulations would be implemented to minimize the exposure of workers and the public to hazardous substances. With adherence to applicable federal, state, and local regulations governing hazardous materials and compliance with the proposed General Plan 2045 policies indicated above, the potential risks associated with hazardous wastes in the study area would be less than significant. As such, cumulative impacts would be less than significant.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

3.7 Land Use and Planning

This section evaluates the potential impacts related to land use and planning resulting from adoption and implementation of the General Plan 2045.

Multiple comments related to land use and planning were received in response to the Notice of Preparation circulated for the proposed General Plan 2045. Comments included those related to concerns about building scale (i.e., height, setback), incentives for building development, consistency with regional transportation plans, and updates to the sphere of influence.

To provide the basis for this evaluation, the Setting section describes the local setting within the City. The Regulatory Framework section describes the regulatory background that applies to land use and planning, and the Impact Analysis section establishes the thresholds of significance, evaluates potential hazard-related impacts, and identifies the significance of impacts.

3.7.1 Study Area

The General Plan 2045 contains four geographic planning features: the City limits, Urban Services Boundary, Sphere of Influence, and Planning Area. These features, along with the policies that guide related development activities, such as annexation, constitute much the City's growth management program. The General Plan 2045 relies on an infill strategy, intended to focus future growth within the existing City limits. No new or amended land uses or zoning changes are proposed for the areas within the Urban Services Boundary, Sphere of Influence, or Planning Area. Additionally, the City does not expect to annex for urban development. In the event that annexation becomes of future interest to the City, the potential environmental impacts associated with such action would be evaluated under CEQA at that time. Therefore, for impact assessment related to land use and planning, the City limits were used as the study area (see Figure 2-1 – City of Arcata Planning Areas).

3.7.2 Setting

Existing Land Use and Planning within the Study Area

Arcata's existing land use is a mix of residential, commercial, industrial, public facilities, agriculture, and natural resource (open space) uses (Table 3.7-1). The predominant urban land use in the City is residential, which makes up 26.6% of the land base; the vast majority of which has a low or very low residential designation. Agriculture and natural resources uses are the second and third-most common use types within the City, consisting of 20.0% and 33.7% of the land base, respectively. The majority of these agricultural and natural resource areas are provided as green belt buffers along the City limits. Over 700 acres, principally natural resources, have been annexed since the adoption of the General Plan 2020.

Other urban uses include industrial areas with 8.6% of the land base, public facility uses (including Cal Poly Humboldt) with 8.6%, and commercial areas with 2.5%, respectively. The City's industrial hubs are located along South G Street, Samoa Blvd, K Street, St. Louis Road, Giuntoli Lane, and West End Road. The largest commercial area is within the Valley West area, in northern Arcata. Additional neighborhood scale commercial areas are located near some residential areas.

Table 3.7-1: Land Use Plan Categories and Acreages in 2020

Arcata General Plan: 2020 Land Use Designations		Acres	%
A-E	Agriculture – Exclusive	1038.9	19.4
A-R	Agriculture – Residential	34.2	0.6
C-C	Commercial – Central	25.4	0.5
C-G	Commercial – General	47.6	0.9

Arcata General Plan: 2020 Land Use Designations		Acres	%
C-M	Commercial – Mixed	16.9	0.3
C-VS	Commercial – Visitor Serving	42.2	0.8
I-G	Industrial General	173.5	3.2
I-L	Industrial Limited	285.7	5.3
NR	Natural Resources	1,806	33.7
NZ	Not Zoned	0.9	0.0
PF	Public Facilities	459.9	8.6
R-H	Residential – High Density	151.1	2.8
R-L	Residential – Low Density	577.8	10.8
R-M	Residential – Medium Density	162.9	3.0
R-VL	Residential – Very Low Density	533.2	10.0
	Total	**5,356.3**	**100**

Note: The numbers above do not include road rights-of-way, interchanges, and the portion of Arcata Bay within the City limits, nor Jacoby Creek Forest. These combined areas covered an additional 2,251 acres when General Plan 2020 was adopted.

The City has developed around a central core, which supports the highest density and the most diverse mix of urban uses. The Plaza and surrounding blocks are made up predominantly of commercial and residential uses. Retail commercial businesses occupy the majority of the storefronts surrounding the Plaza, with professional offices, non-profit organizations, financial institutions, entertainment, health care, and related uses most prevalent on the adjacent blocks. Civic uses, such as the post office, ballfield, fire station, transit center, services center, and City Hall, are all located within two blocks of the Plaza.

The most prominent of the neighborhood centers and employment areas are described in the Project Description and include:

– Valley West / Giuntoli Lane Neighborhood Center
– Westwood / Sunset Neighborhood Center
– Sunny Brae Neighborhood Center
– Bayside Neighborhood Center
– West End / Aldergrove Employment Center
– Samoa Boulevard and South G Street Employment Center (formerly called the West Samoa Boulevard Employment Center)
– Gateway Area

Proposed Land Use and Planning within the Study Area

While land use allocations are presented herein for context, it is important to note that such allocations between General Plan 2020 and General Plan 2045 do not readily lend themselves to an objective comparison of land uses, since the Gateway Area designations did not previously exist. The Gateway Area includes the Creamery District and a mix of commercial, industrial, and residential uses. The Gateway Area is considered an Infill Opportunity Zone and is proposed as the location for the highest increase in density. The Gateway Area and the Gateway Area Plan and an Element of the General Plan 2045 are further described in the Project Description.

As described in the Project Description, the City's anticipated growth during the planning period is expected be contained within the present City limits and concentrated largely within the Infill Opportunity Zones, including the Gateway Area, which present the highest potential for infill development. As shown in Table 3.7-2, the predominant urban land use in the City will remain residential, which will make up 26.9% of the land base. The

other urban uses include public facility uses (including Cal Poly Humboldt) with 8.2% of the land base, industrial areas with 6.2%, and commercial areas with approximately 2.7%.

Natural resource will continue to be the largest non-urban use in the City, with approximately 34% of the land base, followed by agricultural areas with 19.4%.

Table 3.7-2: Land Use Plan Categories and Acreages

Arcata General Plan: 2045 Land Use Designations		Acres	%	Acreage Change from 2020 *
A-E	Agriculture - Exclusive	1,038.9	19.4%	0.0
A-R	Agriculture - Residential	34.2	0.6%	0.0
C-C	Commercial - Central	25.8	0.5%	+0.4
C-G	Commercial - General	-	0.0%	-47.6
C-M	Commercial - Mixed	120.7	2.3%	+103.8
C-VS	Commercial - Visitor Serving	-	0.0%	-42.2
G-B	Gateway Barrel District**	28.9	0.5%	+28.9
G-C	Gateway Corridor**	17.3	0.3%	+17.3
G-H	Gateway Hub**	32.0	0.6%	+32.0
G-N	Gateway Neighborhood**	19.2	0.4%	+19.2
G-OS	Gateway Open Space**	6.9	0.1%	+6.9
I-G	Industrial General	130.7	2.4%	-42.8
I-L	Industrial Limited	201.9	3.8%	-83.8
NR	Natural Resources	1,803.7	33.7%	-2.3
NZ	Not Zoned	20.4	0.4%	19.5
PF	Public Facilities	442.3	8.3%	-17.6
R-H	Residential - High Density	185.4	3.5%	+34.3
R-L	Residential - Low Density	555.8	10.4%	-22.0
R-M	Residential - Medium Density	181.0	3.4%	+18.2
R-VL	Residential - Very Low Density	511.2	9.5%	-22.1
	Total	**5,356.3**	**100%**	

*(+) denotes an addition in acreage while (-) denoted a reduction in acreage. Reductions in some industrial and residential areas have occurred to reclassify with new Gateway designations allowing similar uses.

**New land use designations proposed in the General Plan 2045.

Note: The numbers above do not include road rights-of-way, interchanges, or the portion of Arcata Bay within the City limits, nor do they include the Jacoby Creek Forest, a City-owned non-contiguous incorporated area.

Infill Opportunity Zones include the Gateway Area, Valley West, Craftsman's Mall / St. Louis, and Downtown. The Land Use Element will increase the density of local zoning and reduce barriers to development in these areas, targeting higher-density development and affordable housing. Table 2.6-2 in the Project Description shows the development standards and different community benefit bonus tiers, which permits higher intensities of development in exchange for community benefits. As described in the Project Description, outside of the Infill Opportunity Zones, the Land Use Map and development standards applicable throughout the City limits are anticipated to receive less significant changes that will be relatively evenly dispersed throughout the City, including rezoning I-L and C-G parcels to C-M, and increasing allowed residential densities in the R-M, R-H, and

C-M zone districts. The General Plan 2045 Land Use Element's proposed maximum density and floor area ratios are provided in Table 2.6-3 in the Project Description and are also available as Table LU-1 in the Land Use Element.

3.7.3 Regulatory Framework

Federal

There are no federal regulations which apply to the study area related to land use and planning.

Humboldt Bay National Wildlife Refuge Complex Comprehensive Conservation Plan

The Humboldt Bay National Wildlife Refuge Complex includes Humboldt Bay National Wildlife Refuge and Castle Rock National Wildlife Refuge. The Humboldt Bay National Wildlife Refuge is located in the vicinity of Eureka and Arcata with refuge units distributed around Humboldt Bay. The U.S. Fish and Wildlife Service prepared a Comprehensive Conservation Plan to guide management of fish, wildlife, plants, other natural resources, and visitor uses on the Humboldt Bay National Wildlife Refuge Complex between 2009 and 2024.

State

Government Code Section 65300

California Government Code Section 65300 requires each county and city to prepare and adopt a comprehensive, long term General Plan. The Legislature intends that the General Plan and elements and parts thereof comprise an integrated, internally consistent and compatible statement of policies for the adopting agency. This section requires planning agencies and legislative bodies to accommodate local conditions and circumstances, while meeting minimum requirements.

Government Code Section 65301

Section 65301 requires a General Plan to address the geographic territory of the local jurisdiction and any other territory outside its boundaries that bears relation to the planning of the jurisdiction. At a minimum, this could include all land within the City limits and all land within the City's Sphere of Influence. As discussed in Section 3.7.1., based on the scope of current General Plan updates evaluated in this Draft EIR, the identified study area is the City limits.

Government Code Section 65302

The General Plan shall consist of a statement of development policies and shall include a diagram or diagrams and text setting forth objectives, principles, standards, and plan proposals. The plan shall include the following elements: Land Use, Circulation, Open Space, Safety, Housing, Conservation, Noise, and Health.

Environmental Justice elements are required in the General Plans of certain communities. Arcata does not meet the thresholds for an Environmental Justice element to be required because the City does not contain any Disadvantaged Communities as identified by the California EPA Pursuant to Section 39711 of the Health and Safety Code.

Government Code Section 65303

The General Plan may include any other elements or address any other subjects which, in the judgment of the legislative body, relate to the physical development of the county or city.

Government Code Section 65584

Pursuant to state housing element law, the Department of Housing and Community Development is required to determine each region's housing need or the projection period starting December 31, 2018 and ending August

31, 2027. The Humboldt County Association of Governments (HCAOG) developed the Humboldt County Regional Housing Needs Plan, which allocates to cities and the unincorporated county their “fair share” of the total county Regional Housing Needs Allocation.

Government Code Section 65860

A city or county’s zoning ordinance must be consistent with the General Plan.

Assembly Bill 1358 (California Complete Streets Act)

AB 1358 was signed into law in 2008 and became effective January 1, 2011, requiring jurisdictions to amend their circulation elements to plan for multimodal transportation networks. This places the planning, designing, and building of complete streets into the General Plan planning framework.

California Coastal Act

A portion of the study area is within the Coastal Zone. The Coastal Act set policies related to management of resources in California’s coastal zone. The policies of the Coastal Act constitute the statutory standards applied to planning and regulatory decisions made by the California Coastal Commission, pursuant to the Coastal Act. The General Plan must comport with legislative policies relating to the California Coastal Act.

Climate Change Scoping Plan

In December 2008, pursuant to AB 32, California Air Resources Board (CARB) adopted the Scoping Plan, which outlined measures to attain the 2020 greenhouse gas (GHG) emissions limit. CARB is required to update the Scoping Plan at least every five years. The Scoping Plan was updated in 2017, and more recently in 2022. The 2022 Scoping Plan identifies a path to meet the Senate Bill 32 GHG, as well as reducing anthropogenic GHG emissions to 85 percent below 1990 levels by 2045, and achieving carbon neutrality by 2045 or earlier, consistent with AB 1279. The updated Scoping Plan includes measures to move to a zero-emissions (decarbonized) transportation sector and phasing out the use of natural gas in residential and commercial buildings. The Scoping Plan would also reduce emissions of short-lived climate pollutants and includes mechanical CO_2 removal and carbon capture and sequestration actions, as well as natural working lands management and nature-based strategies. The Scoping Plan also states that local action by municipalities can support and amplify efforts to reduce GHGs.

Local

The study area equates to the City limits and the southern and western portion of the study area (bisected by Samoa Blvd and Old Arcata Road) is also within the Coastal Zone. Therefore, this section includes City General Plan and City Local Coastal Program policies.

City of Arcata General Plan 2020

The General Plan 2020, adopted by the City Council in 2000, is the document that guides development in the study area. Since that time there have been updates of individual General Plan elements or parts of the General Plan, including the Housing Element update in 2019. The General Plan 2020 also includes the Parks & Recreation Element adopted in 1994. The plan is the City's “constitution” for physical development and change within the existing and future City boundaries and legally governs both private and public actions.

Proposed City of Arcata General Plan 2045

As described in the Project Description, the City is preparing an update of its existing General Plan 2020 as well as preparing a new Gateway Area Plan element. The Gateway Area Plan Element will provide additional specific development guidance within the Gateway Area. New associated amendments to the Zoning Code will be developed to implement the Gateway Area Plan through an area-specific form-based code. Proposed citywide zoning (not including the Gateway Area form-based code, analyzed herein) is considered a subsequent action to

the General Plan 2045 and associated Draft EIR. The General Plan 2045 horizon year is year 2045, which reflects a 20-year planning period.

Policy LU-1 Overall Development Pattern

Objective. *Establish a pattern of development that concentrates activity and amenities in a pattern of centers, clusters and mixes of uses to support the City's focus on infill development and active transportation. Provide an overall land use arrangement that concentrates city-wide uses and functions in these areas with an emphasis on areas within walking distance of the central Plaza Area, Cal Poly Humboldt, and existing neighborhood and employment centers which provide a mix of commercial services, residential uses, and community facilities.*

Applicable sub-policy:

LU-1r Maximum and Minimum Residential Density Standards. *In Commercial Mixed-Use and Central Commercial districts, allow residential uses. In each of these land use designations, do not establish a maximum residential density standard. Instead, allow residential density to be naturally restricted through other development standards, such as building height and Building Code requirements for minimum unit size. In addition, establish a minimum residential density standard in each of these land use designations, with exceptions established for some use types (such as theaters) and some building types (such as historically significant structures and the adaptive reuse of existing buildings).*

LU-1aa Form-based Design Standards. *Where high-density housing uses are appropriate, apply form-based design standards that allow high-density, multi-story buildings while simultaneously requiring a vibrant, community-oriented, street-facing built environment designed to fit a "human-centered" scale.*

LU-1ac Incentivize Mixed Use as a Community Amenity. *Incentivize mixed-use projects that have a ground-floor non-residential (retail, office, light industrial, or other job-creation component) through the community benefit program where not otherwise required by the form-based code.*

LU-3f Relationship of Building Height to Open Space*. Allow for buildings over four stories using Community Benefits Program but require greater percentages of Open Space to be retained at ratios set in the Form-Based Code to ensure residents of high-density housing retain an excellent quality of life and easy access to high-quality open space.*

LU-3h New Non-residential Uses. *Permit Commercial Mixed and Central Commercial land use designations in the City to allow mixed uses to complement residential uses. Ensure that all new non-residential, mixed-use development supports an active and livable neighborhood, with residential, retail, office, and light-manufacturing uses thoughtfully blended together to create a cohesive neighborhood that feels complete. Allow flexibility in non-residential uses, with targeted limitations on uses that do not encourage street level human activity, livability, or neighborhood identity. Examples of uses that do not encourage human activity include heavy industrial uses, mini-storage, and outdoor automotive sales.*

Proposed City of Arcata General Plan 2045 Gateway Area Plan

Policy Chapter 1: Land Use

Objective. *Establish an overall land use arrangement that promotes mixed-use, multi-story buildings with a clear emphasis on high-density housing that is equitable, environmentally sustainable, and compatible with the envisioned neighborhood character. Allow for a broad diversity of non-residential uses that support a pedestrian/bicycle-friendly environment, contribute to a car-free lifestyle, and meet the physical, social, and economic needs of residents.*

GA-1a. Land Use Targets. *Aim to achieve a mix of residential and non-residential uses in each land use subarea that supports the full range of services to Gateway Area residents, workforce, and visitors. Estimated long-term targets to balance uses are shown in Table 5.*

GA-1b. Relocate Existing Uses that are Incompatible with Plan Vision. *Facilitate the relocation of nonconforming uses that are incompatible with the Plan Vision and explore opportunities to reduce conflicts between new and existing users (e.g. noise attenuation). Target uses that conflict with or otherwise detract from the intended character of the Plan Area by being incompatible with human activity, livability, or neighborhood identity/cohesion. Support relocation of existing uses with affordable housing, large workforce, or high sales-tax.*

GA-1c. Nonconforming Uses, Site Conditions and Structures. *Allow existing nonconforming uses, site conditions, and structures to remain unless specifically targeted for relocation in the Zoning Code. When new development occurs, encourage incompatible non-conforming uses to become conforming, and in some cases, require non-conforming uses to relocate as specified in the Zoning Code. Consider offering incentives for some nonconforming uses to either relocate or modify operations or form to become more compatible with the surrounding neighborhood.*

City of Arcata Municipal Code and Land Use Code

The Municipal Code is a codification of all prior enacted ordinances except those which have been specifically repealed and the following ordinances: tax levy ordinances; appropriation ordinances relating to boundaries and annexations; franchise ordinances and other ordinances granting special rights to persons or corporations; contract ordinances and ordinances authorizing the execution of a contract or the issuance of warrants; salary ordinances; ordinances establishing, naming or vacating streets, alleys or other public places; improvement ordinances; bond ordinances; ordinances relating to elections; ordinances relating to the transfer or acceptance of real estate by or from the City; and all special ordinances. The Municipal Code contains the following Titles: General Provisions, Administration, Public Safety, Public Welfare Morals and Conduct, Sanitation & Health, Business Professions and Trades, Public Works, Building Regulations, Planning and Zoning, Public Property, and Ordinance List and Disposition Table.

Title IX is Planning and Zoning and contains Chapter 1, the Planning and Zoning Standards, which includes the Land Use Code. The Land Use Code was adopted by the City Council by Ordinance 1377 in 2008. It includes regulations related to site development, resource managing, and other land use procedures and processes. The Land Use & Development Guide, adopted in 1994, includes land use and development regulations, standards, and review procedures applicable within the Coastal Zone (City of Arcata 1994) and is considered a part of Chapter 1. These Zoning Ordinances have been amended several times since their adoption.

Proposed Gateway Code

Land Use Code Chapter 9.29-Gateway Area Districts is a form-based code for the Gateway Area. The chapter establishes standards and requirements to implement the Gateway Area Plan. This includes permit and approval requirements, allowable uses, district standards, building design standards, streetscape requirements, mobility and greenway standards, and community benefits program.

City of Arcata Local Coastal Program

Approximately one-third of the City is located within the Coastal Zone, as established by the California Coastal Act. The Coastal Zone boundary includes westerly and southerly portions of the City. The Coastal Act requires jurisdictions having land within the coastal zone prepare and adopt a local coastal plan. The City of Arcata Local Coastal Program was certified by the California Coastal Commission on October 10, 1989. The City is currently in the process of comprehensively updating the Local Coastal Program, but it is outside of the scope of this Draft EIR and will be analyzed separately in the future.

Americans with Disabilities Act Transition Plan

The Americans with Disabilities Act (ADA) of 1990 requires all public agencies to develop an ADA Transition Plan for the installation of various improvements that are intended to make the existing pedestrian facilities within the right-of-way accessible for persons with disabilities, to the maximum extent feasible. A Transition Plan outlines the manner in which a jurisdiction shall transition toward compliance with the ADA; this compliance shall be achieved by identifying barriers to accessibility, and then developing solutions that facilitate access for all individuals. The main purpose of this plan is to develop the City's policies and practices for implementing improvements within the public right-of-way. The regulatory document was originally adopted in 1993 and was updated in 2019.

Non-industrial Timber Management Plan

The Non-industrial Timber Management Plan is a long-term management option and permit available to timber land ownerships of less than 2,500 acres that was adopted in 1999. The plan covers the Arcata Community Forest and the Jacoby Creek Forest. Elements include a description of timber stand characteristics, a description of proposed activities within each management unit, a description of cultural or historical records, and information on threatened or endangered plant or animal species. The plan also stipulates that the landowner must practice uneven age management and demonstrate and document sustainable harvesting. The plan is required by the state, and amendments and deviations are sent to CAL FIRE as lead agency for review and approval. The Timber Management Plan is also discussed in Section 5.3 (Biological Resources).

Northern Spotted Owl Habitat Retention Agreement

The Northern Spotted Owl (*Strix occidentalis caurina*) was federally listed as threatened in 1990. The Habitat Retention Agreement is a voluntary commitment by the City to manage the City's timberland in a manner that maintains and enhances Northern Spotted Owl habitat. The City entered into the agreement in 2008 for areas within the Non-industrial Timber Management Plan. Management commitments include limiting all openings created by timber harvest to 0.99 acres, retaining a greater average post-harvest basal area (square feet per acre) for trees greater than 12-inch diameter breast height, legacy trees, and snags will be recruited and retained to a minimum level of 0.5 per acre, down cull logs will be retained, and Northern Spotted Owl surveys / monitoring will be conducted annually. The Habitat Retention Agreement is also discussed in Section 5.3 (Biological Resources).

3.7.4 Evaluation Criteria and Significance Thresholds

Under criteria based on Appendix G of the CEQA Guidelines, the adoption and implementation of the General Plan 2045 would be considered to have a significant impact on a land use and planning if it would:

– Physically divide an established community; or
– Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect.

The following sections describe the anticipated environmental impacts on land use and planning due to the adoption and implementation of the proposed General Plan 2045.

3.7.5 Methodology

This section analyzes whether development facilitated by the adoption and implementation of the General Plan 2045 would physically divide communities. The evaluation of impacts related to land use planning is based on a comparison of the General Plan 2045 to the applicable land use plans, policies, and regulations to determine if adoption and implementation of the General Plan 2045 would conflict with a plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect.

A policy inconsistency is considered a significant adverse impact only if the inconsistency would result in a significant adverse physical impact based on the established significance criterion. Adoption and implementation

of the General Plan 2045 could result in a significant impact if it conflicts with applicable land use plans, policies, and regulations of the ADA Transition Plan. Consistency with the RePower Humboldt Comprehensive Action Plan for Energy, Non-industrial Timber Management Plan, and Northern Spotted Owl Habitat Retention Agreement are discussed in other sections of this Draft EIR.

Plans such as the Arcata Parks and Recreation Master Plan, Arcata Pedestrian and Bicycle Master Plan, and West End Specific Plan are adopted plans that are not used as regulatory or public policy documents. These plans are visioning and/or feasibility study documents. Therefore, they are not used as a threshold in determining potential environmental impacts associated with the General Plan 2045.

3.7.6 Impacts and Mitigation Measures

Impact LU-a: Would adoption and implementation of the General Plan physically divide an established community?

The physical division of an established community typically refers to the construction of a physical feature (such as an interstate highway or wall) and/or the removal of a means of access (such as a local road, trail, or bridge) that would impair mobility within or between existing communities. The General Plan 2045 does not authorize any such physical changes to the community. The City proposes a robust network of multimodal capacity improvements to accommodate the existing and planned land uses within the City. Proposed bikeway and trail improvements would further connect communities. For example, the General Plan 2045 Transportation Element includes goals and policies that focus on providing a connected multimodal transportation system and creating a multimodal transportation system that will improve the livability of residential neighborhoods (Goals A and E). The General Plan 2045 does not propose roadways or other physical divisions that would divide or remove access to an existing community. Temporary road closures or obstructions required during construction would not constitute a division of an established community. Additionally, development would generally be focused on infill locations and these areas have existing infrastructure (including highways and local roadways) already in place creating adequate connections between established communities.

The General Plan 2045 includes multiple policies to promote neighborhood cohesion and revitalization and to avoid potential impacts:

> ***LU-1j: Maintain Arcata's Historic Plaza Area as a major community center in central Arcata.*** *The Plaza has historically been, and should continue to be, a commercial, civic, social, and cultural center of the community, and a location for community-wide special events. The area surrounding the Plaza (Commercial–Central area), including the adjacent commercial and mixed-use areas, shall be planned to accommodate retail establishments, entertainment services, restaurants, and business and professional offices. High density residential use in the Commercial–Central area is encouraged as an Infill Opportunity Zone. Housing shall be included, where feasible, in all new commercial development within the Plaza Area.*
>
> ***LU-1k: Encourage Valley West's growth as a major community center for north Arcata.*** *Ensure City resources are allocated to improving accessibility, safety, and attractiveness of this mixed use area, which functions as both a tourism destination and a vibrant neighborhood commercial center for many neighboring residents. The area surrounding the Valley West Shopping Center, including the adjacent commercial, office, and residential areas, shall be planned to accommodate a large concentration of high-density residential development as well as retail establishments, entertainment services, restaurants, and business and professional offices. Continue to promote Carlson Park as a regional draw to access the Mad River. High density residential use in the Valley West Infill Opportunity Zone will be streamlined and residential units shall be included, where feasible, in all new commercial development within the Valley West Area.*
>
> ***LU-1m: Support and revitalize the West End/ Aldergrove Employment Center as an industrial and business hub for north Arcata.*** *This area has a mix of general and limited industrial uses, including the Aldergrove Industrial Park, the Foodworks Culinary Center, and surrounding commercial,*

residential, and public open space areas. Light and general-industrial uses shall be encouraged to relocate and expand in this area.

LU-1n: Support and revitalize the Samoa Boulevard and South G Street Employment Center as an industrial hub for South Arcata*. This area includes general and limited industrial, general commercial businesses on both sides of Samoa Boulevard, and surrounding high-and medium-density residential areas. Light and general-industrial uses shall be encouraged to relocate and expand within the Adaptation Zone boundary of this area as described in the City's Local Coastal Program.*

The City's over-arching planning document, namely the General Plan 2045 goals, policies, and Land Use Maps, will help shape how the City will look, function, provide services, and manage resources for the next 20 years. As such, it is intended to guide orderly growth to appropriate areas and provide services and infrastructure necessary to accommodate planned growth. The General Plan 2045 would prioritize development within City limits in areas within or contiguous to existing urban uses and services; concentrate growth around existing activity centers; and preserve rural and agricultural lands. The General Plan 2045 would not promote incompatible development or development that would physically divide an established community. Therefore, adoption and implementation of the General Plan 2045 would result a less than significant impact.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact LU-b: Would adoption and implementation of the General Plan cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

This discussion reviews potential conflicts with federal, state, and local plans having jurisdiction within the City.

Federal Plans

The U.S. Fish and Wildlife Service owns property in south Arcata, along Humboldt Bay west of SR 101. The City does not have direct regulatory authority over land owned by the federal government. The General Plan 2045 would designate this land as NR. The U.S. Fish and Wildlife Service manages this land as part of the Humboldt Bay National Wildlife Refuge. The General Plan 2045 Resource Conservation Element includes policies to manage coastal access in bayfront and marsh areas consistent with the U.S. Fish and Wildlife Service management of the National Wildlife Refuge (Policy RC-4b and Policy RC-4f). Adoption and implementation of the General Plan 2045 would result in a less than significant impact in relation to conflicts with federal plans.

State Plans

Consistency of the General Plan 2045 with other state regulations, policies, and plans associated with specific environmental issues, such as air quality, GHG emissions, and transportation, is discussed in relevant sections of this Draft EIR.

The 2022 CARB Scoping Plan is discussed in Section 3.5 (Greenhouse Gas Emissions). The General Plan 2045 would not be consistent with some of the project attributes within the 2022 Scoping Plan; therefore, implementation of Mitigation Measure GHG-1 would bring the project into consistency with CARB-recommended key project attributes.

Consistent with state housing law, the General Plan 2045, and in particular the Housing Element, plan for the City's share of statewide and county housing needs as identified by the Department of Housing and Community Development and the HCAOG. The 2019 Humboldt County Regional Housing Needs Assessment Plan (HCAOG 2018) identified that the City should accommodate 610 dwelling units through the 6th Cycle (2019-2027). The General Plan 2045 supports the development of housing and is consistent with the statewide regional housing needs allocation.

The state owns and manages land within the City; the City does not have direct authority over these lands. The California Department of Fish and Wildlife (CDFW) owns land adjacent to Humboldt Bay and the Arcata Marsh and Wildlife Sanctuary that is managed as a wetland / tidal marsh. The General Plan 2045 would designate this land as NR. Resource Conservation Element Policy RC-4a states the tidal marshes in this area shall be enhanced and maintained to protect wetland services. This is consistent with the management of the CDFW land.

Cal Poly Humboldt occupies approximately 146 acres within the City, east of SR 101. Cal Poly Humboldt has made recent land acquisitions throughout the City including Creekside (APN 505-161-011), Stewart School (APN 020-133-003), Cal Poly Bookstore (APN 021-044-008), and Craftsman Mall (APN 505-022-011, -012; 503-372-002 through -006). The City does not have direct authority over these lands. Under the General Plan 2045, these parcels would be designated R-L, R-L, C-C, and R-H, respectively. General Plan 2045 contains goals and policies to coordinate development needs with Cal Poly Humboldt. Public Facilities and Infrastructure Element Policy PF-4c (Coordination and development review with Cal Poly Humboldt) establishes that the City will designate at least one member of the City Council as liaison to Cal Poly Humboldt and request that the designated Council member be appointed to the University President's Advisory Council. The Land Use Element contains Guiding Principle and Goal M to seek and encourage open and cooperative consultation and cooperation with managers of state land not subject to Arcata's land use authority including Cal Poly Humboldt, lands within the California Coastal Commission's retained jurisdiction, and others.

The General Plan 2045 was prepared in conformance with state laws and guidelines associated with the preparation of General Plans. Implementation of Mitigation Measure GHG-1 would bring the General Plan 2045 into consistency with CARB-recommended key project attributes and, therefore, consistency with the 2022 Scoping Plan and the state's goal of carbon neutrality by 2045 or sooner. The City does not have direct authority over state lands; however, the General Plan 2045 would not conflict with the application of state land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect. Adoption and implementation of the General Plan 2045 would result in a less than significant impact in relation to conflicts with state plans.

Local Plans

Several regionally and locally adopted land use plans, policies, and regulations apply to the project. Consistency with the Arcata Municipal Code with respect to protected trees are evaluated in Section 5.2 (Agriculture and Forestry Resources) and Section 5.3 (Biological Resources). Potential conflicts with the City's Non-industrial Timber Management Plan and Northern Spotted Owl Habitat Retention Agreement are also evaluated in Section 5.3 (Biological Resources). Compatibility with noise standards land use compatibility standards, specifically with respect to noise, are evaluated in Section 3.8 (Noise). Regional transportation plans are discussed in Section 4.2 (Transportation).

RePower Humboldt Comprehensive Action Plan for Energy is discussed in Section 3.5 (Greenhouse Gas Emissions). General Plan 2045 would be consistent with several goals from the Redwood Coast Energy Authority's (RCEA's) 2019 RePower Humboldt Plan; however, would not be consistent with the accelerated development of electric vehicle adoption. Implementation of Mitigation Measures GHG-1 would bring the Project into consistency with RCEA's 2019 RePower Humboldt Plan.

The General Plan 2045 is atop the hierarchy of local government laws regulating land use. Other laws and policies, such as specific plans, subdivision regulations, and the zoning ordinance are subordinate to, and must be consistent with, the General Plan. The adoption of the General Plan 2045 would require revisions to the Land Use and Zoning Code to ensure consistency with the General Plan 2045. Therefore, consistency with the existing Land Use and Zoning Code in Arcata's Municipal Code is not evaluated further. The Zoning Code and form-based code (both specific to the Gateway Area) will be consistent with the Gateway Area Plan Element and proposed land use changes analyzed in this Draft EIR.

The General Plan 2045 is a land use plan that contains policies that will be adopted, in part, for the purpose of avoiding or mitigating an environmental effect. In the future, projects consistent with General Plan 2045 will be able to use this EIR for a streamlined environmental review process. CEQA Guidelines Section 15183 (Projects

Consistent with a Community Plan or Zoning) allows projects to be eligible for streamlined environmental review if they are consistent with the development density established by existing zoning, community plan, or general plan policies for which the EIR was certified.

There are no conflicting applicable goals and policies within the General Plan 2045 and the ADA Transition Plan. The ADA Transition Plan identified deficiencies with respect to the physical pedestrian facilities, inventoried the necessary improvements to bring the City into compliance with ADA requirements, and established an improvement and monitoring schedule. The General Plan 2045 Circulation Element includes specific policies and implementation measures related to developing and maintaining ADA clearance on sidewalk pedestrian amenities in the downtown area (Policy CM-5h) and to ensure public health and equity considerations are included as part of transportation network improvement decisions, including accessibility and mobility considerations for people of diverse abilities and disabilities.

The Health Element includes policies and implementation measures to engage with Arcatans of multiple abilities with regard to City infrastructure, programs, and operations to ensure that City facilities, programs, and practices serve people of varied abilities and disabilities (Policy H-4i). The Parks & Recreation Element notes that the ADA Transition Plan should include updates for parks and recreation facilities and that all master planning efforts should incorporate ADA guidelines. The Gateway Area Plan Element includes design principle 5 and Policy GA-7b promotes circulation improvements to improve safety and accessibility. Policy GA-7h, GA-8a, and GA-8d promote pedestrian friendly and accessibility in streetscape design. Policy GA-6d also encourages the development of universally designed park space, creating greater accessibility for the public than required under the ADA. As demonstrated above, goals and policies of the General Plan 2045 would be consistent with the strategies of the ADA Transition Plan. Therefore, impacts would be less than significant.

The goals and policies of the General Plan 2045 would be consistent with goals, policies, and strategies of the local plans evaluated in this Draft EIR Section. The General Plan 2045 is consistent with the plans, policies, and regulations described in Section 6.2 (Energy), Section 4.2 (Transportation), Section 5.2 (Agriculture and Forestry Resources), Section 5.3 (Biological Resources), and Section 5.5 (Hydrology and Water Quality). With the implementation of mitigation measures, the General Plan 2045 is also consistent with the plans, policies, and regulations described in Section 3.8 (Noise), Section 3.3 (Air Quality), and Section 3.5 (Greenhouse Gas Emissions). Therefore, adoption and implementation of the General Plan would cause a less than significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect.

Mitigation Measures: No additional mitigation measures for land use planning would be required beyond those identified throughout this Draft EIR, including Mitigation Measure GHG-1, Mitigation Measure NOI-1, Mitigation Measure NOI-2, and Mitigation Measure NOI-3.

Level of Significance: Impacts would be less than significant without mitigation, beyond those identified throughout this EIR.

3.7.7 Cumulative Impacts

The geographic boundary for cumulative projects related to land use and planning impacts is the City Planning Area.

Impact LU-C-1: Would adoption and implementation of the General Plan contribute to a cumulatively significant impact to Land Use and Planning?

The cumulative effects analysis examines the current project effects taken together with effects of past projects and known projects in the foreseeable future. Future projects considered for cumulative impacts are identified in Table 10.1-1.

The General Plan 2045 does not authorize the construction of a physical feature (such as a highway or wall) and/or the removal of a means of access (such as a local road, trail, or bridge) that would impair mobility within or between existing communities within the City. Projects that occur within the City would be required to conform

with the General Plan 2045. Projects listed in Table 10.1-1 that are related to housing are generally focused on infill locations; these areas have existing development, may be considered underutilized, and have existing infrastructure (including highways and local roadways) in place.

Other cumulative projects propose road safety or connectivity improvements, which would not physically divide an existing community. Additionally, the General Plan 2045 does not authorize or approve construction or development of any new highway, road, trail, walls, bridges, major infrastructure, or other features that would divide existing neighborhoods within the geographic boundary for cumulative project analysis. As such, the General Plan 2045 would have less than significant cumulative impacts.

General Plan 2045 contains policies and implementation measures in the Growth Management Element to coordination land use planning with the county of Humboldt, including areas with potential cumulative project considerations. Policy GM-2f (County Land-use and Zoning designations in Sphere of Influence) requires the City to request that Humboldt County adopt agricultural, timber, natural resource, or other rural land use designations within the Sphere of Influence, as a holding zone to prevent premature development prior to annexation to the City. Implementation Measure GM-1 requires the City to continue to participate in the county application review process and to provide input on all proposed actions in Sphere of Influence/Planning Area lands. Implementation Measure GM-3 (Update Sphere of Influence Boundary) requires the City to coordination with the Local Agency Formation Commission to comprehensively evaluate the Sphere of Influence Boundary, which could include reductions in the following areas: east of Aldergrove / Ericson Way, Bay School Road, east of Buttermilk Lane near Baywood golf course, and Bracut.

In sum, the General Plan 2045, taken together with past and foreseeable future projects, would not cause a cumulative adverse effect related to land use and planning. General Plan 2045 land use and planning policies would contribute to cohesive growth within the study area and will be adopted, in part, for the purpose of avoiding or mitigating an environmental effect. Development in other communities and unincorporated areas within the City Planning Area would also be subject to federal, state, and local policies and plans governing land use. Therefore, the cumulative impacts to land use and planning would be less than significant.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

3.8 Noise

This section evaluates the potential impacts of the proposed General Plan 2045 related to environmental noise and vibration. A Noise Tech Memo was prepared that evaluated environmental noise and vibration effects throughout the study area with a focus on the four Infill Opportunity Zones identified by the City.

The Noise Tech Memo included a review of the existing federal, state, and local regulatory framework; a review of the existing noise and vibration conditions throughout the City; and an evaluation against the standards of significance from Appendix G of the CEQA Guidelines. Comment letters were received in response to the Notice of Preparation circulated for the proposed General Plan 2045, which included some comments with respect to noise.

To provide the basis for this evaluation, the Setting section describes the local setting within the City. The Regulatory Framework section describes the regulatory background that applies to noise conditions, and the Impact Analysis section establishes the thresholds of significance, evaluates potential hazard-related impacts and identifies the significance of impacts.

3.8.1 Study Area

For impact assessment related to noise, the City limits were used as the study area (see Figure 2-1 – City of Arcata Planning Areas). Particular areas of focus within the study area are the Infill Opportunity Zones identified as the Gateway Area, Downtown, Craftsman Mall, and Valley West.

3.8.2 Setting

Fundamentals of Acoustics

Noise may be defined as objectionable or disturbing sound caused by its pitch or its loudness. Pitch is the height or depth of a tone or sound, depending on the relative frequency of the vibrations by which it is produced. Generally, higher-pitched sounds are perceived as louder to humans than sounds with a lower pitch having the same sound pressure level. Loudness is the intensity of sound waves combined with the reception characteristics of the human ear.

Noises vary widely in their scope, source, and volume, ranging from individual occurrences such as leaf blowers, to the intermittent disturbances of overhead aircraft, to the constant noise generated by traffic on freeways or mechanical equipment associated with an industrial facility. Noise is primarily a concern for sensitive receptor locations such as residences, schools, churches, parks, and hospitals.

In addition to the concepts of pitch and loudness, there are several noise measurement metrics which describe noise in a particular location. A decibel (dB) is a unit of measurement in acoustics which indicates the relative amplitude of a sound compared to a reference sound level. The generally accepted reference sound pressure is 20 µPa, which is used throughout this Study. The zero on the decibel scale corresponds to approximately the lowest sound level that the healthy, unimpaired human ear can detect. Sound levels in dB are calculated on a logarithmic scale. An increase of 10 dB represents a ten-fold increase in acoustic energy, while 20 dB is 100 times more intense, 30 dB is 1,000 times more intense, and so on. There is a relationship between the subjective noisiness or loudness of a sound and its dB level. Each 10 dB increase in sound level is perceived as approximately a doubling of loudness over a wide range of intensities.

Table 3.8-1 provides a brief summary of how changes in measured dB levels are perceived by the human ear.

Table 3.8-1 Human Perceptibility of Changes in Sound Level (Bies & Hansen 2009)

Change in Measured Sound Level (dB)	Change in Perceived Loudness
+3 dB	Threshold of human perceptibility to sound level change

Change in Measured Sound Level (dB)	Change in Perceived Loudness
+5 dB	Clearly noticeable change in noise level
+10 dB	Twice as loud
+20 dB	Much louder (any previously audible sources are completely masked by the louder source at this point)

Sound levels are often expressed in terms of A-weighted decibel levels (dBA), A-weighted sound levels are intended to more accurately represent the sound level experienced by the human ear. Since humans do not perceive sounds in all frequency ranges equally, the A-weighted correction artificially suppresses the impact of low frequency (31.5 – 125 Hz) sound in favor of middle and higher range frequency more easily perceived by humans (250 – 8000 Hz). Unless otherwise stated, sound levels presented and discussed in this section are subject to A-weighting.

For non-transportation and stationary noise sources, the typical sound level descriptor used to quantify exposure are the 1-hour time-equivalent sound level (Leq 1-hr) and the Lmax sound level. The Leq sound level descriptor accounts for sound pressure level fluctuations from moment to moment by averaging the louder and quieter moments over a time period (e.g., one hour) to determine an equivalent continuous sound pressure level. The Lmax descriptor is the highest sound pressure level experienced/measured over the course of a sound level measurement period.

Since the sensitivity of noise receptors to noise increases during the evening and at night, and because excessive noise interferes with the ability to sleep, 24-hour descriptors have been developed that incorporate artificial noise penalties added to quiet-time noise events. The Day/Night Average Sound Level (Ldn) represents the average A-weighted sound pressure level during a 24-hour day, obtained after addition of 10 decibels to levels assessed in the night between 10:00 PM and 7:00 AM. Community Noise Equivalent Level (CNEL) is an average A-weighted noise level during a 24-hour day, obtained after addition of 5 decibels to levels assessed in the evening between 7:00 PM and 10:00 PM as well as 10 decibels to levels assessed in the night between 10:00 PM and 7:00 AM. For the purposes of this Study, all evaluated/calculated transportation noise levels will be presented in terms of Ldn.

Generally, sound energy from localized or point sound sources spreads out spherically as it travels away from the source, resulting in sound pressure level reductions of approximately 6 dB per doubling of distance from the source. Sound energy from a line source (e.g., traffic on a highway) spreads out cylindrically, resulting in sound pressure level reductions of approximately 3 dB per doubling of distance from the source. Environmental factors also affect the transmission of sound, including ground absorption, atmospheric absorption, temperature gradients, wind, and screening by physical obstructions.

According to the Governor’s Office of Planning and Research, maximum exterior noise levels of 60 dBA are considered “normally acceptable” for unshielded residential development.

Noise levels from 60 to 70 dBA fall within the “conditionally unacceptable” range, and those in the 70 to 75 dBA range are considered “normally unacceptable.”

For reference, Caltrans publishes the following table of typical noise levels to provide context for regulatory limits and acceptable levels.

Table 3.8-2 Typical Noise Levels of Everyday Settings (Caltrans 2023)

Common Outdoor Activities	Noise Level (dBA)
Instant perforation of eardrum	160
	150
Military Jet Takeoff	140
Threshold of Pain	130
Front rows of rock concert	120
	110
Earphones at maximum level	100
	90
Vacuum cleaner	80
Busy street traffic	70
Normal conversation	60
	50
	40
	30
Whisper	20
Rustling leaves	10
Threshold of hearing	0

Fundamentals of Ground Borne Vibration

Ground vibration consists of rapidly fluctuating motions or waves with an average motion of zero. Several methods are typically used to quantify the amplitude of vibration including peak particle velocity and Root mean square velocity. Peak particle veloccity is defined as the maximum instantaneous positive or negative peak of the vibration wave. Root mean square velocity is defined as the square root of the average of the squared amplitude of the signal, usually measured in decibels relative to one micro-inch per second (in/sec) and reported in velocity decibels (VdB). Peak particle velocity and VdB vibration velocity amplitudes are typically used in analysis to evaluate the effect of vibration on buildings and people in the vicinity of construction activities.

Construction activities can cause vibration that varies in intensity depending on several factors. The use of pile-driving and vibratory compaction equipment typically generates the highest construction-related ground borne vibration levels. Because of the impulsive nature of such activities, the peack particle velocity descriptor has been used routinely to measure and assess ground borne vibration due to construction and almost exclusively to assess the potential of vibration to induce structural damage. The root mean square descriptor is more commonly used to assess human perception to vibration. Table 3.8-3 below summarizes various vibration levels and various associated thresholds.

Table 3.8-3 Typical Levels of Ground Borne Vibration (FTA 2018)

Human/Structural Response	RMS Vibration Velocity Level (VdB relative to 10^{-6} in/s)	Typical Sources (50 ft from source)
Threshold for risk of minor cosmetic damage for fragile buildings	100	Blasting from construction projects
		Bulldozers and other heavy tracked construction equipment
Difficulty with tasks such as reading a computer screen	90	
		Commuter rail (upper range)
Residential annoyance, infrequent events (e.g., commuter rail)	80	Rapid transit (upper range)
Residential annoyance, frequent events (e.g., rapid transit)		Commuter rail (typical); bus or truck over bump
	70	Rapid transit (typical)
Limit for vibration sensitive equipment; approximate threshold for human perception of vibration		Bus or truck (typical)
	60	
		Typical background vibration
	50	

The potential for structural damage due to ground borne vibration is dependent on the level of the vibration, the type of structure, and the integrity of the structure. Reinforced concrete structures are less susceptible to damage due to vibration, while older, timber structures are significantly more susceptible to damage by vibration. For reference, Table 3.8-4 below summarizes construction vibration damage criteria used by the Federal Transit Administration.

Table 3.8-4 Construction Vibration Damage Criteria (FTA 2018)

Building / Structure Category	PPV (in/s)
Reinforced-concrete, steel or timber (no plaster)	0.5
Engineered concrete and masonry (no plaster)	0.3
Non-engineered timber and masonry buildings	0.2
Buildings extremely susceptible to vibration damage	0.12

Existing Noise and Vibration Environment within the Study Area

This section summarizes existing ambient noise conditions in the City, with a focus on the Infill Opportunity Zones. The primary existing sources of noise in the City are understood to be vehicle traffic from highways and local roadways, as well as light industrial/commercial activities. In addition, existing commercial / light industrial areas within the City are a source of stationary noise. Sources of ground borne vibration are typically minimal but can occasionally be sourced to vehicles using the roadway. There are no active railroad lines within the City.

Current conditions in the City are generally dominated by the noise sources associated with traffic on SR 101, Samoa Blvd (SR 255), and arterial roads, along with numerous other smaller streets. Noise sources include stopping, turning, accelerating, and decelerating automobiles and trucks. In addition, stationary noise sources (air conditioning units, loading docks, mechanical equipment, etc.) from commercial and light industrial activity also contribute to the ambient noise environment.

A community noise survey conducted in 1997 as part of background studies for the General Plan 2020 showed that typical noise levels in noise-sensitive areas of the City ranged from 46 dB to 63 dB Ldn. The primary sources

of noise at that time were road traffic, railroad operations, industrial activities, and neighborhood activities. Since the time of the survey, the following changes have occurred:

– There are no longer any active rail operations within the City.
– Traffic volumes are generally assumed to be higher in present-day compared to 1997 due to population growth within the City. For reference, the population grew approximately 24% from 1990 to 2020 (U.S. Census 1992, 2022).
– There have been changes in land uses within the City.

Based on projected 2020 noise contours presented in the General Plan 2020, noise survey results referenced above, and actual population growth in the City, existing road traffic noise levels within the City are estimated to be generally in the range of 50 dB to 65 dB Ldn. At locations in close proximity to major roads and highways there is potential for existing noise levels exceeding 65 dB Ldn.

Noise can result from many processes and activities even when the best available noise control technology is applied. Noise exposure within industrial facilities is controlled by federal and state employee health and safety regulations, but exterior noise levels may exceed locally acceptable standards. Activities at commercial, recreational, and public services facilities can also produce noise that affects adjacent land uses.

Non-transportation related noise generators are typically called “stationary”, “fixed, “area”, or “point” sources of noise. Industrial processing, mechanical equipment, pump stations, and heating, ventilating, and air conditioning (HVAC) equipment are examples of fixed location, non-transportation noise sources within the City and Gateway Area. Some non-transportation sources are not stationary but are typically assessed as point or area sources due to the limited area in which they operate, such as truck deliveries, agricultural field machinery, and material handling equipment.

Of these noise sources, noise generated by delivery truck activity typically generates the highest maximum noise levels. Delivery truck loading and unloading activities can result in maximum noise levels from 75 dBA to 85 dBA Lmax at 50 feet. Other noise sources specific to commercial centers and industrial zones of the City include light and medium industrial land uses, which can vary in noise level.

Existing Noise and Vibration Environment within the Gateway Area and Downtown Area

A technical noise study was completed in February 2023 by GHD and is attached to this Draft EIR as Appendix F. Based on GHD’s review of aerial imagery of the Gateway Area, Downtown Area, and properties in the immediate surroundings, these areas currently include some light- and medium-scale industrial / commercial facilities. The majority of these facilities are existing in close proximity to sensitive/residential uses and would not be expected to produce significant noise levels without resulting in complaints from residents. However, there are also some medium-scale industrial/commercial facilities south of 8th Street and west of L Street within the Gateway Area, and just south of the Gateway Area, which are not as close to sensitive receptor locations (e.g., Wing Inflatables, 300 feet from nearest residence; C&K Johnson Industries, 380 feet from nearest residence). These facilities would be categorized as medium or heavy industries (see Table 3.8-9 below) and may have the potential for significant noise emissions in the areas surrounding them (estimate potential for noise impacts at up to approximately 1,000 feet). At this time, it is not known if any of these facilities produce noise levels exceeding the standards set out in Table 3-2 of the Land Use Code (Table 3.8-5 of this Draft EIR).

Existing Noise and Vibration Environment within Remaining Infill Opportunity Zones

The Craftsman Mall infill area includes a mixture of residential and light- to medium-scale industrial / commercial facilities. At this time, it is not known if any of these facilities produce noise levels exceeding the standards set out in Table 3-2 of the Land Use Code.

The Valley West infill area includes a mixture of residential and light-scale industrial/commercial facilities. At this time, it is not known if any of these facilities produce noise levels exceeding the standards set out in Table 3-2 of the Land Use Code.

Sensitive Receptors within the Study Area

Sensitive receptors are people who are particularly susceptible to the adverse effects of noise, and sensitive receptor locations include: residences, schools, playgrounds, childcare centers, retirement homes, hospitals, and medical clinics.

Sensitive Receptors within the Gateway Area

The Gateway Area currently includes R-L uses dispersed throughout, the Redwood Coast Montessori Arcata Campus (793 K St), and Little Learners Center (1111 M St). These are all considered noise-sensitive receptor locations.

Sensitive Receptors within Remaining Infill Opportunity Zones

The other Infill Opportunity Zones include R-L and R-M uses dispersed throughout, hotels/motels, Arcata Plaza, Humboldt Open Door Clinic (770 10th St), and Plaza Point seniors' residence (977 8th St). These uses are all considered to be noise-sensitive receptor locations.

3.8.3 Regulatory Framework

Federal

The adverse impacts of noise were officially recognized by the federal government in the Noise Control Act of 1972 (42 U.S. Code, § 4901-4918), which serves three purposes:

– Promulgating noise emission standards for interstate commerce;
– Assisting state and local abatement efforts; and
– Promoting noise education and research.

The Office of Noise Abatement and Control was initially tasked with implementing the Noise Control Act. However, the Noise Abatement and Control has since been eliminated, leaving the development of federal noise policies and programs to other federal agencies and interagency committees. For example, OSHA prohibits exposure of workers to excessive sound levels. The U.S. DOT assumed a significant role in noise control through its various operating agencies, such as with the Federal Aviation Administration, which regulates noise generated by aircraft and airports. Surface transportation system noise is regulated by a host of agencies, including the Federal Transit Administration (FTA), which requires that all rail systems receiving federal funding be constructed and operated in accordance with its regulations and specifications. The Federal Railroad Administration sets forth and enforces safety standards, including noise emissions within railroad locomotive cabs. Transit noise is regulated by the FTA, while freeways that are part of the interstate highway system are regulated by the Federal Highway Administration (FHWA). The FHWA has adopted and promulgated noise abatement criteria for highway construction projects. The federal government encourages local jurisdictions to use their land use regulatory authority to site new development to minimize potential noise impacts.

Federal Highway Administration (FHWA) Standards

Title 23, Part 772 sets procedures for the abatement of highway traffic noise and construction noise. Title 23 is implemented by the U.S. DOT FHWA. The purpose of this regulation is to provide procedures for noise studies and noise abatement measures to help protect the public health and welfare, to supply noise abatement criteria, and to establish requirements for information to be given to local officials for use in the planning and design of highways. All highway projects which are developed in conformance with this regulation shall be deemed to be in conformance with the U.S. DOT FHWA Noise Standards. Title 23 establishes a 67 dBA standard to federal highway projects (23 CFR Chapter 1, Part 772, Section 772.19).

Federal Transit Administration (FTA) Standards

For federally funded mass transit projects, the FTA standards preempt county/regional standards. The vibration standards listed in the FTA Transit Noise and Vibration Impact Assessment Manual (FTA 2018) are currently relied upon for vibration assessment and exposure limits.

State

California Senate Bill 860, which became effective January 1, 1976, directed the California Office of Noise Control within the state Department of Health Services to prepare “Guidelines for the Preparation and Content of Noise Elements of the General Plan.” One purpose of these guidelines was to provide sufficient information concerning the noise environment in the community so that noise could be considered in the land use planning process. As part of this publication, Land Use Compatibility Standards were developed in four categories: Normally Acceptable, Conditionally Acceptable, Normally Unacceptable, and Clearly Unacceptable. These categories were based on earlier work done by the U.S. Department of Housing and Urban Development (HUD). The interpretation of the four categories is as follows:

- **Normally Acceptable**: Specified land use is satisfactory without special insulation.
- **Conditionally Acceptable**: New development requires detailed analysis of noise insulation requirements.
- **Normally Unacceptable**: New development is discouraged and requires a detailed analysis of insulation features.
- **Clearly Unacceptable**: New development should not be undertaken.

The state of California has developed a Land Use Compatibility Matrix for community noise environments that further defines the four categories of acceptance and assigns Ldn/CNEL values to them.

In addition, the California Building Code (Title 24 CCR Part 2) establishes uniform minimum noise insulation performance standards to protect persons within new hotels, motels, dormitories, long-term care facilities, apartment houses, and residential units other than detached single family residences from the effects of excessive noise, including, but not limited to, hearing loss or impairment and interference with speech and sleep. Residential structures to be located where the CNEL or Ldn is 60 dBA or greater are required to provide sound insulation to limit the interior CNEL/Ldn to a maximum of 45 dBA. An acoustic, or noise, analysis report prepared by an experienced acoustical engineer is required for the issuance of a building permit for these structures. Conversely, land use changes that result in increased noise levels at residences of 60 dBA or greater must be considered in the evaluation of impacts to ambient noise levels. Table IV.E-2, *Land Use Compatibility for Community Noise Environments*; and Table IV.E-3, *Normally Acceptable Noise Levels for Residential Land Use*, depict noise levels for a variety of uses.

Local

City of Arcata General Plan 2020

The General Plan 2020 addresses noise resources in the Noise Element. The following policies from the General Plan 2020 were used to analyze the difference in existing versus proposed policies in the General Plan 2045. These policies are implemented in Section 9.30.050 of the Land Use Code (described below).

> ***Policy N-1: Noise Attenuation***
>
> ***Objective.*** *Reduce, or eliminate, noise impacts at their source by providing enclosures, barriers, and other on-site noise attenuation measures for noise generating activities. Monitor noise levels to ensure that acceptable noise levels are maintained on adjacent sites.*
>
> *Applicable sub-policies*
>
> > ***N-1a: Noise attenuation measures.*** *Noise attenuation measures, and stationary noise source controls shall include the use of barriers, setbacks, site design, baffles, enclosures, silencers, and improved facade construction techniques.*

N-1b: Noise attenuation guidelines. *Noise attenuation measures and stationary noise source controls shall follow the guidelines provided in the technical document entitled: Noise Control Manual (which is considered an implementation measure).*

N-1c: Noise mitigation. *Where noise mitigation measures are required, the emphasis of such measures shall be placed upon site planning and project design. The use of noise barriers shall be considered a means of achieving the noise standards only after all other practical design-related noise mitigation measures have been integrated into the project.*

N-1d: Noise level reduction. *To reduce existing, objectionable, industrial, and stationary noise levels at the source, the City shall work with local industries to incorporate noise control technology through building and site design and engineering solutions. The City shall make available current acoustical attenuation techniques (Noise Control Manual) for new and retrofitted industrial development.*

N-1e: Noise standards enforcement. *Enforcement of noise standards shall be accomplished through development and implementation of a noise control ordinance, post-project compliance testing, and through the use of mediation.*

N-1f: Mediation of noise conflicts. *Where noise conflicts may occur, all affected parties shall strive to use innovative and positive solutions to solve those disputes, including the use of trained mediators. The City recognizes that many noise issues can be resolved before they get to the complaint stage if there is a procedure for airing the issue with an impartial third party.*

N-1g: Resolution of noise disputes. *The City shall establish positive ways to discuss and resolve noise issues and disputes, including the use of trained mediators.*

Policy N-2: Stationary Noise Sources and Levels

Objective. *Establish acceptable noise levels for land uses and activities that will protect community residents from the harmful effects of excessive noise exposure from stationary noise generators. Maintain interior and exterior noise standards that will achieve land use compatibility with respect to community noise.*

Applicable sub-policies:

N-2a: Noise contour maps. *The noise contour map (Figure N-b) and other estimates of noise source levels shall be used in conjunction with the noise source criteria to evaluate the feasibility of a proposed project.*

N-2b: New development of noise-sensitive uses. *New noise receptors shall not be allowed where the noise level from non-transportation noise generators will exceed noise level standards (Table N-1), unless effective noise mitigation measures that meet City standards are incorporated. (Table N-1 is shown below as Table 3.8-5).*

N-2c: Noise created by new or proposed stationary noise sources. *Noise created by new or proposed stationary noise sources, or the expansion or alteration of an existing use, shall be mitigated so as not to exceed noise level standards (Table N-1) at noise-sensitive land uses. All noise generators not in compliance with these standards will be encouraged to mitigate impacts. (Table N-1 is shown below as Table 3.8-5)*

N-2d: Acceptable noise levels. *New construction and retrofits at existing buildings shall include appropriate insulation, glazing, and other sound attenuation measures so that they comply with standards contained in Table N-1. These standards are intended to set levels for external noise sources that could potentially impact a new dwelling or other noise-sensitive use. (Table N-1 is shown below as Table 3.8-5)*

Policy N-3: Transportation Noise Sources and Levels

Objective. *Establish acceptable noise levels, for land uses and activities, that will protect community residents from the harmful effects of excessive noise exposure due to transportation noise sources.*

Maintain interior and exterior noise standards that will achieve land use compatibility with respect to community noise.

Applicable sub-policies:

N-3a: New development of noise-sensitive land uses. *New development of noise receptors will not be permitted in areas exposed to existing or projected levels of transportation noise exceeding levels specified in Table N-2, unless exterior noise or noise levels in interior spaces can be reduced to meet City Standards (Table N-2). (Table N-2 is shown below as Table 3.8-6)*

N-3b: Transportation noise. *Transportation noise sources shall be periodically measured, and significant increases mitigated, so as not to exceed the levels specified in Table N-2 for outdoor activity areas or interior spaces of existing receptors. (Table N-2 is shown below as Table 3.8-6).*

N-3c: Roadway projects. *To minimize noise impacts, the following criteria may be used as a test of significance for roadway projects:*

1. *Where existing traffic noise levels are less than 60 dB Ldn at the outdoor activity areas of noise receptors, a +5 dB Ldn increase in noise levels due to a roadway improvement project will be considered significant.*
2. *Where existing traffic noise levels range between 60 and 65 dB Ldn at the outdoor activity areas of noise receptors, a +3 dB Ldn increase in noise levels due to a roadway improvement project will be considered significant.*
3. *Where existing traffic noise levels are greater than 65 dB Ldn at the outdoor activity areas of noise receptors, a + 1.5 dB Ldn increase in noise levels due to a roadway improvement project will be considered significant.*

Policy N-4: Acoustical Analysis Requirements

Objective. *Establish a consistent procedure and framework for conducting and reviewing acoustical analyses.*

Applicable sub-policies:

N-4a: Noise-sensitive land uses. *Where receptor land uses are potentially exposed to existing or projected exterior noise levels exceeding the levels specified in Table N-2 or the performance standards of Table N-1, an acoustical analysis shall be required as part of the environmental review process, so that noise mitigation may be included in the project design. An acoustical analysis prepared pursuant to the Noise Element shall:*

1. *Be the financial responsibility of the applicant.*
2. *Be prepared by a qualified person experienced in the fields of environmental noise assessment and architectural acoustics.*
3. *Include noise level measurements, with sufficient sampling periods and locations, to adequately describe local conditions and the predominant noise sources.*
4. *Estimate existing and projected cumulative (twenty years) noise levels in terms of Ldn or CNEL and/or the standards of Table NI, and compare those levels to the adopted policies of the Noise Element.*
5. *Recommend appropriate mitigation to achieve compliance with the adopted policies and standards of the Noise Element, giving preference to proper site planning and design over mitigation measures which require the construction of noise barriers or structural modifications to buildings which contain noise sensitive land uses.*
6. *Estimate noise exposure after prescribed mitigation measures are implemented.*

7. *Describe a post-project assessment program which could be used to evaluate the effectiveness of the proposed mitigation measures.*

Policy N-5: Intrusive and Intermittent Noise Sources

Objective. *Protect community residents from the effects of excessive, intrusive, and intermittent noise. Set standards for intrusive and intermittent noise sources for both daytime and nighttime periods. Intrusive noise sources have a qualitative aspect that can be annoying. These sources may contain a tonal component which is absent from the existing general background noise. They may also be rhythmic, reoccurring or impulsive in nature, or comprised mainly of music or speech. Intrusive noise can result in annoyance or interference with sleep. These types of noise sources can include, but are not limited to, industrial processes, warning horns, backup alarms, and pressure release devices.*

Applicable sub-policies:

N-5a: Intrusive noise. *When intrusive noise sources have been identified, the detrimental effects (sleep interference or the potential for annoyance) shall be disclosed to neighboring receptor properties.*

N-5b: Noise levels due to non-transportation sources. *Noise levels due to non-transportation sources which may be intermittent or recurring, impulsive noises, pure tones, or noises consisting primarily of speech or music, shall be subject to the criteria contained within Table N-1, with a -5 dB penalty applied to the criteria.*

N-5c: Rhythmic, reoccurring, or impulsive noise sources. *When noise sources have been identified to be rhythmic, reoccurring, or impulsive in nature or comprised mainly of music or speech, they may comply with applicable noise level criteria and still be annoying to individuals. When these types of noise sources have been identified, they may be subject to additional mitigation or mediation.*

N-5d: Construction site tool or equipment noise. *The following shall apply to construction noise from tools and equipment:*

1. *The operation of tools or equipment used in construction, drilling, repair, alteration or demolition shall be limited to between the hours of 8 A.M. and 7 P.M. Monday through Friday, and between 9 a.m. and 7 p.m. on Saturdays.*
2. *No heavy equipment related construction activities shall be allowed on Sundays or holidays.*

This shall apply to construction noise from tools and equipment which are subject to the review of the City, and which may affect receptor uses. This policy shall not apply to emergency work of public service utilities or by variance under a noise ordinance.

N-5e: Stationary and construction equipment noise. *All stationary and construction equipment shall be maintained in good working order, and fitted with factory approved muffler systems.*

N-5f: Noise ordinance *– The City of Arcata shall develop and adopt a City-wide noise ordinance. The ordinance shall contain noise level criteria consistent with the criteria contained within the noise element.*

City of Arcata Land Use Code

The City of Arcata Land Use Code (Title 9 of the Municipal Code) addresses noise throughout the City in Title III – Planning and Project Design Standards, section 9.30.050 “Noise Standards” (City of Arcata 2019) as follows:

A. *“**Purpose**. This Section implements the policies of the Noise Element of the General Plan, and provides standards for noise mitigation that are intended to protect the community health, safety, and general welfare by limiting exposure to the unhealthful effects of noise.*

B. ***Applicability**. No use, activity, or process shall exceed the maximum allowable noise levels established by this Section, except for the following noise sources:*

1. ***Emergencies**. Public safety warning devices (e.g., ambulance, fire, and police sirens), sound for alerting persons to the existence of an emergency, or the performance of authorized emergency work;*

2. ***State or Federal preempted activities**. Any activity regulated by State or Federal law;*

3. ***Public health and safety activities**. Construction, maintenance, and/or repair operations by public agencies and/or utility companies or their contractors that are serving public interests, and/or protecting the public health, safety, and general welfare;*

4. ***Parks**. Public agency sanctioned recreational activities and programs conducted in public parks; and*

5. ***Solid waste collection**. The authorized collection of solid waste.*

C. ***Definitions**. Definitions of the technical terms used in this Section may be found in Article 10 (Glossary) under "Noise."*

D. ***Noise source standards.***

1. ***Stationary and transportation source noise level limitations**. No use, activity, or process within the City shall generate noise in excess of the levels identified by [Table 3.8-5] and [Table 3.8-6], as the noise is measured at the property line of a noise sensitive land use identified in [Table 3.8-5] and [Table 3.8-6].*

   a. *If the measured ambient noise level exceeds the applicable noise level standard in any category shown in the tables, the applicable standards shall be adjusted to equal the ambient noise level.*

   b. *If the noise source being evaluated is continuous and cannot reasonably be discontinued or stopped to allow measurement of the ambient noise level, the noise level measured while the source is in operation shall be compared directly to the applicable noise level standards identified in the tables.*

   Notwithstanding the above requirements, no person shall allow or cause the generation of any noise of a type, volume, pitch, tone, repetition, or duration that would be found to be a nuisance by a reasonable person beyond the boundaries of the property where the noise is generated.

Table 3.8-5. Maximum Allowable Stationary Noise Level by Receiving Land Use (Table 3-2 of the Land Use Code)

Noise Level Descriptor	Maximum Exterior Noise Level			Maximum Interior Noise Level		
	7 am – 7 pm	7 am – 10 pm	10 pm – 7 am	7 am – 7 pm	7 am – 10 pm	10 pm – 7 am
Dwellings, Transient Lodging, Hospitals, Extended Care, and Similar Uses						
Hourly Leq	55 dB	50 dB	45 dB	45 dB	40 dB	35 dB
Maximum	75 dB	75 dB	70 dB	65 dB	65 dB	60 dB
Meeting Facilities, Auditoriums, Theaters, Libraries, Schools, and Similar Uses						
Hourly Leq	55 dB	55 dB	n/a	40 dB	40 dB	n/a
Maximum	75 dB	75 dB	n/a	60 dB	60 dB	n/a

Notes:
(1) The City can impose noise level standards up to 5 dB less than those specified above based upon determination of existing low ambient noise levels in the vicinity of the project site.
(2) These noise level standards do not apply to residential units established in conjunction with industrial or commercial uses (e.g., caretaker dwellings).
(3) The standards will be applied at the outdoor activity areas of the receiving land use, and at the building facade for upper floor receivers which do not have an outdoor activity area facing the noise source. Where no outdoor activity area is identified, the City has the option to apply only the interior noise level performance standards.

Table 3.8-6. Maximum Allowable Transportation Noise Exposure (Table 3-3 of the Land Use Code)

Noise Sensitive Land Use	Outdoor Activity Areas (1)	Interior Spaces	
	dBA Ldn	dBA Ldn	dBA Leq (2)
Residential	60 (3)	45	n/a
Transient Lodging	60 (4)	45	n/a
Hospitals, extended care	60 (3)	45	n/a
Theater, auditorium	n/a	n/a	35
Meeting facility, public or private	60 (3)	n/a	40
Offices	n/a	n/a	45
School, library, museum	n/a	n/a	45
Playground, park	70	n/a	n/a

Notes:
(1) Where the location of outdoor activity areas is unknown, the exterior noise level standard shall be applied to the property line of the receiving land use.
(2) As determined for a typical worst-case hour during periods of use.
(3) Where it is not possible to reduce noise in outdoor activity areas to 60 dB Ldn/CNEL or less using a practical application of the best-available noise reduction measures, an exterior noise level of up to 65 dB Ldn/CNEL may be allowed provided that available exterior noise level reduction measures have been implemented and interior noise levels are in compliance with this table.
(4) In the case of hotel/motel facilities or other transient lodging, outdoor activity areas such as pool areas may not be included in the project design. In these cases, only the interior noise level criterion will apply.

2. ***Limitation on hours of construction****. In order to allow construction schedules to take advantage of the weather and normal daylight hours, and to ensure that nearby residents as well as nonresidential activities are not disturbed by the early morning or late night activities, construction site tool and equipment noise shall be limited in compliance with [Table 3.8-7] or as required by conditions of approval.*

Table 3.8-7. Allowable Hours of Construction (Table 3-4 of the Land Use Code)

Day	Allowable Hours
Monday through Friday	8:00 a.m. to 7:00 p.m.
Saturday	9:00 a.m. to 7:00 p.m.
Sunday, Holidays	* No heavy equipment-related construction activities allowed

All stationary and construction equipment shall be maintained in good working order, and fitted with factory approved muffler system.

3. ***Intrusive noise****. When intrusive noise sources have been identified through project review, the review authority shall require that the detrimental effects (sleep interference or the potential for annoyance) be disclosed to neighboring receptor properties.*

4. ***Rhythmic, recurring, or impulsive noise sources****. When noise sources have been identified to be rhythmic, reoccurring, or impulsive in nature or comprised mainly of music or speech, they may comply with applicable noise level criteria and still be annoying to individuals. When these types of noise sources have been identified, they may be subject to additional mitigation or mediation, and shall be subject to the criteria in [Table 3.8-6], with a -5 dB penalty applied to the criteria.*

E. ***Standards for sensitive receptors.*** *New noise sensitive land uses as identified in [Table 3.8-6] shall not be allowed where the noise level from existing non-transportation noise generators will exceed the noise level standards in [Table 3.8-5], or where projected levels of transportation noise will exceed the levels specified in [Table 3.8-6], unless effective noise mitigation measures are incorporated into*

project design to maintain outdoor and indoor noise levels on the receptor site in compliance with [Tables 3.8-5], and [3.8-6].

1. *New noise-sensitive uses. New construction and retrofits at existing buildings shall include appropriate insulation, glazing, and other sound attenuation measures so that they comply with standards in [Table 3.8-6].*

2. *Mitigation required. Noise that may affect a proposed noise sensitive land use shall be mitigated to not exceed the noise level standards in [Table 3.8-5] at the property line of any noise-sensitive land use identified in [Table 3.8-6]. Appropriate mitigation measures include:*

    a. *Noise attenuation measures, and stationary noise source controls shall include the use of barriers, setbacks, site design, baffles, enclosures, silencers, and improved facade construction techniques.*

    b. *Where noise mitigation measures are required, mitigation shall occur primarily through site planning and project design, where feasible. The use of noise barriers shall be considered a means of achieving the noise standards only after all other practical design-related noise mitigation measures have been integrated into the project.*

F. ***Acoustical analysis**. Where the Director determines that a proposed project is a noise sensitive land use (such as hospitals, schools, and health care facilities), or may generate noise in excess of any limit established by [Tables 3.8-5] or [3.8-6], and/or where the use may generate noise in outdoor areas in excess of 60 dBA, the planning permit application for the use shall include an acoustical analysis, which shall:*

3. *Be the financial responsibility of the applicant;*

4. *Be prepared by a qualified person experienced in the fields of environmental noise assessment and architectural acoustics;*

5. *Include noise level measurements, with sufficient sampling periods and locations, to adequately describe local conditions and the predominant noise sources;*

6. *Estimate existing and projected cumulative (20-year) noise levels in terms of Ldn or CNEL and/or the standards of [Table 3.8-5], and compare those levels to the requirements of this Section and the policies of the Noise Element;*

7. *Recommend appropriate mitigation to achieve compliance with this Section and the policies and standards of the Noise Element, giving preference to proper site planning and design over mitigation measures which require the construction of noise barriers or structural modifications to buildings that contain noise-sensitive land uses;*

8. *Estimate noise exposure after prescribed mitigation measures are implemented; and*

9. *Describe a post-project assessment program that may be used to evaluate the effectiveness of the proposed mitigation measures.*

G. ***Noise measurement**. Exterior noise levels shall be measured at the property line of the noise sensitive land use receiving the noise. Noise measurement shall be made with a sound level meter using the 'A' weighted scale at slow meter response. Fast meter response shall be used only for an impulsive noise.*

The City of Arcata Land Use Code addresses noise in the Downtown Plaza Area in Title IV – Public Welfare, Morals and Conduct, Chapter 3 (City of Arcata 1996). While Chapter 3 does not apply directly to the Gateway Area, the requirements are provided below for reference:

Section 4320 Exterior Noise in General

A. *No person shall make, cause, suffer or permit to be made any noises or sounds at any location within the Downtown Plaza area which causes the average sound level when measured on any other property to exceed:*

1. *60 dBA between the hours of 10:00 p.m. and 7:00 a.m. or 65 dBA between the hours of 7:00 a.m. and 10:00 p.m. for a cumulative period of more than 10 minutes in any hour; or*
2. *the standard expressed in item 1 above plus five dB for a cumulative period of five minutes in any hour; or*
3. *the standard expressed in item 1 above plus 15 dB for any period of time; or*
4. *the ambient noise level, for a period of five or more minutes.*

B. *If the measured ambient noise level exceeds that permissible within any of the first three noise limit categories above, the allowable noise exposure standard shall be the ambient noise level.*

C. *If possible, the ambient noise level shall be measured at a location along the real property boundary on the property adjoining the parcel which is the location of the alleged offending noise source. If the intruding noise source is continuous and cannot be reasonably discontinued or stopped for a time period whereby the ambient noise level can be measured, the ambient noise level shall be determined by traveling away from the noise source to a point where a steady state decibel reading is achieved. If this test is not possible, the noise level shall be compared directly to the noise level standards in section A above.*

D. *Adjustment for character of sound. In the event the alleged offensive noise, as judged by the noise control officer, contains a steady, pure tone such as a whine, screech, or hum, or is an impulsive sound such as hammering or riveting, or is repetitive or rhythmic in character, the standards set forth in section A above shall be reduced by five dB.*

Section 4325 Offensive or Unreasonably Disturbing Noises

A. *Notwithstanding the standards set forth in Section 4320, no persons shall make, cause, suffer or permit to be made any offensive or unreasonably disturbing noise which disturbs any person within hearing distance of such noise.*

B. *Offensive noise means any noise which is loud, boisterous, irritating, penetrating, repetitive, rhythmic or unusual, or that is unreasonably distracting in any other manner, such that it is likely to disturb people of ordinary sensitivity in the vicinity of such noise."*

City of Arcata General Plan 2045

Policies in the Proposed General Plan 2045 relating to noise resources in the Noise Element include:

Policy N-1 Noise Attenuation

Objective. *Reduce, or eliminate, noise impacts at their source by providing enclosures, barriers, and other on-site noise attenuation measures for noise generating activities. Monitor noise levels to ensure that acceptable noise levels are maintained on adjacent sites.*

Applicable sub-policies

- ***N-1a: Noise attenuation measures.*** *Noise attenuation measures, and stationary noise source controls shall include the use of barriers, setbacks, site design, baffles, enclosures, silencers, and improved facade construction techniques.*
- ***N-1b: Noise attenuation.*** *Where noise attenuation measures are required, the emphasis of such measures shall be placed upon site planning and project design. The use of noise barriers shall be considered a means of achieving the noise standards only after all other practical design-related noise attenuation measures have been integrated into the project.*
- ***N-1c: Noise level reduction.*** *To reduce existing, objectionable, industrial, and stationary noise levels at the source, the City shall work with local industries to incorporate noise control technology through building and site design and engineering solutions. The City shall make available current acoustical attenuation techniques (Noise Control Manual) for new and retrofitted industrial development.*

- ***N-1d: Noise standards enforcement.*** *Enforcement of noise standards shall be accomplished through development and implementation of a noise control ordinance, post-project compliance testing, and through the use of mediation.*
- ***N-1e: Mediation of noise conflicts.*** *Where noise conflicts may occur, all affected parties shall strive to use innovative and positive solutions to solve those disputes, including the use of trained mediators. The City recognizes that many noise issues can be resolved before they get to the complaint stage if there is a procedure for airing the issue with an impartial third party.*
- ***N-1f: Resolution of noise disputes.*** *The City shall establish positive ways to discuss and resolve noise issues and disputes, including the use of trained mediators.*

Policy N-2: Stationary Noise Sources and Levels

Objective. *Establish acceptable noise levels for land uses and activities that will protect community residents from the harmful effects of excessive noise exposure from stationary noise generators. Maintain interior and exterior noise standards that will achieve land use compatibility with respect to community noise.*

Applicable sub-policies

- ***N-2a: Noise contour maps.*** *The noise contour map (Figure N-b) and other estimates of noise source levels shall be used in conjunction with the noise source criteria to evaluate the impacts to and from a proposed project, as well as the attenuation measures that may be necessary.*
- ***N-2b: New development of noise-sensitive uses.*** *New noise receptors shall not be allowed where the noise level from non-transportation noise generators will exceed noise level standards (Table N-1), unless effective noise attenuation measures that meet City standards are incorporated.*
- ***N-2c: Noise created by new or proposed stationary noise sources.*** *Noise created by new or proposed stationary noise sources, or the expansion or alteration of an existing use, shall be attenuated so as not to exceed noise level standards (Table N-1) at noise-sensitive land uses. All noise generators not in compliance with these standards will be encouraged to attenuate impacts.*
- ***N-2d: Acceptable noise levels.*** *New construction and retrofits at existing buildings shall include appropriate insulation, glazing, and other sound attenuation measures so that they comply with standards contained in Table N-1. These standards are intended to set levels for external noise sources that could potentially impact a new dwelling or other noise-sensitive use.*

Policy N-3: Transportation Noise Sources and Levels

Objective. *Establish acceptable noise levels for land uses and activities that will protect community residents from the harmful effects of excessive noise exposure due to transportation noise sources. Maintain interior and exterior noise standards that will achieve land use compatibility with respect to community noise.*

Applicable sub-policies

- ***N-3a: New development of noise-sensitive land uses.*** *New development of noise receptors will not be permitted in areas exposed to existing or projected levels of transportation noise exceeding levels specified in Table N-2 unless exterior noise or noise levels in interior spaces can be reduced to meet City Standards (Table N-2).*
- ***N-3b: Roadway projects.*** *To minimize noise impacts, the following criteria may be used as a test of significance for roadway projects:*
    1. *Where existing traffic noise levels are less than 60 dBA Ldn at the outdoor activity areas of noise receptors, a +5 dBA Ldn increase in noise levels due to a roadway improvement project will be considered significant.*
    2. *Where existing traffic noise levels range between 60 and 65 dBA Ldn at the outdoor activity areas of noise receptors, a +3 dBA Ldn increase in noise levels due to a roadway improvement project*

will be considered significant.

3. *Where existing traffic noise levels are greater than 65 dBA Ldn at the outdoor activity areas of noise receptors, a + 1.5 dBA Ldn increase in noise levels due to a roadway improvement project will be considered significant.*

Policy N-4: Acoustical Analysis Requirements

Objective. *Establish a consistent procedure and framework for conducting and reviewing acoustical analyses.*

Applicable sub-policy

- ***N-4a: Noise-sensitive land uses.*** *Where receptor land uses are potentially exposed to existing or projected exterior noise levels exceeding the levels specified in Table N-2 or the performance standards of Table N-1, an acoustical analysis shall be required as part of the environmental review process, so that noise mitigation may be included in the project design. An acoustical analysis prepared pursuant to the Noise Element shall:*
  1. *Be the financial responsibility of the applicant.*
  2. *Be prepared by a qualified person experienced in the fields of environmental noise assessment and architectural acoustics.*
  3. *Include representative noise level measurements, with sufficient sampling periods and locations, to adequately describe local conditions and the predominant noise sources.*
  4. *Recommend appropriate mitigation to achieve compliance with the adopted policies and standards of the Noise Element, giving preference to proper site planning and design over mitigation measures which require the construction of noise barriers or structural modifications to buildings which contain noise-sensitive land uses.*
  5. *Estimate noise exposure after prescribed mitigation measures are implemented.*

Policy N-5: Intrusive and Intermittent Noise Sources

Objective. *Protect community residents from the effects of excessive, intrusive, and intermittent noise. Set standards for intrusive and intermittent noise sources for both daytime and nighttime periods. Intrusive noise sources have a qualitative aspect that can be annoying. These sources may contain a tonal component which is absent from the existing general background noise. They may also be rhythmic, reoccurring or impulsive in nature, or comprised mainly of music or speech. Intrusive noise can result in annoyance or interference with sleep. These types of noise sources can include, but are not limited to, industrial processes, warning horns, backup alarms, and pressure release devices.*

Applicable sub-policies

- ***N-5a: Intrusive noise.*** *When intrusive noise sources have been identified, the detrimental effects (sleep interference or the potential for annoyance) shall be disclosed to neighboring receptor properties.*
- ***N-5b: Noise levels due to non-transportation sources.*** *Noise levels due to non-transportation sources which may be intermittent or recurring, impulsive noises, pure tones, or noises consisting primarily of speech or music, shall be subject to the criteria contained within Table N-1, with a -5 dBA penalty applied to the criteria.*
- ***N-5c: Rhythmic, reoccurring, or impulsive noise sources.*** *When noise sources have been identified to be rhythmic, reoccurring, or impulsive in nature or comprised mainly of music or speech, they may comply with applicable noise level criteria and still be annoying to individuals. When these types of noise sources have been identified, they may be subject to additional attenuation or mediation.*
- ***N-5d: Construction site tool or equipment noise.*** *The following shall apply to construction noise from tools and equipment:*
  1. *The operation of tools or equipment used in construction, drilling, repair, alteration or demolition*

shall be limited to between the hours of 8 a.m. and 7 p.m. Monday through Friday, and between 9 a.m. and 7 p.m. on Saturdays and Sundays.

2. *Heavy equipment shall not operate on Sundays and City recognized holidays.*

This shall apply to construction noise from tools and equipment that are subject to the review of the City and that may affect receptor uses. This policy shall not apply to emergency work of public service utilities, City sponsored and/or grant funded projects, or by variance under a noise ordinance or authorization by the appropriate City review authority.

- ***N-5e: Stationary and construction equipment noise.*** *All stationary and construction equipment shall be maintained in good working order, and fitted with factory approved muffler systems.*
- ***N-5f: Noise Ordinance.*** *The City of Arcata shall enforce its City-wide noise ordinance. The City shall periodically review and update its noise ordinance.*

Anticipated Land Use Code Changes

It is anticipated that the following revisions to the City's land use code will occur under the proposed General Plan 2045:

- Revise section 9.30.050.D.1.a to the following: "If the measured ambient noise level exceeds the applicable **stationary** noise level standard in any category shown in the tables, the applicable **stationary** standards shall be adjust to equal the ambient noise level."
- Revise the title of Table 3-2 in section 9.30.050.D.1 to the following: "Table 3-2 – Maximum Allowable Noise Level **from Stationary Source** by Receiving Land Use."
- Revise Table 3-2 in section 9.30.050.D.1 to clarify the limit values are in terms of A-weighted decibels (**dBA**), consistent with common practices for environmental sound level limits.
- Add the following note below Table 3-2 in section 9.30.050.D.1: "'Maximum' sound level shall be taken to mean the maximum A-weighted sound level measured with the sound level meter set to Slow response."
- Add the following note below Table 3-2 in section 9.30.050.D.1: "Sound level measurements use to evaluate stationary sources against the applicable limits in should be performed using a lab-calibrated Type 1 or Type 2 sound level meter as defined in ANSI standard S1.4 and checked before and after the measurements using an acoustic calibrator meeting the requirements of ANSI standard S1.40."
- Add the following note below Table 3-4 in section 9.30.050.D.2: "The time restrictions above only apply to heavy equipment and activities which generator significant outdoor noise emissions."
- Add the following note below Table 3-4 in section 9.30.050.D.2: "Heavy equipment usage may operate on Sundays and holidays if the project is compatible with objective design standards, the project includes restricted affordable housing, and the project timeline requires an exception from this prohibition."

City of Arcata Local Coastal Program

There are no policies within the City of Arcata's Local Coastal Plan that regulate noise within the City's jurisdiction of the Coastal Zone.

3.8.4 Evaluation Criteria and Significance Thresholds

The Project would cause a significant impact related to noise, as defined by Appendix G of the CEQA Guidelines, if one or more of the following exists:

- Result in exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;
- Result in exposure of persons to or generation of excessive ground-borne vibration or ground- borne noise levels;
- Result in substantial permanent increases in ambient noise levels in the project vicinity above levels existing without the project;

– Result in substantial temporary or periodic increases in ambient noise levels in the project vicinity above levels existing without the project;
– For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, expose people residing or working in the project area to excessive noise levels; or
– For a project within the vicinity of a private airstrip, expose people residing or working in the project area to excessive noise levels.

3.8.5 Methodology

Impact assessment related to noise compares noise levels allowed under the proposed General Plan 2045 to applicable existing City noise policies and guidelines, as well as existing noise in the study area.

3.8.6 Impacts and Mitigation Measures

Impact NOI-a: **Would adoption and implementation of the General Plan 2045 result in exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?**

Gateway Area and Other Infill Opportunity Zones

Adherence to City of Arcata Land Use Code Table 3-3 (see Table 3.8-6 of this Draft EIR) maximum allowable transportation sound level limits requires that outdoor sensitive receptors not be exposed to transportation sound levels exceeding 60 dBA Ldn (with exception of playgrounds and parks, where 70 dBA Ldn in the limit). In the event that all feasible mitigation options have been exhausted, transportation levels as high as 65 dBA at sensitive outdoor receptor locations are acceptable.

Transportation-related noise sources inside of and surrounding the Gateway Area include car and truck traffic on highways and local roads. Roadways, in particular federal and state highways, are a major source of ambient noise in general, especially because most developed communities are located adjacent to these transportation corridors. Highways and streets are expected to remain the major transportation noise sources in the Gateway Area and surrounding region.

Traffic noise emissions depend on several factors including traffic volume, speed, commercial vehicle percentages, environmental effects, and distance to the receptor location. The primary source of noise from automobiles is high frequency tire noise, which increases with speed. In addition, trucks and automobiles produce engine and exhaust noise (audibly dominant over tire noise at low speeds), as well as wind noise. Pavement type and condition can also influence traffic noise. Noise from automobiles is generally located at ground level, whereas truck noise sources can be located as high as 10 to 15 feet above the road surface due to tall exhaust stacks and higher engines.

Differences in elevation can reduce the perceived noise level. Noise from a thoroughfare in a trough or valley between residential areas is reflected upward and focused, similar to a satellite dish, while noise from an elevated thoroughfare will dissipate and is perceived as less of an annoyance. On flat ground, a buffer (such as a sound wall or dense vegetation) can greatly reduce the noise escaping to surrounding areas.

Projected growth during the General Plan Update planning period (up to 2045) is expected to result in development of noise-sensitive uses where noise levels may exceed applicable standards for sensitive interior and outdoor areas. Transportation noise levels exceeding standards contained in Table 3.8-6 of this Draft EIR would represent a significant impact.

Future noise levels were calculated by GHD for the roadways shown in Figure 3.8-1 (GHD 2023a), which are expected to be the primary sources of road traffic noise in the study area. Traffic noise levels for these roadways were assessed using the U.S. FHWA's Traffic Noise Model Version 2.5. Traffic noise modelling and analysis assumptions used in this study included:

- **Ground Absorption**: Ground surfaces throughout the entire study area were modelled as pavement (i.e., flow resistivity of 20,000 cgs Rayls)
- **Receptor Elevation**: Noise contour and intersection sound levels are evaluated at 5 feet above grade
- **Foliage**: No attenuation due to foliage was included to be conservative
- **Building Massing**: No building structures or barriers were included in the model to be conservative
- **Topography**: All topographical changes in elevation have been reflected in the acoustic modelling

Based on the U.S. EPA publication, “Protective Noise Levels” (EPA 1978), standard building construction in warm climates provides on average approximately 12 dBA noise reduction with windows and doors open, and 24 dBA with windows and doors closed. Thus, for potential developments where exterior road traffic sound levels exceed the indoor sound level criteria of Table 3.8-6 by more than 10 dBA (rounded down from 12 dBA), central air conditioning systems will be required to allow occupants to close their windows to achieve acceptable indoor noise levels. Further, where exterior road traffic noise levels exceed the indoor sound level criteria by more than 20 dBA (rounded down from 24 dBA), façade construction upgrades would be required to achieve the applicable indoor sound level criteria.

The projected traffic volumes used in the model were provided by GHD’s Transportation Engineering team (GHD 2023b). The results of the traffic noise analysis under future (2045) conditions are presented graphically as noise level contours in Figure 3.8-2. General setback distances from the roads to achieve various road traffic noise thresholds are summarized as follows:

Table 3.8-8. Setback Distances to Noise Prediction Thresholds

Road Segment	> 65 dBA Ldn	≤ 65 dBA Ldn	≤ 60 dBA Ldn	≤ 55 dBA Ldn
	Setback Distance			
Redwood Highway (US-101)	< 1,300 ft	≥ 1,300 ft	≥ 2,700 ft	≥ 5,000 ft
US-299	< 900 ft	≥ 900 ft	≥ 1,800 ft	≥ 3,600 ft
Samoa Blvd (US-255)	< 180 ft	≥ 180 ft	≥ 550 ft	≥ 1,800 ft
K Street	< 180 ft	≥ 180 ft	≥ 550 ft	≥ 1,800 ft
Alliance Road	< 110 ft	≥ 110 ft	≥ 350 ft	≥ 1100 ft
11th Street	< 80 ft	≥ 80 ft	≥ 250 ft	≥ 800 ft
Mitigation Required for proposed residential, transient lodging, hospitals, extended care	Upgraded building exterior construction, acoustic barriers for Outdoor Activity Areas, and central air conditioning	Acoustic barriers for Outdoor Activity Areas, and central air conditioning	Central air conditioning	None
Study Requirements	When standard design features and adherence to the building code does not result in sufficient noise attenuation, the City may require that minimum building façade sound insulation performance shall be specified by an acoustical consultant and must be sufficient to achieve the applicable indoor sound level limit assuming windows and doors are closed.	When standard design features and adherence to the building code does not result in sufficient noise attenuation, the City may require that dimensions and layout of acoustic barriers shall be specified by an acoustical consultant and must be sufficient to achieve the applicable outdoor sound level limit. As per the City of Arcata Municipal Code, sound	Not required	Not required

Road Segment	> 65 dBA Ldn	≤ 65 dBA Ldn	≤ 60 dBA Ldn	≤ 55 dBA Ldn
	Setback Distance			
	Dimensions and layout of acoustic barriers shall be specified by an acoustical consultant and must be sufficient to achieve the applicable outdoor sound level limit. As per the City of Arcata Municipal Code, sound levels up to 65 dBA Ldn may be acceptable in cases where it is not possible to reduce noise levels to 60 dBA Ldn using a practical application of the best available noise reduction measures.	levels up to 65 dBA Ldn may be acceptable in cases where it is not possible to reduce noise levels to 60 dBA Ldn using a practical application of the best available noise reduction measures.		

As seen in Figure 3.8-2, projected 2045 road traffic noise levels in the Gateway Area and other Infill Opportunity Zones exceed 55 dBA Ldn, such that noise mitigation is expected to be required. For any planned sensitive uses within the corresponding roadway setbacks noted above, mitigation will be required as described below.

Adherence to Table 3-2 of the Land Use Code (Table 3.8-5 in this section) maximum allowable non-transportation sound level limits requires that all outdoor sensitive receptors not be exposed to stationary source sound levels exceeding an hourly Leq of 45 dBA to 55 dBA, dependent on the time of day, and an Lmax of 70 dBA to 75 dBA, dependent on the time of day. Additionally, interior sensitive receptor locations are not to be exposed to stationary source sound level exceeding an hourly Leq of 35 dBA to 45 dBA, depending on the time of day and an Lmax of 60 dBA to 65 dBA, depending on the time of day.

Noise-related land use controls are typically focused in two areas: (1) preventing the introduction of new noise-producing uses in noise-sensitive areas; and (2) preventing encroachment of noise-sensitive uses on existing noise-producing facilities. The first land use control can be achieved by applying noise performance standards to proposed new noise-producing uses. The second land use control can be accomplished by requiring that new noise-sensitive uses located near noise-producing facilities include design features to ensure compliance with noise performance standards. Site-specific noise analyses should be performed where noise-sensitive land uses are proposed near noise sources, or where noise sources are proposed to be located near sensitive land uses, and the City has determined that noise attenuating standards in building design are not likely to effectively comply with noise performance standards. Based on typical land use compatibility guidelines, the setbacks in Table 3.8-9 will be used to evaluate the need for detailed assessments of potential noise compatibility issues between stationary sources and sensitive uses.

Table 3.8-9 Industrial Categorization Criteria and Recommended Setbacks (MECP 2021)

Industry Classification	Industry Characteristics	Area of Concern
Light Industry	– Small, self-contained plant or building which produces/stores a packaged product – Daytime operations only – Infrequent movement of products and/or heavy trucks – Sound from operations inaudible or barely audible off-property	70 ft
Medium Industry	– Medium production levels, possibly with some open processes – Nighttime operations permitted – Frequent movement of products and/or heavy trucks, primarily during daytime hours – Sound from operations occasionally audible off-property	250 ft

Industry Classification	Industry Characteristics	Area of Concern
Heavy Industry	– Large production levels, with open processes – Frequent nighttime operations – Outside storage of raw materials and/or finished products – Frequent movement of products and/or heavy trucks, including during nighttime hours – Sound from operations frequently audible off-property	1000 ft

The City would continue to enforce building noise standards and attenuation requirements per the Building Code for all uses. The Building Code regulates the interior environment of new construction. If a proposed commercial / industrial facility is located within the respective setbacks identified above relative to an existing sensitive use or to a property that is zoned to permit such sensitive uses, and the City has determined that noise attenuating standards in building design are not likely to effectively comply with noise performance standards, then a detailed stationary noise impact assessment should be required to ensure that appropriate noise controls are incorporated into the design to achieve the applicable sound level limits of Table 3.8-5. Similarly, if a proposed sensitive use is within the respective setbacks identified above relative to an existing industrial / commercial facility, then the developer of such sensitive use should be required to conduct such a study.

Remaining Study Area

The projected 2045 road traffic noise levels in the remainder of the study area includes areas where sound levels are sufficiently high that mitigation is expected to be required, particularly in areas close to SR 101 and SR 299. Any new sensitive developments in the study area would be required to comply with the sound level limits of the Land Use Code and may require noise attenuation beyond the standards provided in the building code and Land Use Code. Generally, these will be demonstrated on the plans using standard practices such as those outlined in the Fire Resistance Design Manual – Sound Control (GA 2018).

Any proposed stationary noise sources (e.g., commercial/industrial facilities) will be required to comply with the stationary noise limits of the Land Use Code.

Mitigation Measures:

Mitigation Measure NOI-1: Noise Study for Planned Sensitive Uses within Roadway Setbacks

For any planned sensitive uses within the corresponding roadway setbacks identified in Table 3.8-8, where the City has determined that noise attenuating standards in building design are not likely to effectively comply with noise performance standards, the developer shall undertake a noise study to determine noise control requirements. Dependent on the proximity to the roads, noise control measures may include central air conditioning, acoustic barriers for Outdoor Activity Areas, and/or upgraded building exterior construction.

Mitigation Measure NOI-2: Location and Design Features for High-Noise Generating Uses

In general, high-noise generating uses (e.g., new industrial uses) should be located away from noise-sensitive land uses and minimize excessive noise through project design features that include noise control and landscape buffers. These are supported by General Plan Policies LU-4a, Industrial Uses, LU-4e, Conversion and reuse of industrial sites, and Policy group N-2 in the Noise Element, as well as regulations in the Land Use Code, Section 9.30.050, Noise Standards.

Mitigation Measure NOI-3: Acoustical Analysis for Noise Sensitive or Employment Land Uses within Recommended Setbacks

For discretionary projects, the City may require an acoustical analysis as part of the environmental review process for development of noise sensitive land uses or employment land uses proposed within the recommended setbacks of Table 3.8-9. This analysis shall meet the following requirements:

a. Be prepared by an engineer, architect, or other qualified person experienced in the field of acoustics with an Institute of Noise Control Engineering Board Certification.
b. Include representative noise level measurements with sufficient sampling periods and locations or reference to noise contours and other sources to adequately describe local conditions.
c. Recommend appropriate mitigation or include reference to standardized metrics for assemblies used in the construction that are known and tested to reduce interior noise to achieve compliance with the adopted policies and standards of the Noise Element.
d. Estimate interior and exterior noise exposure after the prescribed mitigation measures have been implemented.

In the event that an acoustical analysis of a proposed development identifies exceedances of applicable non-transportation sound level limits, the analysis should identify and expand on the source(s) of noise responsible for the non-compliance. Upon identification of the problematic source(s), tailored mitigation measures can be developed.

Level of Significance: Less than significant with appropriate mitigation incorporated into design of developments where necessary to comply with the sound level limits of the Land Use Code.

Impact NOI-b: Would adoption and implementation of the General Plan 2045 result in exposure of persons to or generation of excessive ground-borne vibration or ground-borne noise levels?

Gateway Area and Other Infill Opportunity Zones

It is likely that intrusive ground-borne vibration levels will primarily be sourced from construction activity inside the Gateway Area and other Infill Opportunity Zones, as well as elsewhere in the City, during future development. While large trucks on roadways have the capacity to generate ground-borne vibrations, the road surfaces in question around the Development Areas are unlikely to generate intrusive levels of ground-borne vibration.

Earth moving and earth compacting activities using heavy machinery would create ground-borne vibrations and noise that may be noticeable on a temporary and intermittent basis, at nearby residences, school, commercial and retail businesses. Noticeable ground-borne vibrations and noise would be limited to normal daytime hours. Any proposed development projects would comply with all applicable City policies to abate construction-related noise impacts. The Land Use Code restricts construction activity to specified daytime hours, and that all construction equipment be maintained in good working order and fitted with factory approved mufflers. Adherence to these policies would result in a less than significant impact with regard to exposing persons to or generating excessive ground-borne vibration or ground-borne noise levels. Additional ground-borne vibrations beyond baseline conditions are not anticipated as a result of normal operational (permanent) activities, and the potential impact would be less than significant. For significant construction activities occurring within 50 feet of an existing structure, construction vibration assessments may be warranted to ensure potential for damage is minimized and monitored.

Remaining Study Area

Construction activity is similarly expected to be the primary source of ground-borne vibration throughout the remainder of the study area, as there are no longer any active rail lines within the study area. Construction activities will be temporary and likely periodic, dependent on the rate of development. It is expected that construction activities will be less frequent in the areas outside of the Gateway Area and other Infill Opportunity Zones.

Mitigation Measures:

Mitigation Measure NOI-4: Vibration intensive construction operations such as pile driving should be avoided whenever possible in favor of less intensive alternatives such as caisson drilling.

If vibration intensive operations must be conducted, active vibration monitoring of nearby sensitive structures shall be conducted to ensure no foundational/structural damage occurs.

Level of Significance: Less than significant with mitigation

Impact NOI-c: Would adoption and implementation of the General Plan 2045 result in substantial permanent increases in ambient noise levels in the project vicinity above levels existing without the project?

Gateway Area and Other Infill Opportunity Zones

Permanent increases to road traffic noise levels in the Gateway Area and Infill Opportunity Zones would be expected by the year 2045 as a result of population growth under the General Plan 2045. Based on traffic volume projections, sound levels adjacent to some of the roads may increase by up to 3.6 dBA. A sound level increase of 3 to 4 dBA is typically characterized as “just-perceptible;” therefore, this is not considered to be a significant permanent increase.

Development of commercial / industrial uses within the Gateway Area and Infill Opportunity Zones is expected; however, provided that they comply with the sound level limits of the Land Use Code, the associated increases to the overall ambient sound levels in these areas is not expected to be significant.

Remaining Study Area

Adoption and implementation of the General Plan 2045 is not expected to affect development throughout the remaining study area. Therefore, there would be no significant change to overall ambient noise levels from commercial / industrial facilities.

Similar to the Gateway Area and other Infill Opportunity Zones, road traffic volumes are projected to increase on many of the roads throughout the remainder of the study area as a result of population growth. Based on traffic volume projections, sound levels adjacent to some of the roads may increase by up to 3.6 dBA. A sound level increase of 3 to 4 dBA is typically characterized as “just-perceptible;” therefore, this is not considered to be a significant permanent increase.

Mitigation Measures:

Mitigation Measure NOI-1: Noise Study for Planned Sensitive Uses within Roadway Setbacks

Mitigation Measure NOI-2: Location and Design Features for High-Noise Generating Uses

Mitigation Measure NOI-3: Acoustical Analysis for Noise Sensitive or Employment Land Uses within Recommended Setbacks

Level of Significance: Less than significant with appropriate mitigation incorporated into design of developments where necessary to comply with the sound level limits of the Land Use Code.

Impact NOI-d: Would adoption and implementation of the General Plan 2045 result in substantial temporary or periodic increases in ambient noise levels in the project vicinity above levels existing without the project?

Gateway Area and Other Infill Opportunity Zones

Construction in the Gateway Area and other Infill Opportunity Zones would temporarily increase noise in the immediate surrounding area. The temporary noise increases would result from use of construction equipment for the Project, as well as from increased traffic as construction workers commute to and from the construction site. To prevent noise disturbance to the community, the Land Use Code limits construction activity to the hours between 8 a.m. and 7 p.m. Monday through Friday, And between 9 a.m. and 7 p.m. on Saturdays. No heavy equipment-related construction activities shall be allowed on Sundays or holidays. Temporarily heightened noise levels would be generated during construction. Noise levels would be consistent with the reference noise levels in Table 3.8-10 below.

Table 3.8-10 Construction Equipment Reference Noise Levels as Measured at 50' (FTA 2018)

Equipment	Noise Level (dB[1])	Equipment	Noise Level (dB)
Drill rig truck	84	Jackhammer	85
Horizontal Boring Hydraulic Jack	80	Large Generator	82
Front end loader or Backhoe	80	Paver or Roller	85
Excavator	85	Dump truck	84

Sound from a point source is known to attenuate at a rate of -6 dB for each doubling of distance. For example, a noise level of 84 dB Leq as measured at 50 feet from the noise source would attenuate to 78 dB Leq at 100 feet from the source and to 72 dB Leq at 200 feet from the source to the receptor. Based on the reference noise levels in Table 3.8-10, the noise levels generated by construction equipment at the project site may reach a maximum of approximately 85 dB Leq at 50 feet during site excavation and construction. The maximum noise level would result in short-term increases in noise to sensitive receptors in and adjacent to the development; however, construction-related increase in noise would not constitute a significant noise-related impact.

[1] "dB" is an A-weighted decibel measurement for assessing hearing risk and, therefore, is used by most regulatory compliance.

Remaining Study Area

The adoption of the General Plan 2045 is not anticipated to affect construction activities in the remainder of the study area. Therefore, temporary increases in noise levels are not anticipated to be affected, except in areas close to the Gateway Area and other Infill Opportunity Zones.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact NOI-e: **For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?**

The study area is not located within the vicinity of an airport land use plan or within two miles of a public airport. Therefore, airport-related noise impacts are not anticipated within the study area.

Mitigation Measures: No mitigation is necessary

Level of Significance: No impact

Impact NOI-f: **For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?**

The study area is not located within the vicinity of a private airstrip. Therefore, airstrip-related noise impacts are not anticipated within the study area.

Mitigation Measures: No mitigation is necessary

Level of Significance: No impact

3.8.7 Cumulative Impacts

Impact NOI-C-1: **Would adoption and implementation of the General Plan 2045 contribute to a cumulatively significant impact to Noise?**

Gateway Area and Other Infill Opportunity Zones

Allowable cumulative noise levels in the Gateway Area and other Infill Opportunity Zones will be comparable to those that could occur without adoption and implementation of the General Plan 2045. With adherence to applicable federal, state, and local regulations governing noise compliance with the proposed General Plan 2045 policies indicated above, the potential risks associated with noise in the study area would be less than significant. As such, cumulative impacts would be less than significant.

Remaining Study Area

With adherence to applicable federal, state, and local regulations governing noise compliance with the proposed General Plan 2045 policies indicated above, the potential risks associated with noise in the study area would be less than significant. As such, cumulative impacts would be less than significant.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

3.9 Population and Housing

This section evaluates the potential impacts related to population and housing resulting from adoption and implementation of the General Plan 2045.

Multiple comments related to population and housing were received in response to the Notice of Preparation circulated for the proposed General Plan 2045. Comments included those related to how the City is tracking or calculating population growth, differences in growth expected in different neighborhoods, prevention of gentrification, procedures to maintain low rent costs and home ownership in the Gateway Area, future jobs and industry in the Gateway Area, and support for infill and mixed-use development.

To provide the basis for this evaluation, the Setting section describes the local setting within the City. The Regulatory Framework section describes the regulatory background that applies to population and housing, and the Impact Analysis section establishes the thresholds of significance, evaluates potential impacts, and identifies the significance of impacts.

3.9.1 Study Area

For impact assessment related to population and housing, the City limits were used as the study area (see Figure 2-1 – City of Arcata Planning Areas).

3.9.2 Setting

As described in the Project Description, this Draft EIR evaluates the projected development that could occur with implementation of the General Plan through 2045.

Population within the Study Area

According to the U.S. Census, the City had an estimated population of 15,197 in 1990 and 18,857 in 2020 (U.S. Census 1992, 2022). The planning period between 2000 and 2020 expected 1 percent growth per year and a total population growth of 20 percent. Over the decade from 2010 to 2020, the actual population growth was approximately 0.94 percent annually. The median age of Arcata's population is approximately 25 years of age, 10 years or more younger than the median age of other communities in Humboldt County (ADE 2021). An estimated 11.2 percent of the population is under 18 years of age (U.S. Census 2022).

Population Estimates

As described in the Project Description, the City is planning for the same annual background growth rate of 1 percent plus a growth factor associated with the increased population pressure associated with climate change, Cal Poly Humboldt, telework and COVID migrants, and a host of regional and local economic drivers that affect the desirability of this community. Considering all of these factors, the range of 1 percent to 1.4 percent results in a final population of between 25,000 and 27,000 by 2045. The Cal Poly Humboldt Prospectus anticipates a total resident population of just over 10,000 students by 2030 (HSU 2021). In addition, the Cal Poly Prospectus indicated the need for approximately 625 new faculty and staff at full projections. While not all these new community members will live in Arcata, Cal Poly will be a major driver of population growth.

Population Assumptions

- Modest growth rate of 1 percent to 1.4 percent annually.
- Total resident maximum population in 2045 of 27,000 (calculated at 1.4 percent annually from base year 2020).
- Average household size ranging between 2.2 and 2.5.
- Cal Poly Humboldt will continue to influence Arcata's demographics, resulting in a lower median age than surrounding communities and the state as a whole, influencing the type of demand for housing.

Households and Dwelling Units within the Study Area

The number of households in the City was estimated at 6,073 in 1990 and 7,722 in 2010 (U.S. Census 1992, 2010). In 2018, the greatest number of housing structures in the City were detached single family, though the number of five or more units increased at the fastest pace when compared with number of structures in 2010 (City of Arcata 2019). The number of housing structures estimated in 2018 is shown in the table below.

Table 3.9-1: Housing Units by Type in 2018 (City of Arcata 2019)

Units in Structure	Number of Units
Single-family detached	3,374
Single-family attached	524
2 to 4 units	1,203
5 or more units	2,029
Mobile home	889
Total	**8,019**

Housing Estimates

Assuming the total resident maximum population in 2045 will be 27,000, a total of 2,791 additional dwelling units and 1,550 net additional dorm beds would be developed to accommodate that growth. This estimate is based on 2.36 persons per household, per 2021 census data, and one dorm bed, regardless of configuration, per the Cal Poly Prospectus. This Draft EIR assumes that the creation of dwelling units to meet the need of future residents would occur within the City's existing boundaries, particularly within the Infill Opportunity Zones identified in the City's 6th Cycle Housing Element (and described in the Project Description). Due to the infinite combinations of how this development could occur and for the purpose of analysis in this Draft EIR, assumptions were made regarding the location and number of units to be developed by 2045. Approximately 42 percent of dwelling units are estimated to occur within the Infill Opportunity Zones, 36 percent of dwelling units are to be provided by Cal Poly Humboldt, and 22 percent of dwelling units would occur within the remaining study area. Additionally, these assumptions include the following:

– Housing Element Vacant Parcels – 351 units
– Accessory Dwelling Units and Small Lot Splits – 400 units
– Gateway Area (Infill Opportunity Zone) – 500 units
– All Other Infill Opportunity Zones – 1,340 units
– Redevelopment Infill – 200 units
– Cal Poly Humboldt Campus Housing – 1,550 units

The City of Arcata Regional Housing Needs Allocation developed for the 6th Cycle Housing Element update included housing needs by income type; Table 3.9-2 below summarizes the data presented in the Market Infill Study (ADE 2021).

Table 3.9-2: Arcata Regional Housing Needs Allocation 2019-2027

Income Group	Total Regional Housing Needs Allocation	Progress from January to October 2019*	Remaining Regional Housing Needs Allocation
Very Low	142	20	122
Low	95	23	72
Moderate	111	12	99
Above Moderate	262	3	259
Total	610	58	552

*Building Permits and/or Planning Permits issued for new residential construction.

Housing Assumptions

– New housing will result from infill, not greenfield expansion/annexation.
– As the largest regional employer and principal population driver in Arcata, Cal Poly Humboldt will continue to have an outsized influence on housing in the City. Cal Poly plans to develop and maintain housing to accommodate approximately 50 percent of its planned 2030 resident student population.

Employment

Arcata's employment is predominantly made up of jobs in the education, healthcare, arts and entertainment, retail trade, manufacturing, construction, and professional management services industries. Major employers within Arcata include Cal Poly Humboldt, Mad River Community Hospital, Bettendorf Trucking, the Danco Group, and the North Coast Coop, but nearly 80 percent of employers have fewer than 10 employees. Approximately 64 percent of the population is estimated to be in the civilian labor force (U.S. Census 2022) and the unemployment rate was estimated at 5.5 to 6.0 percent between 2017 to 2019 (ADE 2021). According to the Housing Needs Assessment in 2019, approximately half of Arcata's residents work in the City and Arcata has a ratio of 1.04 employed persons for each housing unit (City of Arcata 2019).

Employment Estimates

Economic growth is planned to be commensurate with housing growth. The development related to the City's economic growth will be concentrated in specific zones according to the Land Use Element. The General Plan Land Use Element includes a range of allowable commercial and industrial uses that could increase the City's employment base. The majority of the new development in the Gateway Area Plan would be residential; however, non-residential land uses (retail, personal services, restaurants, professional offices, hotels, light manufacturing, and arts and entertainment uses) would be incentivized and would provide new employment opportunities.

Employment Assumptions

– Arcata will continue to attract small and medium sized businesses that are predominantly local start-ups.
– Business retention and succession planning will play a critical role in maintaining Arcata's economy and jobs base.

3.9.3 Regulatory Framework

Federal

There are no federal regulations which apply to population and housing in the City of Arcata.

State

State Housing Element Statutes

The state housing element statutes (Government Code Sections 65580-65589.9) mandate that cities and counties must plan effectively to meet the housing needs of all economic segments within their communities, both current and projected.

In compliance with Section 65583 of the California Government Code, cities and counties are mandated to prepare a Housing Element as part of their General Plan. This section provides specific guidelines on the content of the Housing Element. The Housing Element must include a plan that encourages and supports the creation of accessory dwelling units for very low- or moderate-income households, which are offered at affordable rents as defined in Section 50053 of the Health and Safety Code. The Housing Element must also include a program that imposes housing replacement requirements on certain identified sites in the inventory. These requirements

mandate the replacement of units that are affordable to the same or lower income levels, in accordance with the provisions outlined in the State Density Bonus Law (Government Code Section 65915(c)(3)). Housing Elements must be updated at least once every eight years. Arcata's most recent Housing Element update occurred in 2019, which was the 6th Housing Element Cycle.

Government Code Section 65584 requires regions to address housing issues and needs based on future growth projections. The California Department of Housing and Community Development prepares an initial housing needs assessment and then collaborates with the regional "council of governments" to develop results in the final assessment. The Humboldt County Association of Governments (HCAOG) developed the Humboldt County Regional Housing Needs Plan, which allocates to cities and the unincorporated county their "fair share" of the total county Regional Housing Needs Allocation. The principal use of the allocations in the Regional Housing Needs Plan is inclusion in local housing elements as the shares of regional housing need. Local governments are mandated to adequately plan to meet the existing and projected housing needs of all economic segments of the community. The law recognizes the importance of local governments adopting land use plans and regulations that facilitate housing development without excessive constraints in order to address housing needs and demands in the private market. The state-established Regional Housing Needs Allocation period of Humboldt County is 2018 to 2027.

Government Code Section 66410 (Subdivision Code)

A subdivision refers to the division of land with the intention of selling, leasing, or financing it. In the State of California, the Subdivision Map Act (Government Code Section 66410) governs subdivisions throughout the state. The Subdivision Map Act aims to achieve several goals including, encouraging organized and well-planned community development by regulating and controlling the design and improvement of subdivisions, considering their relationship to adjacent areas. Another goal is ensuring that areas within the subdivision dedicated for public purposes are appropriately developed by the subdivider. This prevents these areas from becoming burdensome to the community. Lastly, the Subdivision Map Act aims to safeguard the public and individual buyers from fraudulent activities and exploitation related to subdivisions. This includes protecting buyers from deceptive practices during the purchase or transfer of subdivided land. The Subdivision Map Act serves to promote orderly and responsible development, protect public interests, and prevent potential harm or exploitation in relation to subdivisions in California.

Senate Bill 375

SB 375 became law in 2009 and requires the integration of planning processes for transportation, land use, and housing in order to reduce greenhouse gas emissions from cars and light trucks. It also provides incentives to encourage more compact new development and transportation alternatives as well as CEQA exemptions and streamlining for projects that conform to the regional sustainable communities strategy to achieve the emissions reduction target set by the California Air Resources Board. The City of Arcata is not required to develop a sustainable communities strategy.

Housing Bills

Governor Gavin Newsom signed multiple bills aimed at addressing the housing crisis in California. These bills were designed to incentivize affordable housing, simplify the construction of accessory dwelling units, and streamline permitting and approvals processes. Most of the following bills took effect in 2020:

- SB 113 enables the transfer of millions in state funds to the National Mortgage Special Deposit Fund, with the intention of creating a trust to manage these funds for borrower relief and legal aid to vulnerable homeowners and renters. SB 330 (Housing Crisis Act of 2019), Introduced by Senator Nancy Skinner, this bill accelerates housing production by streamlining permitting and approval processes, ensuring no net loss in zoning capacity, and limiting fees after projects are approved.
- SB 330 is known as the Housing Crisis Act of 2019. This bill aims to expedite housing production in California by simplifying the permitting and approval processes. It ensures that there is no net reduction in the zoning capacity for housing and imposes limitations on fees charged for housing projects after they have

been approved. The goal of SB 330 is to remove obstacles and streamline the development of new housing in the state to address the ongoing housing crisis.

- Assembly Bill (AB) 1763, which came into effect on January 1, 2020, modifies the State Density Bonus Law (Section 65915) in California. This amendment enables the construction of taller and denser 100 percent affordable housing projects, particularly those located in close proximity to transit, by introducing an enhanced affordable housing density bonus. The purpose of this change is to facilitate the development of more affordable housing units and promote their construction in transit-accessible areas. This bill, by expanding the responsibilities of local planning officials regarding the allocation of density bonuses, would impose a program mandated by the state on local governments. According to the California Constitution, the state is obligated to reimburse local agencies and school districts for certain costs incurred due to state-mandated activities. However, this bill specifies that no reimbursement is necessary for a specific reason, indicating that the state will not provide reimbursement for the costs associated with this legislation.
- AB 116 removes the requirement for Enhanced Infrastructure Financing Districts to obtain voter approval before issuing bonds.
- AB 1485 builds on existing environmental streamlining laws and promotes the production of moderate-income housing.
- AB 101, the Housing Development and Housing 2019-20 Budget Act, requires local governments to provide "by right," CEQA-exempt approvals to certain qualifying navigation centers that move homeless Californians into permanent housing. The law creates additional incentives for cities to comply with their mandates to plan for sufficient housing in their Housing Elements and provides some modest additional remedies that the state can use in court when cities fail to comply with housing element law.
- AB 1783 creates a streamlined, ministerial CEQA-exempt approval process for qualifying agricultural employee housing developments on land zoned primarily for agricultural uses.
- AB 1255 requires cities and counties to report their surplus lands in urbanized areas to the state, which will then include this information in a digitized inventory of state surplus land sites.
- AB 1486 expands the Surplus Land Act requirements for local agencies, mandates that local governments include specific information on surplus lands in their housing elements and annual progress reports, and requires the State Department of Housing and Community Development to establish a database of surplus lands.
- SB 6 requires the state to create a public inventory of local sites suitable for residential development, along with state surplus lands.
- SB 751 establishes the San Gabriel Valley Regional Housing Trust, which aims to finance affordable housing projects for homeless and low-income populations in the region.
- AB 1483 promotes greater transparency and data-driven decision-making in housing policy and planning by mandating that local jurisdictions in California make information regarding zoning ordinances, development standards, fees, exactions, and affordability requirements publicly available. Additionally, the bill requires the Department of Housing and Community Development to create and regularly update a comprehensive 10-year housing data strategy.
- AB 1010 grants eligibility to duly constituted governing bodies of Native American reservations or Rancherias to participate in affordable housing programs in California. This bill aims to address the housing needs of Native American communities by allowing their governing bodies to access and participate in affordable housing programs.
- AB 1743 expands the properties that are exempt from community facility district taxes. This includes properties eligible for the property tax welfare exemption. The bill also restricts the ability of local agencies to reject housing projects solely because they qualify for the exemption.
- SB 196 introduces a new welfare exemption from property tax for properties owned by a Community Land Trust. It also introduces changes to property tax assessments for properties subject to contracts with Community Land Trusts.

- AB 68 introduces significant changes to facilitate the development of more accessory dwelling units and address barriers to construction. The bill reduces approval and construction barriers for accessory dwelling units, promoting the production of low-cost, energy-efficient units that contribute to California's affordable housing supply.
- AB 881 removes obstacles to accessory dwelling unit construction by restricting local jurisdictions' permitting criteria. It clarifies that accessory dwelling units constructed in existing garages must receive streamlined approval and eliminates the requirement of owner-occupancy for five years.
- AB 587 provides a limited exemption for affordable housing organizations to sell deed-restricted land to eligible low-income homeowners.
- SB 13 establishes a tiered fee structure for accessory dwelling units, charging them more fairly based on their size and location. The bill also addresses other barriers by reducing the application approval timeframe, offering a pathway for unpermitted accessory dwelling units to meet code requirements, and enhancing enforcement mechanisms to ensure compliance with accessory dwelling unit statutes.
- AB 671 requires local governments' housing plans to promote affordable accessory dwelling unit rentals. It also mandates the development of a list of state grants and financial incentives for affordable ADUs.

California Coastal Act

A portion of the study area is within the Coastal Zone. The Coastal Act set policies related to management of resources in California's coastal zone. The policies of the Coastal Act constitute the statutory standards applied to planning and regulatory decisions made by the California Coastal Commission, pursuant to the Coastal Act. The General Plan must comport with legislative policies relating to the California Coastal Act.

Local

The study area equates to the City limits and the western portion of the study area (bisected by Samoa Blvd and Old Arcata Road) is also within the Coastal Zone. Therefore, this section includes City of Arcata General Plan and City Local Coastal Program policies.

Humboldt County Regional Housing Needs Assessment Plan

HCAOG develops the Regional Housing Needs Assessment Plan for Humboldt County, per Government Code Section 65583. The total allocation for the City of Arcata during the 2019-2027 planning cycle is 610 dwelling units.

City of Arcata General Plan 2020

The following policies from the City of Arcata General Plan Land Use Element address population and housing:

> ***Policy LU-1: Overall Land Use Pattern: Land Use Plan Map***
>
> ***Objective.*** *Provide an overall land use arrangement that concentrates city-wide uses and functions in the central Plaza Area, linked with a series of neighborhood centers which provide a mix of commercial services, residential uses, and community facilities.*
>
> *Applicable sub-policies:*
>
> - ***LU-1d: Mixed-use neighborhood centers.*** *The existing neighborhood centers of Westwood, Valley West, Sunny Brae, Uniontown, and Greenview are designated as multiple-use sites where additional retail establishments, personal and business services, and other neighborhood-oriented commercial services are encouraged to be developed. Substantial additions to these existing centers shall include residential units on upper floors where feasible or in separate buildings. Upgrading these centers shall include additional landscaping, improvement of parking lot designs, and provision of transit access, such as bus turnouts. Appropriate lands near these centers are designated for higher density residential uses in order to encourage walking and bicycling to neighborhood services.*

- ***LU-1f: Promotion of infill development.*** *The City encourages appropriate redevelopment of certain parcels of land which are either underutilized, brownfields, or vacant but surrounded by existing urban development. These sites represent development opportunities using existing infrastructure, and shall have priority for development over vacant sites that are located outside the urban services boundary (designated in the Growth Management Element) which require investment in extension of infrastructure and services. Infill development may include new residential units on upper floors of commercial structures, development of second units on residential lots, and new or expansion of existing residential and commercial structures consistent with the provisions of the applicable land use plan designations. The Planned Development procedure shall be encouraged for coordinated development on larger infill sites.*

Policy LU-2: Residential Land Use

Objective. *Allow for a mix of housing types and densities to meet the physical, social, and economic needs of residents, with new and converted housing designed to be compatible with the established neighborhood character.*

Applicable sub-policies:

- ***LU-2a: Residential Land Use Classifications.*** *The following land use designations are applicable to residential lands. Table LU-2 defines permitted uses, densities, lot sizes, and other development standards for each classification.*

  Residential Very Low Density [R-VL]. This designation allows the lowest density residential development in areas where physical constraints, protection of natural features, or preservation of semi-rural character are important considerations. The R-VL designation is applicable primarily for lands with steep slopes and where the open space character of Arcata's hillsides and perimeter lands are to be preserved. Individual homesites are allowed in hillside areas, as long as precautions are taken to prevent the excessive removal of vegetation and strict grading controls are enforced to prevent erosion. Development and grading on areas characterized by slopes over 25% should be avoided. Review of development proposals in all hillside areas shall ensure that seismic and geologic hazards are avoided or mitigated. More detailed hillside development standards are included in Policy PS-3c.

  The R-VL designation allows creation of lots as small as 20,000 square feet, in the less-steep areas of Arcata's hillsides. Newly created lots in this zone must contain a buildable area of sufficient size and flatness to allow development without significant environmental damage or landform alteration. The development regulations for R-VL are intended to balance protection of the sensitive hillside environment with the need for quality housing sites. This designation is also intended to protect the existing rural environment in certain areas of Arcata and to provide a transition between urban uses and agricultural operations.

  - *Residential – Low Density [R-L]. The low density residential designation primarily provides for single-family homes on individual lots. This designation is found throughout the community, including the older, historical neighborhoods surrounding the Plaza Area, Sunny Brae, Sunset, Preston Ridge Area, and Greenview Terrace.*
  - *Residential – Medium Density [R-M]. Medium density residential unit types typically include duplexes, townhouses, co-housing, low density apartments, and modular housing located in mobile home parks.*
  - *Residential High Density [R-H]. The Colony Inn and Humboldt Green multifamily units are representative of R-H density. R-H density residential uses are designated in central Arcata to allow increases in density above present levels.*

- ***LU-2b: Diversity and choice in residential environments****. The land use plan map shall provide sufficient quantities of land in the various residential use categories to allow for development of a variety of types of new housing units and residential environments. The purpose shall be to maintain an appropriate balance between single-family housing on individual lots and multi-unit housing types. The*

City shall encourage residential developments which collectively provide a variety of choices for housing consumers in terms of types of units, location, unit sizes, costs, design, amount of privacy, and neighborhood environment. Inclusionary measures shall be provided for affordable housing. To encourage this, the City will implement inclusionary zoning and provide incentives to developers to include low and moderate income housing units in their proposals.

- ***LU-2c: Specific considerations for certain residential areas**. Certain specific parcels have unique characteristics and/or limitations that require careful consideration when development or a change of use occurs. The considerations for the identified parcels shall be as described in Table LU-3.*
- ***LU-2d: Planned residential developments**. On vacant sites of one acre and larger designated for residential use, the Planned Development combining zone shall be required. The purpose shall be to: incorporate a mix of residential types, unit sizes, and styles in a coordinated manner to allow clustering of units; to provide larger, more usable areas of common open space; and to protect natural resources or site features, such as creekside riparian areas, wetlands, and significant vegetation such as trees. Where planned residential developments are adjacent to non-residential uses, appropriate visual and noise buffers shall be provided between the uses. Other provisions in the General Plan would assure affordable housing.*

Policy LU-3: Commercial Land Use

***Objective.** Provide sufficient land areas and locations for a variety of retail and commercial services, to serve the consumer needs of the community and visitors.*

Applicable sub-policies:

- ***LU-3d: Inclusion of residential uses**. Commercial developments should include residential units where feasible. Residential units should be located on upper floors or at the rear, to maintain uninterrupted commercial uses at the street level. This shall not apply to the C-VS land use category. Any residential development in new structures shall comply with the development standards of the R-M land use category.*
- ***LU-3e: Primary residential uses in Commercial – Central [C-C].** To maximize housing opportunities, residential uses are allowed as the primary use on vacant sites designated C-C, at densities consistent with the R-H designation, with a use permit.*

Policy LU-6: Agricultural and Natural Resource Lands

***Objectives.** Preserve and promote the sustained production of natural resources; preserve and promote the agricultural, forest, and aquaculture lands; and protect public natural resource/open space lands, including stream courses, wetlands, tidelands, and open space areas. Provide for complementary uses including farm housing, processing of agricultural and aquaculture products, and access for timber harvesting, in designated areas.*

Applicable sub-policies:

- ***LU-6a: Agricultural and Natural Resource classifications.** The following land use categories are applicable to agricultural and natural resource lands. Table LU-9 defines permitted uses, densities, lot sizes, and coverages for each category.*
  - *Agriculture Exclusive [A-E]. This designation is intended to preserve land for agricultural production. The A-E designation is appropriate for lands with prime agricultural soils and wetlands that could be used as grazed agricultural lands. Structures associated with agricultural production, such as barns and farmhouses, are appropriate uses in A-E areas.*
  - *Agriculture Residential [A-R]. This designation allows very low density residential development on agricultural lands. Structures associated with agricultural production, such as barns and farmhouses, would be appropriate uses in these agricultural areas.*

- ***LU-6d: Uses allowed in diked/reclaimed former tidelands****. Allowable uses and development in grazed or farmed wetlands are limited to uses compatible with the Public Trust. These uses are summarized below:*

    1. *Farm-related structures, including barns, sheds, and farmer-occupied housing, necessary for the performance of agricultural operations. Such structures may be located on an existing grazed or farmed wetland parcel only if no alternative upland location is available for such purpose and the structures are sited and designed to minimize adverse environmental effects on Public Trust resources and uses. No more than one primary and one secondary residential unit shall be allowed per parcel.*

The following policies from the City of Arcata General Plan Growth Management Element address population and housing:

Policy GM-2: Sphere of Influence

Objective. *Designate an appropriate amount of urban reserve and open space land in the Sphere of Influence to provide for the ultimate development of the City*

Applicable sub-policies:

- ***GM-2b: Changes to the Sphere of Influence boundary****. The City shall comprehensively evaluate the Sphere of Influence boundary at least every five years, but more frequently if appropriate. Any boundary amendments shall be considered by the Planning Commission and recommended to the City Council, prior to any action by LAFCo. Any City decision to change the boundary shall be based on the following:*

    1. *The resulting area has an adequate supply of land to accommodate projected housing needs allocated by the Humboldt County Council of Government*

Policy GM-4: Urban Services and Urban Services Boundary

Objective. *Define the boundary that limits the extent of City services and urban uses, within the City's incorporated area and Sphere of Influence. Extend City services to urban uses within the urban services boundary when provision of those services will not exceed the City's planned system capacities*

Applicable sub-policies:

- ***GM-4b: Services outside City boundary.*** *The City shall not extend sewer mains or new water mains or provide new service connections to portions of the Planning Area outside the City Limits except under the following conditions:*

    1. *Emergency sanitary sewer connection. The City may provide an emergency sewer line extension provided the following conditions are met:*
        a. *The property is located within the City Urban Services Boundary for water and sewer.*
        b. *The property is adjacent to the City limits.*
        c. *The on-site sewage disposal system has failed.*
        d. *It is not feasible to replace or repair the on-site sewage disposal system as evidenced by a letter from the County of Humboldt Division of Environmental Health.*
        e. *The on-site sewage disposal system failure is considered a health hazard by the County of Humboldt Division of Environmental Health.*
        f. *The owner has submitted a complete application to the City of Arcata for annexation of the property within 18 months from the date that sanitary sewer service was provided.*
        g. *LAFCo has approved the emergency sanitary sewer connection.*
        h. *The sewer connection shall be sized to only accommodate the failed system.*

The following policies from the City of Arcata General Plan Public Safety Element address population and housing:

Policy PS-8: Human Health Hazards

Objective. *Promote access to services and programs (prevention, treatment, and long term care) that will improve human health conditions for current and future populations. The City recognizes that its resources are limited but will work with other government agencies, non-profit organizations, social service and health care providers to help all residents meet and maintain basic physical and mental health. The City will serve as a model for other governmental entities that are addressing local health needs*

Applicable sub-policies:

- ***PS-8b: Social services programs.*** *The City administers certain social services, such as temporary and permanent housing programs. Other public agencies, including the State of California, and Humboldt County, offer social services, such as public assistance, and food subsidy programs. There are also non-profit, religious, social, and other organizations, as well as businesses that offer social services such as counseling, educational, family assistance, child care, health education, and food subsidy programs. Social service needs shall be monitored, through population trend analysis and other indicators, and information disseminated to other social service providers.*

  Larger employers shall be encouraged to provide childcare services. The City shall coordinate with other public agencies and service providers to avoid duplication of services and shall assist in coordination, planning, and evaluating social services delivery. Additional services, such as Travelers Aid, shall also be encouraged, either through City sponsorship or identification of appropriate service providers. Social service facilities shall be located in areas that are accessible to users.

  The General Plan Housing Element goal is to provide housing opportunities for people of all income levels, through the development of a wide range of housing types. The Element also contains affordability and fair housing policies as well as design standards to serve the needs of all population segments. The Housing Element shall be implemented to promote affordable and accessible housing for segments of the population with limited financial resources and limited mobility.

The City's Current Housing Element was adopted in 2019. The previous version was adopted in 2014. The 2019 Housing Element is not being updated as part of the current General Plan update. The Housing Element has four goals A-B and associated policies:

A. Housing Quality

Objective. *It is the goal of the City of Arcata to promote the development of new sustainable and energy efficient housing that meets safety standards, offers a variety of housing types in a variety of locations, and enhances existing neighborhoods, services, and the environment.*

- ***Policy HE-1*** *Support innovation and creativity in sustainable construction techniques, energy efficient design, property conveyances, and types of development. Condominium, Community Land Trusts, cooperative and co-housing, developments, and planned developments shall be encouraged.*
- ***Policy HE-2*** *Encourage the maintenance of existing housing to prevent deterioration and promote dwelling lifespan.*
- ***Policy HE-3*** *Continue to provide understandable information to the public about the City's policies, standards, and procedures for housing.*
- ***Policy HE-4*** *Continue to encourage and support public involvement in decisions concerning housing.*

B. Housing Quantity

Objective. *It is the goal of the City of Arcata to provide housing opportunities for people of all income levels through the development of a wide range of housing types and the preservation of existing housing.*

- ***Policy HE-5*** *Identify adequate sites that are or will be made available with appropriate zoning and development standards and that will have the public services and facilities needed to facilitate and encourage the development of a variety of types of housing for the needs of all income levels.*
- ***Policy HE-6*** *Provide opportunities for infill development of vacant and redevelopable properties in a way that allows for gradual, rather than drastic, changes from surrounding development density or type. Design features such as gradual increases in building height, functional open space, well-designed landscaping and natural vegetation, breaks in wall and roof lines, and building separations.*
- ***Policy HE-7*** *Encourage a wide range of public and private investment to help meet the City's Housing Goals.*
- ***Policy HE-8*** *Eliminate unnecessary discretionary review procedures and delays in the housing development process due to complex processing procedures for housing projects, which may be under tight timelines imposed by state and federal funding programs.*
- ***Policy HE-9*** *Where appropriate, remove governmental constraints to the maintenance, improvement, and development of housing.*
- ***Policy HE-10*** *Focus housing development in the downtown area to promote higher densities and levels of affordability and to create a more vibrant city center.*
- ***Policy HE-11*** *Encourage higher densities near the Intermodal Transit Facility and near bus stops.*
- ***Policy HE-12*** *Encourage Humboldt State University to maintain, rehabilitate or replace existing campus housing, develop additional on-campus housing, and to work with the City and private developers to ensure that there are adequate and appropriate housing opportunities for Humboldt State University students and staff.*
- ***Policy HE-13*** *Support affordable housing and greenhouse gas emissions reduction by prioritizing high-density, mixed-income, infill housing projects that improve alternative transportation infrastructure. Affordable housing and infill projects that include public and/or private infrastructure for public transit, bike and other ride share programs, electric vehicles, and other transportation demand management strategies or alternative transportation modes will receive incentives including deferred fees and reduced development standards, including but not limited to reduced parking, setbacks, or landscaping requirements.*

C. Affordable Housing

Objective. *It is the goal of the City of Arcata to promote affordability of housing of all types to meet the present and projected needs of households of all income levels.*

- ***Policy HE-14*** *Support private and nonprofit developers through grants, loans, and other forms of assistance to voluntarily develop housing affordable to extremely low-, very-low-, and low-income households.*
- ***Policy HE-15*** *Preserve assisted housing identified in this document as reserved for lower-income households.*
- ***Policy HE-16*** *Seek and support programs that address the housing needs of and prioritize housing for special groups such as seniors, disabled persons, farmworkers, those in need of temporary shelter, those in need of supportive housing, single-parent families, and large families.*
- ***Policy HE-17*** *Assist in the development of housing affordable to very low-, low-, and moderate-income households through financial and/or technical assistance.*
- ***Policy HE-18*** *Provide incentives to developers to include low- and moderate-income housing units in their proposals; and support housing for persons with lower incomes in residential developments in all areas of the City through a variety of methods to ensure neighborhood diversity.*

- ***Policy HE-19*** *Continue to provide a housing rehabilitation program for lower income renters and owners. Housing rehabilitation is a cost-effective way of keeping the community's stock of affordable housing in a safe and decent condition.*
- ***Policy HE-20*** *Prioritize meeting the needs of low-income households, since they represent the most significant area of unmet need.*
- ***Policy HE-21*** *Encourage the development of accessory dwelling units (ADUs).*
- ***Policy HE-22*** *Encourage the use of density bonuses to incorporate affordable housing units into projects.*

D. Equal Housing Opportunity

Objective. *It is the goal of the City of Arcata to ensure that discrimination is not a factor in the ability of households to obtain housing.*

- ***Policy HE-23*** *Promote housing opportunities for all persons regardless of race, color, national origin, religion, sex, familial status, disability, sexual orientation, gender identity/expression, genetic information, marital status, and source of income.*
- ***Policy HE-24*** *Support state and federal mandates for fair housing practices in both public and private housing developments.*
- ***Policy HE-25*** *Meet the housing and supportive housing and accessibility needs of the homeless and other special needs groups, including prevention of homelessness.*

Proposed City of Arcata General Plan 2045

No modifications are proposed in the 2019 Housing Element.

The following policies from the proposed City of Arcata General Plan 2045 Land Use Element address population and housing:

Policy LU-1: Overall Land Use Pattern: Land Use Plan Map

Objective. *Establish a pattern of development that concentrates activity and amenities in a pattern of centers, clusters and mixes of uses to support the City's focus on infill development and active transportation. Provide an overall land use arrangement that concentrates city-wide uses and functions in these areas with an emphasis on areas within walking distance of the central Plaza Area, Cal Poly Humboldt, and existing neighborhood and employment centers which provide a mix of commercial services, residential uses, and community facilities.*

Applicable sub-policies:

- ***LU-1b: Promotion of infill development and designated Infill Opportunity Zones****. The City encourages appropriate redevelopment of certain parcels of land that are either underutilized, brownfields, or vacant, but surrounded by existing urban development. These sites represent development opportunities using existing infrastructure and shall have priority for development over vacant sites that are located outside the urban services boundary (designated in the Growth Management Element) that require investment in extension of infrastructure and services. The City's Infill Opportunity are intended to encourage and streamline infill development in these areas, based on available land and proximity to transit, services, jobs, and activity centers. Infill development may include new residential units in new or existing structures, development of second units on residential lots, and new or expansion of existing residential and commercial structures consistent with the provisions of the applicable land use plan designations. Infill Opportunity Zones are shown on the land use plan diagram (Figure LU-a).*
- ***LU-1e: Streamlined Review and Standards in Infill Opportunity Zones****. Infill Opportunity Zones are intended to identify areas where the City plans to accommodate high density residential uses through a ministerial review process in order to facilitate housing production. In addition to creating a ministerial*

pathway for residential projects, applicable standards (parking ratios, height limitations, site coverage, etc.) shall be consistent with development at greater densities with a larger reliance on multi-modal transit.

- ***LU-1f: Development of a diversity of housing types.*** *The land use plan map shall provide sufficient quantities of land in the various residential use categories to allow for development of a variety of types of new housing units and residential environments. The purpose shall be to achieve an appropriate balance between single-family housing on individual lots and multi-unit housing types.*
- ***LU-1g: Inclusion of residential uses.*** *Commercial developments should include residential units where feasible. Where residential units are incorporated, some ground floor commercial should generally be maintained. Any residential development in new structures shall comply with the development standards of the applicable land use category.*
- ***LU-1h: Variety of Industrial Uses.*** *Provide sufficient land for a broad range of industrial uses to retain and expand existing uses and attract new industries. Continue to support industrial uses that are intended to retain and generate living-wage jobs.*
- ***LU-1i: Activity areas diagram.*** *The activity areas diagram (Figure LU-a) for lands within the City and Sphere of Influence and the planning area land use map (Figure LU-c) show existing activity areas for the City and surrounding areas. Continue to invest in improving housing, job, and active transportation access to these centers. Target investment in economic development, infrastructure, and placemaking resources in ways that strengthen these centers, support their growth and development in more equitable ways, improve connectivity within and between them, and ensure that existing residents and businesses benefit from this new investment.*
- ***LU-1j: Maintain Arcata's Historic Plaza Area as a major community center in central Arcata****. The Plaza has historically been, and should continue to be, a commercial, civic, social, and cultural center of the community, and a location for community-wide special events. The area surrounding the Plaza (Commercial–Central area), including the adjacent commercial and mixed-use areas, shall be planned to accommodate retail establishments, entertainment services, restaurants, and business and professional offices. High density residential use in the Commercial–Central area is encouraged as an Infill Opportunity Zone. Housing shall be included, where feasible, in all new commercial development within the Plaza Area.*
- ***LU-1k: Encourage Valley West's growth as a major community center for north Arcata.*** *Ensure City resources are allocated to improving accessibility, safety, and attractiveness of this mixed use area, which functions as both a tourism destination and a vibrant neighborhood commercial center for many neighboring residents. The area surrounding the Valley West Shopping Center, including the adjacent commercial, office, and residential areas, shall be planned to accommodate a large concentration of high-density residential development as well as retail establishments, entertainment services, restaurants, and business and professional offices. Continue to promote Carlson Park as a regional draw to access the Mad River. High density residential use in the Valley West Infill Opportunity Zone will be streamlined and residential units shall be included, where feasible, in all new commercial development within the Valley West Area.*
- ***LU-1p: Gateway Area land uses****. Gateway Area land use designations allow for a broad range of mixed-use redevelopment with an emphasis on housing creation. Gateway Area land use designations and policies are described in the Gateway Area Plan.*
- ***LU-1r: Maximum and Minimum Residential Density Standards.*** *In Commercial Mixed-Use and Central Commercial districts, allow residential uses. In each of these land use designations, do not establish a maximum residential density standard. Instead, allow residential density to be naturally restricted through other development standards, such as building height and Building Code requirements for minimum unit size. In addition, establish a minimum residential density standard in each of these land use designations, with exceptions established for some use types (such as theaters) and some building types (such as historically significant structures and the adaptive reuse of existing buildings).*

- ***LU-1t: Incentivize Projects that Provide Designated Community Amenities.*** *Establish ministerial permitting options and streamlined development processes for projects that create housing and provide designated community amenities.*
- ***LU-1u: By-Right Approval.*** *Allow development projects participating in the community benefits program with by-right approvals when the project conforms to all applicable standards and design guidance. To promote housing production, limit participation in community benefits program to projects that include a minimum standard of residential units.*
- ***LU-1v: Minimum Residential Density.*** *Require that all new development in C-C, C-M, R-M, and R-H land use designations provides at least some minimum quantity of housing units by establishing a minimum residential density (number of units per acre). Projects that do not provide the designated minimum residential density will need a use permit demonstrating they support the City's housing objectives.*
- ***LU-1w: Mixed-Tenure.*** *Encourage a mix of both owner-occupied and rental housing in C-C, C-M, R-M, and R-H land use designations.*
- ***LU-1y: Residential Relocation.*** *In addition to relocation support encoded in state law, support the re-housing of existing residents displaced by the redevelopment of properties containing existing residential uses.*
- ***LU-1z: Racial Equity and Housing Partner Collaborations.*** *Continue to collaborate with community housing partners that work to promote racial equity and anti-discrimination in housing for both ownership and rental opportunities within the City.*
- ***LU-1aa: Form-based Design Standards.*** *Where high-density housing uses are appropriate, apply form-based design standards that allow high-density, multi-story buildings while simultaneously requiring a vibrant, community-oriented, street-facing built environment designed to fit a "human-centered" scale.*
- ***LU-1ab: Mixed-Income Neighborhoods.*** *Provide for mixed-income neighborhoods with housing options available for all income groups. Housing in a mixed-income neighborhood should include deed-restricted units affordable to very low-income households, small affordable-by-design units, student housing, moderate income owner-occupied condominiums and townhouses, market-rate rental units, median-priced family-sized dwellings, and penthouse units for high-income households.*
- ***LU-1ac: Incentivize Mixed Use as a Community Amenity.*** *Incentivize mixed-use projects that have a ground-floor non-residential (retail, office, light industrial, or other job-creation component) through the community benefit program where not otherwise required by the form-based code.*
- ***LU-1ad: Partnerships with the Wiyot Tribes.*** *Seek partnerships with the Wiyot Tribes to support housing projects.*
- ***LU-1ae: State mandated housing production.*** *The City recognizes that the state's housing goals have resulted in laws that increase density above City established base density, removed discretion in housing development, required streamlining in approval processes, established by-right development for certain housing types, and has reduced local control over many land use decisions related to housing production. The City shall monitor and comment on state actions to advocate for reasonable solutions to housing production that meet both state objectives and City need for housing.*

Policy LU-2: Residential Land Use

Objective. *Allow for a mix of housing types and densities to ensure residents at all ages, income levels, and abilities have safe, healthy, and affordable homes that meet their physical, social, and economic needs through housing production, preservation, and conversion that is compatible with established and planned neighborhood design elements.*

- ***LU-2a: Residential Land Use Classifications****. The following land use designations are applicable to residential lands. Table LU-2 defines permitted uses, densities, lot sizes, and other development standards for each classification.*
- ***Residential – Low Density [R-L].*** *The low-density residential designation primarily provides for single-family homes, duplexes, and accessory dwelling units on individual lots. This designation is found throughout the community, including the older, historical neighborhoods surrounding the Plaza Area, Sunny Brae, Sunset, and Greenview Terrace. Under current state land use and planning law, single-family zones are authorized to construct multiple dwelling units per lot in single family residential zones and may allow up to four residential units on most R-L lots.*
- ***Residential High Density [R-H].*** *High density residential uses are designated in central Arcata and other areas to allow higher density multi-family housing located in proximity to commercial and employment uses, public services, schools, and parks. Local-serving commercial uses such as corner grocery stores and coffee shops shall be permitted in [R-H] zones.*
- ***LU-2b: Diversity and choice in residential environments.*** *The City shall encourage residential developments that collectively provide a variety of choices for housing the community, including currently unhoused people. Units shall be diverse in terms of types of units, location, unit sizes, costs, design, amount of privacy, and neighborhood environment. Inclusionary measures shall be provided for affordable housing. To encourage this, the City will implement inclusionary zoning in higher density developments and provide incentives to developers to include low and moderate income housing units in their proposals.*
- ***LU-2c: Planned Development - Residential.*** *The purpose of a Planned Development shall be to: incorporate a mix of residential types, unit sizes, affordability levels, and styles in a coordinated manner to encourage housing for all, including currently unhoused people; allow clustering of units; provide larger, more usable areas of common open space; and protect natural resources or site features, such as creek side riparian areas, wetlands, and significant vegetation such as trees to incorporate health-promoting design. Planned Development may also incorporate non-residential uses appropriate visual and noise buffers shall be provided between the uses.*

Policy LU-3: Commercial Land Use

Objective. *Grow a pattern of activity centers that meet the daily needs of the community and visitors and with a variety of retail goods, food, and services that are convenient, safe, accessible, and affordable to all.*

- ***LU-3a: Commercial use classifications****. The following land-use plan categories are applicable to commercial lands. Table LU-4 defines permitted uses, densities, lot sizes, and coverages for each classification. Large scale retail uses shall require a use permit due to evaluate:*
  1. *Potential impact on existing and projected traffic conditions.*
  2. *Impact on municipal utilities and services.*
  3. *Impact on the physical and ecological characteristics of the site and surrounding area.*
  4. *Impact on the community.*
- ***Commercial – General [C-G].*** *This designation provides the full range of retail, entertainment, and service commercial uses primarily in Valley West. C-G development must provide convenient access for patrons arriving by bicycle, public transit, motor vehicle, or on foot. Businesses in the C-G area will be expected to provide sufficient on-site parking. C-G areas are intended to have convenient access from residential areas in order to provide for day-to-day shopping and service needs. Residential densities allow up to 50 units per acre, but commercial uses shall constitute a predominant use of the first floor.*
- ***Commercial – Mixed Use [C-M].*** *This land use designation allows high-density infill development with a high degree of flexibility around uses. This land use designation is applied to parcels suitable for infill development, redevelopment, and densification. Residential densities allow up to 50 units per acre.*

- ***LU-3c: Northtown Commercial Mixed-Use Area.*** *The continuation of mixed commercial and residential uses in the Northtown area should be encouraged; including allowing redevelopment to maximize housing opportunities at up to 50 units per acre.*
- ***LU-3f: Relationship of Building Height to Open Space.*** *Allow for buildings over four stories using Community Benefits Program but require greater percentages of Open Space to be retained at ratios set in the Form-Based Code to ensure residents of high-density housing retain an excellent quality of life and easy access to high-quality open space.*
- ***LU-3g: No Maximum Residential Density.*** *Regulate building bulk and massing through design and community benefit measures; do not directly limit units per acre. Instead, encourage the maximum of dwelling units feasible within the allowed building envelope and allow other standards (e.g., height, setbacks, minimum units sizes) to collectively establish natural limitations on the number of dwelling units that can be developed.*
- ***LU-3h: New Non-residential Uses.*** *Permit Commercial Mixed and Central Commercial land use designations in the City to allow mixed uses to complement residential uses. Ensure that all new non-residential, mixed-use development supports an active and livable neighborhood, with residential, retail, office, and light-manufacturing uses thoughtfully blended together to create a cohesive neighborhood that feels complete. Allow flexibility in non-residential uses, with targeted limitations on uses that do not encourage street level human activity, livability, or neighborhood identity. Examples of uses that do not encourage human activity include heavy industrial uses, mini-storage, and outdoor automotive sales.*

Policy LU-4: Industrial Land Use

Objective. *Provide for a variety of industrial uses that will retain and generate living-wage jobs, including labor-intensive manufacturing, processing, assembly, warehousing, services, and complementary non-industrial uses, in appropriate locations. Build on the City's 150-year history of supporting industrial jobs, businesses, and product generation by supporting new and existing users in identified industrial nodes.*

- ***LU-4a: Industrial uses****. The following land use designations are applicable to industrial lands. Table LU-6 defines permitted uses, densities, lot sizes, and coverages for each classification.*
- ***Industrial – Limited [I-L****]. This land use designation is intended to provide attractive industrial areas suitable for light manufacturing and limited commercial uses. High impact industrial uses more prone to produce noise, odors, heavy truck traffic, or dust such as lumber mills and recycling centers are not permitted in limited industrial areas. The I-L land use designation includes auto sales; service and repairs; sales of mobile homes, trucks and tractors; warehousing and wholesaling establishments; outdoor sales and storage lots; light industrial activities (when conducted within a building); and similar uses. Some retail sales uses and services, particularly those involving sales of products made on the premises, will be allowed as an accessory use. Residential uses may also be permitted where they are compatible with the nature of the production process, or the related sales of products made on the premises (such as artists' live/work space).*

  The major I-L areas are the West End Employment Center near the State Route 299/Giuntoli Lane interchange including the Aldergrove Industrial Park and Happy Valley; and areas south of Samoa Blvd. including Little Lake and along south G Street). These industrial areas will be the primary focus of industrial and mixed-industrial development and investment during the timeframe of this General Plan.

The following policies from the proposed City of Arcata General Plan 2045 Public Safety Element address population and housing:

Policy PS-8: Climate Adaptation and Resiliency

Objective. *The City will continue to support and monitor research about the nature of all hazards in Arcata, including research on prediction and warning systems, community vulnerability and consequences assessments, and improvements to building performance and resilience. The City will continue to pursue*

efforts that minimize Arcata's contribution to climate change by reducing greenhouse gas emissions and protecting people, the built environment, and the natural environment from the impacts of climate change.

- ***PS-8a: Land Use and Urban Development.*** *Compact urban development has co-beneficial climatic effects, including reducing greenhouse gases, preserving habitats, producing healthy vibrant communities, and facilitating opportunities for environmental justice. The City shall support land use activities that promote compact, climate-friendly design, such as infill development, densification, and regenerative building design. City projects and private developments shall be designed to consider multi-benefit solutions that mitigate hazard risk and support the City's climate goals.*

  Urban design and development will be informed by the latest climate science to determine how to best protect and modify existing public and private infrastructure and assets and how to design new infrastructure and assets. Urban design and development should also take environmental justice considerations into account, working to eliminate disparities and burdens related to all hazards and the climate crisis for all people in Arcata.

Policy D-8: Community Benefits Program

Objective. *Ensure new development benefits the community generally while streamlining approval and accountability in the development planning process.*

- ***D-8a: Choice of Benefits.*** *Allow applicant to select community benefits from a menu of available options. The Form-Based Code will reflect the community's priorities among and relative value of community benefits. All buildings that exceed four stories must include architectural features amenities.*
- ***D-8b: Housing Production Emphasis.*** *Ensure that the available community benefits emphasize and support the City's goal of maximizing housing production.*
- ***D-8c: Value of Benefits****. Ensure that the additional intensity allowed is appropriately calibrated to the value of the community benefits provided. High-cost benefits should allow for a greater increase in allowed intensity than low-cost benefits.*
- ***D-8d: Owner-Occupied Affordable Housing as a Community Amenity****. Encourage new home ownership opportunities affordable to households of all income levels. Include deed-restricted affordable opportunities for low- and moderate-income households. Encourage a range of ownership opportunities including condominiums, townhouses, and other alternative ownership models. Provide strong incentives through community benefits program for owner occupancy.*
- ***D-8e: Incentivize Residential Density as a Community Amenity****. Through the community benefit program, allow increased development intensity and simplified development processes for projects that provide residential densities above established minimums.*
- ***D-8f: Incentivize Affordable Housing as a Community Amenity****. Through the community benefit program, allow increased development intensity and simplified development processes for projects that provide deed-restricted affordable units above established inclusionary zoning minimums.*
- ***D-8g: Incentivize Adaptable Design****. Through the community benefit program, allow increased development intensity and simplified development processes for projects that provide fully accessible or "adaptably designed" units to facilitate the conversion to housing accessible for people with disabilities or general frailty.*

Proposed City of Arcata General Plan 2045 Gateway Area Plan

Policy Chapter 1: Land Use

Objective: *Establish an overall land use arrangement that promotes mixed-use, multi-story buildings with a clear emphasis on high-density housing that is equitable, environmentally sustainable, and compatible with the envisioned neighborhood character. Allow for a broad diversity of non-residential uses that support a*

pedestrian/bicycle-friendly environment, contribute to a car-free lifestyle, and meet the physical, social, and economic needs of residents.

- ***GA-1a. Land Use Targets.*** *Aim to achieve a mix of residential and non-residential uses in each land use subarea that supports the full range of services to Gateway Area residents, workforce, and visitors. Estimated long-term targets to balance uses are shown in Table 5.*
- ***GA-1b. Relocate Existing Uses that are Incompatible with Plan Vision.*** *Facilitate the relocation of nonconforming uses that are incompatible with the Plan Vision and explore opportunities to reduce conflicts between new and existing users (e.g., noise attenuation). Target uses that conflict with or otherwise detract from the intended character of the Plan Area by being incompatible with human activity, livability, or neighborhood identity/cohesion. Support relocation of existing uses with affordable housing, large workforce, or high sales-tax.*
- ***GA-1c. Nonconforming Uses, Site Conditions and Structures.*** *Allow existing nonconforming uses, site conditions, and structures to remain unless specifically targeted for relocation in the Zoning Code. When new development occurs, encourage incompatible non-conforming uses to become conforming, and in some cases, require non-conforming uses to relocate as specified in the Zoning Code. Consider offering incentives for some nonconforming uses to either relocate or modify operations or form to become more compatible with the surrounding neighborhood.*

Policy Chapter 2: Community Benefits and Development Standards

Objective: *Identify a range of supplemental community amenities that a development project could include but that is not inherently required (such as electric vehicle charging stations, affordable-by-design studio apartments, and murals). Ensure that these amenities improve the quality of life for community members. Allow applicants to incorporate such community benefits into proposed development projects in exchange for a streamlined, by-right approval process and increased development potential consistent with Table 6, Table 7, and Image 2.*

- ***GA-2a. Base Standards and Bonus Tier Standards.*** *Utilize the tiered incentives system presented in Table 6, Table 7, and Image 2, where projects that provide higher levels of community benefits are permitted greater intensity.*

Policy Chapter 3: Housing

Objective: *The City's housing development is regulated by the State of California through the City's adopted housing element, which is updated every eight years. The last three cycles have consistently included policies to encourage efficient growth patterns, including policies supporting mixed use and infill development projects near jobs and transit. This plan delivers on previous implementation measures by creating a new and targeted focus on high density residential projects within the Gateway Area. To implement the Housing Element, substantially increase the volume and variety of housing in the Plan Area by transitioning from the current patchwork light-industrial development pattern to a denser, more cohesive mixed-use and high-density residential pattern. Plan accordingly in recognition that the Gateway Plan Area has by far the best potential to create a volume of new housing when compared to all the other priority infill areas identified in the Housing Element. The City also acknowledges that the Plan Area has the greatest potential to accommodate a much-needed increase in the diversity of housing types.*

The Gateway Area Plan relies on the housing policies in the Housing Element, Land Use Element, and Design Element to support the variety and mix of housing types envisioned in the Gateway Area. While the Gateway Area Plan conforms to the housing policies elsewhere in the General Plan, the following are emphasized in the Gateway Area.

Element	*Policy*	*Policy Area*
Design	*D-8d*	*Owner-Occupied Affordable Housing as a Community Amenity.*
Design	*D-8e*	*Incentivize Residential Density as a Community Amenity.*
Design	*D-8f*	*Incentivize Affordable Housing as a Community Amenity.*
Design	*D-8g*	*Incentivize Adaptable Design.*
Land Use	*LU-1a*	*Partnerships with the Wiyot Tribes.*
Land Use	*LU-1v*	*Minimum Residential Density.*
Land Use	*LU-1w*	*Mixed-Tenure.*
Land Use	*LU-1ab*	*Mixed-Income Neighborhoods.*
Land Use	*LU-3g*	*No Maximum Residential Density.*
Land Use	*LU-1y*	*Residential Relocation.*
Land Use	*LU-1z*	*Racial Equity and Housing Partner Collaborations.*

Policy Chapter 4: Employment

Overview: *As reflected in Table 5, the City envisions the majority of new development in the Gateway Area to be residential. However, to provide for complete neighborhoods and support a car-free lifestyle, some additional non-residential development is desired. Non-residential land uses will include retail, personal services (e.g., hair salons and tattoo studios), restaurants, professional offices, hotels, light manufacturing, and arts and entertainment uses. Non-residential uses not only serve residents but also provide new employment opportunities and enhance the City's economic vitality.*

Employment Policies

Objective: *Provide for uses that retain and generate jobs.*

The Gateway Area Plan relies on the Land Use Element Commercial Mixed-Use policies to support a variety of commercial, compatible light manufacturing, and mixed-uses to support the vision of a thriving complete neighborhood. The Gateway Area will further refine the expansive allowable uses supporting employment through the Gateway Zoning Code.

City of Arcata Local Coastal Program

Policy Recommendations in the City of Arcata Local Coastal Plan related to housing include:

- ***E-6 and G-4: Where wetlands are seasonally farmed, continued agricultural use of the wetlands is allowed.*** *Expanding farming operations into non-farmed wetlands by diking or otherwise altering the functional capacity of the wetland is not permitted. Farm-related structures (including barns, sheds, and farm-owner occupied housing) necessary for the continuance of the existing operation of the farmed wetlands may be located on an existing farmed wetland parcel, only if no alternative upland location is viable for such purpose and the structures are sited and designed to minimize the adverse environmental effects on the farmed wetland. Clustering and other construction techniques to minimize both the land area covered by such structures and the amount of fill necessary to protect such structures will be required. The location of the wetlands shall be determined by use of the adopted Coastal Wetlands Map.*
- ***J-7: The City shall encourage the use of Planned Development zoning as a means of providing a variety of housing types, land uses, and sufficient usable open space through innovative design****. The Planned Development District should allow diversification in the relationship of buildings, structures, and open spaces while (e)nsuring substantial compliance to the base district regulations.*

3.9.4 Evaluation Criteria and Significance Thresholds

Under criteria based on Appendix G of the CEQA Guidelines, the adoption and implementation of the General Plan 2045 would be considered to have a significant impact on population or housing if it would:

– Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure); or
– Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere.

The following sections describe the anticipated environmental impacts on population and housing resources due to the adoption and implementation of the proposed General Plan 2045.

3.9.5 Methodology

Population and housing trends in the City were evaluated by reviewing the most current data available from the current General Plan 2020, the 2019-2027 Regional Housing Needs Assessment, the City's Infill Market Study (ADE 2021), and the U.S. Census Bureau. This evaluation considers whether the adoption and implementation of the General Plan 2045 would affect the current population and housing stock. Per CEQA Section 15131, a social or economic change is not considered a significant effect on the environment unless the changes are directly linked to a physical change. For purposes of this analysis, substantial displacement of existing people or housing would occur if allowed land uses would displace substantially more residences than would be accommodated through growth accommodated by the General Plan 2045.

3.9.6 Impacts and Mitigation Measures

Impact PH-a: Would adoption and implementation of the General Plan induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

The General Plan 2045 does not propose policies, implementation measures, or development that would lead to unplanned population growth. The purpose of the General Plan 2045 is to appropriately and efficiently plan for future growth of the City. As described in the Project Description, the General Plan 2045 anticipates a total population of 27,000 people and approximately 12,400 total dwelling units by 2045. Population growth is anticipated to be absorbed throughout the City, within the existing City limit boundaries. Infill development would preserve the greenbelt around the City and provide for reinvestment in existing neighborhoods.

The land uses allowed under the General Plan 2045 would provide opportunities for cohesive new population, housing, and business growth in the City and would not induce substantial unplanned population growth. Proposed General Plan 2045 Land Use Element policies emphasize infill, including upzoning throughout the City, increasing allowable density in existing zones, and providing more flexibility in mixed use zones to increase housing production. Areas throughout the City, though mainly in the Infill Opportunity Zones, would be rezoned (Figure 2-3B – Proposed Zoning and Infill Opportunity Zones) to accommodate new residential development. Upzoning would occur to allow higher densities in current residentially designated districts. Table 2.6-3 in the Project Description outlines proposed changes in land use density. The Land Use Element encourages infill development of vacant, brownfield, and underutilized land to meeting housing and employment needs without major extensions of infrastructure and services.

Infill to support population growth would predominantly occur within the Infill Opportunity Zones. These Infill Opportunity Zones include four neighborhoods whose current mix of uses present opportunities for infill development (Figure 2-3A – Existing Zoning and Infill Opportunity Zones). The Infill Opportunity Zones are in close proximity to transit, commercial areas, support economic development efforts and the proposed mix of land uses may allow residents to live closer to their places of work and thereby encourage alternative modes of transportation.

The General Plan 2045 Growth Management Element updates center around promoting equity, strengthening the economy, protecting the environment, and promoting public health and safety. Growth Management Element policies establish criteria for land annexation (GM-3) and extending services outside Sphere of Influence and City

boundaries (GM-2c and GM-4b). These policies would reduce the potential for direct and indirect unplanned population growth surrounding the City.

General Plan 2045 policies strive to promote both residential growth and economic opportunities. Land Use Element policies support mixed-use neighborhood centers (LU-1d, LU-1j, and LU-1k), provide land for a broad range of industrial uses to retain existing uses and attract new uses (LU-1h), invest in improving housing, job, and active transportation access (LU-1i). Residential-high density and Commercial-General, and Commercial-Mixed use land uses allow for mixed uses with residential and employment opportunities. Major Industrial-Limited areas such as the West End Employment Center and areas south of Samoa Blvd would be the primary focus of industrial and mixed-industrial development and investment during the timeframe of this General Plan.

The General Plan 2045 anticipates the majority of the development in the Gateway Area would be residential. Gateway Area Plan Element Chapter 4 (Employment) provides strategies to promote non-residential uses in the Gateway Area that would retain and generate jobs.

The General Plan 2045 is a comprehensive plan to guide appropriate and efficient future growth of the City. Infill development promoted by the General Plan 2045 would minimize pressure to develop the greenspace and forests surrounding the City, reducing development pressure directly outside the City limits. The General Plan 2045 includes several policies that would ensure responsible, planned development within the City of Arcata. Infill development policies and the Infill Opportunity Zones would encourage development near existing infrastructure, utilities, and services. Adoption and implementation of the General Plan 2045 would not result in the direct or indirect inducement of unplanned population growth; therefore, potential impacts would be less than significant.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact PH-b: Would adoption and implementation of the General Plan displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

“Substantial” displacement would occur if General Plan 2045 policies and allowed land uses would promote the displacement of more residences than would be accommodated through growth facilitated by the policies and land uses. The General Plan 2045 would accommodate new development through increased residential densities and building intensities as well as form-based code that would be allowed for the land use designations in the General Plan 2045.

An increase of approximately 4,341 dwelling units is planned during the General Plan period. This is in addition to the approximately 8,000 residential units that currently exist. This Draft EIR assumes that the creation of dwelling units to meet the need of future residents would occur within the City’s existing boundaries, particularly within the Infill Opportunity Zones. Additionally, the Land Use Element encourages high density residential infill development in the Infill Opportunity Zones and infill development of vacant, brownfield, and underutilized land to meet housing and employment needs without major extensions of infrastructure and services. The General Plan 2045 does not redesignate developed residential areas for non-residential purposes, generally proposed zoning changes would increase density.

Gateway Area and Other Infill Opportunity Zones

A significant portion of the housing and population growth is expected to occur in the Infill Opportunity Zones. Though some existing residents could be displaced, there would be a net increase in dwelling units over the planning horizon. The Gateway Area Plan Element contains policies and implementation measures intended to address housing and business displacement, including:

– Land Use Programs: Imp-GA-1.2. Relocation Assistance. Develop a formalized business relocation program that identifies funding, program requirements, and critical infrastructure for industrial users, including incompatible Industrial Limited uses and Industrial General uses.

- Housing Policies: LU-1y. Residential Relocation. In addition to relocation support encoded in state law, support the re- housing of existing residents displaced by the redevelopment of properties containing existing residential uses.
- Housing Programs: Imp-GA-3.1. Housing Monitoring. Monitor the size, type, and affordability of new housing proposed, approved, and developed in the Gateway Area. Revise policies and programs in the Gateway Area Plan and implementing development regulations as needed to achieve the Plan housing goals. Monitoring will be completed in conjunction with the City's annual Housing Element Annual Performance Report.
- Housing Programs: Imp-GA-3.2. Resident Relocation Assistance. Establish a program to require developers to assist with the re-housing of low-income residents displaced from their housing as a result of a redevelopment project. Seek funding through a combination of state and federal sources, and partner with nonprofit entities such as Housing Humboldt. Require private financing to contribute to ensure relocation program is fully and sustainably funded.
- Housing Programs: Imp-GA-3.3. Business Relocation Program. Establish a relocation program to support businesses displaced by redevelopment in the Gateway Area. Program funding should be through a combination of private and public sources. The program should use both City owned and privately owned property to retain businesses within the City limits.

These policies will reduce potential impacts related to housing displacement and housing supply to a less than significant level.

Remaining Study Area

The Housing Elements contain a series of policies and implementation measures to promote the development of new sustainable and energy efficient housing that meets safety standards, offers a variety of housing types in a variety of locations and enhances existing neighborhoods, services, and the environment; these include:

- *HE-1 Support innovation and creativity in sustainable construction techniques, energy efficient design, property conveyances, and types of development. Condominium, Community Land Trusts, cooperative and co-housing, developments, and planned developments shall be encouraged.*
- *HE-5 Identify adequate sites that are or will be made available with appropriate zoning and development standards and that will have the public services and facilities needed to facilitate and encourage the development of a variety of types of housing for the needs of all income levels.*
- *HE-6 Provide opportunities for infill development of vacant and redevelopable properties in a way that allows for gradual, rather than drastic, changes from surrounding development density or type. Design features such as gradual increases in building height, functional open space, well-designed landscaping and natural vegetation, breaks in wall and roof lines, and building separations.*
- *HE-13 Support affordable housing and greenhouse gas emissions reduction by prioritizing high-density, mixed-income, infill housing projects that improve alternative transportation infrastructure. Affordable housing and infill projects that include public and/or private infrastructure for public transit, bike and other ride share programs, electric vehicles, and other transportation demand management strategies or alternative transportation modes will receive incentives including deferred fees and reduced development standards, including but not limited to reduced parking, setbacks, or landscaping requirements.*
- *HE-16 Seek and support programs that address the housing needs of and prioritize housing for special groups such as seniors, disabled persons, farmworkers, those in need of temporary shelter, those in need of supportive housing, single-parent families, and large families.*
- *HE-17 Assist in the development of housing affordable to very low-, low-, and moderate-income households through financial and/or technical assistance.*
- *HE-22 Encourage the use of density bonuses to incorporate affordable housing units into projects.*
- *HE-23 Promote housing opportunities for all persons regardless of race, color, national origin, religion, sex, familial status, disability, sexual orientation, gender identity/expression, genetic information, marital status, and source of income.*

- *HE-25 Meet the housing and supportive housing and accessibility needs of the homeless and other special needs groups, including prevention of homelessness.*
- *HE-21 Encourage the development of accessory dwelling units (ADUs).*
- *Imp-HE-1 Promotion of Owner-Occupied Units*
- *Imp-HE-3 Affordable Housing Preservation*
- *Imp-HE-5 Development and Acquisition of Affordable Multifamily Housing*
- *Imp-HE-8 Community Land Trust*
- *Imp-HE-10 Access for Persons with Disabilities, Including Persons with Developmental Disabilities*
- *Imp-HE-11 Infill Development Program*
- *Imp-HE-12 Mixed Use*
- *Imp-HE-13 Development of Additional Living Units in Residential Zones*
- *Imp-HE-15 Housing Discrimination and Housing Equal Opportunity*
- *Imp-HE-16 Housing Development for Seniors*
- *Imp-HE-18 Promote Student Housing Opportunities*

The Housing Elements also contains an implementation measure intended to address potential displacement and provide relocation assistance. Housing Element Implementation Measure 14 (Residential Relocation and Anti-Displacement Program) would require the City to continue to implement its Residential and Business Anti-Displacement and Relocation Assistance Plan (adopted Resolution No. 045-12), which provides financial assistance to low-income households of rental-occupied units who are permanently displaced when the City acquires a property, and to property owners who undertake repairs that require occupants to be temporarily relocated.

Multiple General Plan 2045 policies and implementation measures address housing needs to special groups including homeless populations within the City of Arcata. Policy HE-16 and HE-25 supports housing needs of special groups such as seniors, disabled persons, farmworkers, and includes those in need of temporary shelter or supportive housing. Housing Element Implementation Measure 17 (address the shelter and other needs of the homeless population) states the City will continue to identify needs of the homeless population, including homeless students and encourage the development of housing for the homeless on the parcels preapproved for Emergency Housing and transitional housing in other areas zoned multifamily. Land Use Element Policy LU-2c (Planned Development - Residential) outlines that the purpose of planned development shall be to incorporate a mix of residential types, unit sizes, affordability levels, and styles in a coordinated manner to encourage housing for all, including currently unhoused people.

The General Plan 2045 also includes policies to support social services programs related to homeless populations. The Health Element includes Policy H-1d (Support unhoused community members) to increase City coordination with/support for organizations that provide resources and health services those living unsheltered in Arcata. Public Safety Element contains Policy PS-8b (Social services programs) for the City to administer certain social services, such as temporary and permanent housing programs. This policy also requires the City to monitor social services needs, through population trend analysis and other indicators, and information disseminated to other social service providers. These policies and implementation measures would reduce potential impacts on homeless or special groups from the anticipated General Plan 2045 development to a less than significant level.

Residential zones would be subject to state law related to residential housing development (for example, accessory dwelling units and small lot subdivision requirements). This would reduce local control over many land use decisions related to housing production. Per Land Use Element Policy LU-1r (State mandated housing production), the City would monitor and comment on state actions to advocate for reasonable solutions to housing production that meet both state objectives and City needs for housing.

The 2019 Regional Housing Need Allocation identified a need for Arcata to construct 610 dwelling units of various income categories (Table 3.9-2) by 2027 (HCAOG 2018). General Plan 2045 identified an additional

4,341 dwelling units could be constructed by 2045. The City can reasonably obtain the regional housing allocation.

The General Plan 2045 would not result in substantial displacement or the net loss or displacement of housing, necessitating the construction of replacement housing elsewhere. The Land Use and Housing Elements contain policies and implementation measures intended to support higher density residential development within the City near existing infrastructure and services and to provide for mixed housing types and affordability levels to meet the needs of the community. Proposed Gateway Area Plan and Housing Element policies would lessen potential impacts to the displacement of people, housing, and businesses. Therefore, adoption and implementation of the General Plan 2045 would be less than significant in relation to population or housing displacement.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

3.9.7 Cumulative Impacts

The geographic boundary for cumulative projects related to population and housing impacts is the City of Arcata, City of Eureka, and surrounding unincorporated areas of Humboldt County.

Impact PH-C-1: Would adoption and implementation of the General Plan 2045 contribute to a cumulatively significant impact to Population and Housing Resources?

The cumulative effects analysis examines the current project effects taken together with effects of past projects and known projects in the foreseeable future. The projects listed in Table 1.10-1, cumulatively with the General Plan 2045, could directly and indirectly result in increased population and housing. The General Plan 2045 includes policies and actions to ensure responsible, planned development and growth of the City. General Plan 2045 would not cause substantial unexpected population growth and would not cause a net loss of housing. Growth would also occur outside of the City of Arcata, in the City of Eureka and in unincorporated Humboldt County. The City of Eureka and the County are required by State law to use the General Plan process and other planning processes to plan for and control future growth. Therefore, the General Plan 2045 would have a less than significant cumulative impact related to population and housing.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

3.10 Public Services and Recreation

This section evaluates the potential impacts related to public services and recreation resources resulting from adoption and implementation of the General Plan 2045. Public services evaluated include fire protection, police protection, schools, parks and recreation, and other public facilities.

Multiple comment letters received in response to the Notice of Preparation circulated for the proposed General Plan 2045 were related to public services. No comments were received about primary and secondary schools, while one was received about service and land capacity for new students at Cal Poly Humboldt. One question asked about fees related to both fire and police protection services. Comments related to public stormwater facilities are addressed in Section 5.5 (Hydrology and Water Quality), public wastewater, water, and solid waste facilities are discussed in Section 3.12 (Utilities and Service Systems), and wildfire in Section 3.14 (Wildfire).

Arcata Fire Protection District representatives attended the Gateway Area Plan agency scoping meeting and sent a letter. Comments from Arcata Fire Protection District included concern related to their current capacity to provide fire suppression and emergency medical services for the additional residential units and population anticipated in the Gateway Area Plan. Potential concerns included water supply, traffic flows and patterns, access to buildings, and equipment and staff with appropriate skills/training for high-rise fire suppression. Arcata Fire Protection District did not provide recommendations or mitigation to reduce potential direct and indirect impacts on fire protection services. Where the comments do not necessarily pertain to environmental issues, such as funding or adequate fire suppression training, no analysis is provided as it is outside the scope of this document.

Of the comment letters received in response to the Notice of Preparation circulated for the proposed General Plan 2045, there were few comments specific to recreation. One letter noted support for parks and another noted support for trail planning. The Native American Heritage Commission requested that when planning greenspace, parks, or other open space, to incorporate culturally appropriate protection and management criteria for Tribal cultural resources. Section 3.11 (Tribal Cultural Resources) further addresses this and other Native American Heritage Commission comments.

To provide the basis for this evaluation, the Setting section describes the local setting within the City. The Regulatory Framework section describes the regulatory background that applies to public services and recreation, and the Impact Analysis section establishes the thresholds of significance, evaluates potential impacts, and identifies the significance of impacts.

3.10.1 Study Area

For impact assessment related to public services and recreation, the City limits were used as the study area (see Figure 2-1 – City of Arcata Planning Areas).

3.10.2 Setting

The settings for fire, police, schools, parks, and other facilities are described below.

Fire Protection within the Study Area

Fire protection and prevention duties within the City are the responsibility of the Arcata Fire Protection District, a combination fire protection agency (career and volunteer firefighters). The Arcata Fire Protection District is a Special District that received its charter on June 1, 1944. The Fire District expands past the City limits to include the communities of McKinleyville, Bayside, Manila, Jacoby Creek, and other rural areas; totaling approximately 62 square miles and serving approximately 37,000 people. The Arcata Fire Protection District operates out of three fire stations, two located within the City (the Arcata Station at 631 9th Street and the Mad River Station at 3235 Janes Road) and one in McKinleyville (2149 Central Avenue) to provide rapid response to all incidents within its service area. Each of the three stations are staffed daily with two career firefighters, averaging six on-duty firefighters 365 days per year. Occasionally, low staffing availability results in temporarily station closure (for

around 24-48 hours). Between 2018-2022, the Fire District's personnel fluctuated but averaged approximately three Chiefs and 19 career firefighters (Table 3.10-1). In addition to fire protection services, the Arcata Fire Protection District provides basic emergency medical services, public safety education, and building inspections.

Table 3.10-1: Arcata Fire Protection District Staffing 2018-2022

Staff Type	Range (personnel)	Average Annual (personnel)
Chiefs	2-4	2.8
Career Firefighters	15-22	19.2
Volunteer Firefighter	1-13	6

In 2022, the Arcata Fire Protection District responded to approximately 3,750 calls within the District. Of those calls, 1,747 were within the City limits; an approximate 50% increase since 2004. In the past five years, the Fire District has responded to an average of approximately 1,678 calls annually within the City limits. Almost 50% of the Fire District's calls were related to rescue or emergency medical services, approximately 20% were good intent (no threat/problem found upon arrival), approximately 15% were service calls, between 5-10% were fires, 5-8% were false alarm, and less than 5% were related to hazardous conditions, weather/natural disaster, or other types of calls. Call volumes and response times are listed in Table 3.10-2 below.

Table 3.10-2: Annual Call Volume Since 2008 and Response Times within the City Limits

Years	Number of Calls within Arcata	Response Times (minutes)
2022	1,747	8.02*
2021	1,595	9.23*
2020	1,530	7.85
2019	1,872	6:05
2018	1,650	6:07
Average between 2013-2017	1,377	N/A
Average Between 2008-2012	1,094	N/A

Source: Personal communication, Justin McDonald

Note: *Increase in response time could be attributed to low staffing and station closures.

Insurance Services Office, Inc. develops fire insurance ratings based on a community's structure fire suppression capabilities including fire department, emergency communications, water supply, and community risk reduction efforts. A classification of 10 indicates that the community's fire suppression program does not meet Insurance Services Office, Inc.'s minimum criteria, while classification of 1 indicates an exemplary fire suppression program. The City has an Insurance Services Office, Inc. fire insurance classification of 3/3y (AFPD 2016).

The Arcata Fire Protection District maintains effective automatic and mutual aid agreements for rapid response to fires within the City and in outlying areas. The Fire Protection District has agreements with CAL FIRE and Humboldt Bay Fire as well as the following volunteer departments: Samoa Peninsula Fire Department, Blue Lake Fire Protection District, Fieldbrook Volunteer Fire Department, and Westhaven Volunteer Fire Department.

Fire Protection within the Infill Opportunity Zones

There are no differences in fire protection services within the Infill Opportunity Zones compared to areas outside these Zones.

Police Protection within the Study Area

Currently, law enforcement within City limits is primarily provided by the Arcata Police Department (APD). The Arcata Police Department operates out of its main station office located at the City Hall, 736 F Street and a

storage facility on South G Street. APD's primary responsibilities include enforcement of the laws of the state and the City, investigation of crimes, apprehension of criminals, and community service include the maintenance of a crime prevention program. The territory is divided in two beats, North and South, within the City limits. There are three shifts daily, covering 24 hours a day, 365 days a year. Since the early 2000s, APD staffs each shift with one sergeant and two officers. Additional patrol coverage may be provided during peak call volume times. As staff are available and in addition to typical shifts, APD provides investigations and outreach activities, and manages several community programs, including the Arcata Certified Emergency Response Teams (CERT) and Neighborhood Watch.

In 2019-2020, APD had 29 officers, the highest number in its history. As of May 2023, APD is currently comprised of 19 officers and 13 non-sworn personnel (i.e., administrators, dispatch, parking attendants). APD has a fleet of 36 vehicles and resources, mainly consisting of patrol vehicles but also including a Mobile Command Center, trailers, side-by-side vehicle, and volunteer vehicles. APD responds to over 30,000 calls annually and has an average response time of 4 minutes and 20 seconds to 4 minutes and 50 seconds when responding to emergency calls. The majority of calls are related to patrol checks (either officer or citizen initiated), reports of disturbance (i.e., noise or physical altercations), traffic stops, and welfare checks.

Table 3.10-3: Arcata Police Department Annual Staffing and Call Volume

Year	Number of Calls	Sworn Officers	Non-Sworn Personnel
2022	33031	19	13
2021	33422	25	13
2020	34826	29	13
2019	39945	29	14
2018	35835	n/a	n/a

Source: Personal communication, Leah Brazil, Police Business Manager

APD has a mutual cooperative agreement with Cal Poly University Humboldt Police Department. The University Police Department has jurisdiction on the University campus and operates out of the Student and Business Services Building, Room 101, Harpst Street, Arcata. APD also provides automatic aid to Humboldt County Sheriff's Department, California Highway Patrol, and Eureka Police Department. The Humboldt County Sheriff's Department law enforcement jurisdiction is the unincorporated areas around the City. It provides service from the Sheriff's Department Eureka Main Station, located at the Humboldt County Courthouse. The California Highway Patrol holds primary responsibility for law enforcement on State and Federal highways. The Eureka Police Department has jurisdiction in the City of Eureka. In 2022, APD assisted with approximately 1,200 mutual aid calls with the University Police Department, County Sheriff's Department, Eureka Police Department, and California Highway Patrol. Additionally, APD assisted the Fire District and local ambulance with approximately 1,300 calls.

Police Protection within the Infill Opportunity Zones

There are no differences in police protection services within the Infill Opportunity Zones compared to areas outside these zones.

Schools within the Study Area

The educational opportunities available in Arcata include public and private schools for kindergarten through twelfth grades, vocational training programs, and university education. There are three public school districts that provide kindergarten through eighth grade education. Enrollment for school districts within the City limits is shown in Table 3.10-4. Data is from Humboldt County Office of Education Humboldt County Schools First Week Enrollment data (HCOE 2022), Northern Humboldt Union High School District Opening Day Enrollments (NHUHSD 2022), and Arcata School District (personal communication, Luke Biesecker).

Table 3.10-4: Humboldt County Schools First Week Enrollment Data for District Schools within Arcata City Limits

Sources: HCOE 2022, NHUHSD 2022, Arcata School District personal communication Luke Biesecker

Note: *charter schools

The Arcata School District operates two schools, Arcata Elementary School and Sunny Brae Middle School. The Arcata School District boundaries encompass the City limits of Arcata, including Humboldt State University, parts of the region near Blue Lake and Fieldbrook, and the town of Manila on the Samoa Peninsula. Between 2018 to 2022, the district had an average enrollment of 503.4 students and from 2020-2023 had an average of 38.3 teachers, 60 classified staff, and 11 admin / management staff (personal communication, Luke Biesecker). In addition to those two schools, the district sponsors four charter schools: Fuente Nueva Charter School, Coastal Grove Charter School, Union Street Charter School, and Redwood Coast Montessori. Redwood Coast Montessori is located in the Gateway Area on K Street. The four schools had a combined average 5-year enrollment of 627 students (HCOE 2022).

The Jacoby Creek School District includes Jacoby Creek School serving kindergarten through grade eight in Bayside and Arcata. Between 2020-2023 the district had a total annual enrollment of approximately 455 students, one superintendent, and 26 teachers (personal communication, Melanie Nannizzi). Prior to 2020, the district had an annual enrollment of approximately 465 students. Approximately half of the students enrolled live outside the district boundaries (personal communication, Melanie Nannizzi).

The Pacific Union School District includes one kindergarten through grade eight school, the Pacific Union School. The district boundaries encompass the northern City limits of Arcata and west to the coast. Pacific Union School's target enrollment is approximately 530 students. Between 2020-2023, Pacific Union School had an average of 539 students (38% of which lived out of the district), 36 teaching staff, and 2 administrative staff (personal communication, Marci Laffranchi).

Northern Humboldt Union High School District provides high school education to Arcata and McKinleyville to the north. The schools located within the study area include:

– Arcata High School
– Pacific Coast High School
– Six Rivers Charter High School
– Laurel Tree Charter School

For the 2022-2023 school year, Arcata High School had 1,072 students enroll and Pacific Coast High School had 30 students enroll (NHUHSD 2022). Approximately 40% of students live outside of the City (personal communication, Roger Macdonald). Between 2018-2022, Arcata High School had an average of 63.2 teachers and 9.6 other staff while Pacific Coast High School had an average of 4.8 teachers and 1 other staff (personal communication, Tammy Pires).

In addition to public schools, there are several private pre-schools and kindergarten schools, and private elementary and middle schools in Arcata including but not limited to Mad River Montessori, Arcata Christian School, and Humboldt Bay Christian School.

Cal Poly Humboldt offers undergraduate and graduate degrees and occupies approximately 146 acres east of State Route 101. Cal Poly Humboldt has made recent land acquisitions throughout the City. In 2021, enrollment was 5,562 students (HSU 2021). The Cal Poly Humboldt Prospectus anticipates a total resident population of around 10,300 students by 2030 (HSU 2021).

Schools within the Infill Opportunity Zones

Some schools are located within the Infill Opportunity Zones; however, they serve regional populations, not just students that live within the Zones.

Parks within the Study Area

The City currently owns and maintains approximately 4,103 acres of parkland at 29 sites. The City divides the responsibility for parks and recreation services between the Parks and Recreation Divisions of the Environmental Services Department. The City's system for classifying parks is based on National Recreation and Park Association standards but defines park types and appropriate levels of service to reflect the unique characteristics of Arcata and to facilitate future parks planning for the City. Arcata's classification system includes:

– Neighborhood Parks, which provide access to basic recreation opportunities for nearby residents;
– Community Parks, which are larger parks that provide both active and passive recreation opportunities and that appeal to the entire community;
– Special Use Areas, which are stand-alone recreation facilities not located within larger parks;
– Greenways and Linear Parks that are natural or built corridors that provide green buffers between communities or around the City; and
– Natural Areas that are undeveloped lands left in a natural state for conservation or outdoor recreation.

Approximately 97% of the City's parks and recreation acreage is provided as natural areas or undeveloped park reserves and a relatively small proportion of the park system is devoted to developed parks (Table 3.10-5). Most developed parkland (approximately 66%) is provided at three large community parks: Arcata Community Park, Carlson Park, and Redwood Park. Remaining developed parkland acreage (approximately 39 acres) is distributed among 22 small parks, consisting of neighborhood parks (16.4%), special use areas (14.5%), and linear parks/greenways (2.6%). Based on the City's current population of approximately 19,000 people, there is approximately 6 acres of developed parks and 210 acres of undeveloped parks per 1,000 residents in the City.

Table 3.10-5: Comparison of Parkland Area in Arcata in the Year 2010 Based on the Parks & Recreation Master Plan and in 2023

Developed Parks	Number of Parks 2010	Acres 2010	Number of Parks 2023	Acres 2023	Change in Acres
Neighborhood Parks	12	9.5	14	19.1	9.6
Community Parks	2	56.6	3	77.7	21.1
Special Use Areas	6	16.9	6	16.9	0.0
Linear Parks/Greenways	3	5.9	2	3.0	-2.9*
Subtotal	**23**	**88.8**	**25**	**116.7**	**27.8**
Undeveloped Parks	**Number of Parks 2010**	**Acres 2010**	**Number of Parks 2023**	**Acres 2023**	**Change in Acres**
Natural Areas	15	3,625.4	2	3.9	-3,621.5*
Undeveloped Sites	5	29.9	2	5.5	-24.4*
Subtotal	**20**	**3,655.3**	**4**	**3,986.9**	**331.6**
Total Park System	**43**	**3,744.1**	**29**	**4,103.6**	**359.4**

*Note: Negative changes in acres are due to recategorization of parkland types since the adoption of the Parks & Recreation Master Plan in 2010, not a loss of parkland. Overall, a net gain in parkland occurred between 2010 and 2023.

Parks within the Infill Opportunity Zones

Typically, access to recreational resources within the Infill Opportunity Zones is similar to access within the rest of the study area.

Gateway Area

No public parks, recreational facilities, or publicly accessible open spaces other than the Rail-to-Trail project along L Street, currently exist within the Gateway Area. Several parks and recreational facilities are within walking distance in the surrounding neighborhoods. Approximately 10 parks are located within 0.25 miles from the Gateway Area. Arcata Plaza is three blocks from the eastern boundary. Shay Park and Stewart Park are located to the north, and the Janes Creek Linear Park is west. South of Samoa Boulevard is the Arcata Marsh and Wildlife Sanctuary.

Downtown

One City park, called the Plaza, is located in the Downtown Infill Opportunity Zone. Approximately four additional parks are within 0.25 miles, including the 30-acre Arcata Community Park & Sports Complex.

Craftsman Mall

Although no parks are within the Craftsman Mall Infill Opportunity Zone, Larson Park and Arcata Skateboard Park are directly south of the Zone. Approximately four additional neighborhood parks are within 0.25 miles.

Valley West

No parks currently exist within the Valley West Infill Opportunity Zone. Two parks, Carlson Park and Valley West Park, are located within 0.25 miles.

Trails

The City has a comprehensive system of trails within and connecting parks that provide a valuable recreation resource to the community in addition to regional linkages. The City has a mix of hard and soft surface multi-purpose trails that support activities, such as running, hiking, mountain biking and riding horses. Table 3.10-6 notes the types of trails and mileage proposed in City visioning as part of the preparation of the Parks and Recreation Master Plan.

Table 3.10-6: Recreational Trails in Arcata

Trail Type	2010 Mileage*	Existing Mileage	Proposed Mileage	Total Mileage
Pedestrian	5.9	4.18	0	4.18
Pedestrian/Bicycle	5.3	14.40	13.75	28.15
Pedestrian/Equestrian/Bicycle	7.7	21.73	1.92	23.66
Bicycle Only	n/a	1.14	0.88	2.01
Total	**18.9**	**41.5**	**16.5**	**58.0**

*Source: Parks and Recreation Master Plan (City of Arcata 2010)

Other Park Resources

In addition to City parks and recreation areas, several other public agencies and private groups provide parks and recreation opportunities within the study area. The acreage related to other park resources is not counted with City parks; however, the City takes them into account when assessing community park and recreation needs. These other park resources include:

– Schools: there are a number of local schools in Arcata whose sport fields, sport courts, playgrounds, and gymnasiums are regularly used by the community, including: Arcata Elementary; Jacoby Creek, Pacific Union, and Sunny Brae. In addition, Cal Poly Humboldt is a major provider of a variety of recreational facilities and programs, primarily serving faculty, staff, and students. The campus Student Recreation Center has a climbing wall, fitness center, weight room, and indoor field space (artificial turf).
– Northern Humboldt Recreation and Park District: This District manages the Arcata Community Pool. It is located adjacent to Arcata High School and serves surrounding communities as well, including Manila, Jacoby Creek, and the Warren Creek area.
– County, State, and Federal Agencies: Humboldt County Parks, the Bureau of Land Management, U.S. Fish and Wildlife Service, California Department of Fish and Game, and several other agencies maintain significant natural areas and trails in or near Arcata.
– Private, Non-Profit, and Land Trusts: Private and non-profit organizations in and around Arcata also provide land and facilities offering recreation opportunities, including a private golf course, a health club, pool and sport fields, as well as preserved natural areas.

Other Public Facilities within the Study Area

Other public facilities offer locations for community interaction and events, ranging from community-wide celebrations to group meetings, instructional classes, and weddings. The City has enclosed facilities and outdoor spaces to provide gathering places for all manner of social, cultural, political, recreational, religious, educational, and entertainment events. Their physical form and design are important components of Arcata's community character. The following is a list of other public facilities considered in this Draft EIR analysis.

– There are two public library facilities in Arcata:
  - Arcata City Library at 500 7th Street
  - Cal Poly Humboldt Library on the University Campus at the Library Circle
– City Hall is situated at 736 F Street, and houses the main City offices: City Manager, Environmental Services, Finance, Personnel, Planning and Community Development, Police Department, Building and Engineering, and other departments, as well as the Council Chambers.
– The D Street Community Center is situated on D Street, between 13th and 14th Streets, on a one-acre site. Its meeting hall has a 300-occupant capacity and can seat 130; it includes kitchen facilities, restrooms, tables, chairs, parking, and bike racks. The Center is available to rent for events most weekends during the year.

- The Arcata Community Center is located in the Arcata Community Park & Sports Complex, south of 7th Street and east of State Route 101. It has a senior center, meeting rooms, kitchen, gymnasium and adjacent ballfields, soccer fields, and a futsal court.
- The Redwood Park Lodge & Lounge are located in Redwood Park, and accessible from the 11th Street entrance. The building capacity is 99, and it seats 50. There is a small kitchen and exterior restrooms at the lodge. Both the Lodge and Lounge have meeting rooms and restrooms.
- The Arcata Ballpark, located at 8th and F Streets, is home to the Humboldt Crabs, Arcata's semi-pro baseball team since 1944. Their summer season runs from June through July. The five-acre site includes one baseball field, restrooms, a concession stand, and bleachers.
- Arcata-Mad River Transit Center is located at 925 E Street. The Transit Center serves as a stop for the Arcata & Mad River Transit System, Redwood Transit System, and Greyhound.
- Arcata Marsh Interpretive Center is located at 569 S G Street within the Arcata Marsh and Wildlife Sanctuary. The Center provides interactive exhibits and information about the marsh, wastewater treatment facility, and local habitat and wildlife. Tours and educational presentations also occur at the Center.

Other Public Facilities within the Infill Opportunity Zones

No other public serving, city-maintained facilities are located in the Infill Opportunity Zones.

3.10.3 Regulatory Framework

Federal

National Fire Protection Association Codes and Standards

In 2001, the National Fire Protection Association (NFPA) released NFPA 1710 (Standard for the Organization and Deployment of Fire Suppression Operations, Emergency Medical Operations, and Special Operations to the Public by Career Fire Departments). The standard specifies guidelines for effectiveness and efficiency of public career fire agencies including the crew size, initial alarm deployment, key performance objectives for fire and basic life support/emergency medical service response. NFPA 1710 standards provide guidance on best practices; however, are not regulatory requirements. According to the 2020 Edition, key performance objectives include:

- Key Performance Objectives for Fire Response
  - Turnout time ≤ 80 seconds
  - First engine arrives on scene ≤ 240 seconds (four minutes)
  - Second company arrive on scene ≤ 360 seconds (six minutes)
  - Low and medium hazard: Initial full alarm on scene ≤ 480 sec (eight minutes)
  - High hazard/high-rise: Initial full alarm ≤ 610 sec (10 minutes, 10 seconds)
- Key Performance Objectives for EMS Response
  - Turnout time ≤ 60 seconds
  - First responder arrives with an AED or higher capability ≤ 240 seconds (four minutes)
  - ALS unit arrives ≤ 480 sec (eight minutes)
  - The eight-minute benchmark for ALS units assumes that a first responder, minimally equipped with an AED, arrived in four minutes

State

Police and Fire Protection

California Code of Regulations Title 8 (Cal/OSHA)

Title 8 Sections 1270 "Fire Prevention" and 6773 "Fire Protection and Fire Equipment" establish minimum standards for fire suppression and emergency medical services. The standards include, but are not limited to, guidelines on the handling of highly combustible materials, fire hose sizing requirements, restrictions on the use of compressed air, access roads, and the testing, maintenance, and use of all firefighting and emergency medical equipment.

California Code of Regulations Title 14 (Natural Resources)

Division 1.5 (Department of Forestry and Fire Protection) establishes various wildfire preparedness, prevention, and response regulations.

California Code of Regulations Title 19 (Public Safety)

Title 19 of the CCR establishes regulations related to fire prevention and engineering measures for new construction.

California Code of Regulations Title 24 (California Building Standards Code) Part 9 (California Fire Code)

The 2022 California Fire Code, which consists of the 2021 International Fire Code, is Title 24 Part 9 of the California Code of Regulations. The 2022 California Fire Code was adopted by Arcata Fire Protection District on November 8, 2022 (Ordinance 22-21). The California Fire Code contains regulations for safeguarding life and property from fire and explosion, dangerous conditions arising from the storage, handling, and use of hazardous materials and devices, hazardous conditions in the use or occupancy of buildings or premises, fire protection systems such as alarm and sprinkler systems, fire safety during construction and demolition, standards for building inspections, as well as provisions to assist emergency response personnel. Fire-safety-related building standards are cross-referenced in other parts of Title 24. Part 7 includes information related to building materials, systems and/or assemblies to be used in the exterior design and construction of new buildings located within a wildland urban interface area.

California Health and Safety Code Division 12 (Fires and Fire Protection)

Additional state fire regulations are set forth in California Health and Safety Code Section 13000 et seq. These include regulations for building standards, fire protection and notification systems, fire protection devices such as extinguishers, smoke alarms, high-rise building standards, childcare facility standards, and fire suppression training. Building standards related to fire prevention and safety are also set forth in the California Building Code.

State of California Emergency Response Plan

California has developed the State of California Emergency Response Plan to coordinate emergency services provided by federal, state, and local government agencies. The plan is administered by the State Office of Emergency Services, which coordinates the responses of other agencies such as local fire and police agencies, emergency medical providers, California Highway Patrol (CHP), the California Department of Fish and Wildlife and Caltrans (CGOES 2017).

Schools

California Senate Bill 50 (Development Impact Fees)

California Senate Bill 50 (SB 50) was funded by Proposition 1A, the Kindergarten–University Public Education Facilities Bond Act of 1998, and approved in 1998. This is codified in California Government Code Section 65995 which authorizes school districts to collect fees to offset the costs associated with increasing school capacity as a result of new residential and commercial/industrial development and related population increases. SB 50

established a process to determine the amount of fees developers would be charged. According to California Government Code Section 65996, development fees authorized by SB 50 are deemed to be "full and complete school facilities mitigation," notwithstanding any contrary provisions in CEQA or other state or local laws. Two school districts that serve City of Arcata residents have development impact fees requirements.

Parks and Recreation

Quimby Act (California Government Code Section 66477 of the Subdivision Map Act)

The State's "Quimby Act" was established in 1965 and allows cities to require residential subdividers to dedicate land, or to pay in-lieu fees, for park and recreational purposes if the general plan contains policies and standards for parks and recreational facilities and definitive regulations are in place specifying the proportion of a subdivision to be dedicated or the payment of in-lieu fees. The Quimby Act allows for minimum dedications of three acres per 1,000 residents and the dedications of up to five acres to match a jurisdictions actual parkland to population ratio. The City's General Plan and Land Use Code require dedications of the maximum amount under the Quimby Act, five acres per 1,000 residents.

Mitigation Fee Act (California Government Code 66000-66008)

The Mitigation Fee Act, enacted as AB 1600, allows local agencies to impose a fee as a condition of approval of a development project to mitigate the impact on the jurisdiction's ability to provide specified public facilities to serve the proposed development projects. Fees collected are required to be deposited into a separate capital facilities account or fund to provide public information annually.

California Coastal Act

The study area is partially within the Coastal Zone. No Coastal Act policies relate to schools or police protection. Section 30253 states that new development shall *"minimize risks to life and property in areas of high geologic, flood, and fire hazard."* Numerous policies are relevant to parks and recreation, included below.

Section 30210 Access; recreational opportunities; posting

In carrying out the requirement of Section 4 of Article X of the California Constitution, maximum access, which shall be conspicuously posted, and recreational opportunities shall be provided for all the people consistent with public safety needs and the need to protect public rights, rights of private property owners, and natural resource areas from overuse.

Section 30211 Development not to interfere with access

Development shall not interfere with the public's right of access to the sea where acquired through use or legislative authorization, including, but not limited to, the use of dry sand and rocky coastal beaches to the first line of terrestrial vegetation.

Section 30212 New development projects

a. *Public access from the nearest public roadway to the shoreline and along the coast shall be provided in new development projects except where (1) it is inconsistent with public safety, military security needs, or the protection of fragile coastal resources, (2) adequate access exists nearby, or (3) agriculture would be adversely affected. Dedicated accessways shall not be required to be opened to public use until a public agency or private association agrees to accept responsibility for maintenance and liability of the accessway.*

Section 30214 Implementation of public access policies; legislative intent

a. *The public access policies of this article shall be implemented in a manner that takes into account the need to regulate the time, place, and manner of public access depending on the facts and circumstances in each case including, but not limited to, the following: (1) Topographic and geologic site characteristics. (2) The capacity of the site to sustain use and at what level of intensity. (3) The appropriateness of limiting public access to the right to pass and repass depending on such factors as*

the fragility of the natural resources in the area and the proximity of the access area to adjacent residential uses. (4) The need to provide for the management of access areas so as to protect the privacy of adjacent property owners and to protect the aesthetic values of the area by providing for the collection of litter.

b. *It is the intent of the Legislature that the public access policies of this article be carried out in a reasonable manner that considers the equities and that balances the rights of the individual property owner with the public's constitutional right of access pursuant to Section 4 of Article X of the California Constitution. Nothing in this section or any amendment thereto shall be construed as a limitation on the rights guaranteed to the public under Section 4 of Article X of the California Constitution.*

c. *In carrying out the public access policies of this article, the commission and any other responsible public agency shall consider and encourage the utilization of innovative access management techniques, including, but not limited to, agreements with private organizations which would minimize management costs and encourage the use of volunteer programs.*

Section 30220 Protection of certain water-oriented activities

Coastal areas suited for water-oriented recreational activities that cannot readily be provided at inland water areas shall be protected for such uses.

Section 30221 Oceanfront land; protection for recreational use and development

Oceanfront land suitable for recreational use shall be protected for recreational use and development unless present and foreseeable future demand for public or commercial recreational activities that could be accommodated on the property is already adequately provided for in the area.

Section 30222 Private lands; priority of development purposes

The use of private lands suitable for visitor-serving commercial recreational facilities designed to enhance public opportunities for coastal recreation shall have priority over private residential, general industrial, or general commercial development, but not over agriculture or coastal-dependent industry.

Section 30222.5 Oceanfront lands; aquaculture facilities; priority

Oceanfront land that is suitable for coastal dependent aquaculture shall be protected for that use, and proposals for aquaculture facilities located on those sites shall be given priority, except over other coastal dependent developments or uses.

Section 30223 Upland areas

Upland areas necessary to support coastal recreational uses shall be reserved for such uses, where feasible.

Section 30224 Recreational boating use; encouragement; facilities

Increased recreational boating use of coastal waters shall be encouraged, in accordance with this division, by developing dry storage areas, increasing public launching facilities, providing additional berthing space in existing harbors, limiting non-water-dependent land uses that congest access corridors and preclude boating support facilities, providing harbors of refuge, and by providing for new boating facilities in natural harbors, new protected water areas, and in areas dredged from dry land.

Section 30233 Diking, filling or dredging continued movement of sediment and nutrients

a. *The diking, filling, or dredging of open coastal waters, wetlands, estuaries, and lakes shall be permitted in accordance with other applicable provisions of this division, where there is no less feasible less environmentally damaging alternative, and where feasible mitigation measures have been provided to minimize adverse environmental effects, and shall be limited to the following:*

(3) In open coastal waters, other than wetlands, including streams, estuaries, and lakes, new or expanded boating facilities and the placement of structural pilings for public recreational piers that provide public access and recreational opportunities.

(6) Restoration purposes.

(7) Nature study, aquaculture, or similar resource dependent activities.

c. In addition to the other provisions of this section, diking, filling, or dredging in existing estuaries shall maintain or enhance the functional capacity of the wetland or estuary. Any alteration of coastal wetlands identified by the Department of Fish and Game, including, but not limited to, the 19 coastal wetlands identified in its report entitled, "Acquisition Priorities for the Coastal Wetlands of California", shall be limited to very minor incidental public facilities, restorative measures, nature study, commercial fishing facilities in Bodega Bay, and development in already developed parts of south San Diego Bay, if otherwise in accordance with this division.

Section 30240 Environmentally sensitive habitat areas; adjacent developments

a. Environmentally sensitive habitat areas shall be protected against any significant disruption of habitat values, and only uses dependent on those resources shall be allowed within those areas.

b. Development in areas adjacent to environmentally sensitive habitat areas and parks and recreation areas shall be compatible with the continuance of those habitat and recreation areas.

Section 30252 Maintenance and enhancement of public access

The location and amount of new development should maintain and enhance public access to the coast by

(1) facilitating the provision or extension of transit service,

(2) providing commercial facilities within or adjoining residential development or in other areas that will minimize the use of coastal access roads,

(3) providing non-automobile circulation within the development,

(4) providing adequate parking facilities or providing substitute means of serving the development with public transportation,

(5) assuring the potential for public transit for high intensity uses such as high-rise office buildings, and by

(6) assuring that the recreational needs of new residents will not overload nearby coastal recreation areas by correlating the amount of development with local park acquisition and development plans with the provision of onsite recreational facilities to serve the new development.

Section 30253 Minimization of adverse impacts

New development shall do all of the following: (e) Where appropriate, protect special communities and neighborhoods that, because of their unique characteristics, are popular visitor destination points for recreational uses.

Local

This section includes City of Arcata policies and plans for the portions of the Project within City limits and within the Coastal Zone.

City of Arcata General Plan 2020

Police Protection, Fire Protection, and Schools

The following policies from the City of Arcata General Plan Public Safety Element, Public Facilities and Infrastructure Element, Land Use Element, and Design Element that address educational facilities, fire protection, and police protection:

Policy PS-1: Emergency Preparedness

Objective. *Ensure that the City, its residents, businesses, agencies, and organizations are prepared for emergencies or disasters and have effective response and recovery plans in place.*

Applicable sub-policies:

- ***PS-1a: City Emergency Response Plan.*** *The City shall maintain a comprehensive response plan for emergencies, including seismic events, tsunamis, slope failures, floods, storms, fires, and materials spills or contamination. The plan will provide for timely and coordinated response to emergencies that threaten community residents, property, and vital services. The plan will identify City and other emergency response agencies that should be contacted, and also identify neighborhood resources available for more localized assistance and relief.*
- ***PS-1b: Evacuation routes/transportation facilities****. Emergencies such as floods, storms, fires, distantly generated tsunamis, and hazardous materials spills may necessitate immediate evacuation of affected areas. A map of evacuation routes shall be included in City and neighborhood emergency response plans. These plans will also include evacuation methods for residents who are without, or unable to operate, vehicles. An emergency access plan shall be developed for access to the east side of town (east of State Route 101) after a major seismic event.*
- ***PS-1c: Disaster preparedness coordination using the Standardized Emergency Management System.*** *City staff responsible for emergency response shall be trained in Standardized Emergency Management System (SEMS) implementation, which is necessary to receive reimbursement from the State of California for disaster response related costs. This training includes instruction about the Incident Command System (ICS) which is used to manage emergency incidents or non-emergency events.*
- ***PS-1e: Development & design standards for emergency response.*** *New and renovated structures, as well as streets, driveways, and alleyways, shall be designed to provide adequate entry and exit by emergency vehicles and personnel. This includes visible street numbering, emergency vehicle turn-arounds, accessible building entry points and stairways, lighting, and interior evacuation routes.*

Policy PS-5: Fire Hazards

Objective. *Minimize risk of personal injury and property damage resulting from structural (urban) and wildland fires.*

Applicable sub-policies:

- ***PS-5a: Management of urban fire hazards (development/design standards).*** *Structural fires demand immediate response from a combination of onsite and Fire Department resources in order to minimize injury and damage. Fire suppression devices such as extinguishers and sprinklers are important for initial response, reduce fire insurance premiums, and satisfy operations requirements for certain types of businesses. These devices are encouraged in new and renovated non-residential buildings and in all residential structures with more than four units, even when not required by fire and building code.*

  All buildings should have adequate lighting, street numbering, and access to ensure rapid response by fire-fighting vehicles. To ensure urban fire safety, the City shall enforce the Uniform Building and Uniform Fire Codes (UBC & UFC) currently in effect, and the Universal Building Code when it is adopted.
- ***PS-5b: Review of development for fire safety.*** *The Arcata Volunteer Fire Department takes an active role in reviewing new development for compliance with fire safety standards. The City shall continue to incorporate Fire Department review to ensure that driveways, turns-arounds, and other access ways have sufficient width, vertical clearance, and turn-around space for fire fighting vehicles. Roadways shall have an all-weather surface and grades shall not exceed the Fire Department's maximum slope standards for emergency access.*

- ***PS-5c: Water supply (fire flow).*** *The City's fire hydrant system provides the primary source of water for fighting urban fires. The City shall maintain fire hydrant spacing so that no residential structure is more than 500 feet from a hydrant and no commercial or industrial structure is more than 300 feet from a hydrant. Each hydrant shall have adequate fittings and be capable of providing adequate water flows to meet Fire Department standards. The City shall maintain adequate fire flows in its water system. Open-water sources such as ponds, swimming pools, private storage tanks, and reservoirs may be used as a secondary water source by fire-fighting apparatus. These sources shall be equipped with appropriate filtering devices or strainers to prevent clogging of water pumps.*
- ***PS-5d: Management of wildland fire hazards****. Wildland fires in forested areas of the City can cause property damage and threaten nearby structures. Buildings in forested areas shall use materials such as non-flammable perimeter vegetation and roofing material to prevent exposure to wildland fires. The City shall encourage the Arcata Fire Department to maintain its mutual aid agreement with the California Department of Forestry and Fire Prevention (CDF) to insure rapid response to wildland fires.*
- ***PS-5e: Fire suppression services.*** *The Arcata Volunteer Fire Department's (AVFD) jurisdiction (shown as District #1 on the AVFD service area map) includes the City's incorporated, sphere of influence, and planning areas, except for an outlying area along Jacoby Creek Road. The AVFD maintains two fire stations to provide rapid response to all fire calls within its service area. They also maintain mutual aid agreements with the CDF and the Eureka Fire Department (Humboldt Bay Fire) for rapid response to fires in outlying areas.*

Policy PS-6: Hazardous Materials

Objective. *Minimize the personal injury, property damage, and public health risks associated with the production, use, storage, disposal, and transporting of toxic substances or hazardous materials.*

Applicable sub-policy:

- ***PS-6d: Siting of facilities handling hazardous waste****. Businesses and agencies that use, store, or produce hazardous materials shall train employees and other users in safe handling and storage procedures, and shall post current Occupational Safety and Health Act (OSHA) and Humboldt County hazardous materials requirements. Businesses shall also comply with Federal "community right-to-know" regulations. The City shall consider proximity to sensitive receptors, such as schools, hospitals and other health care facilities, day care centers, and other immobile populations, when reviewing new facilities and businesses involved in these activities.*

Policy PS-7: Crime Prevention and Response

Objective. *Promote law enforcement agency and community group efforts to reduce crime and assure timely and effective responses to calls for service.*

Applicable sub-policies:

- ***PS-7a: Development/building and site design standards for crime prevention.*** *Some criminal acts in and around buildings can be prevented or minimized by incorporating safety and security precautions into building and site design. These include a combination of onsite features such as alarm systems, secured entryways, lighting, and visible access. Crime prevention measures, such as providing alarm systems, security lighting, street numbers, and visibility for police surveillance, should be incorporated into, and around, new and renovated buildings. Gated communities hinder police and fire suppression access and shall be prohibited, consistent with Community Design Element policy.*
- ***PS-7b: Community-based policing.*** *Community-based policing has proven effective in reducing crime by involving citizens in crime prevention. The City Police Department provides training to business and neighborhood groups in how to discourage crime and best respond when crime occurs. The City shall continue to provide citizen training, maintain relationships with community groups, and encourage Business Emergency Services Teams (BESTs) to reduce crime and augment the essential*

services of the Police Department. Foot and bike patrols shall be promoted to maximize interaction between citizens and police, to foster friendship, understanding, and mutual help.

- ***PS-7c: Cooperative Law Enforcement**. There are three law enforcement agencies based in Arcata: The Arcata Police Department, the HSU Police Department, and the California Highway Patrol. These agencies work together, responding to incidents throughout the City. The City shall continue to cooperate with other law enforcement agencies to maximize public safety within its boundaries. The City Police Department shall be the primary response agency within City limits since it is the only agency directly accountable to the government and citizens of Arcata.*
- ***PS-7d: Independent review.** The Arcata Police Department has an established review procedure for investigating complaints against law enforcement personnel. Complaints may also be referred to the Humboldt County Grand Jury.*
- ***PS-7e: Education and crime prevention funding.** The City recognizes that funds spent on education and crime prevention are more effective in reducing crime than funds spent on apprehending, prosecuting, and incarcerating criminals. The City shall pursue a long-term strategy of funding education and crime prevention programs.*

Policy PF-4: Educational Facilities

***Objective.** Identify student enrollment increases, based on the projected future population of the City, and coordinate with local school (public and private) districts, Humboldt State University, and other education providers to maintain and improve educational facilities and services, while preserving established community/student ratios.*

Applicable sub-policies:

- ***PF-4a: Coordination with Arcata, Pacific Union, and Jacoby Creek school districts**. The City shall provide demographic information to assist the School Districts in projecting future student enrollments. The City shall encourage the school districts to expand existing schools rather than designating new sites for this purpose.*
- ***PF-4b: Coordination with private and specialized education providers.** The City shall accommodate providers of private, vocational, and specialized education that fills an identified community need, when they desire to locate in the City.*
- ***PF-4c: Coordination and development review with Humboldt State University.** The City shall designate at least one member of the City Council and one Planning Commission member as liaisons to Humboldt State University and request that the designated Council member be appointed to the University President's Advisory Council.*
- ***PF-4d: Joint use of school facilities for community events and recreation.** School facilities are primary locations for neighborhood level events and recreational activities. The City, school districts, and community organizations shall develop and maintain partnerships for the joint use of school facilities.*

Policy PF-5: Public Facilities

***Objective.** Provide adequate facilities for services and programs administered by the City and other public service providers, including City administrative and meeting facilities (City Hall), police and fire departments, libraries, and community centers.*

Applicable sub-policies:

- ***PF-5a: Facilities for community service and private organizations.** Community service organizations, as well as non-profit and private organizations offer shelter, assistance, training and other human services. These organizations also offer places for religious, cultural, social, entertainment and recreation activities. The City shall allow facilities, operated by community service and private organizations, to be located in incorporated areas designated General Commercial [C-G];*

Central Commercial [C-C]; Residential High Density [RH]; Limited Industrial [I-L]; and Public Facility [P-F]. Operations and functions of these facilities may be subject to a use permit, to be granted and revocable at the discretion of the City.

- ***PF-5b: City administrative and operations facilities and community centers.*** *The City shall limit development of the Corporation Yard facilities to within existing boundaries, and shall maintain a landscaped screen along the northern and eastern perimeter of the oxidation pond.*
- ***PF-5c Public libraries and civic facilities operated by other agencies.*** *The City shall coordinate with Humboldt County to provide public library facilities in the City. The City shall also coordinate with other agencies, such as the Redwood Regional Transit System, to maintain joint-use facilities in the City.*

Policy LU-5: Public Facilities

Objective. *Provide appropriate locations and sites for water storage and delivery; wastewater collection and treatment; drainage; solid waste management; fire protection; parks and recreation; civic and institutional uses; and education (public and private) facilities.*

Applicable sub-policies:

- ***LU-5a: Public Facility [PF] uses****. Public Facility land use category is applicable to those lands which are to be used for the various types of public facilities, except that some public facility uses are also allowed in other land-use categories. Public facility uses include certain uses which may be owned by private individuals, private organizations, or private institutions, as well as by government entities. Uses include schools, public services and administrative offices, wastewater and solid waste management facilities, public parking lots, parks and non-commercial recreation uses, golf courses, auditoriums, and other public assembly spaces, hospitals, cultural facilities, community gardens, communication (including telecommunications) and transportation facilities, and utilities. The types of uses allowable within this category shall be specified in Table LU-6.*

Policy D-6: Commercial and Industrial Design

Objective. *Create functional commercial centers and industrial areas, suited to staff and customer needs, responsive to site conditions, and compatible with the neighborhood context.*

Applicable sub-policies:

- ***D-6c: Design of institutional development.*** *Since institutional uses—such as churches, schools, government facilities, and others—are frequently located within residential areas, their design shall be reviewed for compatibility with the adjacent residential neighborhood. In addition, the City requests that HSU, school districts, and other institutional entities adhere to the following criteria, which shall apply to design of any facilities within Arcata:*
  1. *Long, uninterrupted expanses of wall and roof planes should be avoided and architectural features which add interest and variation, such as porches, cupolas, towers, arbors or pergolas, etc., should be incorporated.*
  2. *Appropriate buffers and screening should be provided between institutional uses and adjacent residential uses, including increased setbacks, fencing, and landscaping.*
  3. *The massing of buildings and the visual organization of facades, including the proportion of window and door openings to total wall surface, exterior materials and colors, and architectural detailing and ornamentation, should be designed to harmonize with any adjacent residential uses.*
  4. *Appropriate setbacks and landscaped buffers should be provided to minimize noise and visual impacts.*

Parks and Recreation

The following policies from the City of Arcata General Plan Parks and Recreation Element:

City of Arcata General Plan Parks and Recreation Element

In 1994, the City adopted a General Plan Parks and Recreation Element (Resolution 945-26) to serve as the central policy document to guide the provision of parks and recreation in the City. The Element considered a wide variety of recreation programs with policies addressing the community's desire to provide a wide spectrum of parks and recreation opportunities and facilities; encouraging cooperative agreements with other government entities and public/private partnerships to enhance the availability of recreation programs; and emphasized fiscal responsibility and the objective to minimize environmental impacts. This Element was maintained as a separately bound document in the Arcata General Plan 2020.

Parks and Recreation Element Goal 1: To provide a wide spectrum of recreational opportunities for Arcata residents of all ages.

- *Policy. The City of Arcata shall annually review and establish standards and objectives and evaluate and address deficiencies. Evaluate new program ideas and incorporate if appropriate.*

Parks and Recreation Element Goal 2: Two to provide all residents, with a wide assortment of parks and related facilities.

- *Policy A. The City of Arcata shall continue to develop and improve the City's parks and related facilities.*
- *Policy B. The City of Arcata shall encourage the development of privately operated recreation facilities within the City limits and sphere of influence.*
- *Policy C. The City of Arcata shall acquire additional parklands as needed to accommodate population growth.*

  Fees and or parkland dedications pursuant to the Quimby Act (California Government Code Section 66477, as amended) shall be used to provide or improve park and recreation facilities which serve the residents of the subdivision from which such fees or land are obtained. Community Parks serve all residents of the City of Arcata.

  Whenever a Neighborhood Park exists, residents of a particular subdivision located in that neighborhood may be considered served by the existing Neighborhood Park. The term "neighborhood" is intended to be applied to the area from which residents can reasonably be expected to travel to use a park or facility. It is not intended to be applied in a strict manner, such as identifying the residents on one side of a street as being in one neighborhood, and the residents on the other side in a different neighborhood.

Parks and Recreation Element Goal 3: To promote sharing of facilities and programs with other entities.

- *Policy A. The City of Arcata shall encourage cooperative agreements, maintain good relations, and continue sharing equipment, facilities, fields, maintenance, and staff with other entities.*
- *Policy B. The City of Arcata shall acquire and develop future park sites adjacent to schools wherever possible.*

Parks and Recreation Element Goal 4: To emphasize fiscal efficiency, in the provision of parks and recreation programs.

- *Policy A. The City of Arcata shall develop and improve parks and related facilities as funds become available.*
- *Policy B. The City shall offer credit for private recreation facilities as specified in California Government Code Section 66477 or where it is determined that proposed private recreation facilities are in the best interest of the citizens of the City of Arcata.*

Parks and Recreation Element Goal 5: To provide aesthetically, pleasing parks and recreational facilities, which are compatible with their environment.

- *Policy. The City of Arcata shall support a system of recreational services and facilities which minimize adverse impacts on the environmental; fiscal, and social well-being of Arcata.*

Parks and Recreation Element Goal 6: To bring park and recreation facilities in compliance with changing federal and state laws and encourage user safety.

- *Policy A. The City of Arcata shall establish priorities to ensure compliance with the requirements of federal and state laws.*
- *Policy B. The City of Arcata shall maintain a risk management program for park and recreation programs and facilities.*

The City manages some of its open space areas for recreation and therefore the Open Space Element includes policies relevant to recreation.

Policy OS-1: Overall Open Space System

Objective. *Designate, maintain, and enhance the quality, and increase the amount of permanently protected open space in the Arcata Planning Area, including: natural resource areas; resource production areas; outdoor recreation areas; and areas subject to health and safety hazards. These areas are to be protected, linked together in a network wherever practical for accessibility, managed for resource production, and maintained for enjoyment by City residents and visitors.*

Applicable sub-policies:

- ***OS-1e: Appropriate uses and development limitations within open space lands.*** *Certain open space areas contain wetlands and other critical habitat, and must be preserved in a natural condition and enhanced. Other areas can accommodate managed activities such as mining and timber harvesting, subject to sustainable yield policies RC-6 and RC-8 in the Resource Conservation & Management Element, while other areas shall be designated for interpretive and recreational use. Each designated open space area of the City shall be evaluated by the appropriate City advisory board (e.g., Creeks & Wetlands Committee) to determine the resources present, the acceptable level of use, and appropriate preservation. The management of, and development in, open space areas are subject to applicable policies of the Resource Conservation and Management and Land Use Elements.*
- ***OS-1g: Public and private ownership and management of open space****. Open space resource areas are owned and managed by the City, state agencies, land trusts, corporations, and private individuals. The City shall set the standard for responsible resource land stewardship through its management of the Community Forest, marshes, parks, and other resource lands, and encourage other public and private entities, entrusted with the ownership and management of similar resource areas, to consider natural resource values to the community in all long term use decisions.*

Policy OS-4: Open Space for Outdoor Recreation and Coastal Access

Objective. *Designate and secure public access to a sufficient supply of land and water areas with recreation resource value, including parks, forests, coastal areas, baylands, and stream corridors, to meet the outdoor recreation needs of Arcata residents and visitors.*

Applicable sub-policies:

- ***OS-4a: Designations for park lands and outdoor recreation areas.*** *All publicly held park lands and outdoor recreation areas are designated as Public Facility [PF] on the General Plan Land Use Element map. The natural resources present on these lands are also subject to the applicable policies of the Resource Conservation & Management Element. Recreation areas are mapped on Figure OS-a.*

OS-4b: Coastal access policy. *The City shall maintain coastal access corridors to Arcata Bay and other public use areas and public trust lands within the coastal zone. Coastal access routes include:*

- *Access from Samoa Boulevard to Arcata Bay via South "I" and "G" Streets.*
- *Access to Mad River Beach via Mad River Road.*
- *Access to Manila Dunes via Samoa Boulevard.*

- ***OS-4c: Relationship to the Parks and Recreation Element.*** *This element contains policies for management of open space lands designated for outdoor recreation. The Parks and Recreation Element contains goals and policy direction for: providing a of recreation opportunities; sharing facilities; park and recreation program efficiency; environmental compatibility; and user safety.*

Policy OS-4: Open Space in Health and Safety Hazard Areas

Objective*. Designate health and safety hazard areas such as seismic fault and liquefaction zones, unstable soils or slopes, floodplains, areas susceptible to wildland fire, and watershed/reservoir safety zones. Provide appropriate protections, or restrictions, to minimize unnecessary exposure of people and property to health and safety hazards.*

Applicable sub-policies:

- ***OS-5a: Designation of open space for public safety.*** *Designated open space for public safety is shown on Figure OS-a. Setbacks for seismic faults and liquefaction zones, unstable soils or steep slopes, mapped Flood Hazard Zone A, areas susceptible to wildland fire, and watershed/reservoir safety zones, shall be established as part of the development review process. Where severe safety considerations exist (e.g., within the Alquist-Priolo Zone), open space easements shall be granted to the City to protect people and property from health and safety hazards.*

  Open space areas, with slopes 15% or greater shall retain their natural landform features; excavation shall be restricted, according to the City's adopted grading ordinance, and removal of vegetation shall be limited to the selected thinning of timber stands and removal of hazard trees.

  Open Space areas that are flood-prone may be used for agricultural and recreational purposes but shall be kept free from urban development. A flood plain overlay zone shall be applied to all Natural Resource [NR] and Agricultural [AE] areas subject to inundation according to the Flood Insurance Rate Map Hazard Boundary Map) developed by the Federal Emergency Management Agency (FEMA) or the Federal Insurance Administration.

The Resource Conservation and Management Element Policy contains goals and policies for conserving, enhancing, and managing the City's natural systems and features which in some cases, include recreational features or amenities.

Policy RC-2: Streams Conservation & Management

Objective. *Enhance, maintain, and restore the biological integrity of entire steam courses (headwaters to mouth), and their associated riparian habitats, as natural features in the City's landscape.*

Applicable sub-policy:

- ***RC-2a: Designation of protected streams.*** *The provisions of this policy shall apply to those streams shown on the Protected Watercourse Map (Figure RC-a). These watercourses and their associated riparian areas serve as habitat for fish and wildlife, provide space for the flow of stormwater runoff and flood waters, and furnish open space and recreational areas for city residents.*

Policy RC-3: Wetlands Management

Objective. *To protect existing wetlands areas and their functional capacities and values, maintain a standard of "no net loss" in area and value, restore degraded wetland areas, enhance wetlands functions, and create additional wetland areas to replace historical losses.*

Applicable sub-policies:

- ***RC-3d: Allowable uses and activities in Environmental Buffer Areas.*** *The following compatible land uses and activities may be permitted in EBAs, subject to all other policies in this Element, including those requiring avoidance of impacts and other mitigation requirements: 3. Outdoor recreation activities, such as bird watching, hiking, boating, horseback riding, and similar activities. 4. Education, scientific research, and use of nature trails.*
- ***RC-3i: Management of Arcata Marsh for wetlands values as well as wastewater treatment.*** *The marsh and wildlife sanctuary serves a variety of purposes and functions, including providing wetland habitat for a variety of species, wastewater treatment, and recreational use. These purposes shall be balanced for the benefit of all users.*

Policy RC-4: Open Waters of Arcata Bay & Tidelands

Objective. *Maintain existing Bay wetlands and tide lands, protect them from urban and agricultural encroachments, or degradation, and manage the open waters of Arcata Bay for their wildlife, fisheries, navigation and ecological values and recreation and tourism uses.*

Applicable sub-policies:

- ***RC-4c: Coastal-dependent and public trust uses of Arcata's tidelands.*** *Tidelands of Arcata Bay support a variety of wildlife as well as human activities. The following provisions shall be made for managing tideland areas.*
  1. *New development shall not restrict access to the shoreline. Access to coastal areas shall be required for new development.*
  2. *Tidelands and water areas of Arcata Bay shall be designated Natural Resource Public Trust Lands [NR-PTL], and identified as passive use recreational areas.*
  3. *The Arcata Marsh and Wildlife Sanctuary shall be designated as Natural Resource [NR] and the recreational component of the project identified as a passive use recreational area.*
  4. *The continued use of the tideland for scientific and educational studies is encouraged.*
  5. *The Arcata Marsh and Wildlife Sanctuary (AMWS) shall be maintained and new facilities shall be consistent with the AMWS plan adopted by the City Council.*
  6. *The South "I" Street boat launch shall be enhanced and maintained to accommodate small watercraft and windsurfing.*
  7. *The placement of interpretative sites along the Arcata Bay shore, including Nature and Wildlife Centers, shall be coordinated with other agencies, and serve as an educational focal point for Arcata's natural resource areas.*
  8. *Access on the levee from the AMWS westward to the City limit will be provided for passive recreation and nature observation.*
- ***RC-4f: Management of bayfront and marsh areas for coastal access, recreation, and tourism.*** *Tidelands and water areas of Arcata Bay shall be designated Natural Resource-Public Trust Land [NR-PTL] and protected from uncontrolled access. The following guidelines shall be used when permitting access to these areas:*
  1. *Motorized vehicles shall be restricted to paved roads and parking lots.*
  2. *Pedestrians shall be restricted to designated trails and facilities.*
  3. *Valid scientific and educational studies of the wetlands and tidelands shall be encouraged.*

  New development shall not restrict public access to the shoreline. Public access to the shoreline shall be required of new development. Where consistent with the Humboldt Bay National Wildlife Refuge's Management Plan, controlled public access to the Refuge's Jacoby Creek Unit shall be developed along Arcata Bay from the AMWS to the City's westward limit.

Policy RC-6: Forest Resources Management

Objective. *Protect and enhance private and public forest lands (Community and Jacoby Creek) to maintain the integrity of the ecosystem while providing timber production, recreation, and habitat values.*

Applicable sub-policies:

- ***RC-6a: Management of Arcata Community Forest.*** *The City's forest management plan includes the following policies:*
  1. *Recreation and aesthetics resource management - The community forest will emphasize dispersed, day-use opportunities. Recreational use shall not be allowed to impact other resources such as fish, wildlife, or watershed.*
  2. *Timber resource management - To ensure the sustainable and long-term production of forest products, the rate of harvesting must not exceed the rate of production. Long-term productivity refers to the continuing ability of the forest to produce timber while retaining the associated values of watershed, wildlife, soils, recreation and aesthetics. This is dependent upon the use of management practices that do not allow for the deterioration or impairment of soil productivity or the alteration of the natural landscape beyond its ability to recover. For planning purposes, long term means that exceeding fifty years.*
- ***RC-6b: Management of Jacoby Creek Forest.*** *The management policies for the Jacoby Creek Forest are the same as those for the Arcata Community Forest, listed above, except that the Jacoby Creek Forest is not open to recreational use.*
- ***RC-6c: Allocation of forest fund revenues.*** *At least twenty percent of net forest fund revenues, derived from timber cutting, shall be directed towards park acquisition, maintenance, and development. This can include acquisition of stream corridors, and riparian and greenbelt areas. These areas contribute to the diversity of parks and, in the case of linear parks along stream corridors, provide passive recreation areas compatible with the environment. The acquisition of open space shall be emphasized as an appropriate use for the remaining revenues.*
- ***RC-6d: Management practices for private timberlands.*** *The management of private timberlands shall be encouraged to use current principles of sustainable forestry for all aspects of forest use and function: recreation; timber production; biodiversity; air and water quality; and carbon storage. Timber owners are encouraged to apply for conservation easements, certified forestry, or compensation for carbon storage.*

Policy RC-7: Water Resources Management

Objective. *Manage Arcata's water resources from a watershed perspective, to maintain surface and subsurface water quality and quantity. Runoff will be managed for the benefit of aquatic habitats.*

- ***RC-7a: Protection of surface waters from point and nonpoint pollution sources.*** *The use of natural stormwater drainage systems, which preserve and enhance natural features, shall include the following:*
  2. *Recreational opportunities and aesthetics shall be considered in the design of stormwater detention/retention and conveyance facilities*

Proposed City of Arcata General Plan 2045

Police Protection, Fire Protection, and Schools

The following are relevant policies of the proposed General Plan 2045 Update.

Policy CM-3: Bus Transit Policy

Objective. *Maintain a bus transit system which connects and serves major commercial and employment areas within Arcata, Cal Poly Humboldt, public schools, and higher density residential areas. Increase average citywide transit mode share of daily person trips to 12% from the 2020 level of 3% by 2040.*

Applicable sub-policies:

- ***CM-3c: Bus route system.*** *Public transportation is both a civil right and a critical climate solution and should be designed to provide service competitive with automobile travel in terms of access and rider safety, convenience and comfort. Potential improvements to the transit system should be assessed according to the best available evidence of both need and existing and induced demand. In order to increase safety and access to basic needs, work with relevant transit agencies, major employers, key user groups, and area schools to plan for enhanced public transit and school bus lines and new stops to both accommodate the new growth and serve existing community needs.*

Policy PS-1: Emergency Preparedness

Objective. *Ensure that the City, its residents, businesses, agencies, and organizations are prepared for emergencies or disasters and have effective response and recovery plans in place.*

Applicable sub-policies:

- ***PS-1b: Evacuation routes/transportation facilities****. Emergencies such as floods, storms, fires, tsunamis, and hazardous materials spills may necessitate immediate evacuation of affected areas. A map of evacuation routes shall be included in City and neighborhood emergency response plans. These plans will include evacuation methods using a variety of available modes for transportation. An emergency access plan shall be developed for access to the east side of town (east of State Route 101) after a major seismic event.*

  While a majority of the neighborhoods in the City have at least two potential evacuation routes in the event of an emergency, there are some areas with only one evacuation route. Residential areas with only one evacuation route include upper Diamond Drive, California Avenue, Fickle Hill Road, Beverly Way, a portion of Beverly Drive, and others in the Grotzman Creek drainage. The City's emergency operations plan shall identify and include evacuation options for these areas and shall include public education and outreach.
- ***PS-1g: Humboldt County Operational Area Hazard Mitigation Plan (HMP).*** *The 2019 Humboldt County Operational Area HMP and City of Arcata Annex is adopted by reference into the General Plan. General Plan policies and actions shall support its goals and objectives and incorporate policies and programs to address the climate vulnerabilities identified in the City of Arcata Annex.*

Policy PS-5: Fire Hazards

Objective. *Minimize risk of personal injury and property damage resulting from structural (urban) and wildland fires.*

Applicable sub-policies:

- ***PS-5a: Management of urban fire hazards (development/design standards).*** *Structural fires demand immediate response from a combination of onsite and Fire Department resources in order to minimize injury and damage. Fire suppression devices such as extinguishers and sprinklers are important for initial response, reduce fire insurance premiums, and satisfy operations requirements for certain types of businesses. These devices are encouraged in new and renovated non-residential buildings and required in all residential structures.*

  All buildings should have adequate lighting, street numbering, and access to ensure rapid response by fire-fighting vehicles. To ensure urban fire safety, the City shall enforce the current California Building and current Fire Codes, and the Universal Building Code when it is adopted.
- ***PS-5b: Review of development for fire safety.*** *The Arcata Fire Protection District (District) reviews new development for compliance with fire safety standards. The City shall continue to incorporate review by the District to ensure that buildings and sites adhere to relevant fire and building codes, including sprinklers, vertical clearance, and turn-around space for fire fighting vehicles.*

- ***PS-5d: Management of wildland fire hazards****. Fires in the wildland urban interface (WUI) areas of the City can cause property damage and threaten nearby structures. Buildings in WUI areas shall use materials such as non-flammable perimeter vegetation and roofing material to prevent exposure to wildland fires. The City shall support the ongoing implementation of the Humboldt County Community Wildfire Protection Plan and encourage residents in WUI areas to follow its recommendations. The City supports the Fire District in maintaining its mutual aid agreement with the California Department of Forestry and Fire Prevention (CAL FIRE) to insure rapid response to wildland fires.*
- ***PS-5e: Wildland Fire Risk Reduction and Defensible Space Around Homes.*** *The City will draw on available local and regional guidance and support efforts to reduce wildland fire risk. To do so, the City encourages creating defensible space around homes and other structures in wildlands and the wildland urban interface. The City shall support programs and plans that reduce wildland fire risk.*

Policy PS-7: Crime Prevention and Response

Objective*. Promote law enforcement agency and community group efforts to reduce crime and assure timely and effective responses to calls for service.*

Applicable sub-policies:

- ***PS-7f: Principled Policing.*** *The Arcata Police Department shall conform to State and Federal law, California Peace Officer Standards and Training (POST) standards, Department policies, and 21st Century Policing best practices to combat racial profiling and bias in policing and to promote de-escalation and principled policing.*

Policy LU-2: Residential Land Use

Objective. *Allow for a mix of housing types and densities to ensure residents at all ages and abilities have safe, healthy, and affordable homes that meet their physical, social, and economic needs through housing production, preservation, and conversion that is compatible with established neighborhood character.*

- ***LU-2a: Residential Land Use Classifications****. The following land use designations are applicable to residential lands. Table LU-2 defines permitted uses, densities, lot sizes, and other development standards for each classification.*
  - *Residential High Density [R-H]. High density residential uses are designated in central Arcata and other areas to allow higher density multi-family housing located in proximity to commercial and employment uses, public services, schools, and parks. Local-serving commercial uses such as corner grocery stores and coffee shops shall be permitted in [R-H] zones.*

Policy PF-4: Educational Facilities

Objective. *Value Arcata's educational institutions and facilities as keys to achieving the high educational standards that will lead to prosperity and community wellbeing. Partner with schools and the University in support of Arcata's future prosperity, and our diverse and tolerant cultures. Seek the cooperation of Arcata's educational institutions to achieve City goals. Identify student enrollment increases, based on the projected future population of the City, and coordinate with local school (public and private) districts, and other education providers to maintain and improve educational facilities and services. Coordinate with Cal Poly Humboldt to project demand for City services and facilities based on anticipated increases in enrollment and employment.*

- ***PF-4a: Coordination with Arcata, Pacific Union, and Jacoby Creek school districts, the Northern Humboldt Unified High School District, and Charter School Operators.*** *The City shall provide demographic information to assist the School Districts and charter schools in projecting future student enrollments. The City shall encourage the school districts and charter schools to expand existing schools rather than designating new sites for this purpose. Public and charter schools are allowed in all residential zones, in the Gateway Area, and in Public Facilities zoned parcels.*

PF-4c: Coordination and development review with Cal Poly Humboldt. *The City shall designate at least one member of the City Council as liaisons to Cal Poly Humboldt and request that the designated Council member be appointed to the University President's Advisory Council.*

Policy PF-5: Public Facilities

Objective. *Provide adequate facilities for services and programs administered by the City and other public service providers, including City administrative and meeting facilities (City Hall), police and fire departments, libraries, and community centers.*

- ***PF-5a: Facilities for community service and private organizations.*** *Community service organizations, as well as non-profit and private organizations serve an important and vital role in the health of our community and offer shelter, assistance, training and other human services. These organizations also offer places for religious, cultural, social, entertainment and recreation activities. The City shall allow facilities, operated by community service and private organizations, to be located in incorporated areas designated General Commercial [C-G]; Central Commercial [C-C]; Residential High Density [RH]; Limited Industrial [I-L]; and Public Facility [P-F]. Operations and functions of these facilities may be subject to a use permit, to be granted and revocable at the discretion of the City.*
- ***PF-5c: Public libraries and civic facilities operated by other agencies.*** *The City shall coordinate with Humboldt County to provide public library facilities in the City. The City shall also coordinate with other agencies, such as the Humboldt Transit Authority, to maintain joint-use facilities in the City.*
- ***PF-5f: Energy conservation and decarbonization of City facilities****. Continue reducing City facility energy consumption, including conservation and weatherization measures exceeding building code standards, electric only appliances/ HVAC/ water heating systems and renewable energy sources. Consider Greenhouse Gas Reduction measures in all new facility, renovations, site design and connectivity decisions. Develop and implement City practices to increase electrification equity and affordability for all residents.*

Policy H-4: Community Culture

Objective*. Encourage a healthy, cohesive community culture. The strength of relationships and the sense of shared identity between members of a community are linked to emotional wellbeing, safety, and higher levels of investment in health-promoting community resources. This section outlines the community cohesion outcomes the community wants to achieve and addresses how the City can support and contribute to a strong, diverse, and collective community identity.*

- ***H-4a: Healthy and equitable schools.*** *Ensure that schools support mental, physical, emotional, and social wellbeing. Childcare and school environments influence the foods children eat and drink outside the home, rates of physical activity, and social and emotional development. Educational attainment is also linked with lifespan. Increase the ways in which Arcata's schools contribute to students' health and wellbeing through:*
  - *Integrating physical activity into students' daily educational experience.*
  - *Integrating the arts into students' daily educational experience.*
  - *Supporting walking and biking to school.*
  - *Supporting physical activity through the design of school sites and structures.*
  - *Ensuring students have access to healthy foods on school sites.*
  - *Leveraging schools to remove mental health and safety barriers to physical activity among youth.*
  - *Encouraging schools to ensure that classrooms and curriculums integrate and dialogue with historically excluded sources of dialogue, empower and support students of all races, ethnicities, and cultures, and represent/appreciate all cultures respectfully.*

Parks and Recreation

Policy D-8: Community Benefits Program

Objective. *Ensure new development benefits the community generally while streamlining approval and accountability in the development planning process.*

- ***D-8m: Incentivize Privately-Owned Open Spaces as a Community Amenity.*** *Utilize the community benefit program to incentivize the creation of new privately-owned, publicly-accessible open spaces.*

Policy LU-1: Overall Development Pattern

Objective. *Establish a pattern of development that concentrates activity and amenities in a pattern of centers, clusters and mixes of uses to support the City's focus on infill development and active transportation. Provide an overall land use arrangement that concentrates city-wide uses and functions in these areas with an emphasis on areas within walking distance of the central Plaza Area, Cal Poly Humboldt, and existing neighborhood and employment centers which provide a mix of commercial services, residential uses, and community facilities.*

To the maximum extent feasible, the City shall strive through its land use decisions to promote community health for all neighborhoods, with particular attention to those that have been identified as lacking in amenities such as transit, clean air, grocery stores, bike lanes, parks, and other components of a healthy community.

- ***LU-1s: Incentivize Projects that Provide Designated Community Amenities.*** *Establish ministerial permitting options and streamlined development processes for projects that create housing and provide designated community amenities.*

Policy LU-3: Commercial Land Use

Objective. *Grow a pattern of activity centers that meet the daily needs of the community and visitors and with a variety of retail goods, food, and services that are convenient, safe, accessible, and affordable to all.*

- ***LU-3f: Relationship of Building Height to Open Space.*** *Allow for buildings over four stories using Community Benefits Program but require greater percentages of Open Space to be retained at ratios set in the Form-Based Code to ensure residents of high-density housing retain an excellent quality of life and easy access to high-quality open space.*

Policy PR-1: Park Standards

Objective. *Provide parklands to defined City Service Areas to meet unique community preferences and demands for recreation opportunities. Maintain park standards that facilitate future planning and help define appropriate levels of service for various types of parkland.*

- ***PR-1a: City of Arcata Parks Classification System****. The following is a summary of the City Parks Classification System, the complete system description is contained in Appendix B of the Parks and Recreation Master Plan with the Park Design and Development Guidelines.*
    - *Neighborhood Parks. Located within walking and bicycling distance of most users, neighborhood parks are small parks that provide access to basic recreation opportunities for nearby residents. Designed primarily for non-supervised, non- organized recreation activities, neighborhood parks often include amenities such as playground equipment, outdoor basketball courts, picnic tables, pathways, and multi-use open grass areas. Neighborhood parks may include small-scale natural areas, such as riparian areas, and can contribute to environmental sustainability by incorporating sustainable design elements. These parks generally are one to five acres in size and serve residents within a ½-mile radius. Smaller mini parks (of less than one acre) will have a smaller service area (less than ¼ mile).*

- *Community Parks. Community parks are larger parks that provide both active and passive recreation opportunities that appeal to the entire community. These sites are generally designed around organized, active recreation, supported by facilities such as sport fields and outdoor courts. These parks also serve as community gathering spaces, offering a variety of facilities that can accommodate small or large groups, such as recreation centers, group picnic areas and shelters, rental space, festival space, amphitheaters, and large playgrounds. The optimum size of community parks is between 15-30 acres.*
- *Special Use Areas. Special use areas include stand-alone recreation facilities not located within larger parks. These include single-purpose sites, such as community centers, aquatic centers, sports complexes, boat ramps, skate parks, outdoor theaters, urban plazas, and gardens. Special use areas promote a variety of personal, social, and economic benefits depending on facility type and location. In some cases, these facilities may attract new residents and businesses and support tourism.*
- *Linear Parks/Greenways. Greenways and linear parks include natural or built corridors used to link features together and provide green buffers between communities or around the city. Greenways and linear parks typically support trail- oriented activities, including walking, jogging, biking, and skating, which play a major role in health and fitness. These parks may incorporate smaller scale neighborhood park amenities, such as play areas, picnic areas, or exercise trails. Trails between key destinations can help create more tightly-knit communities, improve children's access to schools, and provide opportunities for non-motorized transportation. Greenways and linear parks may be of various lengths and widths, and these corridors typically support facilities such as viewing areas, picnic tables, or trailheads.*
- *Natural Areas. Natural areas are undeveloped lands left in a natural state for conservation or outdoor recreation. They protect and manage unique or significant natural features, such as rivers and streams, wetlands and marshes, steep hillsides, environmentally sensitive areas, and wildlife habitats. Some natural areas may have limited access due to resource conservation needs. Sites may provide a number of ecological benefits, such as shoreline protection, wildlife habitat, stormwater filtration, riparian corridor and wetland preservation, and erosion control. Where appropriate, natural areas may support passive, outdoor recreation, such as trail-related opportunities, bird and wildlife viewing, environmental interpretation and education, and nature photography. These parks provide opportunities to promote conservation and stewardship, develop an appreciation for nature, and improve health and wellness by providing a physical and mental refuge from the built environment. The size and shape of the natural area will vary depending on the protected resource.*
- *Undeveloped Sites. Undeveloped sites include land that has been acquired by the City for possible future park improvements. These sites are not managed as natural areas, although they do provide green space in the City. Their size varies depending on the purpose of their acquisition.*
- *Beautification Areas. Beautification areas are landscaped areas, typically located along street rights-of-way and intersections, entry features, and parking lots. Beautification areas can incorporate flowers, shrubs, trees, native plants, or other ecologically appropriate landscaping to add green space to the urban environment, provide visual and economic benefits, and promote environmental health. Through the use of signage, fountains, or other features, these areas also may add to community identity. Unlike parkland, beautification areas have reduced recreational value.*

- ***PR-1b: Parkland Dedication.*** *For all residential subdivisions, require parkland dedications, or fees in lieu of dedication, according to the following standards:*
  - *Land or fees shall be based on five (5) acres of parkland per 1,000 persons.*
  - *Subdivisions having fifty-one or more lots shall automatically be reviewed by the Parks and Recreation Committee for possible dedications. Any other residential subdivision creating five or more lots, and that proposes to pay a fee in lieu of dedicating land, shall also be reviewed by the Parks and Recreation Committee for possible dedications.*
  - *Land that is not suitable for recreation or wildlife habitat may not be counted toward fulfilling parkland dedication requirements.*
  - *Parkland dedications should be consistent with the following criteria:*

  - *Average slope should not exceed 10 percent;*
  - *Access to the site shall be adequate for the purpose of the community or neighborhood park;*
  - *The site shall not have significant topographic or environmental constraints that would render the site unsuitable for development.*
- *Riparian areas, wetlands, and forests shall be accepted for dedication only if it has been determined that the recreational needs of the area will be adequately met by other sites. Where such lands are accepted, development of parklands should recognize existing wildlife and habitat values and minimize the disturbance of riparian, wetland, and other wildlife habitats.*
- *The City shall maintain a schedule for the use of land and fees acquired pursuant to parkland dedication requirements, including mechanisms for tracking the receipt and expenditure of funds over a five-year period.*

Policy PR-2: Park Development and Maintenance

Objective. *Encourage appropriate and sustainable new park design and development and existing park maintenance.*

- ***PR-2a: Natural resource protection.*** *Protect natural areas and wildlife habitat within parks and open space land to the greatest extent feasible. Integrate recreational use in natural areas, where not in conflict, through appropriately designed trails, trailheads, and interpretive resources to achieve the community's desire for access.*
- ***PR-2b: Park & Recreation Master Plan.*** *Use the Park & Recreation Master Plan as a guide for the provision of parks and recreation in the City and implement the plan in a manner consistent with the Arcata General Plan. Periodically update the plan to reflect changes in the environment, economy, population, and land use and the unique needs of Arcata residents. Use Appendix B, Design and Development Guidelines for direction regarding the amenities and facilities to be provided for each park type.*
- ***PR-2c: Park system improvements****. Parks and recreation projects that provide desired levels of service and minimize energy and water use, sustain existing resources, improve maintenance efficiency, reduce life-cycle costs, and otherwise promote environmental sustainability should be given high priority. Park & Recreation Master Plan recommendations should be used as a guide for new park and trail development to meet community needs and as a guide to prioritize the renovation and rehabilitation of existing parks. In general, prioritize projects that:*
  - *Enhance sustainability;*
  - *Increase trail connectivity;*
  - *Improve park access;*
  - *Expand recreation opportunities;*
  - *Serve future growth areas;*
  - *Enhance natural areas;*
  - *Support community values and strengthens the community;*
  - *Utilize available funding; and*
  - *Encourage participation and recognition of partners for matching funds and volunteer efforts.*
- ***PR-2d: Active use amenities.*** *Provide active use resources in new parks to expand recreation opportunities in the City using the Park & Recreation Master Plan Appendix B, Design and Development Guidelines. Priority should be given to the redesign and integration of active use resources into the following existing neighborhood parks, where feasible:*
  - *Bloomfield Park*
  - *Cahill Park*
  - *Mountain View Park*
  - *Vinum Park*

- *Westwood Manor Park*
- *Windsong Park*

- ***PR-2e: Trail improvements.*** *Provide an interconnected, multi-purpose trail system with regional linkages that includes mountain bike, fitness, nature, and equestrian trails and that enhances individual mobility. Priority should be given to the following trail projects identified in the Parks & Recreation Master Plan:*
  - *Arcata Rail with Trail Corridor integrated with the Great Redwood Trail*
  - *Annie & Mary Rail-Trail*
  - *Hammond Trail*
  - *Aldergrove Open Space/Arcata Community Forest trail connection*
  - *Route 255 Connection*
  - *Baylands Trail*
  - *Arcata Ridge Trail – enhancements to existing trail segments connecting the Arcata Community Forest Tract and the Sunny Brae Forest*
  - *Jacoby Creek Forest Trails – Conduct planning with community partners and adjacent property owners to identify feasible public access opportunities for the future*
- ***PR-2f: Mobility and Accessibility.*** *Design new, and enhance existing, parks and recreation facilities to be inclusive for all community members, including people with cognitive and physical disabilities; multi-lingual/multi-cultural users; groups hosting events; teams; and seniors.*
- ***PR-2g: Maintenance best practices.*** *Use best management practices to ensure that parks are maintained at the desired levels of service. Prepare a Maintenance Management Plan and Natural Resource/Open Space Management Plan that reflects each facility's use, assigned maintenance tier, and level of service and that incorporates the anticipated lifecycle of facilities and projects and an appropriate reinvestment and replacement schedule.*
- ***PR-2h: Art in parks.*** *Integrate arts and cultural activities with City parkland through the implementation of the City of Arcata General Plan and the Strategic Arts Plan.*

Policy PR-3: Coordinated Open Space, Park and Recreational Facilities Planning and Use

Objective. *Undertake effective ongoing coordination between local and regional parks and natural resources agencies, community groups, and the private sector that enhances environmental sustainability and the availability of park and open space for Arcata residents.*

- ***PR-3a: Coordinated recreational use of Community Forests and Marsh & Wildlife Refuge.*** *Work with local and regional partners to protect and enhance the roles of the:*
  - *Arcata Marsh & Wildlife Refuge as an important regional natural and recreational area and as an essential component of the City's wastewater treatment plant; and*
  - *Arcata Community and Jacoby Creek Forests as a source of watershed protection, wildlife habitat, and sustainable timber harvesting to support City park acquisition, development, and maintenance.*
- ***PR-3b: Coordinated recreational use with schools and State/Federal Agencies****. Coordinate closely with community organizations, schools, Cal Poly Humboldt, the private sector, and local, state, and federal agencies in developing creative solutions for meeting recreation program and facility needs. Consider developing a formal partnership with the schools to maintain and program sports fields at school sites, in particular a formal partnership with Cal Poly Humboldt to address existing and potential increases in service demands for City parks and recreation facilities from planned increases in student enrollment, faculty, and other staff.*
- ***PR-3c: Use and management of indoor and athletic facilities, special recreation facilities and gathering areas****. Work with community groups, sports organizations, and other coalitions to define mutually compatible recreational facility needs and mechanisms for the operation, maintenance, and enhancement of these facilities.*

Policy OS-1 Overall Open Space System

Objective. *Designate, maintain, and enhance the quality, and increase the amount of permanently protected open space in the Arcata Planning Area, including: natural resource areas; resource production areas; outdoor recreation areas; and areas subject to health and safety hazards. These areas are to be protected, linked together wherever practical for habitat connectivity, managed for resource production, and maintained for enjoyment by City residents and visitors.*

Applicable sub-policies:

- ***OS-1d: Linkages between open space areas.*** *Open space links, especially in biological corridors and greenways, is important for wildlife migration, non-motorized vehicle transportation, and community recreation, and shall be encouraged. Trails along levees or adjacent to railroad tracks and street rights-of-way can serve as links to parks, open space, and natural areas. Easements shall also be considered as a lower cost alternative to preserving links between open space. The City shall preserve or create corridors in underserved areas, such as the Valley West neighborhood, to prepare for future linkages.*
- ***OS-1e: Appropriate uses and development limitations within open space lands.*** *Certain open space areas contain wetlands and other critical habitat and must be preserved in a natural condition and enhanced. Other areas can accommodate managed activities such as mining and timber harvesting, subject to sustainable yield policies RC-6 and RC-8 in the Resource Conservation & Management Element, while other areas shall be designated for interpretive and recreational use. Each designated open space area shall be evaluated by the appropriate City advisory board (e.g., Wetlands & Creeks, Forest Management Committee) to determine resources present, acceptable use levels, and appropriate management. Open space area management and use are guided by applicable Resource Conservation and Management and Land Use Element policies. Allow for the development of existing vacant and underutilized properties with low natural resource value as a strategy to permanently protect high resource value open space and provide high-quality open space.*
- ***OS-1f: Designation of lands with scenic, aesthetic, historic, and cultural value.*** *The City has locally-designated scenic routes, including Highway 101 and State Route 255 - Samoa Boulevard; vistas, including the forested slopes of Fickle Hill, the Arcata Bottoms; and areas of historic and cultural value, such as the Plaza. The open and natural characteristics of these areas shall be maintained. Policies for retaining scenic vistas and landscape features are included in the Design and Arcata Gateway Area Plan Elements.*
- ***OS-1i: Additional open space area identification and acquisition****. There are land parcels, including forested property on the west slopes of Fickle Hill, and lands around Arcata Bay which would contribute significantly to the City and regional open space systems. The City shall continue to pursue, or coordinate with land trusts, for acquisition, from willing sellers, to expand the amount of open space. Joint land acquisition funding will be coordinated with County, regional and state agencies. Community Forest acquisitions will continue to be a priority. Other acquisition priorities shall be based on capital, operation and maintenance costs, accessibility, resource preservation, ability to complete or enhance an existing open space linkage system and unique environmental features. Lands acquired outside of the City Limits should be annexed pursuant to the Growth Management Element.*

Resource Conservation and Management Element

Imp Measure RC-11. Explore Tribal Partnerships in Restoration Project Planning*. Explore opportunities for partnerships with the Wiyot Tribe and other Wiyot-Area Tribes when pursuing funding for habitat restoration within the City, and seek guidance from appropriate Tribal representatives as part of the habitat restoration planning process.*

Proposed City of Arcata General Plan 2045 Gateway Area Plan

Police and Fire Protection

No relevant policies are specific to the Gateway Area Plan.

Schools

No relevant policies are specific to the Gateway Area Plan.

Parks and Recreation

Gateway Area (GA) Land Use Policies

Objective. *Establish an overall land use arrangement that promotes mixed-use, multi-story buildings with a clear emphasis on high-density housing that is equitable, environmentally sustainable, and compatible with the envisioned neighborhood character. Allow for a broad diversity of non-residential uses that support a pedestrian/bicycle-friendly environment, contribute to a car-free lifestyle, and meet the physical, social, and economic needs of residents.*

Gateway Area (GA) Community Benefit Policies

Objective. *Identify a range of supplemental community amenities that a development project could include but that is not inherently required (such as electric vehicle charging stations, affordable-by-design studio apartments, and murals). Ensure that these amenities improve the quality of life for community members. Allow applicants to incorporate such community benefits into proposed development projects in exchange for a streamlined, by-right approval process and increased development potential consistent with Table 6, Table 7, and Image 2.*

Community Benefits listed in Table 6 include Open Space: Creek daylighting, dedicated open space, open space fee program, community gardens, and related amenities that support trees, landscaped areas, open space, and public-use areas.

Gateway Area (GA) Open Space and Conservation Policies

Objective*. Establish an urban environment that enhances and complements stormwater management and the open space environment. open space system along streets and paths that enhance community interaction and compliment the urban environment. Promote public gathering, enjoyment, and active and passive use by a broad range of the community.*

Applicable sub-policies:

- ***GA-6a. Open Space Concept.*** *Provide for an integrated network for publicly accessible open space, including a new park site, consistent with the concept shown in Figure 7 and Table 8. The City shall actively encourage neighboring property owners to partner to develop Open Space over multiple sites.*
- ***GA-6b. Diversity of Open Space Types.*** *Provide for a range of open space types, including urban plazas, pocket parks, linear parks adjacent to creeks, natural open spaces.*
- ***GA-6c. Privately-owned Publicly Accessible Open Spaces.*** *Establish a series of privately-owned publicly accessible open spaces in the central area shown in Figure 7. Ensure that these spaces are:*
  1. *Linked together by safe and convenient bike/pedestrian facilities;*
  2. *Visible, accessible, and activated by ground floor uses including retail stores and restaurants; and*
  3. *Coordinated so that a variety of spaces are provided (courtyards, tot lot, a sculpture garden).*
  4. *Adequately maintained for public access and safety.*
- ***GA-6d. Linear Park with Daylighted Creek****. Establish a linear park with passive recreational amenities adjacent to daylighted and restored segments of Jolly Giant Creek.*

- ***GA-6e. Bike/ped Connections****. Establish new off-street bike/ped connections to connect open spaces and activity centers in the Gateway area. Enhance connections between the Plan Area and parks and open space destinations near to the Plan Area, such as Arcata Plaza, Shay Park, and Arcata Marsh.*
- ***GA-6f. Public Plaza in Southwest Industrial Area****. Establish a new public open space or plaza in the Barrel District that provides formal public space within the Barrel District that functions as a vibrant, pedestrian-scale open space serving both as a neighborhood gathering space and a regional draw. Design a space of similar size and quality to, but entirely distinctive from, the existing Arcata Plaza.*
- ***GA-6g. Wetland Areas.*** *Maintain a no net loss standard but allow for passive recreational uses within and around wetland area in southwestern Gateway Area. Provide for bicycle and pedestrian connections to this area from other Plan Area locations. Enhance and restore wetland functions where feasible. Use mitigation and restoration together to consolidate scattered low-quality wetlands into larger higher quality wetland complexes through the Community Benefits Program.*

  Jolly Giant Creek. Require the restoration and enhancement of the Jolly Giant Creek north of 11th Street. Encourage the daylighting of creek segments south of 11th Street as part of new development projects. Consider additional opportunities for daylighting Jolly Giant Creek, especially along 10th Street, including bridges, road closures, and other alternatives to expose more open creek miles.

Municipal Code and Land Use Code

The Municipal Code is a codification of prior enacted ordinances. The following are relevant to public services and recreation. Municipal Code Title IX is Planning and Zoning and contains Chapter 1 the Planning and Zoning Standards, which are also referred to as the Land Use Code and the Land Use and Development Guide or the Coastal Zoning Ordinance. The Land Use Code was adopted by the City Council by Ordinance 1377 in 2008. It includes regulations related to site development, resource managing, and other land use procedures and processes. The following regulations are relevant to public services and recreation.

Fire Protection

Sec. 3100 Adoption of fire protection system.

All fire protection and prevention duties, except those hereinafter mentioned, within the City of Arcata have been and continue to be the responsibility of the Arcata Fire Protection District.

9.34.060 Landscape Standards

A. Landscape design. The required landscape plan shall be designed to integrate all elements of the project to achieve desired aesthetic objectives, accommodate microclimates, and minimize water and energy demand.

(1) Plant selection and grouping. Plant materials shall be selected for adaptability to the site, non-invasiveness, color, form, and pattern; adhere to xeriscaping concepts; ability to provide shade; and soil retention capability.

b. Fire prevention shall be addressed on sites in any wooded or vegetated area of the City identified by the Fire Department as being fire prone, by providing fire-resistant landscaping buffers between development areas and naturally vegetated areas, as identified by the Director.

9.88.030 Subdivision Design and Improvement Standards

This Section establishes standards for the design and layout of subdivisions, and the design, construction or installation of public improvements within subdivisions. These standards are intended to ensure, through careful site evaluation and design, the creation of new usable parcels that are consistent with the General Plan and any applicable specific plan. These standards apply to all proposed subdivisions as noted, except as otherwise provided by Section 9.88.032 (Subdivision Design and Improvement Standards - Special Residential Subdivisions)

K. Public facilities and utilities.

2. Fire hydrants. The subdivider shall install fire hydrants of sizes and at locations approved by the Fire Chief and the City Engineer.

Police Protection

9.30.050 Noise Standards

A. Purpose. This Section implements the policies of the Noise Element of the General Plan, and provides standards for noise mitigation that are intended to protect the community health, safety, and general welfare by limiting exposure to the unhealthful effects of noise.

B. Applicability. No use, activity, or process shall exceed the maximum allowable noise levels established by this Section, except for the following noise sources:

(2) Emergencies. Public safety warning devices (e.g., ambulance, fire, and police sirens), sound for alerting persons to the existence of an emergency, or the performance of authorized emergency work.

Schools

9.28.070 Planned Development (:PD) Combining Zone

D. Land Use and Development Standards. Proposed development within the :PD combining zone shall comply with the land use activity requirements of the primary zoning district, and all other applicable provisions of this Land Use Code, except to the extent modified by the approved Planned Development Permit, and except as follows.

(3) Bike and pedestrian facilities. In addition to any required open space land, the project developer shall dedicate land for bicycle and pedestrian route facilities if the project is adjacent to or contains a proposed route in the adopted Pedestrian and Bicycle Master Plan or in the Transportation Element of the General Plan.

c. Where practical, the bicycle and pedestrian route facilities shall provide access to a neighboring school, playground, shopping area, or other community facility, or to an adjacent street which, in the determination of the Planning Commission, is suitable for bicycle and/or pedestrian traffic.

9.30.050 Noise Standards

F. Acoustical analysis. Where the Director determines that a proposed project is a noise sensitive land use (such as hospitals, schools, and health care facilities), or may generate noise in excess of any limit established by Tables 3-2 or 3-3, and/or where the use may generate noise in outdoor areas in excess of 60 dBA, the planning permit application for the use shall include an acoustical analysis, which shall:

(1) Be the financial responsibility of the applicant;

(2) Be prepared by a qualified person experienced in the fields of environmental noise assessment and architectural acoustics;

(3) Include noise level measurements, with sufficient sampling periods and locations, to adequately describe local conditions and the predominant noise sources;

(4) Estimate existing and projected cumulative (20-year) noise levels in terms of Ldn or CNEL and/or the standards of Table 3-2, and compare those levels to the requirements of this Section and the policies of the Noise Element;

(5) Recommend appropriate mitigation to achieve compliance with this Section and the policies and standards of the Noise Element, giving preference to proper site planning and design over mitigation measures which require the construction of noise barriers or structural modifications to buildings that contain noise-sensitive land uses;

(6) Estimate noise exposure after prescribed mitigation measures are implemented; and

(7) Describe a post-project assessment program that may be used to evaluate the effectiveness of the proposed mitigation measures.

9.40.030 Specific Regulations

The following specific regulations apply to sex-oriented businesses.

A. Specified distance separation requirements. Notwithstanding Section 9.40.020, no sex-oriented business shall be established or located:

(8) Within 500 feet from any existing park, playground, religious facility, or school.

9.44.060 Facility Design and Development Standards

Each proposed telecommunication facility shall comply with all of the following standards.

A. Facility placement.

(3) A telecommunication facility shall be at least 1000 feet from any residence, and shall be at least 1,500 feet from any historic district, school, or hospital.

Parks and Recreation

Sec. 2231. Creation, Powers and Duties.

The Parks and Recreation Committee is hereby created. Its powers and duties shall be:

A. To serve in an advisory capacity to the Council, Commissions, or City staff, as appropriate, on matters pertaining to public recreation, parklands and related facilities.

B. To serve in an advisory capacity to the Council and City staff on matters pertaining to art, literature, music, theatre, and other related activities.

C. To recommend to the Council and City staff the acceptance or rejection of offers of donations of money, personal property and real property to be used for recreation, cultural arts, or parkland purposes.

D. To serve in an advisory capacity to the Council and City staff with respect to the establishment of user/rental fee schedules for parks, sports fields and public facilities.

E. To resolve differences and seek solutions to scheduling and use conflicts of City recreational facilities.

F. To establish rules and regulations for use and improvement of public parklands, recreation areas, community gardens, squares, and grounds, including playgrounds, concessions and recreational and related facilities and programs installed and maintained therein.

G. To serve in an advisory capacity to the Council and City staff with respect to policies for the acquisition, development and improvement of parklands and recreational areas.

H. To recommend to the Council a comprehensive recreation and parkland use program based on the needs and interest of the community to assure and stimulate public interest, and to solicit to the fullest extent the cooperation of schools, local youth and public and private agencies.

I. To provide recommendations to the Council, Commissions or City staff as appropriate for promotion of sustainable urban agriculture. (Ord. 1352, eff, 5/20/2005; Ord. 1367, eff. 1/18/2008; Ord. 1505, eff. 6/15/2018)

Sec. 2685 Findings and Purposes.

A. On November 3, 2020, Arcata residents adopted the Open Space, Parks, and Trails Special Tax measure by two-thirds vote of the voters voting on the ballot measure.

B. The Open Space, Parks, and Trails Special Tax is imposed for revenue raising purposes to fund improvements to and maintenance of City owned parks, open spaces, trails, forests and other working lands; and to expand public access and trail systems on City-owned and other public access properties.

C. The Open Space, Parks, and Trails Special Tax is imposed on each parcel in the City for the availability of City-owned parks, forests, open spaces, and trails to be used by City property owners.

D. This Article is enacted in accordance with the authority granted by Government Code Sections 37100.5 and 50075. (Res. 190-68, eff. 11/3/2020)

9.70.050 Recreation Fee for New Construction

A. Title. This Section may be cited as the "Arcata Recreation Fee for New Construction Ordinance."

B. Purpose. The fee imposed under this Section is solely for the purpose of raising revenue for park acquisition and improvements. This Section is not enacted for regulatory purposes. This Section is intended to supplement the Park Land Dedication procedure in the Subdivision Ordinance (see Section 9.86.030), and it is applicable only for projects not subject to parkland in lieu requirements.

C. Imposition of Fee. The Recreation Fee, at the rates identified in the City's Fee Schedule, is hereby imposed upon every person who constructs, or causes to be constructed, any residential, commercial, or industrial structure or portion thereof, including any mobile home pad, in the City, in which a person has an equity, title, or other interest either as owner, lessee, or otherwise.

D. Fee Rates. The fee rates on residential, commercial, or industrial construction, including the construction of mobile home pads, imposed under this Section shall be identified in the City's Fee Schedule. The fee rate for residential, commercial, or industrial units shall be based on the valuation of the units being constructed.

E. Time of Payment. The amount of fee imposed for the construction of any residential, commercial, or industrial structure, or portion thereof, shall be due and payable at the time a Building Permit is issued authorizing construction, and the amount of fee imposed for the construction of any mobile home pad shall be due and payable at the time a permit is issued to construct and install electrical or plumbing equipment to service the mobile home pad (whichever permit is issued first).

F. Refund. There shall be a refund of the fee in the event the Building Permit expires, or is revoked, before the facilities for which it was issued are constructed or installed.

G. Place of Payment. Fees imposed by this Section shall be paid to the City's Building Official at the office of the City's Building Division.

H. Exemptions. The fee imposed by this Section shall not apply to the following:

(1) Governmental Agencies. The City, the United States, or any agency or instrumentality thereof, the State or any county, city and county, district, or any political subdivision of the State, or any other governmental agency.

(2) Remodeling/Alteration. Remodeling and/or alteration of a structure, without adding any additional residential units, but only if the total floor area is not increased.

(3) Involuntarily Damaged or Destroyed. Reconstruction of a structure which was involuntarily damaged or destroyed by earthquake, fire, flood, or other cause over which the owner had no control (provided that compliance with any Building Code or other ordinance requirement of the City or of any other applicable law shall not be deemed a cause over which the owner has no control), but only if the total floor area in the structure is not increased. If the total floor area is increased, the Recreation Fee shall be imposed only upon the increased floor area.

(4) Park Land/Fee Payment. Construction of dwelling units on parcels which were part of a subdivision for which park land, or fee payment in lieu, has been dedicated to the City in

compliance with the Park Land Dedication procedure contained in the Subdivision Ordinance (see Section 9.86.030).

I. Use of fee revenue. All of the fees collected by this Section shall be expended for the acquisition, alteration, construction, enlargement, furnishing, modification, reconstruction, remodeling, renovation, replacement, and/or re-furnishing of the following improvements:

(1) City public park, playground, and recreation facilities. City public park, playground, and recreation facilities, including land and interests in land, baseball grounds, basketball, tennis, and volleyball courts, children's play areas, community center structures, recreation structures, sprinkler systems, swimming pools, turf, trails and other facilities, properties, structures, and works necessary or convenient for public park, playground, and recreation purposes; and also including any of the above-described facilities constructed or installed within or upon any public playground for recreation purposes.

(2) City maintenance yards. City maintenance yards for park, playground, and recreation facilities, including land and interests in land, structures, and other structures or works necessary or convenient for the maintenance of the City's parks, playgrounds, and recreation facilities.

J. Fee construction fund. For the purposes identified above, all fees collected by this Section shall be placed in a special construction fund which is hereby created and which shall establish and keep the accounts as may be necessary to account for and control the expenditure of revenues in compliance with this Section.

Section 9.86.030 Park Land Dedication and Fees

A. Purpose. This Section provides for the dedication of land and/or the payment of fees to the City for park and recreational purposes as a condition of the approval of a Tentative Map. This Section is enacted as authorized by the provisions of Chapter 4, Article 3 of the Map Act, also known as the "Quimby Act," and as prescribed through the Parks and Recreation Element of the General Plan.

B. Applicability.

(1) Land dedication and/or fee payment required. As a condition of Tentative Map approval, the subdivider shall dedicate land and/or pay a fee, at the option of the City, in compliance with this Section for the purpose of developing new, or rehabilitating existing park or recreation facilities to serve the subdivision.

(2) Exemptions. The provisions of this Section do not apply to industrial or commercial subdivisions, condominium projects or stock cooperatives which consist of the subdivision of airspace in an existing apartment building which is more than five years old when no new dwelling units are added, or to any other subdivision exempted by Map Act Section 66477.

C. Review authority. The review authority for determinations required by this Section shall be the same as that assigned by Section 9.80.060 for the type of subdivision being processed. When the review authority considers a Tentative Map for a residential subdivision of 51 or more parcels, or a residential subdivision of five or more parcels that includes a proposal to dedicate parkland, the matter shall first be referred to the Parks and Recreation Committee for a recommendation to the review authority as to whether the proposed dedication conforms to the Parks and Recreation Element of the General Plan, and any other applicable City plan.

D. Amount of parkland required.

(1) General standard. It is found and determined that the public interest, convenience, health, welfare, and safety require that five acres of property for each 1,000 persons residing within this City be devoted to neighborhood and community park and recreational purposes.

(2) Dedication requirement for residential subdivisions. The amount of contiguous acreage required to be dedicated by a residential subdivider for park and recreational purposes shall be based upon the number of dwelling units proposed in the subdivision. The required dedication shall be computed using the following formula:

X = .005(U)(P)

Where:

X = Amount of parkland required, in acres.

U = Total number of approved new dwelling units in the subdivision. In the case of a subdivision in a zone that allows multiple dwellings per lot, the number of units shall be the maximum allowed by the zone unless the total number is limited to a specific number by condition of approval or other City requirement.

P = Average number of persons per dwelling unit within the City, from the most recent Federal census.

In addition, the subdivider shall, without credit, provide improvements in compliance with Subsection H.

E. Formula for fees in lieu of land. If the review authority determines that:

(1) If the entire parkland obligation for a proposed residential subdivision is not satisfied by dedication in compliance with Subsection D. above, the subdivider shall pay a fee to the City in lieu of dedication, as a condition of Tentative Map approval. The fee shall equal the acreage of parkland obligation derived from the formula in Subsection D., less the amount of parkland, if any, offered for dedication by the subdivider and accepted by the City, times the average per-acre fair market value per buildable acre for the appropriate park planning area, plus 20 percent toward the cost of off-site improvements (e.g., utility line extensions).

(2) For purposes of determining the required fee, the term "fair market value" shall be based upon an appraisal within the past 12 months, and approved by the Council, immediately prior the receipt of the Final Map by the Council. The subdivider shall notify the City of the expected submittal date of the Final Map at least twelve weeks prior to the submittal of the Final Map to the Department, to permit the City to select a certified land appraiser and carry out the appraisal. The subdivider shall pay the City's costs for an independent appraiser.

(3) If the subdivider or City staff object to the valuation, they may appeal the determination in compliance with Chapter 9.76 (Appeals); provided that the burden of proof on all issues shall lie with the subdivider.

F. Fees only. Only the payment of fees shall be required in subdivisions of 50 parcels or less, except that when a condominium project, stock cooperative, or community apartment project exceeds 50 dwelling units, dedication of land may be required even though the number of actual parcels may be less than 50.

G. Criteria for requiring dedication and fees. In a subdivision of 51 or more parcels, the City may require the subdivider to dedicate both land and pay a fee, as follows:

(1) Determination of land or fee. Whether the City accepts land dedication or elects to require payment of a fee in lieu thereof, or a combination of both, shall be determined by consideration of the following:

d. The General Plan, and the compatibility of dedication with the General Plan;

e. Topography, geology, access, size, shape and the location of land in the subdivision available for dedication;

f. Feasibility of dedication; and

g. Availability of existing park property.

(2) Procedure for determining land or fee. The review authority shall determine whether the subdivider shall dedicate land, pay in-lieu fees, or provide a combination of both, at the time of Tentative Map approval. The determination of the review authority shall be based on a report and recommendation from the Director, and a recommendation from the Parks and Recreation Committee. The recommendations and the action of the review authority shall consider the factors in Subsection G.1 above, and shall include the following:

a. The amount of land required;

b. Whether a fee shall be charged in lieu of land;

c. Whether land and a fee shall be required;

d. The location and suitability of the park land to be dedicated or use of in-lieu fees; and

e. The approximate time when development of the park or recreation facility shall commence.

The determination of the City as to whether land shall be dedicated, or whether a fee shall be charged, or a combination thereof, shall be final and conclusive.

(3) Land and fees. A requirement for both land dedication and fee payment shall comply with the following standards.

a. When only a portion of the land to be subdivided is proposed in the General Plan or applicable specific plan as the site for a local park, that portion shall be dedicated for local park purposes, and a fee computed as provided by Subsection E. shall be paid for any additional land that would have been required to be dedicated by Subsection D.

b. When a major part of the local park or recreational site has been acquired by the City and only a small portion of land is needed from the subdivision to complete the site, the remaining portion shall be dedicated, and a fee computed as provided by Subsection E. shall be paid in an amount equal to the value of the land that would otherwise have been required to be dedicated by Subsection D. The fees shall be used for the improvement of existing City parks or recreational facilities serving the community, with consideration for parks and facilities impacted by the subdivision.

(4) Credit for improvements. The cost of park and recreational improvements and equipment provided by the developer on the dedicated land shall be a credit against the required dedication of land or fees. Off-site improvements shall not be credited. The park and recreation improvements and equipment shall be approved by the Parks and Recreation Committee prior to any credit being reviewed and/or granted.

(5) Credit for private recreation facilities. A subdivider may be credited for the provision of private recreation facilities within the subdivision, as follows.

c. Eligibility. Subdivisions meeting either of the following criteria shall be eligible to receive credit for private recreation facilities:

1. In compliance with Government Code Section 66477, the subdivision involves a planned development, real estate development, stock cooperative, or community apartment project, as defined in Business and Professions Code Sections 11003, 11003.1, 11003.2, 11003.4 and 11004, respectively; and condominiums, as defined in Civil Code Section 783; or

2. Where the review authority determines that proposed private recreation facilities are in the best interest of the City, not necessarily the subdivision, based on a recommendation from the Parks and Recreation Committee.

d. Amount of credit. The maximum amount of credit considered for private recreation facilities (improvements) shall be 50 percent of the land or fees specified in compliance with this

Section. The amount of credit shall be determined by the review authority based on a recommendation from the Parks and Recreation Committee.

e. Characteristics of private recreation facilities given credit. Private recreation facilities shall be accepted for credit only if the review authority determines that they will meet the requirements of the Parks and Recreation Element of the General Plan, and any other applicable City plans. All private recreation facility improvements receiving credit shall be recorded on the Final Map and maintained in a safe and operable condition for the duration of the development.

H. Improvement requirements. When land is required to be dedicated in compliance with this Section, the subdivider shall provide the following improvements prior to the acceptance of the dedication by the City. These improvements shall not be credited toward any required in-lieu fees.

(1) Full street improvements and utility connections including, but not limited to, curbs, gutters, street paving, traffic control/calming devices, street trees, sidewalks, and lighting;

(2) Fencing along property lines of portions of the subdivision contiguous to the dedicated land, where required by the review authority;

(3) Improved drainage through the site; and

(4) Other minimal improvements which the review authority determines to be essential to the acceptance of the land for recreational purposes.

The Council reserves the right to accept the improvements prior to agreeing to accept the dedication of land and to require in-lieu fee payments if the Council determines that the improvements are unacceptable.

I. Conveyance of land, payment of fees.

(1) Land. Real property being dedicated for park purposes shall be conveyed by the Parcel or Final Map in fee simple absolute, to the City by the subdivider, free and clear of all encumbrances except those which, in the opinion of City Attorney, will not interfere with use of the property for park and recreational purposes, and which the Council agrees to accept. The subdivider shall provide all fees and instruments required to convey the land, and title insurance approved by the City Attorney in favor of the City in an amount equal to the value of the land.

(2) Fees. The amount of required fees shall be deposited with the City at the time of submittal of a Parcel or Final Map. The City Treasurer shall deposit the fees into the Subdivision Park Trust Fund, or its equivalent.

a. Timing of payment. Fees required in compliance with this Section shall be paid to the City prior to Parcel Map or Final Map recordation.

b. Use of funds. The money collected in compliance with this Section, including accrued interest, shall be used only for the purpose of acquiring necessary land, developing new or rehabilitating existing park or recreational facilities, or related improvements, in the manner specified in the Parks and Recreation Element of the General Plan.

c. Distribution of unused fees. Fees not used within five years in accordance with Map Act Section 66477, less an administrative charge, shall be distributed and paid to the then record owners of the subdivision in the same proportion that the size of their lot bears to the total area of all lots in the subdivision.

d. Annual report. As part of the City's budget, the Finance Director shall report to the Council at least annually on income, expenditures, and status of the Subdivision Park Trust Fund.

e. Facility development schedule. As specified in the Parks and Recreation Element of the General Plan, the City shall develop and maintain a schedule in compliance with Government Code Section 66477, specifying how, why, when, and where it will use the

land or fees, or both, to develop park or recreational facilities to serve residents of the subdivision.

Public Facilities

9.86.040 Reservations of Land for Public Facilities

As a condition of approval of a Tentative Map, the City may require the subdivider to reserve sites appropriate in area and location for fire stations, libraries or other public uses, pay an in-lieu fee or both at the option of the City in compliance with this Section.

A. Standards for reservation of land.

(1) Location of land. Where a fire station, library, or other public use is shown in the General Plan or applicable Specific Plan, the subdivider may be required by the City to reserve sites as determined by the City in compliance with the standards in the applicable plan.

(2) Configuration. The reserved area shall be of a size and shape that will permit the balance of the property to develop in an orderly and efficient manner. The amount of land to be reserved shall not make development of the remaining land held by the subdivider economically unfeasible. The land to be reserved shall be in multiples of streets and parcels that will permit an efficient division of the reserved area if it is not acquired within the period determined by Subsection B.

B. Procedure for reservation of land. The public agency for whose benefit an area has been reserved shall at the time of approval of the Parcel or Final Map enter into a binding agreement with the subdivider to acquire the reserved area within two years after the completion and acceptance of all improvements, unless a longer time is authorized by mutual agreement.

C. Purchase price of reserved land. The purchase price shall be the market value of the land at the time the Tentative Map is filed, plus the property taxes against the reserved area from the date of the reservation, and any other costs incurred by the subdivider in maintaining the reserved area, including interest costs incurred on any loan covering the reserved area.

D. Termination of reservation. If the public agency for whose benefit an area has been reserved does not enter into a binding agreement as described in Subsection B. (Procedure for Reservation of Land), the reservation shall automatically terminate.

City of Arcata Local Coastal Program

The City of Arcata Local Coastal Program was certified by the California Coastal Commission on October 10, 1989. The City of Arcata Local Coastal Program includes policy restrictions on siting critical facilities (such as fire and police stations) in hazardous areas (Policy H-2 and H-4). No policies are specifically relevant to schools. The following policy recommendations are relevant to recreation:

Recreation and Visitor-Serving Facilities Policy Recommendations

- ***B-1*** *The City shall maintain the Natural Resource Protection designation on all tidelands and water areas of Arcata Bay, and identify these areas as passive use recreational areas. The Arcata Bay tidelands shall also be designated Natural Resource Protection.*
- ***B-2*** *The City shall designate the area encompassed by the Arcata Marsh and Wildlife Sanctuary as Natural Resource Protection, and identify the recreational component of the project as a passive use recreational area.*
- ***B-3*** *The City shall encourage the continued use of the tideland for scientific and educational studies.*
- ***B-4*** *The City shall maintain the existing facilities of the Arcata Marsh and Wildlife Sanctuary and construct new facilities consistent with the plan developed by the Marsh Task Force or its equivalent and adopted by the City Council.*
- ***B-5*** *The City shall develop the community park area bounded by Highway 101, Samoa Boulevard, 7th Street, and Union Street as an active use recreational area.*

- ***B-6*** *The City shall designate the floodplain along McDaniel Slough north of Samoa Boulevard and south of 11th Street as park land and identify this area as a passive use recreational area.*
- ***B-7*** *The City shall encourage the retention and expansion of commercial visitor serving facilities along Samoa Boulevard within the General Commercial zoning district, and along South "G" Street and South "I" Street in the Industrial Commercial zoning district.*
- ***B-8*** *The City shall identify Samoa Boulevard, a State Highway, as a community entry way and seek funding to develop a specific public improvement program between the highway overpass and "K" Street that provides for consistent landscaping, street furniture, and directional signing.*
- ***B-9*** *The City shall maintain the Boat Basin at its current design level of use.*
- ***B-10*** *The City shall seek funding to establish interpretative sites along the Arcata Bay shore including a Nature Center and Wildlife Center to serve as an educational focal point for Arcata's natural resource areas.*

Agriculture Policy Recommendations

- ***G-5*** *Private and public non-vehicular recreational activities such as hiking, riding, fishing, hunting, and other recreational activities which do not require permanent structures, facilities, or foundations may be permitted in the Agricultural Exclusive zone if they do not interfere with adjacent agricultural uses or limit potential of the site to return to agricultural use or significantly displace the wildlife utilizing the area, especially in seasonal wetlands. This recommendation shall be implemented in the Coastal Land Use and Development Guide.*

2010 Parks & Recreation Master Plan

The Parks and Recreation Master Plan is a planning and feasibility document that includes a comprehensive assessment of community recreation needs (City of Arcata 2010). The Parks and Recreation Master Plan includes a series of maps to characterize service areas for parks facilities and areas with identified needs and recommendations for actions. The Plan also includes recommendations to update the City ADA Transition Plan for parks and recreation facilities and to incorporate universal design principals into all master planning efforts. The Plan is used to guide and inform planning; however, is not a regulatory document.

3.10.4 Evaluation Criteria and Significance Thresholds

Under criteria provided in Appendix G of the CEQA Guidelines, adoption and implementation of the proposed Arcata General Plan 2045 would be considered to have a significant impact on public services and recreational resources if it would result in any of the following:

– Substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for:
  1. fire protection,
  2. police protection,
  3. schools,
  4. parks,
  5. and/or other public facilities;
– Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated; or
– Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment.

In terms of “other public facilities,” such facilities include libraries and facilities that serve the public, as listed in Section 3.10.2 (Setting). Impacts related to these facilities are discussed in this section under Impact PS-1e. For

the purposes of this Section, public facilities do not include stormwater, water, wastewater, and soil waste facilities. Impacts related to public stormwater facilities are addressed in Section 5.5 (Hydrology and Water Quality), and impacts related to public wastewater, water, and solid waste facilities are discussed in Section 3.12 (Utilities and Service Systems).

The following sections describe the anticipated environmental impacts on public services and recreational resources due to the adoption and implementation of the proposed General Plan 2045.

3.10.5 Methodology

The impact analysis included in this section is based on geospatial data, interviews with police and fire personnel, school enrollment and facility capacity data from local school district staff, and other information collected from the City of Arcata. The evaluation considers whether the adoption and implementation of the General Plan 2045, and the associated full buildout and increased population, would affect the City's existing public services and recreational facilities by affecting the current service ratios, response times, and/or level of service.

3.10.6 Impacts and Mitigation Measures

Impact PSR-a1: **Would adoption and implementation of the General Plan result in substantial adverse physical impacts associated with the provision of new or physically altered government facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for fire protection?**

In 2022, Arcata Fire Protection District (AFPD) responded to approximately 3,750 calls within the District. Of those calls, 1,747 were within the City limits; In the past five years, the Fire District has responded to an average of approximately 1,678 calls annually within the City limits. The General Plan 2045 assumes modest annual growth up to 27,000 people and 4,143 dwelling units by 2045. The increase in population could result in a proportional increase in calls for service. In a Notice of Preparation Comment letter from AFPD, the Fire Chief wrote that the additional residential units and population anticipated is likely to exceed the capacity of the District to ensure safe and effective response.

Both the City and AFPD do not have an established level of service expected for fire protection services. National Fire Protection Association (NFPA) standards are not used as level of service thresholds locally as they are generally not realistically obtainable for this region (personal communication, Justin McDonald). No urban fire protection service providers in Humboldt County meet all NFPA standards for staffing or response times. NFPA 1710 standards for recommended deployment are listed in Table 3.10-7 along with typical local expectations for the number of fire suppression staff on the scene of a fire. To achieve the needed personnel, AFPD must rely on mutual aid (support from other fire departments).

Table 3.10-7: NFPA 1710 Deployment Models and Common Local Deployment Strategy

Call-Population Ratios

AFPD has documented an approximate 50% increase in calls for service within the City limits since 2004. Calls have increased approximately 22-26% every five years since 2008, based on a five-year average between 2008-2012, 2013-2017, and 2018-2022 (Table 3.10-2). Based on historic trends per capita and an assumed population of 27,000 in 2045, it is projected that there could be an increase of 900-3,300 service calls annually by 2045. The City and AFPD do not have an established level of service based on ratios of calls per population. Therefore, it is unknown at this time if an increase in population alone would require the construction of new fire protection facilities. Given the wide range in projected increases based on differing data sources, other factors described below better inform the need for new or renovated facilities.

Staff Training

AFPD has maintained a full-time equivalent career staff of approximately 20 firefighters and 3-4 chiefs since 2012. Between 2020-2022, career staffing decreased to 2 chiefs and under 20 firefighters. This Draft EIR does not address staff skills or training as those have no bearing on requirements for new government facilities. AFPD utilizes local and regional training facilities and will not need a new standalone training facility.

Facility Capacity

Population growth induced by the General Plan 2045 could require additional fire response vehicles and staff, requiring covered parking and living space. AFPD currently operates out of three fire stations; two located within the City and one in McKinleyville. Each of the three stations currently contain up to three fire engines. AFPD currently does not have a ladder truck, though some types of 100-foot ladder trucks could fit within existing facilities at the Mad River and McKinleyville stations. In the past, a 100-foot rear mounted ladder truck was parked at the Mad River station. Typically, six firefighters are on duty each shift. Based on the dormitory spaces at each station, AFPD could have 11 firefighters on duty each shift. Therefore, the existing stations have adequate capacity for additional equipment and approximately 50% more on-duty staff. Altered or new government facilities would not be required based on facility capacity for equipment and personnel.

Response Times

Response times are calculated based on time it takes for the fire crew to travel from the station to the location of the emergency. AFPD utilize heat maps as one method to confirm the adequacy of their station location. Heat maps show areas where a higher frequency of calls occur. Based on heat maps from recent years, the three existing stations continue to be located in adequate areas for current call distributions (personal communication, Justin McDonald). Because of the infill growth pattern promoted by the General Plan 2045, little or no expansion of City limit is expected. Additionally, since the City limits are within AFPD's current response area, the geographic extent of the response area within the study area remains the same and the locations of the fire stations remain adequate. Therefore, response times are not anticipated to increase based on call distance from the station.

Response times can also be calculated based on the time it takes for fire personnel to travel to the emergency location from their current location. If they are attending to another emergency call, this could be a location closer to or farther than the station. Because the increase in population could increase calls for service, response times could increase as fire crews are busier. Additionally, traffic flows and patterns could change, further slowing response times. The construction of a new station could be warranted if call volume and distribution change significantly due to development patterns and population growth. These changes would happen slowly over the 20-year planning horizon, enabling AFPD to monitor changes and respond as needed.

The following policies from the General Plan 2045 Public Safety Element would reduce impacts related to fire protection access and response:

- ***PS-1e: Development & design standards for emergency response****. New and renovated structures, as well as streets, driveways, and alleyways, shall be designed to provide adequate entry and exit by emergency vehicles and personnel. This includes visible street numbering, emergency vehicle turn-arounds, accessible building entry points and stairways, lighting, and interior evacuation routes.*
- ***PS-5b: Review of development for fire safety****. The Arcata Fire Protection District (District) reviews new development for compliance with fire safety standards. The City shall continue to incorporate review by the District to ensure that buildings and sites adhere to relevant fire and building codes, including sprinklers, vertical clearance, and turn-around space for fire fighting vehicles*

Based on the discussion above, impacts to response times may potentially warrant the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts. The potential environmental impacts of constructing and operating the facilities would likely be similar to those associated with new development, infill, redevelopment, and infrastructure projects under the General Plan 2045. It is expected that new facilities would be located within infill or previously developed areas inside the City limits. Construction would require adherence to all applicable building and zoning codes and additional CEQA review to analyze project and location specific impacts. Environmental impacts of constructing and operating the government facilities would likely be similar to those impacts associated with new development and infill projects as identified elsewhere in this Draft EIR. As such, impacts associated with the adoption and implementation of General Plan 2045 to police protection services would be less than significant.

While AFPD may not have adequate staff, training, or equipment to serve the full buildout of the General Plan 2045, those have been determined to not result in the need for renovated or new facilities because no new training facilities are needed, and current facilities could accommodate additional staff and equipment. AFPD's existing facilities will remain sufficient to adequately serve the 2045 projected population within its existing service area based on staffing levels, equipment needs, and response times from existing stations.

The adoption and implementation of the General Plan 2045 may result in an increase in the number of calls for service, placing a greater demand on fire protection services. In order to maintain current response rates, a new facility or substation may be required if call volume increases and call distribution changes significantly. The City and AFPD would need to continue monitoring and review call volumes, call distributions, and response times to determine adequate level of service or if a new facility should be constructed. The growth anticipated in the General Plan 2045 could potentially result in the need for new or expanded fire protection facilities. The exact location and extent of facility improvements or expansion is not known at this time and would likely be based on future call distribution in order to most effectively serve the community. AFPD would be required to address the potential environmental impacts of the development of additional or expanded fire facilities at that time. As a programmatic, policy-level analysis, the adoption and implementation of General Plan 2045 would not result in significant environmental impacts caused from the alteration and construction of fire protection facilities to maintain acceptable service ratios and response times. Impacts would be less than significant.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact PSR-a2: Would adoption and implementation of the General Plan result in substantial adverse physical impacts associated with the provision or new or physically altered government facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for police protection?

The General Plan 2045 projects the population to increase from approximately 18,875 (year 2020 estimate) to up to 27,000 residents by the end of the planning horizon. Future regional growth within the study area would result in increased demand for police services. APD and the City do not have an established level of service for police protection.

Staffing and Facility Capacity

Over the past five years, APD has had between 19-29 officers (Table 3.10-3). APD is currently budgeted at 29 sworn positions, therefore, has an identified need for current service ratio of approximately 1.5 personnel / officers to 1,000 residents. The national average for cities between 10,000-24,999 in population is 1.9 officers per 1000 residents. With the addition of an estimated 8,250 residents, the service ratio would be reduced to approximately 1.1 officers per 1,000 residents, based on APD's current employment target. If APD were to maintain the current ratio, it would require a staff of 40 officers by 2045.

APD's existing facility has long been identified as too small and missing features that strengthen a police department such as secure parking, modern interview rooms, etc. This space has historically accommodated 29 officers. However, based on recent communications with Police Chief Brian Ahearn, their current facilities continue to have limitations that affect operations such as insufficient office space, limited equipment and evidence storage facilities, as well as other site access, safety, and health considerations. Because there are several ways to accommodate a growing Department such as distributed substations or additions / alterations to the current site police department facility and vehicle planning should be consider each 5-year increment of this planning horizon.

Response Times

APD responds to over 30,000 calls annually and typical emergency response times range from 4 minutes and 20 seconds to 4 minutes and 50 seconds. Because of the infill growth pattern promoted by the General Plan 2045, little or no expansion of the City limits is expected. Therefore, the geographic response area of APD remains the same and response times are not anticipated to increase based on call distance from the station. However, as the population increases, the call volume would be expected to rise proportionally. Based on the frequency of calls and distribution of calls, a new substation could be required to maintain adequate response times. However, this would happen slowly over the course of the planning horizon. APD would continue to monitor adequacy of response times as the City develops.

If an additional facility or substation becomes required due to increases is response times or unhealthy staff working conditions, APD could require a substation to be constructed within the City. The exact location is not known at this time. However, the new police facilities would be primarily provided on infill sites with land use designations that allow such uses; such as Public Facilities. The City contains approximately 440 acres of Public Facility designated land, a portion of which may merit consideration for a police facility (i.e., not dedicated school or parkland). The potential environmental impacts of constructing and operating the facilities would likely be similar to those associated with new development, infill, redevelopment, and infrastructure projects under the General Plan 2045.

The following goals and policies from General Plan 2045 would reduce impacts to police protection:

- ***PS-7a: Development/building and site design standards for crime prevention****. The City shall integrate CPTED (Crime Prevention Through Environmental Design) and related strategies into building and site design to prevent or minimize criminal acts, reduce victimization, and build a sense of community safety. These include a combination of onsite features such as alarm systems, secured entryways, lighting, and visible access. Crime prevention measures, such as providing alarm systems, security lighting, street numbers, and visibility for police surveillance, should be incorporated into, and around, new and renovated buildings. Gated communities hinder police and fire suppression access and shall be prohibited, consistent with Community Design Element policy.*
- ***PS-7b: Community-based policing****. Community-based policing has proven effective in reducing crime by involving citizens in crime prevention. The City Police Department provides training to business and neighborhood groups in how to discourage crime and best respond when crime occurs. The City shall continue to provide citizen training, maintain relationships with community groups, and encourage Community Emergency Response Teams (CERTs) to reduce crime and augment the essential services of the Police Department. Foot and bike patrols shall be promoted to maximize interaction between citizens and police, to foster friendship, understanding, and mutual help.*
- ***PS-7c: Cooperative Law Enforcement****. There are three law enforcement agencies based in Arcata: The Arcata Police Department, the Cal Poly Humboldt Police Department, and the California Highway Patrol. These agencies work together, responding to incidents throughout the City. The City shall continue to cooperate with other law enforcement agencies to maximize public safety within its boundaries. The City Police Department shall be the primary response agency within City limits since it is the only agency directly accountable to the government and citizens of Arcata.*
- ***PS-7e: Education and crime prevention funding****. The City recognizes that funds spent on education and crime prevention are more effective in reducing crime than funds spent on apprehending, prosecuting, and incarcerating criminals. The City shall pursue a long-term strategy of funding education and crime prevention programs.*

The goals and policies listed above in the General Plan 2045 would help to reduce impacts to police protection through community-based policing, education, design standards, and coordination with cooperating agencies. Additionally, APD would continue to review facilities for staff and visitor wellbeing, security needs, and response times, as growth increases. This continued informal monitoring would inform the adequacy of service provision and determination if a new facility is needed in the future as development and the population grows.

The growth anticipated in the General Plan 2045 could potentially result in the need for new or expanded police protection facilities. It is expected that new facilities would be located within infill or previously developed areas

within the City limits. Construction would require adherence to all applicable building and zoning codes and additional CEQA review to analyze project and location specific impacts. Environmental impacts of constructing and operating the facilities would likely be similar to those identified in this EIR associated with new development and infill projects. As such, impacts associated with the adoption and implementation of General Plan 2045 to police protection services would be less than significant.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact PSR-a3: Would adoption and implementation of the General Plan result in substantial adverse physical impacts associated with the provision of new or physically altered government facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for schools?

Based on the public and charter schools identified in Table 3.10-4, for the 2022-2023 school year, 3,689 students were enrolled at the school districts that serve City. Over the past five years, annual enrollment has ranged between 3,621 to 3,689 kindergarten through twelfth grade students. Based on personal communication with district superintendents, approximately 30-50% of enrolled students are from outside their district.

To roughly estimate the number of school age children in Arcata for the planning horizon, U.S. Census data was considered. The U.S. Census estimates that 11.2% of Arcata's population is under 18 years old and 2.5% is under 5 years old; therefore, approximately 1,653 children between 6-18 years old were estimated to live in Arcata in 2023. With a population of 27,000, an estimated 2,349 could be 6-18 years old.

Alternatively, the projected number of school age children could be estimated based on a student per dwelling unit rate. Assuming approximately 40% of the total 3,689 students enrolled are out-of-district students (personal communication with local district superintendents), local school districts currently have approximately 2,213 students who are residents of Arcata. The City has approximately 8,019 dwelling units (City of Arcata 2019) resulting in a student-dwelling unit rate of 0.276. Applying that rate to the 4,340 additional dwelling units anticipated by the General Plan 2045, would result in an additional 1,198 students.

Other considerations for estimating school age children include the demographics of the increase (i.e., the population would include Cal Poly Humboldt students), state fertility trends, and migration trends. College age students are less likely to have children; potentially reducing the percentage of the population that are between 6-18 years old. Due to trends in fertility and migration, the State of California Department of Finance estimates a decrease in state-wide public kindergarten through twelfth grade enrollment over the next ten years (DoF 2022). Department of Finance projections for kindergarten through twelfth grade enrollment in Humboldt County for the 2030-2031 school year are approximately 13% lower than enrollment in 2010 and 11% lower than enrollment in 2022 (DoF 2022).

Based on personal communication with school district staff, most schools are currently either near or at capacity. The Arcata School District's 2023 developer fee study projected an increase of 152 students over the next 20 years and a need to construct new facilities and refurbish existing facilities in order to maintain the existing level of service (personal communication, Luke Biesecker). The Jacoby Creek School District's facilities are currently near or at capacity (personal communication, Melanie Nannizzi). In 2018, Jacoby Creek School completed a Facility Master Plan that proposed additional structures on the existing campus (JCS 2018). The Plan identified an existing facility capacity of 478 students; the 2021-2022 school year enrollment was approximately 460 students. Based on facility capacity and classroom size, Pacific Union School District's ideal enrollment is 530 students; the district has neared or exceeded its capacity (personal communication, Marci Laffranchi and Rene McBride). Northern Humboldt Union High School District has some additional capacity (personal communication, Roger Macdonald and Tammy Pires). Some of the school districts have the ability to stop accepting students from out of their district, increasing the availability for in-district students. However, with an estimated 700-1,200

new kindergarten through twelfth grade students over the planning horizon, it is likely that new or expanded school facilities or staff within the City would be needed.

The growth anticipated in the General Plan 2045 could potentially result in the need for new or expanded school facilities. The location and extent of new or expanded facilities to serve additional students in is not known at this time. Therefore, the significance of physical impacts on the environment that could result from the construction and operation of future school facilities cannot be evaluated. Construction of facilities would likely result in similar physical impacts discussed throughout this Draft EIR, but impacts could also be reduced depending on location and intensity. New school facilities would be primarily provided as expansions to existing facilities or on infill sites with land use designations that allow such uses, such as Public Facilities or Gateway Area residential zones (PF-4a). Public Facility Element Policy PF-4a requires the City to coordinate with local school districts regarding expected growth and encourages the districts to expand existing schools rather than designating new sites to serve future student enrollment needs; thus, reducing potential impact by focusing development on property previously disturbed or developed. Additionally, new or expanded facilities would require adherence to all applicable building and zoning codes, and if relevant, additional CEQA review to analyze project and location specific impacts.

California Senate Bill 50 (SB 50), codified in California Government Code Section 65995, authorizes school districts to collect fees to offset the costs associated with increasing school capacity as a result of new residential and commercial/industrial development and related population increases. Per SB 50, these development fees are deemed to be “full and complete school facilities mitigation,” notwithstanding any contrary provisions in CEQA or other State or local laws. Two of the school districts within the study area have adopted development impact fees. Development facilitated by the General Plan 2045 that is located in areas subject to school impact development fees would be required to pay the adopted fees, therefore, fully mitigating the impacts on those district school facilities.

For university school facilities, Cal Poly Humboldt is expecting increased enrollment throughout the General Plan 2045 planning horizon, which would require the construction of new facilities on State-owned land. This Draft EIR does not evaluate impacts on State-owned land within the City limits. Potential cumulative impacts are discussed below in Section 3.10.7 (Cumulative Impacts).

Population growth, including an increase in school age children, is anticipated with the development facilitated by the General Plan 2045. This growth could increase the demand for school services and potentially create the need for new or physically altered school facilities. However, the development or expansion of new school facilities would likely occur on previously disturbed property and sites that are served by existing infrastructure. Future development would require additional CEQA review and compliance with existing building and zoning codes. As a result of the General Plan 2045 policies, impact development fees, and consistent with State law, school impacts would be less than significant.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant

Impact PSR-a4: Would adoption and implementation of the General Plan result in substantial adverse physical impacts associated with the provision or new or physically altered government facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for parks?

In Arcata, the current area of developed parks is 95.9 acres and undeveloped parks is 4,006.8 acres. The City currently maintains a parkland to population ratio of approximately five acres per 1,000 residents. The General Plan 2045 assumes a total resident maximum population of 27,000 in 2045. Based on this population, 135 acres of total parkland would be required to maintain a ratio of five acres per 1,000 residents. Therefore, without the

addition of new parkland, the ratio of developed parks and undeveloped parks to residents in 2045 would be approximately 4.3 acres and 147 acres per 1,000 residents, respectfully.

The Quimby Act allows for parkland dedications of three to five acres per 1,000 residents. With the anticipated growth and existing developed parkland, the City would maintain consistency with the Quimby Act. Additionally, according to the public outreach conducted during the Parks and Recreation Master Plan development, residents desire a park system that emphasizes natural areas and trails (City of Arcata 2010). Considering the large expanse of natural area and undeveloped parks, the City will exceed well past the Quimby Act maximum dedication ratio when considering the projected population and existing undeveloped parkland.

Based on the range of Quimby Act parkland dedication, the adoption and implementation of General Plan 2045 would not result in the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios for parks. Even with the projected population growth, the City would maintain a ratio of greater than 3 acres per 1,000 residents based on existing parkland. No impact would occur.

Mitigation Measures: No mitigation is necessary

Level of Significance: No impact

Impact PSR-a5: Would adoption and implementation of the General Plan result in substantial adverse physical impacts associated with the provision or new or physically altered government facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for other public facilities?

The projected population increase associated with General Plan 2045 will place additional demands on public facilities such as City Hall and libraries. A substantial portion of the population growth within the City is expected to comprise Cal Poly students; the continued operation of the Cal Poly Humboldt library would maintain acceptable service ratios. The infill growth pattern identified in the proposed General Plan would not disperse populations that may require additional facilities to be constructed in new locations. Future needs could be met by providing additional staffing, potential expansion at existing facilities rather than construction of new facilities and coordinating with Humboldt County and community service and private organizations to provide public service facilities.

The General Plan 2045 includes multiple policies to provide adequate public facilities and avoid potential impacts. The Public Facilities & Infrastructure Element Policy PF-5 intends to provide adequate facilities for services and programs administered by the City and other public service providers, including City administrative and meeting facilities (City Hall), police and fire departments, libraries, and community centers. Policy 5a and 5c are specific to community facilities, public libraries, and civic facilities. PF-5a allows facilities, operated by community service and private organizations, to be located in incorporated areas designated Central Commercial (C-C); Residential High Density (RH); Limited Industrial (I-L); and Public Facility (P-F); subject to use permit approval. PF-5c requires the City to coordination with Humboldt County to provide public library facilities in the City and requires coordination with other agencies, such as the Humboldt Transit Authority, to maintain joint-use facilities in the City.

The Land Use Element includes policies related to allowable land use designations for public facilities and considerations for evaluating impacts on public services.

- ***LU-5a: Public Facility [PF] uses****. Public Facility land use category is applicable to those lands which are to be used for the various types of public facilities, except that some public facility uses are also allowed in other land-use categories. Public facility uses include certain uses which may be owned by private individuals, private organizations, or private institutions, as well as by government entities. Uses include schools, public services and administrative offices, wastewater and solid waste management facilities, public parking lots, parks and non-commercial recreation uses, golf courses, auditoriums, and*

other public assembly spaces, hospitals, cultural facilities, community gardens, communication (including telecommunications) and transportation facilities, and utilities. The types of uses allowable within this category shall be specified in Table LU-6.

- ***LU-3a: Commercial use classifications**. The following land-use plan categories are applicable to commercial lands. Table LU-4 defines permitted uses, densities, lot sizes, and coverages for each classification. Large scale retail uses shall require a use permit due to evaluate:*
  - *Potential impact on existing and projected traffic conditions.*
  - *Impact on municipal utilities and services.*
  - *Impact on the physical and ecological characteristics of the site and surrounding area.*
  - *Impact on the community.*

These policies, alongside the ongoing monitoring of facilities for their sufficiency to meet future needs, will reduce potential impacts to a less than significant level.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact PSR-b: Would adoption and implementation of the General Plan increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

It's anticipated that over the life of the General Plan 2045, the use of parks, trails, and recreational facilities would increase due to the planned growth that is accommodated by the General Plan 2045. Additional demand on existing parks and other recreational facilities would incrementally increase the need for maintenance and improvements. These improvements could have environmental impacts, although the level and severity of impacts cannot presently be determined since the potential improvements are unknown.

The General Plan 2045 establishes policies and implementation measures to ensure that existing parks and recreational facilities are improved and maintained. The General Plan 2045 includes Policy OS-1g for the City to set standards for responsible resource land stewardship and to consider natural resource values to the community in all long-term use decisions. Policy PR-2g requires the use best management practices to ensure that parks are maintained at the desired levels of service and for the City to prepare a Maintenance Management Plan and Natural Resource/Open Space Management Plan which would include facility reinvestment and replacement schedules. Policy PR-3c requires the City to work with community groups and other coalitions to define mutually compatible recreational facility and maintenance needs. The General Plan 2045 also includes Implementation Measure PR-2b (ongoing) to implement Park Development and Maintenance in accordance with the Park & Recreation Master Plan, Implementation Measure PR-2c Maintenance Management Plan, and Natural Resource/Open Space Management Plan. These policies and implementation measures support maintenance of existing parks and recreational facilities to ensure neighborhood and regional facilities adequately serve the community.

The City Municipal Code and Land Use Code contain ordinances and regulations to maintain, improve, and acquire parkland. Municipal Code Section 2685 (Resolution 190-68, effective in 2020) imposes the Open Space, Parks, and Trails Special Tax to fund improvements to and maintenance of City owned parks, open spaces, trails, forests and other working lands and to expand public access and trail systems. Land Use Code Section 9.70.050, Recreation Fee for New Construction, enables the City to collect fees from residential, commercial, or industrial construction to support park acquisition and improvements. Land Use Code Section 9.86.030, Park Land Dedication and Fees, require parkland dedications or fees in lieu of dedication based on five (5) acres of parkland per 1,000 persons for all residential subdivisions. The General Plan 2045 also includes Policy PR-1b requiring parkland dedication or fees in lieu of dedication in order to provide adequate parkland level of service and facilities. These policies, regulations, and ordinances would ensure the City would continue to plan for and maintain parks and recreational facilities through the year 2045. Additionally, these policies, regulations, and ordinances would support the acquisition and development of new facilities to accommodate the demand for

parks and recreational facilities which could reduce the potential for adverse impacts and physical deterioration of existing parks and recreational facilities.

Adoption and implementation of the General Plan 2045 would result in an increase to the Arcata population, which could increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility could occur or be accelerated. However, General Plan 2045 policies and implementation measures, along with the City Municipal Code and Land Use Code ordinances and regulations, would ensure the City would continue to plan for and maintain existing parks and recreational facilities at an acceptable level. The adoption and implementation of the General Plan 2045 would have a less than significant impact on existing neighborhood and regional parks or other recreational facilities.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact PSR-c: Would implementation of the General Plan include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?

In Arcata, the current area of developed parks is 95.9 acres and undeveloped parks is 4,006.8 acres. The General Plan 2045 assumes a total resident maximum population of 27,000 in 2045. Without the addition of new parkland, the ratio of developed parks and undeveloped parks to residents in 2045 would be approximately 4.3 acres and 147 acres per 1,000 residents, respectfully. Based on the range of Quimby Act parkland dedication (three to five acres per 1,000 people), the adoption and implementation of General Plan 2045 would not result in the need for new recreational facilities. However, the General Plan includes the following guiding principles and goals: Provide residents with an accessible variety of recreation opportunities and park experiences that are equitably distributed throughout the City (Goal A); Expand the range of park types and recreation programs to meet changing community needs and priorities (Goal B); and Assess user needs and adapt as needed on an ongoing basis (Goal F). The City would need to evaluate the extent to which the increased growth could increase the demand for parks, trails, and recreational facilities, and in turn, the need for new or expanded recreational facilities. The construction and operation of such facilities could have environmental impacts.

The General Plan 2045 supports the development of new parks, diverse recreational facilities, and preservation of open space. Facilities supporting recreation can be located in various land designations (commercial, industrial-light, public facility, natural resource, agricultural exclusive), and even considered in the design of stormwater / retention, treatment, and conveyance facilities (Policy PF-3d). General Plan 2045 contains Implementation Measures OS-1 to preserve and acquire open space, PR-1b to continue to implement fees and dedications pursuant to Quimby Act, PR-1c to update level of service standards-parkland to population every five years, and PR-2a to implement strategic funding options. It is anticipated that in-lieu fees collected from subdivisions, residential, commercial, or industrial development in the area will be sufficient for purchase and at least partial development of new parkland facilities. In this manner, General Plan 2045 policies and implementation measures would ensure that new and expanded parks and recreation facilities are provided to accommodate new growth.

Additionally, the Open Space Element contains Policy OS-1 to designate, maintain, and enhance the quality, and increase the amount of permanently protected open space in the Arcata Planning Area, including: natural resource areas; resource production areas; outdoor recreation areas; and areas subject to health and safety hazards. These areas are to be protected, linked together wherever practical for habitat connectivity, managed for resource production, and maintained for enjoyment by City residents and visitors. Sub-policy OS-1i requires the City to continue to pursue, or coordinate with land trusts, for acquisition, from willing sellers, to expand the amount of open space. Areas identified include the Community Forest, forested property on the west slopes of Fickle Hill, and lands around Arcata Bay. Lands located outside of the City limits would be considered for annexure pursuant to the City General Plan Growth Management Element.

The Gateway Area Plan contains a Conceptual Open Space Plan to guide the general location and character of new open spaces in the Gateway Area. Concepts include a linear park adjacent to daylighted and restored segments of Jolly Giant Creek (Policy GA-6d and Policy GA-6h) as well as a plaza or public open space in the Barrel District. Open Space Program implementation measures include Imp-GA-6.3 to acquire publicly accessible open space within the Gateway Area Boundary. The City's goal is to provide a park, high-quality trail, or open space within 200 yards of every residential unit in the Gateway Plan Area. This could be provided through the Community Benefit Policies in the Gateway Area Plan Element. Actual implementation and development of parks or open space may vary based on landowner or development agreements obtained during project planning or approval.

Construction or expansion of recreation facilities could result in the loss of open space habitat; however, Policy OS-1e, GA-6g, and GA-6h encourage development in low habitat quality open space areas rather than high-quality areas, require protection of open space, and encourage restoration of wetland areas and Jolly Giant Creek. General Plan 2045 PR-2a requires the protection of natural areas and wildlife habitat within parks and open space land to the greatest extent feasible. The Plan would integrate recreational use in natural areas, where not in conflict, through appropriately designed trails, trailheads, and interpretive resources to achieve the community's desire for access. Many policies require, or encourage the enhancement of natural areas, preservation of open space characteristics, and minimization of impacts including Policy PR-1b, PR-2c, OS-1f.

The General Plan 2045 does not include any site-specific designs or proposals, nor grant any entitlements for development of recreational facilities. However, future recreational projects envisioned in the General Plan include new and expanded pedestrian and bicycle facilities, open space, and community plazas. Given the nature and scale of such improvements (e.g., street furnishings, pavement striping and signage, bicycle racks, playgrounds, benches, gardens, etc. in existing urban / developed areas), the construction of such improvements could result in limited environmental effects, including release of air emissions associated with construction equipment, inadvertent archaeological discoveries, and temporary noise impacts; however, as future recreational facility construction or expansion projects are considered by the City, each project will be evaluated for conformance with the General Plan, Municipal Code, and other federal, state, or local applicable regulations.

Moreover, future development would require further CEQA review of project-level impacts prior to implementation to ensure that the individual projects do not result in a significant adverse physical effect on the environment. Impacts associated with construction or expansion of recreational facilities within the Infill Opportunity Zones and throughout the study area would likely be mitigated similar to those environmental impacts associated with new development under the General Plan 2045. General Plan 2045 includes policies and implementation measures that would help ensure new parks and recreational facilities are developed to accommodate the growing population. Additionally, this Draft EIR addresses the potential impacts of development that may occur under the General Plan 2045, including residential, commercial, industrial, natural resource, and a range of other uses.

Where potentially significant impacts are identified, Mitigation Measures are identified to reduce the impact and discloses which impacts cannot be reduced to a less than significant level. Apart from impacts disclosed in the relevant chapters for this Draft EIR, there are no additional significant adverse environmental impacts that are anticipated to occur associated with existing or new parks and recreational facilities. As a result of the proposed policies and potential impacts of development evaluated in this Draft EIR, the physical effects on the environment from the construction of new or expanded parks and other recreational facilities would be less than significant.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

3.10.7 Cumulative Impacts

The geographic boundary for cumulative projects related to public services and recreation impacts would include the City limits and extend to include Arcata School District, Jacoby Creek School District, Pacific Union School and Northern Humboldt Union High School District, and Arcata Fire Protection District.

Impact PSR-C-1: Would adoption and implementation of the General Plan 2045 contribute to a cumulatively significant impact to Public Services?

Arcata Fire Protection District (AFPD) extends beyond the City limits into unincorporated areas of Humboldt County and one of the District's three stations are located outside the City limits. Therefore, growth outside of the City would impact District services; potentially slowing response times to City properties. Likewise, increased growth within the City would impact AFPD services in areas of the District that are outside of the City. Cumulative projects could require the development of a new fire station if call volume and distribution change significantly due to development patterns and population growth. The City and AFPD would continue to monitor annual call metrics and plan for facilities as needed. Cumulative impacts would be less than significant.

The Cal Poly Humboldt Police Department would continue to provide services to Cal Poly properties as well as student and employees. Development outside the City limits would continue to be served by Humboldt County Sherriff's Office and California Highway Patrol. Projects considered for cumulative impacts would not contribute to increased calls for service within the City limits. Impacts from housing projects are evaluated in this EIR. Proposed trail and roadway improvements could improve transportation safety. Many of the considered projects are located outside the City limits and would not contribute to cumulatively significant impacts to police protection services provided by APD. A less than significant impact would occur.

Projects located in areas subject to school district development impact fees would be required to pay the adopted fees to ensure the adequate provision of schools in the future. Per SB 50, these development fees are deemed to be "full and complete school facilities mitigation" and therefore a less than significant cumulative impact would occur. Projects located in areas that are not subject to school district impact fees would either not result in significant impacts or the districts will adopt development impact fee programs. The process for adopting impact fees is subject to the various school districts' concerns for impacts to their facilities. The districts are able to adopt the fees unilaterally when they find that there are impacts related to new development. For this reason, any impact associated with a district that does not currently have an adopted fee would remedy the impact by adopting a fee.

Cal Poly Humboldt is expecting increased enrollment throughout the General Plan 2045 planning horizon, which would require the construction of new facilities on State-owned land. Potential cumulative impacts would be addressed through Public Facility Element Policy PF-4c that requires the City to coordinate with Cal Poly Humboldt regarding their planned development.

Arcata currently has approximately 4,200 acres of parkland. Development proposed by cumulative projects could increase the use of City parks, however Arcata would still maintain a high ratio of parks to population. Cumulative project development would not result in the need for new or expanded parks and recreation facilities. Therefore, cumulative impacts to parks and recreational facilities would be less than significant.

Generally, cumulative development in the region would continue to increase the concentration of people and structures within the study area and jurisdictional area of police and fire services. This would increase the demand for public services such as fire, police, schools, parks, and other public facilities, such that new or physically altered governmental facilities could be required to maintain acceptable service ratios, response times, or other performance objectives. Construction of such features would occur within existing developed areas where adequate public services currently exist. It would be reasonable to assume that these needs could be served through the expansions of existing facilities or new facilities in already developed areas. Additionally, with adherence to applicable federal, state, and local regulations governing development of public service facilities and compliance with the proposed General Plan 2045 policies indicated above, the potential impacts associated with construction or expansion public facilities in the study area would be less than significant. As such, cumulative impacts would be less than significant.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact PSR-C-2: Would adoption and implementation of the General Plan 2045 contribute to a cumulatively significant impact to Recreational Resources?

Many parks and trails located in Arcata are regional recreational resources, enjoyed by people living and visiting from outside the City. The General Plan 2045 Parks and Recreation Element Implementation Measure PR-3a, Coordinated Open Space, Park and Recreational Facilities Planning and Use, requires the Park & Recreation Master Plan update to identify opportunities for enhanced partnerships with agencies and organizations to enhance City parks and recreation facilities and activities. Updates and regional trails planning would be coordinated with Humboldt County, Humboldt County Association of Governments, Great Redwood Trail Agency, Redwood Community Action Agency, Redwood Coast Mountain Bike Association, and the Humboldt Trails Council.

All future projects within the City would be required to comply with applicable federal and state as well as the City Municipal Code and General Plan 2045 policies that address parks and recreational facilities, including Land Use Code Recreation Fee for New Construction Section 9.70.050 and Subdivision Park Land Dedication (Section 9.86.030) to acquire and maintain parkland. Therefore, cumulative impacts to parks and recreational facilities would be less than significant.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

3.11 Tribal Cultural Resources

Tribal cultural resources include resources that are of specific concern to California Native American tribes, with knowledge of such resources limited to tribal people. Refer to Section 3.4 (Cultural Resources) for a discussion of prehistoric or historic archaeological sites, structures, or objects.

The Native American Heritage Commission responded to the Notice of Preparation with a letter recommending "consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources." The letter also included a list of AB 52 CEQA requirements, provisions of SB 18, and recommendations for Cultural Resources Assessments.

This section evaluates potential impacts on tribal cultural resources from adoption and implementation of the General Plan 2045. To provide the basis for this evaluation, the Setting section describes the setting of Tribal cultural resources. The Regulatory Framework section describes the regulatory background that applies to the General Plan 2045. The Impact Analysis section establishes the thresholds of significance, evaluates potential impacts to Tribal cultural resources, and identifies the significance of impacts.

3.11.1 Study Area

For impact assessment related to Tribal cultural resources, the City limits were used as the study area (see Figure 2-1 – City of Arcata Planning Areas).

3.11.2 Setting

Since time immemorial, before the arrival of European-American settlers in 1850, Arcata and the Humboldt Bay region were the home of the Wiyot. An Algonquian-speaking people, the Wiyot resided in settlements along the lower Mad River and Eel Rivers as well as other local streams, and along Humboldt Bay and on the hills and ridges or lands in between. Their way of life was shaped by the bountiful surroundings of forested hills, streams and rivers, the Pacific Coast and protected marshes and sloughs of Humboldt Bay, which generously provided for generations of subsistence and cultural needs.

Traditional Native American culture was disrupted by Euro-American settlement and U.S. government policy. This produced significant depopulation and relocation of Native Californians from most of the lands they occupied, and these actions combined with cultural intolerance have led to the displacement of the Wiyot community and their inability to engage in many traditional cultural practices; however, affected Native American populations have not disappeared; rather, they have adapted to these new pressures.

Today, the Wiyot people are federally recognized in the Wiyot Tribe Reservation, the Bear River Band of the Rohnerville Rancheria, and the Blue Lake Rancheria. These tribes are actively involved in various tribal economic projects and in the revitalization of cultural traditions such as language, basket weaving, ceremonies, and reclaiming ancestral lands. It is the City's goal to support and encourage Tribal efforts to revitalize cultural traditions and invest in the cultural and physical health and well-being of Tribal members as a key component of the cultural and physical health of the Arcata community.

3.11.3 Regulatory Framework

Federal

Archaeological Resources Protection Act

The Archaeological Resources Protection Act protects archaeological sites on Federal and Indian lands by governing the excavation, removal, and disposition of any possible collections from those sites. This Act understands that archaeological resources are important to the nation and enforces their protection by requiring

permits before the excavation or removal of archaeological resources from public or Indian lands. This allows for the security and protection of archaeological resources for the present and future benefit of the America people as well as increased cooperation and information exchange between governmental authorities, professional archaeological community and private collectors.

Native American Graves Protection and Repatriation Act

The Native American Graves Protection and Repatriation Act of 1990 provides a process of repatriation of collections of Native American Cultural items for lineal descendants, Indian tribes, Alaska Native Corporations, and Native Hawaiian organization from federal agencies or federally funded museums. This process requires any federally funded institution housing Native American remains or artifacts to compile an inventory of all cultural items within the museum or with its agency and to provide a summary to any Native American tribe claiming affiliation. Also, Native American Graves Protection and Repatriation Act provides a process for the intentional removal and inadvertent discovery of human remains and other cultural items from federal and tribal lands. A critical piece for addressing identification, treatment, and disposition of Native American cultural items is the consultations with all Native organizations.

Section 106

Section 106 of the National Historic Preservation Act of 1966 ensures that cultural resources are handled in order of importance. Through regulations associated with the National Historic Preservation Act, an impact to a cultural resource would be considered significant if government action would affect a resource listed in or eligible for listing in the National Register of Historic Places. The National Historic Preservation Act codifies a list of cultural resources found to be significant within the context of national history, as determined by a technical process of evaluation. Resources that have not yet been placed on the National Register of Historic Places, and are yet to be evaluated, are afforded protection under the Act until shown not to be significant.

State

California Public Resources Code

Section 21074

California PRC Section 21074 details what can be considered a tribal cultural resource.

A) Tribal cultural resources are either of the following:

1) Sites, features, places, cultural landscapes, sacred places and objects with cultural value to a California Native American tribe that are either of the following:

a) Included or determined to be eligible for inclusion in the California Register of Historical Resources (CRHR).

b) Included in a local register of historical resources as defined in subdivision (k) of PRC Section 5020.1.

2) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of PRC Section 5024.1. In applying the criteria set forth in subdivision (c) of PRC Section 5024.1 for the purposes of this paragraph, the lead agency shall consider the significance of the resource to a California Native American tribe.

B) A cultural landscape that meets the criteria of subdivision (a) is a tribal cultural resource to the extent that the landscape is geographically defined in terms of the size and scope of the landscape.

C) A historical resource described in PRC Section 21084.1, a unique archaeological resource as defined in subdivision (g) of PRC Section 21083.2, or a "nonunique archeological resource" as defined in

subdivision (h) of PRC Section 21083.2 may also be a tribal cultural resource if it conforms with the criteria of subdivision (a).

Assembly Bill 52

Assembly Bill (AB) 52, the Native American Historic Resource Protection Act, sets forth a proactive approach intended to reduce the potential for delay and conflicts between Native American and development interests. Projects subject to AB 52 are those that file a notice of preparation for an Environmental Impact Report or notice of intent to adopt a negative or mitigated negative declaration on or after July 1, 2016. AB 52 adds tribal cultural resources to the specific cultural resources protected under CEQA. Under AB 52, a tribal cultural resource is defined as a site, feature, place, cultural landscape (must be geographically defined in terms of size and scope), sacred place, or object with cultural value to a California Native American tribe that is either included or eligible for inclusion in the California Register of Historical Resources (CRHR) or included in a local register of historical resources. A Native American Tribe or the lead agency, supported by substantial evidence, may choose at its discretion to treat a resource as a tribal cultural resource. AB 52 also mandates lead agencies to consult with tribes, if requested by the tribe, and sets the principles for conducting and concluding consultation.

Senate Bill 18

SB 18 defines a cultural place as “Native American sanctified cemetery, place of worship, religious or ceremonial site, or sacred shrine” (PRC Section 5097.9). As well as “Native American historic, cultural, or sacred site, that is listed or may be eligible for listing in the California Register of Historical Resources pursuant to Section 5024.1, including any historic or prehistoric ruins, any burial ground, any archaeological or historic site” (PRC Section 5097.995).

According to California Government Code Section 65352.3 (adopted pursuant to the requirements of SB 18) it is required that local governments contact, refer plans to, and consult with the local tribal organizations prior to deciding to adopt or amend a general or specific plan. Eligible tribal organizations for consulting must have traditional lands within the local government jurisdiction of the city or county in question. The Native American Heritage Commission may identify eligible tribal organizations upon request. The California Office of Planning and Research’s Tribal Consultation Guidelines (2005) states; “The intent of SB 18 is to provide California Native American tribes an opportunity to participate in local land use decisions at an early planning stage, for the purpose of protecting, or mitigating impacts to, cultural places.”

Assembly Bill 168

AB 168 was signed in 2020 to prohibit destruction and desecration of tribal cultural resources. This bill ensures any project site that a tribal resource that is also listed on a historic register whether it is national, state, tribal or local will be automatically disqualified from SB 35 fast-tracked approval. AB 168 also extends the responsibility of a development proponent to consult and receive consent with Native American tribes, before a project is eligible for a permit under SB 35.

AB 168 requires a development proponent to submit notice of its intent to apply for streamlined approval to the local government prior to the actual application submittal. A development with streamlined ministerial approval under SB 35 is not subject to CEQA, allowing for such developments to occur without going through a CEQA review or screening process to determine if they would affect Tribal Cultural Resources. The local government is then required to provide formal notice to each California Native American tribe that is culturally affiliated with the geographic area of the proposed development and to engage in a “scoping consultation” regarding the potential effects the proposed development could have on a potential Tribal Cultural Resource (California Code Section 65913.4(b)).

The scoping consultation must commence within 30 days after the proponent submits a notice of intent to apply for ministerial approval and must conclude before the proponent can submit the application. This bill deems a project ineligible for the streamlined, ministerial approval process and requires it be subject to CEQA if:

(A) The site of the proposed development is a Tribal Cultural Resource that is on a national, State, tribal, or local historic register list;

(B) The local government and the California Native American tribe do not agree that no potential Tribal Cultural Resource would be affected by the proposed development; or

(C) The local government and California Native American tribe find that a potential Tribal Cultural Resource could be affected by the proposed development and the parties do not document an enforceable agreement regarding the methods, measures, and conditions for treatment of those tribal cultural resources, as provided.

California Health and Safety Code §7050.5 – Human Remains

Section 7050.5 of the California Health and Safety Code states that that the disturbance of Native American cemeteries is a felony. In the event of discovery or recognition of any human remains in any location other than a dedicated cemetery, construction or excavation be stopped until a county coroner determines whether the remains are those of a Native American. If the human remains are determined to be of Native American origin, the coroner must notify the Native American Heritage Commission within 24 hours of this identification.

California Public Resources Code Section 5097

Public Resources Code Section 5097 establishes inventory of places of religious or social significance to Native Americans and the identification of known graves and cemeteries of Native Americans on private lands, called the Native American Heritage Commission Sacred Lands File. The Code includes a policy of noninterference with the free expression or exercise of Native American religion and prohibits damage to Native American sanctified cemeteries, places of worship, religious or ceremonial sites or sacred shrines located on public property. This Section contains protocol to be followed in the event of an unexpected discovery of human remains of Native American origin on nonfederal land and defines the unauthorized disturbance or removal of archaeological, historic, or paleontological resources located on public lands as a misdemeanor.

California Environmental Quality Act

CEQA requires lead agencies to determine if a project would have a significant effect on tribal cultural resources. The CEQA Guidelines define a tribal cultural resource according to California PRC Section 21074. While some tribal cultural resources include physical archaeological resources, described above, cultural resources are not limited to physical resources that have scientific significance. Tribal cultural resources also include cultural landscapes and non-unique archaeological resources. Non-unique resources are resources that are deemed culturally significant to a tribe, but do not contain information needed for scientific purposes, and may not be the best specimen in terms of quality, uniqueness, or age.

Local

City of Arcata General Plan

The City of Arcata General Plan 2020 contains policies relating to tribal cultural resources in the Design and Historical Preservation Element.

> ***Policy H-7: Archeological and Cultural Resources***
>
> ***Objective.*** *Protect and preserve Native American and Euro-American archeological sites and cultural resources within the City of Arcata.*
>
> *Applicable sub-policies:*
>
> – ***H-7a: Cultural Resources Project Review.*** *As part of the environmental and project review process, the City of Arcata shall enter into a Memorandum of Agreement (MOA) with the Northwest Information Center of the Historical Resources Information System of the State of California. Under the MOA, all proposed discretionary projects under the California Environmental Quality Act shall be subject to cultural resources sensitivity review by the Northwest Information Center. In order to provide a context for city projects, for the evaluation of cultural significance and for the interpretation of the results of*

cultural resources project reviews, the City of Arcata shall contract for a general prehistoric, ethnographic, and historic overview of the city and its environs.

- ***H-7b: Archaeological Surface Reconnaissance.*** *If the cultural resources project review determines that the project is located in an area with a high probability of archaeological resources, an archaeological survey by a professional archaeologist or other qualified expert shall be performed.*
- ***H-7c: Mitigation of potential impacts on archaeological resources****. If the results of the surface reconnaissance show that the project area contains a resource of cultural significance, and it is demonstrated that a project would cause damage to such a resource, the City may require reasonable efforts to be made to permit any or all of these resources to be preserved in place or left in an undisturbed state. Examples of other treatment include, but are not limited to the following:*
  - *Modifying the project to avoid portions of the site with archaeological resources.*
  - *Providing or conveying easements or other deed restrictions.*
  - *Capping or covering archaeological resources with a soil layer before construction.*
  - *Planning open space to incorporate archaeological sites.*
- ***H-7d: Monitoring of Construction.*** *In appropriate circumstances, when archaeological resources are likely to be present at a construction site, monitoring of excavation and other soil disturbing activities by archaeological and/or Native American observers shall be required.*
- ***H-7f: Discovery of archaeological resources****: Upon discovery of archaeological or paleontological materials, all grading or other land-disturbing construction activities at the site shall be suspended until the nature of the cultural resources has been ascertained and the appropriate disposition method determined.*

Proposed City of Arcata General Plan 2045

Guiding principle (i) the Historic Preservation Element is to "acknowledge the Wiyot Community as the indigenous owners of the lands in which the City occupies and make efforts to incorporate the Wiyot Community in future decisions affecting the Arcata area and to dismantle the legacy narratives of settler colonialism. Maintain communication with the Wiyot community about cultural resources within the City and its surrounds as traditional stewards of this land."

Policies relating to tribal cultural resources in the Design and Historical Preservation Element include:

Policy H-7: Archeological and Cultural Resource and Wiyot Tribal History

Objective*. Protect, preserve and enrich Native American and Euro-American archeological sites and cultural resources within the City of Arcata. Preserve and enrich Native American and Euro-American archeological sites and cultural resources within the City of Arcata, particularly resources related to Wiyot Tribal history. Adopt a series of policies that ensure pre-project consultation and review as well as collaborative government to government relations with the Wiyot Tribe, Bear River Band, and Blue Lake Rancheria.*

- ***H-7a: Cultural Resources Project Review.*** *As part of the environmental and project review process, all proposed discretionary projects under the California Environmental Quality Act shall be subject to cultural resources sensitivity review by the local area Tribal Historical Preservation Officers (THPOs) or their designated representatives, and the Northwest Information Center.*

  If the cultural resources project review determines that the project is located in an area with a high probability of archaeological resources, an archaeological survey or cultural resources monitoring by a professional archaeologist or other qualified expert shall be performed to the satisfaction of the THPOs or their designated representatives.

  If the results of reconnaissance show that the project area contains a resource of cultural significance, and if it is demonstrated that a project will cause damage to such a resource, the City shall confer with appropriate agency and governmental partners. In the case of sites potentially containing resources of

tribal cultural significance, all local Tribal Historic Preservation Officers or their designated representatives shall be notified. This consultation may require reasonable efforts to be made to permit any or all of these resources to be preserved in place or left in an undisturbed state. Examples of other treatment include, but are not limited to, the following:

1. *Formally evaluating the site/find to determine its eligibility for the California Register of Historical Resources.*
2. *Modifying the project to avoid portions of the site with archaeological resources.*
3. *Providing or conveying easements or other deed restrictions.*
4. *Capping or covering archaeological resources with a soil layer before construction.*
5. *Planning open space to incorporate archaeological sites.*

***H-7b: Inadvertent Archeological Discoveries and associated mitigations**. Standard Operating Procedures for handling "post-review" of inadvertent archeological discoveries and/or human remains shall be adopted for all phases and aspects of work carried out by or for the City of Arcata and will be housed in the City's Zoning Ordinance. This protocol shall be developed in partnership with, and approved by, local Tribal Historic Preservation Officers and/or their respective Tribal Councils. The intent of these procedures will generally be to stop work upon discovery, evaluate the discovery with support from qualified archeologists and THPOs or their designees, consult with the Tribes and other interested parties on the inadvertent discovery, determine significance, and if resources are determined significant per the California Register of Historical Places, avoid or minimize direct or indirect impacts to significant archaeological or Native American discoveries.*

City of Arcata Local Coastal Program

There are no policies within the City of Arcata Local Coastal Plan that regulate tribal cultural resources.

3.11.4 Evaluation Criteria and Significance Thresholds

Under criteria based on Appendix G of the CEQA Guidelines, the Project would be considered to have a significant impact on a tribal cultural resource if it would cause a substantial adverse change in the significance of a tribal cultural resource, (as defined in PRC Section 21074), that is:

– A resource listed or eligible for listing in the CRHR, or in a local register of historical resources as defined in PRC Section 5020.1(k); or
– A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of PRC Section 5024.1.

3.11.5 Methodology

Prior to sending a formal AB 52 / SB 18 consultation letter, the City met with the Tribal Historic Preservation Officers (THPOs) of the Wiyot Tribe, Bear River Band of the Rohnerville Rancheria, and Blue Lake Rancheria on January 19, 2022, to discuss the Gateway Area Plan Draft and provide information regarding the General Plan 2045. At this meeting, the City and THPOs discussed updating relevant archeological mapping and City / Tribal contracting in addition to broader policy discussions. The archeological mapping discussed refers to the collaborative preparation of a confidential "Archeological Site Sensitivity Map" of known and reported Wiyot (largely prehistoric) archeological sites. This map was first developed in 2016 and is used by the City for the purposes of consulting with the Tribes for any future proposed ground-disturbing activities located within identified sensitive areas within City limits and the larger surrounding area of influence. This map serves to assist staff in identifying and protecting resources that may be impacted as a result of a ministerial or otherwise CEQA-exempt projects.

The Native American Heritage Commission responded to the City's Notice of Preparation with a letter listing AB 52 CEQA requirements, provisions of SB 18, and recommendations for Cultural Resources Assessments. These recommendations are not legal requirements per CEQA or SB 18 and include recommendations regarding archeological and sacred lands file searches to guide if a survey is required to determine whether previously

unrecorded cultural resources are present within the Area of Potential Effect. A records search was not completed for the proposed General Plan 2045, given the scope of the project and the existence of the City's Archeological Site Sensitivity Map, which constitutes a citywide survey of known Wiyot sites. Although not considered representative of all possible archeological sites (including buried early and middle Holocene aged) that may be present in the study area and subject to future refinement as more information becomes available, the City has committed to collaborating with the Tribes to update the map every five years for the duration of the General Plan 2045 planning horizon. This commitment has been shared with the Tribes as part of the AB 52 / SB 18 consultation process.

To initiate AB 52 / SB 18 consultation, the City sent notification letters to the Tribal Historic Preservation Officers of the Wiyot Tribe, Bear River Band, and Blue Lake Rancheria on March 25, 2022. At that time all three THPOs expressed interest in providing further comment on the General Plan 2045. The City committed to re-engage the THPOs once the project description for the General Plan 2045 EIR was finalized, as well as the draft update to the City's Historic Preservation Element of the General Plan. Once the Draft EIR project description and relevant General Plan Historic Preservation Element policies were finalized, the City re-engaged the THPOs and sent the draft documents along with requests for continued consultation on March 23 and 24, 2023. At that time, only the Wiyot Tribe chose to continue to consult and a meeting to discuss the General Plan 2045 was set for May 5, 2023.

At the May 5 meeting, the Wiyot Tribe reviewed the documents provided by staff and recommended an emphasis on requesting Wiyot tribal cultural monitors for monitoring projects as well as an interest in continued collaboration between governments to further City and tribal housing goals. Though this closure process, the City made modifications to relevant text in the Historic Preservation and Land Use Elements and committed to continuing to work with the Wiyot Tribe to address shared housing and consultation goals through implementation of the General Plan 2045, with opportunities to revisit inadvertent discovery protocol during future Land Use Code update cycles. Following this meeting, the City sent the Wiyot Tribe, Bear River Band, and Blue Lake Rancheria tribes AB 52/SB 18 closure letters on July 20, 2023.

3.11.6 Impacts and Mitigation Measures

Impact TCR-a,b: Would the Project cause a substantial adverse change in the significance of a tribal cultural resource?

Development promoted by the adoption and implementation of the General Plan 2045 could result in direct or indirect impacts to tribal cultural resources. Construction activities, such as grading and excavation, may result in accidental destruction or disturbance of tribal cultural resources without appropriate inadvertent discovery protocols in place. The General Plan 2045 Historic Preservation Element includes policies and implementation measures that would serve to protect and reduce impacts related tribal cultural resources.

Policy H-7a requires tribal cultural resource sensitivity review for all proposed discretionary projects under the California Environmental Quality Act, and outlines a process for consultation, reconnaissance, and treatment if the project is determined to be located in an area with a high probability of archaeological and/or cultural significance. Policy H-7b provides procedures for inadvertent archeological discoveries and associated mitigations. Two implementation measures promote City collaboration with local tribes:

– Implementation Measure H-3: Local Tribal Input to City Historic Context Statement. In order to provide a context for City projects, for the evaluation of cultural significance and for the interpretation of the results of cultural resources project reviews, the City shall contract for a general prehistoric, ethnographic, and historic overview of the city and its environs.
– Implementation Measure H-4: Local Tribal Input to Sensitivity Mapping. Collaborate with the three area THPOs to undertake periodic review of the "Archeologic Sensitivity Map" to ensure updated information regarding tribally significant resources is shared.

Federal and state laws as well as policies and implementation measures in the General Plan 2045 would address potential impacts regarding tribal cultural resources by requiring project specific consultation with local tribes.

Project-specific review and application of the existing Archeologic Sensitivity Map developed in conjunction with the local area THPOs ensure projects with the potential to cause a substantial adverse change to the significance of a tribal cultural resource are identified and appropriate measures for consultation, reconnaissance, and treatment are in place. Therefore, the impacts would be less than significant.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

3.11.7 Cumulative Impacts

The geographic boundary for cumulative projects related to tribal cultural resource impacts is the City Planning Boundary.

Impact TCR-C-1: Would the Project contribute to a cumulatively significant impact to Tribal Cultural Resources?

Cumulative effects analysis examines the current project effects taken together with effects of past projects and known projects in the foreseeable future. Future projects considered for cumulative impacts are identified in Table 1.10-1 of this Draft EIR. Implementation of the cumulative projects may require grading and excavation that could potentially affect tribal cultural resources. If these resources are not protected, the cumulative effect of the General Plan 2045 plus cumulative projects could be significant. However, applicable federal, state, and local requirements for protecting tribal cultural resources apply regionally and the City of Arcata and County of Humboldt have local policies in place to require appropriate consultation, reconnaissance, and treatment of tribal cultural resources. These federal, state, and local requirements reduce the potential of each of the cumulative projects to impact sensitive tribal cultural resources. The Project's contribution to this cumulative impact would therefore not be cumulatively considerable and is less than significant.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

3.11.8 References

None

3.12 Utilities and Service Systems

This section evaluates the potential impacts related to utilities and service systems resulting from adoption and implementation of General Plan 2045. Utilities are critical to providing safe drinking water, disposal and treatment of wastewater, stormwater drainage, and solid waste disposal. This section provides a background discussion of the utility systems in Arcata including water supplies, wastewater, storm drainage, and solid waste. To provide the basis for this evaluation, the Setting section describes the utilities and service systems provided by and used within the City's service area. The Regulatory Framework section describes the regulatory background that applies to the General Plan 2045. The Impact Analysis section establishes the thresholds of significance, evaluates potential impacts to utilities and service systems, and identifies the significance of impacts.

3.12.1 Study Area

For impact assessment related to utilities and service systems, the Urban Services Boundary was used as the study area. The Urban Services Boundary includes the City limits, the Jacoby Creek community (located south of the City), which receives water from the City, and a small portion north of the City (located between State Route 299 and the Mad River), which receives water and sewer from the City (see Figure 2-1 – City of Arcata Planning Areas).

3.12.2 Setting

Utilities and Service Systems within the Study Area

Water

The City is located in the Mad River Valley – Mad River Lowland Basin 1-008.01, which has a SGMA Basin Priority of Very Low (DWR 2020). The basin is located in the coastal floodplain which stretches from the Freshwater Fault north to the Mad River and to the elevated terrace to the East. The City of Arcata uses a system of trunk lines and mains, above ground water tanks, and booster pumps to deliver domestic water to residents, businesses, industry, and other facilities within the City's Urban Services Boundary. The City water supply is provided by the Humboldt Bay Municipal Water District which pumps, treats, and sells the water to the City. Drinking water delivered by the District is drawn from wells located in the Mad River northeast of Arcata, California. These wells, called Ranney Wells, draw water from the sands and gravel of the aquifer under the riverbed at depths of 60 to 90 feet. The City also has a secondary source of drinking water at Heindon Groundwater Well. The well was taken offline in 2016 for conservation purposes and is currently being refurbished to serve as an emergency or auxiliary domestic water source.

Wastewater

The City collects wastewater from the City's service area, and also receives wastewater from the Fieldbrook-Glendale Community Services District. The wastewater is treated at the Arcata Wastewater Treatment Facility located at the edge of Humboldt Bay. Treated effluent is used in enhancement wetlands and is then ultimately discharged into Humboldt Bay. The treatment requirements are set by the North Coast Regional Water Quality Control Board. Treatment requirements are set based on the characteristics of the wastewater entering the plant, the characteristics of the receiving water, and other factors. The City is currently in the process of constructing improvements to the existing Arcata Wastewater Treatment Facility, wetland enhancement, and discharge system. The City approved project and CEQA process is the result of many years of planning and design and is intended to provide treatment upgrades and replacement of aging infrastructure.

The envisioned upgrades were divided into two phases. The City's primary purposes in pursuing the Phase I upgrades, which are currently under construction as noted above, are to provide reliable service to the community now and in the future, replace aging critical infrastructure from the late 1980s, reconfigure to a single pass flow through the treatment facility and enhancement wetlands, and upgrade the disinfection system to

ultraviolet light (UV). These improvements allow the City to continue to provide reliable wastewater treatment while improving existing levels of regulatory compliance for the protection of water quality and public health. Phase II upgrades have been envisioned to include construction of oxidation ditches and a secondary clarifier as a parallel treatment system within the core of the treatment facility. The potential implementation of Phase II will be evaluated after Phase I improvements are complete and treatment performance and regulatory compliance can be assessed. Concurrently the City is undergoing a feasibility study with technical assistance from the State Water Board to assess feasible alternatives for subsequent wastewater facility improvements while preparing for sea level rise beyond the design life of the Phase I improvements (2055). This multi-phase project is consistent with the proposed General Plan 2045.

CEQA does not require analysis of the impact of existing environmental conditions, such as sea level rise, on the future users or residents of a project, except when a project exacerbates an existing condition (*CBIA v. BAAQMD, 2015*). Implementation of the General Plan 2045 includes policy updates and proposed land use changes to accommodate the anticipated population growth over the planning horizon (to 2045) in tandem with the multi-phase wastewater treatment facility upgrades and other existing projects. As mentioned, the City is undergoing a feasibility study to explore design alternatives and sea level rise planning beyond the existing multi-phase wastewater treatment facility upgrades which has a design life to 2055. Therefore, the potential impacts from implementation of the General Plan 2045 on sea level rise are not addressed in this Draft EIR because the Project would not produce wastewater in excess of what the system could accommodate and would not exacerbate the constraints of sea level rise on the wastewater treatment facility.

The City operates and maintains a vast municipal storm drainage system that consists of miles of pipe, open drainage ditches, and detention basins. The detention basins have water quality features incorporated into them. There are eight creeks traversing the Urban Area that accept storm water runoff. They are Jacoby, Jolly Giant, Janes, Sunset, Grotzman, Fickle Hill, Beith, and Campbell. For many years, the City has been committed to improving the quality of urban runoff through the development and implementation of a proactive, comprehensive storm water management program that recognizes its unique position in the Humboldt Bay watershed and the need to protect these important resources.

Stormwater management is governed by federal, state, and local requirements. The Municipal Storm Water Program is through U.S. EPA and is implemented and enforced by the State Water Resources Control Board and Regional Water Quality Control Boards (collectively, the Water Boards). The Municipal Storm Water Program regulates storm water discharges from municipal separate storm sewer systems (MS4s) throughout California. For municipalities under 100,000 people, such as Arcata, the Phase II Permit Program applies.

Solid Waste

The Arcata City Council has developed a universal curbside solid waste and recycling collection program alongside the Arcata community. This program provides convenient service, reduces illegal disposal and public health hazards and assists the City in moving towards the goal of zero waste in the community. The City is actively working with its partners across the Humboldt County region towards full compliance with SB 1383 to provide universal organics collection and recycling. Garbage, recycling, and yard waste is collected curbside weekly by Recology Arcata. There are no landfill or recycling centers in the study area, however a CRV buyback facility exists on South G Street. Active permitted in-County transfer stations include the Humboldt Waste Management Authority facilities in Eureka or Samoa, California and the Recology Eel River Transfer Station in Fortuna, California. There are no permitted active landfills in the County.

Energy

The residential, commercial, industrial and agricultural sectors in Humboldt County consumed a total of 940 Gigawatt-hours (GWh) in 2003, and the total peak electrical demand was 158 Megawatts (MW) (SERC 2005). In 2019, the total electricity usage data for Humboldt County from the California Energy Commission’s Energy Reports was 791 GWh, which is a reduction of approximately 149 GWh from the 2003 electrical usage. For natural gas, the total amount consumed for Humboldt County was estimated to be 31.8 million therms (CEC 2019). See Section 6.2 (Energy) for more detail on energy resources in the City and impact analysis of energy resources from implementation of the General Plan 2045.

Telecommunications

Most telecommunications rely on fiber optic cables which provide broadband service. The City and Cal Poly are currently collaborating to improve fiber connections to key locations within Arcata. Existing fiber optic cables connect to Humboldt County from Santa Rosa to the south, and from Singapore via the “Echo” undersea cable system. A telecommunications data center is located in the Gateway Area and is described below.

Utilities and Service Systems within the Infill Opportunity Zones

The “Echo” subsea cable system is a Google project and spans 10,000 miles from Eureka to Singapore, via Guam. The regional portion of the project, which involved laying two undersea fiber optic cables off the coast of Samoa and into the former pulp mill located on the Samoa peninsula, was completed in fall 2021. A datacenter to manage data is located in Arcata, more specifically within the Gateway Area. The undersea fiber optic cable and datacenter are anticipated to be operational by 2023 (Lost Coast Outpost 2021). Additionally, the Inyo Network’s Digital 299 Project - which includes installation of a fiber optic cable (connected to the Echo cable) along Highway 299 to connect to Redding - is underway and will provide improved connectivity to rural northern California communities between the coast and Redding. Other utilities and service systems within the Infill Opportunity Zones are the same as described above.

3.12.3 Regulatory Framework

Federal

Clean Water Act

The Clean Water Act is a federal law enacted by Congress in 1972 that serves as the main regulation for water quality in the United States. It has been revised multiple times and serves as the foundation for various state and local water quality laws across the country. The Act established a fundamental framework for controlling the release of pollutants into U.S. waters. It grants the U.S. Environmental Protection Agency (EPA) the authority to implement federal programs aimed at controlling pollution. These programs include setting standards for water quality in surface water, defining limits for wastewater and effluent discharge from different industries, and implementing measures to control nonpoint-source pollution. The EPA and the U.S. Army Corps of Engineers are responsible for administering the Clean Water Act at the federal level. In California, the State Water Resources Control Board (SWRCB) and the nine Regional Water Quality Control Boards (RWQCBs) oversee the administration and enforcement of the act at the state and regional levels.

Under Section 402 of the Clean Water Act, certain entities must obtain an NPDES permit if they meet specific criteria. This includes construction sites occupying an acre or more of land and municipal, industrial, and commercial facilities that discharge wastewater or stormwater directly into surface water through a defined point source like a pipe or channel. NPDES permits are designed to regulate these discharges and ensure that the receiving surface water meets specific water quality standards.

Federal Safe Drinking Water Act

The Safe Drinking Water Act authorizes the EPA to establish national standards, known as the National Primary Drinking Water Regulations, to safeguard against natural and human-caused pollutants in drinking water. These regulations define maximum allowable levels of contaminants in drinking water and mandate that all water providers in the United States treat water to eliminate these contaminants, with the exception of privately-owned wells serving fewer than 25 individuals. In California, the State Department of Health Services primarily handles enforcement activities related to these standards. If a water system fails to meet the set standards, it is the responsibility of the water supplier to inform its customers.

National Pollutant Discharge Elimination System

In order to regulate the release of pollutants from municipal and industrial sources into the surface waters of the United States, the National Pollutant Discharge Elimination System (NPDES) permit program was established as

part of the Clean Water Act. The federal regulations governing NPDES permits cover a wide range of discharge categories, including point-source discharges from municipal waste and nonpoint-source runoff from stormwater. These permits typically outline limits on pollutant concentrations or emissions in the discharged and receiving water, as well as restrictions on discharges not explicitly permitted. NPDES permits also specify actions that the discharger must undertake, such as industrial pretreatment, pollution prevention measures, self-monitoring, and other relevant activities. The NPDES permit program oversees direct discharges of wastewater into water bodies, while the National Pretreatment Program regulates indirect discharges to sewage treatment plants.

Title 40 of the Code of Federal Regulations

Part 258 of Title 40 in the Code of Federal Regulations (CFR) pertains to municipal solid waste landfills under the Resource Conservation and Recovery Act, specifically Subtitle D. These regulations mandate that states establish their own permitting programs that adhere to the federal criteria for landfills. The federal regulations cover various aspects such as the selection of landfill locations, operational requirements, design standards, groundwater monitoring, and proper closure procedures of landfills.

State

California Porter-Cologne Water Quality Control Act

The Porter Cologne Water Quality Control Act (Porter-Cologne) is the primary statute covering the quality of waters in California. Under Porter-Cologne, the SWRCB allocates water rights, adjudicates water right disputes, develops state-wide water protection plans, establishes water quality standards, and guides nine RWQCBs state-wide. The joint authority of water allocation and water quality protection enables the SWRCB to provide comprehensive protection for California's waters. RWQCB boundaries are based on watersheds and water quality requirements are based on the unique differences in climate, topography, geology, and hydrology for each watershed. The RWQCBs regulate water quality under Porter-Cologne through the standards and objectives set forth in Water Quality Control Plans (also referred to as Basin Plans) prepared for each region. The current 2018 Basin Plan prepared by the North Coast Regional Water Quality Control Board provides a definitive program of actions designed to preserve and enhance water quality and to protect beneficial uses of water in the North Coast Region.

Beneficial uses serve as a basis for determining appropriate water quality objectives for the region. To protect these beneficial uses, the Basin Plan sets forth water-resource protection objectives for inland surface waters spanning many parameters. Basin Plan parameters relevant to potential water quality impacts of Project actions include floating material, suspended material, settleable material, oil and grease, sediment, turbidity, pH, dissolved oxygen, temperature, toxicity, waste discharge and effluent limits, pesticides, and chemical constituents.

California Urban Water Management Planning Act

The Urban Water Management Planning Act was enacted by the California Legislature in 1983. It requires urban water suppliers that serve 3,000 or more customers or provide over 3,000 acre-feet of water annually to ensure reliable water service to meet the needs of customers during normal, dry, and multiple dry years. The Act mandates that urban water suppliers adopt and submit an urban water management plan every five years to the Department of Water Resources. Failure to comply with the Act renders urban water suppliers ineligible for funding and drought assistance until their plans are submitted and deemed complete. The objectives of the Act include managing urban water demands and promoting efficient water use. The plan prepared by urban water suppliers must identify water sources, quantify projected water use for 20 years, and outline water demand management measures. The Department of Water Resources must receive a copy of the adopted urban water management plan.

Senate Bill 610 and Senate Bill 221

Senate Bill (SB) 610 (2001) and SB 221 (2002), were enacted to improve coordination between local water supply and land use decisions and ensure sufficient water supply for new development. These laws require

detailed information on water availability to be provided to city and county decision-makers prior to approving large development projects. SB 610 adds requirements to urban water management plans, including the inclusion of groundwater as a water source and a description of water supply projects. Under SB 610, Water Assessments must be furnished to local governments for inclusion in any environmental documentation for certain projects as defined in Water Code 10912 subject to CEQA. SB 221 specifically mandates that local water agencies receive a copy of proposed residential subdivisions with over 500 dwelling units or 500,000 square feet of commercial space and establishes requirements for determining if a sufficient water supply exists. Another law, AB 901 (2001), expands urban water management plan requirements to include information on water quality and strategies to address inconsistent water source availability.

Consumer Confidence Report Requirements

California Code of Regulations (CCR) Title 22, Chapter 15, Article 20 requires all public water systems to prepare a Consumer Confidence Report for distribution to its customers and to the Department of Health Services. The Consumer Confidence Report provides information regarding the quality of potable water provided by the water system. It includes information on the sources of the water, any detected contaminants in the water, the maximum contaminant levels set by regulation, violations and actions taken to correct them, and opportunities for public participation in decisions that may affect the quality of the water provided.

California Integrated Waste Management Act

The California Integrated Waste Management Act, also known as Assembly Bill 939, required each jurisdiction in the state to divert 50 percent of its solid waste from landfill or transformation facilities by 2000, and established a statewide diversion of 75% by 2020 for all municipal solid waste. The California Integrated Waste Management Act also required each County to prepare a Countywide Integrated Waste Management Plan, which is the main planning document for solid waste management in each County. Humboldt County's Integrated Waste Management Plan is the principal planning document for solid waste management in the County, addressing source reduction, household hazardous waste, and countywide landfill capacity needs.

Assembly Bill 939

In 1989, the State passed Assembly Bill (AB) 939, requiring every city and county in the State to develop an integrated waste management planning document called a Source Reduction and Recycling Element. AB 939 and its accompanying regulations specified the content for the City's Source Reduction and Recycling Element and required a detailed plan for achieving "landfill diversion" goals of 25% by 1995, and 50% by 2000.

California Assembly Bill 341

Assembly Bill (AB) 341 aims to decrease greenhouse gas emissions by diverting commercial solid waste to recycling initiatives and promoting the growth of recycling services and facilities in California. The law mandates that businesses producing four or more cubic yards of garbage per week and multi-family dwellings with five or more units must implement recycling practices by July 1, 2012. AB 341 also establishes a statewide target of achieving a 75 percent waste diversion rate.

California Assembly Bill 1826

Assembly Bill (AB) 1826 requires businesses to recycle their organic waste on and after April 1, 2016, depending on the amount of waste they generate per week. This law also requires that on and after January 1, 2016, local jurisdictions across the state implement an organic waste recycling program to divert organic waste generated by businesses, including multifamily residential dwellings that consist of five or more units. Organic waste for the purposes of AB 1826 means food waste, green waste, landscape and pruning waste, nonhazardous wood waste, and food-soiled paper waste that is mixed in with food waste. The law phased in the requirements for businesses over time, while offering an exemption process for rural counties. Additionally, the law contains a 2020 trigger that further increased the scope of affected businesses.

California Senate Bill 1016

SB 1016 mandates that the 50 percent solid waste diversion target outlined in Assembly Bill (AB) 939 should be measured in pounds per person per day. SB 1016 also modified the review process conducted by CalRecycle for integrated waste management plans of each municipality. Following the initial determination of diversion requirements in 2006 and the establishment of diversion rates for subsequent years, the Board assesses a jurisdiction's compliance with diversion rates according to a specified schedule. Starting from January 1, 2018, the Board is required to review a jurisdiction's source reduction and recycling element as well as hazardous waste element once every two years.

Senate Bill 1383

SB 1383 was signed by Governor Jerry Brown in September 2016 and addresses short-lived climate pollutants. The final implementing regulations were adopted in November 2020 and require a 50% reduction in the level of statewide disposal of organic waste from the 2014 level by 2020 and a 75% reduction in the level of statewide disposal of organic waste from the 2014 level by 2025. Included in the regulations is a goal of rescuing at least 20% of currently disposed edible food. SB 1383 includes requirements within six main categories:

- Provide organics collection services to all residents and businesses
- Establish an edible food recovery program
- Conduct education and outreach to the community
- Procure recyclable and recovered organic products
- Secure access to recycling and edible food recovery capacity
- Monitor compliance and conduct enforcement

Utility Notification Requirements

Title 8, Section 1541 of the California Code of Regulations requires excavators to determine the approximate locations of subsurface installations such as sewer, telephone, fuel, electric, and waterlines (or any other subsurface installations that may reasonably be encountered during excavation work) prior to opening an excavation. The California Government Code (Sections 4216 et seq.) requires owners and operators of underground utilities to become members of and participate in a regional notification center. According to Section 4216.1, operators of subsurface installations who are members of, participate in, and share in the costs of a regional notification center are in compliance with this section of the code. Underground Service Alert North (USA North) receives planned excavation reports from public and private excavators and transmits those reports to all participating members of USA North that may have underground facilities at the location of excavation. At this point, members of the regional notification center would mark or stake their facilities, provide information, or give clearance to dig (USA North 2014).

California Public Utilities Commission

The California Public Utilities Commission (PUC) regulates privately owned electric, natural gas, communications, water, sewer utilities, railroads, and passenger transportation companies in the State. Regulations are established that ensure the public safety and reasonable rates. The PUC does not regulate personal private utility systems (such as individual water wells, solar panels, private roads, etc.), or private utility associations (such as Community Service Districts).

Building Energy Efficiency Standards – Title 24

California’s energy code is designed to reduce wasteful and unnecessary energy consumption in newly constructed and existing buildings. The California Energy Commission updates the Building Energy Efficiency Standards (Title 24, Parts 6 and 11) every three years by working with stakeholders in a public and transparent process.

Local

The Urban Services Boundary encompasses the area wherein urban development is expected to occur during the General Plan 2045 planning period; this can include areas within and outside of the City Limits. The Urban Service Boundary includes areas within Humboldt County and within the Coastal Zone. Therefore, this section includes City of Arcata General Plan and City Local Coastal Program policies for the portions of the Project within City limits and within the Coastal Zone. This section also includes Humboldt County General Plan policies for the area within County jurisdiction, and regulations from the County's Humboldt Bay Area Plan Local Coastal Plan for the area co-located within County jurisdiction and within the Coastal Zone.

City of Arcata General Plan 2020

The City of Arcata General Plan 2020 addresses utilities and service systems in its Public Facilities and Infrastructure Element. The following policies from the Arcata General Plan 2020 were used to analyze the difference in existing versus proposed policies in the Arcata General Plan 2045.

Policy PF-1: Water Supply and Delivery

Objective. *Manage the City's potable water resources to ensure adequate quantities for community use, to promote water conservation, to maintain water quality, and not to deplete source supplies. Applicable sub-policies:*

Applicable sub-policies:

- ***PF-1a: Water supply.*** *Surface and subsurface water quantities that supply the City are dependent on rainfall and adequate upstream storage. The City shall continually monitor the water quantity and quality in its system and adhere to the Humboldt Bay Municipal Water District's rationing system to ensure that adequate supplies reach all users. The City shall also develop additional water sources to meet current peak use and future use demands.*
- ***PF-1b: Capacity and management of City water delivery system.*** *The City shall update its Urban Water Management Plan, at least every five years, to maintain current projections, management, and contingency programs for water delivery. The Plan shall identify needed water delivery system improvements and anticipated extensions so that they can be budgeted for in the City's Capital Improvement Program. The City water system shall not be extended beyond the Urban Services Boundary (except as provided for in Policy GM-4b of the Growth Management Element).*

  The City shall update its Water Master Plan, at least every five years, to assess system efficiency and ensure that there is adequate storage capacity and fire flows to meet City needs.
- ***PF-1c: Water conservation.*** *The City shall use a combination of economic incentives, educational programs, and auditing to promote water conservation. Water rates will continue to be higher for consumption above baseline usage. Information about conservation devices such as flow restrictors, and practices such as off-peak irrigation, will be made available to the public. The City shall also implement water conservation measures through the water, wastewater, and drainage master plans, and through leak detection and inflow and infiltration (I/I) reduction programs.*
- ***PF-1d: Water quality.*** *The City shall perform periodic testing and, if necessary, treatment of its domestic water supply to ensure that it meets all state and federal safe drinking water standards, as required by the federal safe drinking water act.*

Policy PF-2: Wastewater Collection, Treatment & Disposal

Objective. *Collect and treat wastewater to achieve safe water quality standards, utilizing the City's internationally renowned marsh treatment facility.*

Applicable sub-policies:

- ***PF-2a**: **Capacity and management of City wastewater collection system.** The wastewater collection system is designed to transport community sewage to the treatment plant. The City shall update its Collection System Maintenance Program, at least every five years, to maintain current projections, management, and contingency programs for wastewater collection. The Plan shall identify needed collection system improvements and anticipated extensions, so that they can be budgeted for in the City's Capital Improvement Program. The City shall continue to monitor groundwater infiltration and surface water inflow (I/I) and take necessary action to ensure that these sources do not cause the collection system or the treatment plant to exceed capacity. The City wastewater collection system shall not be extended beyond the Urban Services Boundary except as provided in Policy GM-4b.*
- ***PF-2b: Arcata Marsh wastewater treatment system.** The City shall update its Wastewater Treatment Plant Master Plan, at least every five years, to evaluate the entire system; reflect any changes in treatment standards; ensure wastewater treatment is meeting current standards; verify that there is adequate treatment system capacity; and assure adequate water flows to maintain habitat.*

  The City shall maintain the existing facilities of the Arcata Marsh and Wildlife Sanctuary and construct new facilities consistent with the Marsh Enhancement Plan adopted by the City Council.
- ***PF-2c: Compliance with California Regional Water Quality Control Board wastewater treatment and discharge standards.** The City shall regularly test its wastewater and make necessary adjustments in treatment levels, to ensure that it meets California Regional Water Quality Control Board standards. The City shall also keep its National Pollution Discharge Elimination System Permit (NPDES) current and in compliance with U.S. Environmental Protection Agency standards.*
- ***PF-2d: Composting and disposal of sludge and other system byproducts.** The City includes sewage sludge in compost processed at the treatment plant. The City uses this composted material as a soil amendment. The City shall continue this practice as an efficient means of recycling treatment plant by-products and shall investigate the possibility of selling excess compost to generate revenue.*
- ***PF-2e: Treatment of wastewater from other communities.** The City, until 2012, accepts for treatment wastewater from the unincorporated community of Fieldbrook. This practice may continue as long as there is adequate treatment system capacity. The City shall not enter into any new agreements for processing wastewater from other communities.*
- ***PF-2f: Maintain the Joint City/Humboldt State University Wastewater Utilization Program.** Humboldt State University faculty and students were instrumental in the design, testing, and development of the Arcata Marsh and Wildlife Sanctuary. The City and the University jointly participate in a wastewater utilization program, which provides ongoing research projects for students studying wastewater, stormwater, and water quality issues. The City and University maintain a five-year agreement to operate the program, with the City providing the funding and the University providing the student research and faculty advisors. The City shall renew the program with the University when the current agreement ends, as long as there are funds available to compensate the University.*

Policy PF-3: Stormwater Management

***Objective.** Implement the City's drainage master plan to utilize natural drainage systems; minimize increases in stormwater runoff, flooding, and erosion; maintain the integrity of stream hydrology; reduce pollutant loads; and acquire easements and properties for effective drainage management.*

Applicable sub-policies:

- ***PF-3a: Utilization of City streams and watercourses as natural drainage systems.** Arcata's network of creeks provide a natural drainage system, however, they are very susceptible to damage from urban pollutants carried by runoff, and from drainage facilities that alter creek flows and natural functions. The City shall utilize creeks for urban drainage only when the basic natural functions will not be degraded.*
- ***PF-3b: Control of stormwater runoff, flooding, and erosion** .Stormwater runoff, especially at peak flows, can cause significant flooding and erosion if adequate precautions have not been taken. As*

stated in the Drainage Master Plan, the City shall manage the storm and surface water system in Arcata to maintain a hydrologic balance in order to protect water quality, prevent property damage, provide for the safety and enjoyment of citizens, and preserve and enhance habitat and sensitive areas.

- ***PF-3c: Stormwater quality.*** *Enforce surface water controls, facilities such as detention basins and natural infiltration areas, and education programs to protect surface and ground-water quality.*
- ***PF-3d: City drainage system.*** *The City shall take a comprehensive approach to drainage system management in order to effectively control the quantity of stormwater runoff, assure water quality, and reduce potential flood damage from peak flows. As stated in the City Drainage Master Plan, the City shall gradually expand the City managed drainage system to:*
  1. *Continue maintenance of all drainage facilities within public right-of-way, regardless of size.*
  2. *Extend responsibility onto private property only when permanent easements are dedicated or otherwise available from the private property owner, and need is established based on technical criteria.*
  3. *Define service limits upstream of the City as the point at which runoff from a publicly (not county) dedicated street enters the drainage system, or when a drainage feature needs repairs/improvements which have public benefits that exceed the cost of said repairs/improvements.*
- ***PF-3e: Easements and properties for drainage management.*** *The City shall secure the easements and properties necessary to complete and maintain the drainage system identified in the Drainage Master Plan.*

Policy PF-6: Integrated Waste Management

Objective. *Reduce solid waste generation at the source; maximize re-use and repair of appropriate items and material; promote composting and recycling; and properly transport non-recyclable solid waste to approved disposal sites.*

Applicable sub-policies:

- ***PF-6a: Source reduction.*** *Source reduction and materials re-use are the most cost effective ways to minimize solid waste. Source reduction, or waste prevention, reduces the growing costs of collection, recycling, and disposal systems. Source reduction and re-use shall be promoted through educational programs and incentives. Examples of effective source reduction and re-use activities that shall be promoted are:*
  1. *Backyard composting, landscaping with low water needs, and grass mulching.*
  2. *Purchasing durable re-usable goods instead of disposable items (e.g., cloth diapers, rechargeable batteries).*
  3. *Repairing equipment and appliances.*
  4. *Purchasing goods from second-hand stores, flea-markets and swap meets.*
  5. *Reducing the use of packaging by buying in bulk or purchasing fresh food at farmers markets.*
  6. *Electronic mail and forms, double-sided copying and re-use of scrap paper.*
  7. *Reusable coffee cups and beverages provided in dispensers.*
  8. *Termination of unwanted mail.*
  9. *Incentives such as on-call garbage collection and differential solid waste fees shall be used to encourage source reduction.*

  The Source Reduction and Recycling Element shall be updated every five years and shall incorporate the most efficient and cost-effective source reduction programs.
- ***PF-6b: Recycling.*** *The City's recycling program shall continue and expand, unless a more efficient and cost-effective method of collecting and reusing materials is identified. The City shall continue to*

contract for recycling, collection, and processing, in order to help meet and exceed the State diversion goal. The following programs shall also be promoted:

1. *Collection of commercial corrugated cardboard.*
2. *Collection of office paper.*
3. *City procurement policies and practices favoring reusable and recycled products.*
4. *Implementation of density bonuses for buildings designed to promote recycling.*
5. *The City's active involvement in the Humboldt County Recycling Market Development Zone.*
6. *Educate the public to "close the loop" and buy locally-made products with recycled content.*
7. *Recycling education that includes self-haul services for recyclable materials not collected curbside.*
8. *Encourage the development and expansion of recycling-based manufacturing.*
9. *After the year 2000, in order to minimize increases in solid waste volumes and maximize the amount of material returned to productive use, the City shall continue these programs with a target of reducing landfill volumes 10% every five years.*

- ***PF-6c: Collection, transport and disposal of non-recyclable solid waste.*** *The City shall continue to contract for solid waste collection, transport, and disposal. Solid waste collected for disposal shall be transported to an approved landfill, or other approved solid waste processing or disposal facility. The City will provide education materials about proper use and disposal of household hazardous waste, non-toxic alternatives to household hazardous waste, and recycling of materials (e.g., motor oil, anti-freeze, paint, batteries) in conjunction with recycling centers and local businesses.*

Proposed City of Arcata General Plan 2045

Policies in the proposed General Plan 2045 relating to utilities and services in the Public Facilities and Infrastructure Element include:

Policy PF-1: Water Supply and Delivery

Objective. *Manage the City's potable water resources to ensure adequate quantities for community use, to promote water conservation, to maintain water quality, and not to deplete source supplies.*

Applicable sub-policies:

- ***PF-1a: Water supply****. Surface and subsurface water quantities that supply the City are dependent on rainfall and adequate upstream storage. The City shall continually monitor the water quantity and quality in its system and adhere to the Humboldt Bay Municipal Water District's rationing system to ensure that adequate supplies reach all users.*
- ***PF-1b: Capacity and management of City water delivery system.*** *The City shall update its Urban Water Management Plan, at least every five years, to maintain current projections, management, and contingency programs for water delivery. The City water system shall not be extended beyond the Urban Services Boundary (except as provided for in Policy GM-4b of the Growth Management Element).*

  The City shall continue to assess through its Capital Improvement Program needed water delivery system improvements and storage capacity to meet demand and capacity to respond to emergencies including fire and disruption in water service from Humboldt Bay Municipal Water District.
- ***PF-1c: Water conservation.*** *The City shall use a combination of economic incentives, educational programs, and auditing to promote water conservation and shall remain in compliance with Humboldt Bay Municipal Water District policy regarding its Five-Stage Water Rationing System. Continue to encourage the use of infrastructure and practices that promote efficient water and energy use such as rain barrels, green roofs, and retention structures. Encourage reduced water demand by requiring water-conserving design and equipment in new construction and encouraging the retrofitting of existing development with water-conserving devices, along with water capture and conservation practices,*

Water rates will continue to be higher for consumption above baseline usage. Information about conservation devices such as flow restrictors, and practices such as off-peak irrigation, will be made available to the public. Building and site development permits that require connections to the City's water system shall incorporate water conservation design features and best management practices.

The City shall also implement water conservation measures through the water, wastewater, and drainage master plans, and through leak detection and inflow and infiltration (I/I) reduction programs.

In response to water shortages, the City will work cooperatively with the regional water supplier and the supplier's other municipal customers to implement an effective water shortage contingency plan that defines response actions based on the severity of the water shortage. End use prohibitions shall be determined based on current conditions, recommendations of a regional task force, and historic water use data and trends, and will be considered for mandatory penalties, charges and other escalating enforcement actions including education and outreach, issuing a verbal/written warning, penalty assessment, and water service termination. The City may consider imposing sharply graduated excessive use rates and/or excessive use fines, additional forms of water rationing, warnings, and physical flow restrictions to water users who fail to respond to less severe sanctions.

- ***PF-1d: Water quality.*** *The City shall perform periodic testing and, if necessary, treatment of its domestic water supply to ensure that it meets all state and federal safe drinking water standards, as required by the federal safe drinking water act.*
- ***PF-1e: Water loss.*** *The City shall perform annual water loss audits to identify and better understand the type of and quantity of water losses occurring in the water distribution system. The City shall ensure that it meets any water conservation/water loss standards promulgated by the State Water Resources Control Board.*

Policy PF-2: Wastewater Collection, Treatment & Disposal

Objective. *Collect and treat wastewater to achieve safe water quality standards, utilizing the City's internationally renowned marsh treatment facility No change to text from the General Plan 2020.*

Applicable sub-policies:

- ***PF-2a: Capacity and management of City wastewater collection system.*** *The wastewater collection system is designed to transport community sewage to the treatment plant. The City shall update its Sewer System Management Plan at least every five years, to maintain current projections, management, and contingency programs for wastewater collection. The Plan shall identify needed collection system improvements and anticipated extensions, so that they can be budgeted for in the City's Capital Improvement Program. The City shall continue to monitor groundwater infiltration and surface water inflow (I/I) and take necessary action to ensure that these sources do not cause the collection system or the treatment plant to exceed capacity. The City shall also consider adopting building and land use code policies that provide incentives for design, operation, and technology for buildings and sites to minimize wastewater as well as stormwater loads. The City wastewater collection system shall not be extended beyond the Urban Services Boundary except as provided in Policy GM-4b.*
- ***PF-2b: Arcata wastewater treatment system.*** *The City shall continually review and update its Arcata Wastewater Treatment Facility Operations and Maintenance Manual, at least every five years, to evaluate the entire system; reflect any changes in treatment standards; ensure wastewater treatment is meeting current standards; verify that there is adequate treatment system capacity; and assure adequate water flows to maintain habitat. The City shall ensure ongoing treatment system planning and investments are consistent with mid- and long-range climate adaptation goals, which balance preserving the City's existing investments with habitat restoration and sea level adaptation priorities. Goals, priorities, planning assumptions, and the best available science on which they are based, shall be reviewed publicly through City committees and the Planning Commission at the discretion of the City Council.*

- ***PF-2c: Compliance with California Regional Water Quality Control Board wastewater treatment and discharge standards****. Protecting surface and ground water quality, preventing water pollution, restoring water quality in waterways and wetlands within the City and in receiving waters of California and the United States shall guide design, construction, and operation of the City's water management infrastructure. The City shall use necessary resources to comply with State Regional Water Quality Control Board wastewater treatment and discharge standards. The City shall regularly test its wastewater discharges and make necessary adjustments in treatment processes to ensure that effluent meets the State Regional Water Quality Control Board and National Pollution Discharge Elimination System (NPDES) permit standards.*
- ***PF-2d: Composting and beneficial reuse of biosolids and other system byproducts.*** *The City includes biosolids in compost processed at the treatment plant. The City uses this composted material as a soil amendment. The City shall continue this practice as an efficient means of recycling treatment plant by-products and shall investigate the possibility of selling excess compost to generate revenue. This requires the City to protect the quality of its sludge by implementing an industrial and high-volume discharger wastewater pre-treatment program. (See Policy PF-2g Source Control Program, below.)*
- ***PF-2e: Treatment of wastewater from other communities.*** *The City accepts for treatment wastewater from the Fieldbrook Glendale Community Services District. This practice may continue as long as there is adequate treatment system capacity. The City shall not enter into any new agreements for processing wastewater from other communities, nor shall the City accept additional loadings from any connection from other communities through the Fieldbrook Glendale system.*
- ***PF-2f: Maintain the Joint City/ Cal Poly Humboldt Wastewater Utilization Program.*** *Recognize that Cal Poly Humboldt faculty and students were instrumental in the design, testing, and development of the Arcata Marsh and Wildlife Sanctuary. The City and the University jointly participate in a wastewater utilization program, which provides ongoing research projects for students and faculty studying wastewater, stormwater, and water quality issues. The City and University maintain an agreement to operate the program. The City shall renew the program with the University when the current agreement ends, and should collaborate with the Cal Poly faculty in seeking funds for future research.*
- ***PS-2g: Source control program.*** *The City shall maintain a source control and pretreatment program that provides the legal authority to regulate non-domestic sewer use to control discharges of industrial waste. The source control and pretreatment program shall include legal authority, local limits, pretreatment permitting, and an enforcement response plan.*

Policy PF-3: Stormwater Management

Objective. *Implement the City's Drainage Master Plan and abide by the MS4 Permit to utilize natural drainage systems; minimize increases in stormwater runoff, flooding, and erosion; maintain the integrity of stream hydrology; and reduce pollutant loads.*

Applicable sub-policies:

- ***PF-3a: Utilization of City streams and watercourses as natural drainage systems.*** *Arcata's network of creeks provides a natural drainage system, however, this system is very susceptible to damage from urban pollutants carried by stormwater runoff, and from drainage facilities that alter creek flows and natural functions. The City shall utilize creeks for urban drainage only when the basic natural functions of the creeks will not be degraded.*
- ***PF-3b: Control of stormwater runoff, flooding, and erosion.*** *Stormwater runoff, especially at peak flows, can cause significant flooding and erosion if adequate precautions have not been taken. As stated in the Drainage Master Plan, the City shall manage the storm and surface water system in Arcata to maintain a hydrologic balance in order to protect water quality, prevent property damage, provide for the safety and enjoyment of citizens, and preserve and enhance habitat and sensitive areas.*

- ***PF-3c: Stormwater quality.*** *Implement the City's Phase II MS4 Permit to reduce the discharge of pollutants to the maximum extent practicable and protect water quality. Manage surface water controls, facilities such as detention basins and natural infiltration areas, and education programs to protect surface and ground-water quality.*
- ***PF-3d: City drainage system.*** *The City shall take a comprehensive approach to drainage system management in order to effectively control the quantity of stormwater runoff, protect water quality, and reduce potential flood damage from peak flows. As stated in the City Drainage Master Plan, the City shall gradually expand the City managed drainage system to:*
  1. *Continue maintenance of all drainage facilities within public right-of-way, regardless of size.*
  2. *Extend responsibility onto private property only when permanent easements are dedicated or otherwise available from the private property owner, and need is established based on technical criteria.*
  3. *Define service limits upstream of the City as the point at which runoff from a publicly (not county) dedicated street enters the drainage system, or when a drainage feature needs repairs/improvements which have public benefits that exceed the cost of said repairs/improvements.*
  4. *Integrate green stormwater infrastructure into streets and public spaces to create attractive public areas while also capturing and treating runoff to meet water quality requirements. In this context "Green Infrastructure" is defined as the range of measures that use plant or soil systems, permeable pavement or other permeable surfaces or substrates, stormwater harvest and reuse, or landscaping to store, infiltrate, or evapotranspire stormwater and reduce flows to sewer systems or to surface waters.*
- ***PF-3e: Easements and properties for drainage management.*** *No change to text from the General Plan 2020.*

Policy PF-6: Integrated Waste Management

Objective. *Reduce solid waste generation at the source; maximize re-use and repair of appropriate items and material; promote composting and recycling; and properly transport non-recyclable solid waste to approved disposal sites. Coordinate with regional bodies to develop effective regional solid waste management systems. Ensure new development is adequately sited and designed, including adequate physical space, for solid waste bins.*

Applicable sub-policies:

- ***PF-6a: Source reduction.*** *Source reduction and materials re-use are the most cost-effective ways to minimize solid waste. Source reduction, or waste prevention, reduces the growing costs of collection, recycling, and disposal systems. Source reduction and re-use shall be promoted through educational programs and incentives. Examples of effective source reduction and re-use activities that shall be promoted are:*
  1. *Backyard composting, landscaping with low water needs, and grass mulching.*
  2. *Purchasing durable re-usable goods instead of disposable items (e.g., cloth diapers, rechargeable batteries).*
  3. *Repairing equipment and appliances.*
  4. *Purchasing goods from second-hand stores, flea-markets and swap meets.*
  5. *Reducing the use of packaging by buying in bulk or purchasing fresh food at farmers markets.*
  6. *Moving away from using paper copies for as much City business as possible by working with electronic mail, forms, and agendas, and re-using of scrap paper if possible, if coping is necessary.*
  7. *Reusable coffee cups and beverages provided in dispensers.*
  8. *Termination of unwanted mail.*
  9. *Incentives such as on-call garbage collection and differential solid waste fees shall be used to encourage source reduction.*

- ***PF-6b: Recycling.*** *The City's recycling program shall continue and expand, unless a more efficient and cost-effective method of collecting and reusing materials is identified. The City shall continue to contract for recycling, collection, and processing, in order to help meet and exceed the State diversion goal. The following programs shall also be promoted:*
  1. *Collection of commercial corrugated cardboard.*
  2. *Collection of office paper.*
  3. *Collection of organic waste.*
  4. *City procurement policies and practices reflecting State requirements for purchasing recycled content paper products.*
  5. *Implementation of density bonuses for buildings designed to promote recycling.*
  6. *The City's active involvement in the Humboldt County Recycling Market Development Zone.*
  7. *Public education the public to "close the loop" and buy locally-made products with recycled content.*
  8. *Public education on recycling that includes self-haul services for recyclable materials not collected curbside.*
  9. *Support for development and expansion of recycling-based manufacturing.*

  In order to minimize increases in solid waste volumes and maximize the amount of material returned to productive use, the City shall continue these programs with a target of reducing landfill volumes as specified in the Zero Waste Action Plan.
- ***PF-6c: Collection, transport and disposal of non-recyclable solid waste.*** *The City shall continue to contract for solid waste and recycling collection, transport, and disposal and will amend relevant Franchise Agreements to include the collection and transport of organic waste in the future to comply with state waste and organics regulations (e.g. SB 1383). The City is supportive of organic processing and will work with regional partners to develop an in-County organics processing facility. The City will provide educational materials about proper use and disposal of household hazardous waste, non-toxic alternatives to household hazardous waste, and recycling of materials (e.g., motor oil, anti-freeze, paint, batteries) in conjunction with local governmental and businesses partners.*

City of Arcata Local Coastal Program

There are no policies within the City of Arcata's Local Coastal Plan that regulate utilities and service systems.

City of Arcata Zero Waste Action Plan

In 2017, the City adopted a Zero Waste Action Plan that built upon the state required Source Reduction and Recycling Element (AB 939). The Zero Waste Action Plan included guiding principles, goals, and near-, mid-, and long-term implementation programs; including the goal of achieving 90% landfill diversion by 2027.

3.12.4 Evaluation Criteria and Significance Thresholds

The adoption and implementation of the General Plan 2045 would be considered to have a significant impact on utilities and service systems if it would result in any of the following:

- Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction of which could cause significant environmental effects;
- Have sufficient water supplies available to serve the Project and reasonably foreseeable future development during normal, dry, and multiple dry years;
- Result in a determination by the wastewater treatment provider which serves or may serve the Project that it has adequate capacity to serve the Project's projected demand in addition to the provider's existing commitments;

– Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals; or
– Comply with federal, state, and local management and reduction statutes and regulations related to solid waste.

3.12.5 Methodology

Impact assessment considered the existing policies and operations, and future projected demand of the water, wastewater, stormwater, and solid waste systems within the study area. Anticipated future demand was calculated using existing data of average usage, extrapolated based upon total anticipated population in 2045 (27,000 people).

3.12.6 Impacts and Mitigation Measures

Impact UTL-a: **Would adoption and implementation of the General Plan require or result in the relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, electrical power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?**

Water Treatment

The Humboldt Bay Municipal Water District (District) supplies water to the City of Arcata as well as the City of Blue Lake, City of Eureka, Fieldbrook Glendale Community Services District, Humboldt Community Services District, Manila Community Services District, and McKinleyville Community Services District. Based on email correspondence from Humboldt Bay Municipal Water District General Manager on June 30, 2022, with further clarifications received by email on April 12, 2023, the District has current domestic treatment capacity of 20 Million Gallons Per Day (MGD). Peak demand from the municipalities is only 7 to 13 MGD and so the District currently has a minimum of 7 MGD of excess treatment capacity available for use, which equates to a minimum of 35% growth potential for the entire service area. Some areas of the District's service area will tend to grow at a greater rate than others depending on local planning and other factors. The growth in water demand for Arcata can be evaluated based on existing water demand characteristics, and the characteristics and amount of projected growth within the planning horizon (to 2045).

Based on recent water use data for the City of Arcata, average water use during the peak summer demand period varies between approximately 1.7 MGD and 2.0 MGD and the maximum day demand has been recorded at up to 2.7 MGD. Given a 2020 population of 18,857, this equates to a typical peak summer demand of approximately 90 to 106 gallons per capita day (gpcd) and a maximum day demand of approximately 143 gpcd. As a community water system grows in size, the peak demands do not typically grow as fast as the population assuming future users are similar to existing users. This is due to several factors including water conserving fixtures in new developments, higher density development with less outside landscape irrigation, the moderating effect of a larger user base, and other factors. However, for the purposes of this analysis, a conservative approach is used, and it is assumed that future per capita peak water demands will be the same as existing and that future water demands will be directly proportional to population growth.

The water supply must meet the needs of a projected population of 27,000 people in 2045, which represents a 43% growth over 2020. This growth in population will need a commensurate growth in treated water supply. Based on the current per capita peak water demands and the planned population increase, the 2045 peak summer demand period is therefore projected to vary between approximately 2.4 MGD and 2.9 MGD and the maximum day demand could be up to 3.9 MGD.

For a community water system to satisfy customer demands, there needs to be a source of supply capable of meeting long term average demands and then additional water from local storage within the distribution system can help meet peak demands and provide additional stored water for emergencies such as temporary

interruptions of supply. The local storage reservoirs help smooth out the variations in customer demand with the rate of supply. The City maintains 16 storage reservoirs throughout the distribution system to help meet peak demands and enhance overall distribution system reliability. One additional reservoir is currently under construction and when complete in the fall of 2023, the City will have a total of 5.8 million gallons of storage.

Therefore, given the available Humboldt Bay Municipal Water District treatment capacity, projected Arcata peak water demands over the planning horizon, and existing storage reservoirs within the City distribution system, the existing water treatment capacity is sufficient to meet programmed future growth over the 2045 planning horizon, and no impact would occur.

The District will need to regularly operate and maintain their treatment system and they may have to upgrade portions of the treatment system to comply with future regulatory mandates. Such operations, maintenance, and upgrades are associated with the management of the potable water production system that serves all municipal customers and would not be necessitated by the planned growth in Arcata.

Wastewater Treatment

When evaluating the capacity of the treatment plant following the current upgrade project (Phase I, described above under the 3.12.2 (Setting)), the dry weather flow, and the wet weather flow are important parameters to consider.

Dry weather flows are generally a measure of the wastewater coming from domestic, commercial, and industrial sources. Wet weather flows on the other hand, represent the dry weather flow plus rainwater that enters the collection system through inflow and infiltration. Inflow is predominately due to direct connections from down spouts, area drains, storm drains, and flow in through manhole covers into the wastewater collection system. Infiltration is groundwater leaking into the wastewater collection system through gaps in the piping and manholes.

Dry weather flow tends to be relatively stable year to year and increase as population and other developments increase, although some variation between years is common. Wet weather flows, on the other hand, can fluctuate year to year based on factors such as the amount and timing of precipitation, groundwater elevation, and the size and condition of the collection system. The condition of the collection system is of critical importance in terms of managing inflow and infiltration into the system. As the collection system ages, inflow and infiltration tend to increase. This is because over time the ground can settle, materials become brittle, and leaks increase. Also, the types of piping used in years past, even when they were new, are simply not as reliable as modern gasketed plastic pipe.

Newer portions of collection systems using modern construction materials tend to have lower inflow and infiltration values than older portions of collection systems. Therefore, inflow and infiltration values tend not to grow proportionally with population.

The Phase I treatment plant upgrades currently under construction based on the City’s wastewater discharge permit allows for up to 2.3 MGD average dry weather flow and 5.0 MGD average wet weather flow through the facility. The peak instantaneous flow permit limit and hydraulic capacity at the Arcata Wastewater Treatment Facility is much higher at 16.5 MGD, because instantaneous peak flows can be directed to the oxidation ponds, and then when the peak subsides, the water in the ponds can be conveyed to other areas of the treatment system.

During dry weather, when the flows are low, the treatment facility has ample capacity for treating influent flows. However, during the wet season, inflow and infiltration into the City’s sewer collection system increases wet weather influent flow. The limiting factor in the ability for a wastewater management system to accommodate additional population is typically the availability of wet weather capacity and management of wet weather flows. Managing wet weather flows is a combination of providing hydraulic and treatment capacity for increased flows during wet weather periods, while also making system improvements to reduce inflow and infiltration and hence reduce peak flows to the treatment plant.

The City completed a largescale Sewer Inflow and Infiltration Reduction Project in 2019 to reduce groundwater infiltration and surface water inflow into the sewer collection and treatment facility during wet weather periods. Additional improvements to the wastewater collection system have also been accomplished by the City’s Sewer

Lateral Replacement Program. Since ordinance adoption in 2017, this program has required that private sewer laterals connected to houses older than 25 years be inspected, replaced, or repaired if needed, prior to change of ownership.

Preliminary analysis of the recently completed inflow and infiltration project by City staff indicates a reduction of wet weather flows into the treatment facility by approximately 0.5 MGD when precipitation occurs.

For anticipated growth from 2020 to 2045, the 2020 actual flows were first evaluated. In 2020 the average dry weather flow was 1.0 MGD and the average wet weather flow was 1.5 MGD. Given that the permitted capacity of the upgraded facility provides for an average dry weather flow of 2.3 MGD and an average wet weather flow of 5.0 MGD, the Arcata Wastewater Treatment Facility has significant additional capacity available.

The proposed General Plan 2045 projects a population of up to 27,000 people, which represents 43% growth over 2020. If this population growth is applied to the 2020 wastewater flows, the projected average dry weather flow in 2045 would be 1.4 MGD, which is well within the current permitted capacity of 2.3 MGD. As discussed above, the wet weather flows tend not to grow proportionally with population for new developments. However, to be conservative, it was assumed that the same 43% growth would apply to the planning horizon resulting in a projected average wet weather flow of 2.1 MGD in 2045, which is also well within the current permitted capacity of 5.0 MGD. Therefore, the wastewater treatment plant currently being upgraded has sufficient capacity to meet the needs of the projected growth through 2045, and no impact would occur.

Stormwater Treatment

The specific stormwater drainage characteristics of new developments will need to be evaluated as specific proposals compliant with the General Plan 2045 are implemented. The management of stormwater is very specific to the final design characteristics of developments. Therefore, the specific stormwater management requirements are determined during the formal Building Permit process.

The City has taken a series of steps to comply with the Municipal Separate Storm Sewer System (MS4) requirements including adopting Ordinance No 1463 implementing MS4 requirements for post construction activities. Under this ordinance, any applicant for a building and/or grading permit shall, as a condition of receiving such permit, read and sign a certificate stating that the applicant has read the Stormwater Best Management Practice Manual and shall use approved Best Management Practices for all construction activity. The applicant shall submit for approval a Best Management Practices Plan specifying those methods which will prevent the entry of pollutants into the stormwater drainage facilities, including but not limited to the use of filter materials at drain inlets to retain debris, dirt or other pollutants generated by such work. Under the City's MS4 permit, property owners and developers would have to comply with all terms, provisions, and conditions of City approved Best Management Practices Plans. Furthermore, under the City's MS4 permit, all development projects shall comply with the post-construction requirements of the MS4 General Permit, related to the Post Construction Storm Water Management Program, which may include measures for site design, source control, runoff reduction, stormwater treatment, or baseline hydromodification management as applicable based on project type and size. The City shall incorporate MS4 General Permit post-construction requirements, as applicable, in land use entitlements and construction or building-related permits to be issued relative to such development. The responsible party and developer shall comply with the terms, provisions, and conditions of such land use entitlements and permits.

The City also developed and implemented a Stormwater Management Program. This program includes six control measures. Among the control measures, Construction Site Runoff Control and Post-Construction Storm Water Management in New Development and Redevelopment, directly apply to specific projects that could be considered for implementation during the planning horizon of the General Plan 2045.

The City has Stormwater Ordinance No 1319 in place. The stated purpose of the Stormwater Ordinance is to develop a fully comprehensive stormwater pollution control program, as required by the EPA Storm Water Phase II regulations, and as deemed appropriate to minimize or eliminate the impairment of water quality.

The objectives of the Stormwater Ordinance are as follows:

1. To eliminate non-stormwater discharges from public and private properties into the City's stormwater drainage facilities.
2. To reduce to the maximum extent possible contamination of and pollutants entering into the City's stormwater drainage facilities.
3. To initiate the adoption by the City of a Best Management Practices Manual to assist in the reduction or elimination of pollutants in stormwater, and to thereafter impose Best Management Practices on existing and new sources of contamination.
4. To protect and enhance the water quality of the water resources, water bodies, and wetlands of the City of Arcata in a manner consistent with the Clean Water Act.
5. To protect the health, safety, and general welfare of the residents of the City of Arcata by establishing monitoring, compliance, and enforcement procedures.

To help the City administer the Stormwater Ordinance and to comply with applicable federal and state requirements, the City has adopted a series of ordinances, plans, and manuals. The City uses these documents together to manage stormwater within the City and prevent pollution of receiving waters.

The City has adopted Grading, and Erosion and Sediment Control Ordinance No 1255. The purpose of the ordinance is to establish minimum standards for grading activites. The intent is to promote the public safety and general welfare by preventing unreasonable or unnecessary erosion and sediment production and related degradation of natural resources into the City's stormwater drainage systems.

In addition, the City has adopted a Stormwater Best Practices Manual (per Ordinance No 1319). This manual is intended to provide guidance for Best Management Practices pollution control / good housekeeping information for industrial, commercial, municipal, and construction activities. This manual is not intended to substitute for requirements set forth by permit conditions of approval or requirements by other agencies.

The City has also adopted policies regarding creeks and other environmental resources, as well as land use policies and design guidelines for managing stormwater and protecting the environment.

As specific projects are proposed, property developers will need to create plans that comply with the MS4 permit and other applicable stormwater requirements based on the specific characteristics of the project. Therefore, future projects would not adversely impact water quality via stormwater inputs due to compliance with the MS4 permit and other City policies. Implementation of the General Plan 2045 will adhere to these City policies and standards. A less than significant impact would occur.

Electrical Power and Natural Gas

As discussed above in Section 3.12.2 (Setting), there was a 149 Gigawatt-hour (GWh) reduction in electricity usage at the County level between 2003 and 2019. Therefore, any increase in electricity use due to the projected increase in population would be accommodated by existing electrical infrastructure (e.g., substations, power poles, transmission lines) that has provided an additional 149 GWh in the past. It is understood that PG&E has said there is no additional energy capacity for certain areas of Humboldt County; however, adequate infrastructure exists within the City limits. The construction of new dwelling units and businesses would require electrical wiring and connectivity to existing electrical infrastructure; however, this isn't considered an expansion of electrical power. Additionally, with current and future state bills and local initiatives, energy consumption is anticipated to trend downwards as has occurred up to the present.

Per guidance from the California Energy Commission on 2022 Energy Code changes for multi-family and single-family residential development guidelines, all new development is supposed to enable pathways for all-electric buildings while reducing impacts on the electricity grid (CEC 2023a; CEC 2023b). A variety of renewable energy, particularly photovoltaic, is also proposed. Given that energy code changes for future development do not include infrastructure for natural gas use, implementation of the General Plan 2045 would not cause the relocation or construction of new or expanded natural gas infrastructure.

Energy usage under the General Plan 2045 is further discussed and analyzed in Section 6.2 (Energy).

Telecommunications Facilities

Due to the near completion of the Echo undersea cable project, telecommunication connectivity is at its peak regionally. Existing wireless and fiber optic infrastructure within the study area will continue to serve the population and is anticipated to expand commensurate with population growth. The improved anchor of fiber optic connectivity will provide greater telecommunications to the study area either via wireless or hard-wired connectivity.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact UTL-b: Would adoption and implementation of the General Plan result in sufficient water supplies available to serve the study area including reasonably foreseeable future development during normal, dry and multiple dry years?

The City's primary water supply source is through the Humboldt Bay Municipal Water District (District). The District was initially formed in 1956 and the water rights and infrastructure were developed to serve two major pulp mills along with domestic uses.

Based on email correspondence from the Humboldt Bay Municipal Water District General Manager on June 30, 2022, with further clarifications received by email on April 12, 2023, the loss of the pulp mills resulted in the District having excess water rights, and supply capacity. To address this situation, the District board embarked on a Water Resource Planning effort in 2010. This public process resulted in three focus areas for utilization of excess water rights: 1) local sales; 2) transport; and 3) instream flow.

According to the District, the current water production capacity for the District's wholesale municipal customers, which includes the City, is 20 MGD. Current utilization by the District's municipal customers fluctuates between 7 MGD to 13 MGD depending on the time of year. Peak summer demand period varies between approximately 1.7 MGD and 2.0 MGD and the maximum day demand has been recorded at up to 2.7 MGD. As discussed above in question (a), the 2045 peak summer demand period for Arcata is projected to vary between approximately 2.4 MGD and 2.9 MGD and the maximum day demand could be up to 3.9 MGD.

It is typical that the peak summer demands would be supplied by the Humboldt Bay Municipal Water District system and the incremental additional water needed to meet the maximum day demand would come from the 17 storage reservoirs providing 5.8 MG of water within Arcata's distribution system (16 existing and one currently under construction). Therefore, Arcata is projected to need an additional 900,000 gallons per day to meet future peak summer demands (2.9 MGD projected future demand minus 2.0 MGD current demand) based on the assumptions in question (a). Given that the District currently has 7 MGD of excess source water capacity in the domestic system, there is ample capacity to accommodate significant growth in local demand including the projected growth in Arcata through 2045.

While the source of supply from the Humboldt Bay Municipal Water District is adequate to meet Arcata's planned growth, and as discussed under question (a), the District also has adequate treatment capacity, the treated water must be delivered to the customers. As individual projects are considered, the adequacy of the distribution system needed to serve those projects will need to be evaluated. Upgrades and extensions of portions of the distribution system may be necessary to convey water to new developments and provide adequate flow capacity, including fire flows which tend to govern the sizing of pipes. Potential infrastructure-related projects to treat and deliver water would be carried out in conformance with federal, state and local regulations.

Due to the 7 MGD of excess domestic water the District currently has, the projected increase of 900,000 gallons per day and implementation of the Arcata General Plan 2045 would not result in an adverse impact to water supply. No impact would occur.

Mitigation Measures: No mitigation is necessary

Level of Significance: No impact

Impact UTL-c: **Would adoption and implementation of the General Plan result in a determination by the wastewater treatment provider which serves or may serve the General Plan service area that it has adequate capacity to serve the projected demand in addition to the provider's existing commitments?**

The growth planned within the Arcata collection system will be substantially due to increased residential and mixed-use developments and expansion of Cal Poly Humboldt, which is essentially more of the same type of development that currently exists. Therefore, the general characteristics of the wastewater collected from the service area in the future is expected to be similar to the characteristics of the wastewater being collected currently.

Based on the analysis in question (a), the existing wastewater treatment plant has adequate capacity to serve the projected demand through the year 2045 including serving existing commitments. The General Plan 2045 projects a population of 27,000 people, which represents a 43% growth over 2020. If this population growth is applied to the 2020 wastewater flows, the projected average dry weather flow would be 1.4 MGD, which is well within the current permitted capacity of 2.3 MGD. Applying the same 43% growth to wet weather conditions results in a projected average wet weather flow of 2.1 MGD, which is also well within the current permitted capacity of 5.0 MGD. Therefore, the wastewater treatment plant has sufficient capacity to meet the needs of the projected growth through 2045 including meeting the needs of the existing customers.

The Regional Board regularly reviews treatment requirements based on the circumstances and has updated the requirements for the City numerous times over the history of regulating the facility. It is anticipated that the Regional Board will continue to update requirements for the City over time, but since the characteristics of the future wastewater influent stream is anticipated to be similar to what exists today, the planned developments and population growth are not expected to exceed the wastewater treatment requirements that would otherwise be required without the planned growth.

Therefore, implementation of the General Plan 2045 will not cause an adverse impact to wastewater treatment capacity because adequate capacity exists under current and projected conditions No impact would occur.

Mitigation Measures: No mitigation is necessary

Level of Significance: No impact

Impact UTL-d, e: **Would adoption and implementation of the General Plan 2045 generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals? And would adoption and implementation of the General Plan 2045 comply with federal, state and local management and reduction statues and regulations related to solid waste?**

Implementation of the General Plan 2045 would not directly generate solid waste; however, the Plan would promote infill development within the Gateway Area and other Infill Opportunity Zones, as well as throughout the City, which would generate solid waste during construction and use of said future development. The City's Zero Waste Action Plan (2017) is a materials management approach that first prevents waste and then establishes reuse and recycling policies, programs and infrastructure for all discarded materials. The Zero Waste Action Plan established goals for the City's waste generation including diverting at least 90% of waste generated in the community from landfills and incinerators by 2024-2027.

Using 1990 baseline data, the City's 2015 landfill diversion was 68% which is the equivalent of 2.4 pounds of materials disposed in the trash by every person in Arcata daily. This was achieved through curbside recycling collection and a variety of City waste reduction, reuse, and recycling programs addressing a wide range of material types. In 2015, Arcata disposed of 7,938 tons. To reach the 85% goal of reduction of weight from the 1990 baseline, Arcata must reduce, reuse, recycle and/or compost 4,289 additional tons (1.11 pounds / person /

day). To meet the 90% level, Arcata must reduce another 1,168.5 tons for a total disposal of 2,408.5 tons (0.74 pounds / person / day) (City of Arcata 2017).

The City's population is anticipated to increase to up to 27,000 residents over the course of the planning horizon, which is an increase of approximately 8,143 people as compared to 2020 census data. Emissions modeling prepared for the air quality and greenhouse gas analysis (Section 3.3 and Section 3.5 of the Draft EIR, respectively) includes an estimate of solid waste generated by new land use development by 2045. That estimate translates to approximately 2.13 pounds / person / day of new solid waste generation (total new waste divided by total new population). However, this estimate is based on CalRecycle data from 2021 (the information available at the time that CalEEMod was updated in 2022) and does not account for implementation of statewide, regional, and local regulations or measures that decrease waste generation and increase waste diversion after the year 2021.

The intent to decrease per capita disposal coupled with a projected population increase is a challenging combination and it will be difficult for the City to achieve its 90% goal by 2027. Policies PF-6 (Integrated Waste Management) and sub-policies will be implemented with the goal of reducing solid waste generation at the source, promoting composting and recycling and properly transporting non-recyclable solid waste to approved disposal sites. The City is actively negotiating a new franchise agreement with its solid waste hauler Recology to meet State Bill 1383 organics collection requirements. A key provision to be included in the franchise agreement is a greater focus on education and outreach to divert materials from the municipal solid waste stream which would meet Policy PF-6.

There are no federal solid waste regulations that would apply to the Project. Active permitted in-county transfer stations include the Humboldt Waste Management Authority facilities in Eureka or Samoa, California and the Recology Eel River Transfer Station in Fortuna, California. Humboldt Waste Management Authority contracts with the Dry Creek landfill located in Medford, Oregon. There are no permitted active landfills in the county.

The anticipated population growth within the study area would be incremental, averaging approximately an increase of 326 people per year. The local waste reduction goals will theoretically reduce reliance on services from Humboldt Waste Management Authority's solid waste program, with the exception of the recycling program which is anticipated to increase. The anticipated rate of population increase is gradual, and the existing recycling program would modify over time (as needed) to accommodate the population. At the state level, the Integrated Waste Management Act mandates a reduction of waste being disposed and establishes an integrated framework for program implementation, solid waste planning, and solid waste facility and landfill compliance. The Project would not conflict with or impede implementation of such programs due to the local reduction plans, and due to the adequate capacity of the Humboldt Waste Management Authority's recycling program. A less than significant impact would occur.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

3.12.7 Cumulative Impacts

The geographic boundary for cumulative impact analysis related to utilities and service system impacts would include the Urban Services Boundary (which includes the City limits) as shown on Figure 2-1 (City of Arcata Planning Areas).

Impact UTL-C-1: Would adoption and implementation of the General Plan contribute to a cumulatively significant impact to Utilities and Service Systems?

As discussed above, the adoption and implementation of the General Plan 2045 would have a less than significant impact on utilities and service systems, namely water, wastewater, stormwater, telecommunications, and solid waste infrastructure. The projects listed in Table 1.10-1 would utilize these utilities and service systems, however all projects would be of short, temporary duration, or would occur incrementally (as with the General Plan 2045) and thereby capacity would be expanded as necessary. There is ample capacity in the utilities and

service systems to accommodate the projected increase in population growth and projects listed in Table 1.10-1. With adherence to applicable federal, state, and local regulations governing utilities and service system resources and compliance with the proposed General Plan 2045 policies indicated above, the potential risks associated with utilities and service system resources in the study area would be less than significant. As such, cumulative impacts would be less than significant.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

4.0 Transportation and Circulation

4.1 Introduction

Transportation and Circulation refers to the movement of people and goods throughout the study area and the networks that serve such movement. These networks can include the trails, streets, roads and highways that serve pedestrians, bicyclists, other non-motorized transportation methods, and motor vehicles. The City values transportation and circulation systems that are equitable, sustainable, and efficient.

This Draft EIR analyzes the potential effects of the adoption and implementation of the General Plan 2045 on the environment under the applicable environmental resource categories listed in the CEQA Initial Study Checklist (Appendix G of the 2023 CEQA Guidelines). Draft EIR Chapter 4, Transportation and Circulation, addresses environmental resource area potentially impacted by the General Plan 2045 in the following section:

– 4.2 Transportation

For the transportation environmental resource area, Section 4.2 describes the existing environmental and regulatory setting, discusses the environmental impacts associated with the adoption and implementation of the General Plan 2045, identifies feasible mitigation measures to reduce or eliminate those impacts, and provides conclusions on significance.

4.2 Transportation

This section analyzes the transportation impacts due to adoption and implementation of the General Plan 2045. It describes the Setting and Regulatory Framework relevant to transportation and evaluates the potential transportation impacts that would result from implementation of the General Plan 2045. It provides a level of detail appropriate for a program-level EIR. Future discretionary projects facilitated by the General Plan 2045 will be evaluated for project-specific impacts to transportation at the time they are proposed.

To provide the basis for this evaluation, the Setting section describes the existing transportation network serving the study area. The Regulatory Framework section describes the applicable regulations that are relevant to assessing potential transportation impacts attributable to the Project. The Impact Analysis section establishes the transportation impact evaluation criteria and thresholds of significance, evaluates potential transportation-related impacts, and identifies the significance of impacts. Based on the applicable criteria, the Impact Analysis evaluates the potential for the General Plan 2045 to conflict with programs, plans, ordinances, or policies addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities; conflict with or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b); increase hazards due to a design feature; or interfere with emergency access. The analysis was conducted in accordance with the standards and methodologies set forth by the City.

4.2.1 Study Area

For impact assessment related to transportation, the City's Sphere of Influence was used as the study area (see Figure 2-1 – City of Arcata Planning Areas).

4.2.2 Transportation Setting

Existing Roadway System

Arcata's pattern of highways and streets is similar to many small communities. The central business district has a traditional grid pattern of streets, with a one-way couplet system comprising the primary arterial streets. A series of arterial, collector and local streets surrounds the central business district and serves outlying residential neighborhoods, neighborhood retail sites, schools, parks, Cal Poly Humboldt, and industrial areas. On the outer edges of Arcata, the transportation system is comprised of rural roads and highways serving isolated farms and residences. Arcata is bisected by State Route (SR) 101, the main highway serving the North Coast of California from San Francisco to Oregon. Figure 4.2-1 provides a map showing the existing street functional classification system, based on the current General Plan.

Regional Highways

SR 101, SR 255, and SR 299 are the primary routes connecting Arcata to the region. SR 101 is a four-lane freeway within the City and provides regional access to areas north and south of Arcata. SR 101 has interchanges with City arterials at Samoa Boulevard (SR 255), 14th Street, Sunset Avenue, SR 299 (freeway), and Giuntoli Lane. SR 255 is a 2-lane highway outside of City limits, and a 2- to 4-lane arterial within City Limits, that provides access on the south side of Arcata from SR 101 to the Samoa Peninsula west. SR 299 is a four-lane freeway that provides access on the north side of the City from SR 101 to areas east.

Arterial Streets

The primary function of arterial streets is to provide intracity mobility as efficiently as possible. In addition to interconnecting the various parts of the city, arterial streets also provide some direct multi-modal access to adjacent land uses. Compared to other communities, arterials in Arcata have fewer traffic control devices at intersections. Each of the traffic signals in Arcata are located on Samoa Boulevard (SR 255). Examples of arterials include the "G" and "H" Street one-way couplet, K Street and Alliance Road, Samoa Boulevard and L.K. Wood Boulevard.

Minor Arterial Streets

Minor Arterials primarily provide mobility between arterial and collector streets while also providing direct access to adjacent land uses. Examples include Old Arcata Road, and West End Road within the City limits, and Jacoby Creek Road and Upper Bay Road within the Sphere of Influence.

Collector Streets

Collector streets provide both mobility and direct access to adjacent land uses in about equal proportions. These roadways move vehicular, pedestrian, and bicycle traffic within and between residential, commercial, and industrial areas. As the name implies, collector streets are intended to collect traffic from local streets and channel it to the arterial street system. Examples of collector streets include 7th Street, 14th Street, Union Street, Buttermilk Lane, and Fickle Hill Road.

Local Streets

Local streets mainly serve to provide direct access to adjacent land uses. These low-speed streets provide access between land uses and collector streets. Local streets serve all types of land use including residential, commercial, and industrial. Often, local streets in residential areas are utilized by through traffic, resulting in complaints from residents about speeding and high traffic noise volumes.

Rural Roads

Rural roads are generally two-lane unimproved facilities located on the outer edges of the community, not within the City. Their primary function is to provide connections and access to farms, isolated residential areas, and industrial uses. Rural roads usually do not have typical urban improvements such as underground drainage, lighting, sidewalks, or curbs and gutters. Examples of rural roads in the Arcata area include Mad River Road, Upper Bay Road, Jackson Ranch Road, the western portion of Foster Avenue, and Jacoby Creek Road.

Existing Transit Service

The Arcata & Mad River Transit System (A&MRTS) offers public bus service and is owned and operated by the City, contracted through the Humboldt Transit Authority (HTA). Fixed service routes include the Red, Gold, and Orange Route(s) running along major streets in the City to destinations including City Hall, Uniontown Shopping Center, and Mad River Hospital and to major inter-route transfer points including the Arcata Transit Center and Cal Poly Humboldt. The Willow Creek route offers travel between the communities of Arcata and Willow Creek, located east of Arcata. HTA provides regional public transportation for Humboldt County including service through Arcata via the Redwood Transit System (RTS), a fixed route system serving cities along the SR 101 corridor from Trinidad to Scotia. The RTS has four stops in Arcata including Cal Poly Humboldt and the Arcata Transit Center. The Arcata Transit Center, located on "F" Street between 9th and 10th Streets, provides a centralized transit facility for buses operated by A&MRTS, RTS, Greyhound, and Amtrak. The Transit Center provides a park-and-ride lot and secure bicycle facilities.

Cal Poly Humboldt student ridership is significant during the school season. Cal Poly Humboldt provides unlimited free ride access on several HTA routes, including A&MRTS, through the Jack Pass program. The Jack Pass program aims to encourage mass transit and reduced travel via single-occupant vehicles.

Figure 4.2-2 provides a map showing the existing transit routes and stops.

Existing Bicycle Facilities

Arcata’s bicycle transportation system consists of Class I off-street shared use paths, Class II bike lanes, Class III bike routes, and bicycle boulevards on public streets. Class I facilities are multi-use paths that provide a completely separated right-of-way for the exclusive use of bicycles and pedestrians with cross flows of motorized traffic minimized. Class II bike lanes provide a striped and signed lane for one-way bicycle travel on a street or highway within the paved area of a roadway. Class III bike routes are specially designated corridors in which the travel lanes are shared by motor vehicles and bicycles and are usually marked with on-street pavement stencils.

Bicycle boulevards are a type of Class III facility on low-volume roadways which prioritize the use of bicycles with traffic controls, signage, roadway markings, and traffic calming measures, including bicyclists having the right-of-way.

Arcata currently provides a comprehensive bikeway network connecting most major areas of the City on primary arterial streets. The primary Class I shared use path, the Humboldt Bay Trail North, provides a north-south connection from the Arcata Marsh & Wildlife Sanctuary and the soon to be complete Humboldt Bay Trail South towards Eureka, through the Gateway area, and connecting to Foster Avenue near Cal Poly Humboldt. Additional Class I facilities provide brief connections between existing roadways and on-street bicycle facilities. Most existing Class II bike lanes are located on north-south streets, while Class III bike routes and bicycle boulevards provide east-west connection on key streets. The western portion of the City (west of Alliance Road) is least served by bike lanes, providing an opportunity to expand the bike network to encompass more residential areas.

Figure 4.2-3 provides a map showing the locations of the existing bicycle and trail facilities.

Existing Pedestrian Facilities

Pedestrian facilities are provided throughout Arcata in the form of sidewalks on public streets and along Class I shared use paths which also accommodate bicyclists. Refer to the City's design standards for sidewalk widths and right of way. While more high-trafficked areas like downtown, Valley West, and areas surrounding Cal Poly Humboldt provide a continuous sidewalk system, other areas of the City have many gaps in the sidewalk system. The City's standard sidewalk meets the minimum Americans with Disabilities Act (ADA) requirements, but wider sidewalks are desirable for high-traffic pedestrian locations and to encourage walking. Narrow sidewalks are often obstructed with utility poles, signs, and street furniture, further reducing their effectiveness. In addition, the City's street standards lack sufficient width for a planting strip or street trees, which are important elements in promoting walking as an alternative mode of transportation. Opportunities exist, however, within the standard 50-foot wide right of way to provide street trees in planters located in the parking lane, or to add a planting strip between the sidewalk and travel lanes when new development projects are considered.

Existing Freight Transportation Systems

Arcata has designated truck routes on several key arterial and collector streets including Guintoli Lane, Valley West / Valley East Boulevard, West End Road, Alliance Road, "K" Street, Spear Avenue, L. K. Wood Boulevard, 11th Street, Fickle Hill Road, Union Street, Old Arcata Road, Vaissade Road, Heindon Road, South G Street, Janes Road, and Samoa Boulevard. These streets provide intracity connections for freight travel and serve most of the industrial areas of the City. All state facilities including Routes 101, 299, and 255 are designated truck routes. SR 101 is considered an STAA Terminal Access Route within Humboldt County, apart from Richardson Grove at the southern border with Mendocino County where access is limited as a California Legal Truck Route. SR 299 is considered an STAA Terminal Access Route between SR 101 in Arcata and Interstate 5 in Redding, and SR 255 is considered a California Legal Truck Route between Eureka and Arcata.

Railroad Right of Way Transportation Systems

Arcata has railroad right-of-way formerly managed by the North Coast Railroad Authority, with spurs into several industrial properties. Although most rail service was suspended following damage to tracks caused by storms in 1997, the mainline and many spurs in Arcata were active prior to that time. They served several industrial uses in the northeast and southwest areas of the City and were used to move freight between Arcata and Eureka. The Great Redwood Trail Agency, established in March 2022, took over railroad corridor management from North Coast Railroad Authority. The Great Redwood Trail is a proposed multi-use rail-to-trail project connecting San Francisco to the Humboldt Bay area.

Several rail corridors in Arcata have already been converted into Class I trails with others planned. The Arcata Rails with Trails Project was completed connecting Foster Avenue and Alliance Road south to SR 255 along the L Street rail alignment (Phase 1 of the Humboldt Bay Trail). The rail to trail corridor south of SR 255 at this location to SR 101 in Bracut has also been constructed (City of Arcata Rail with Trail Connectivity Project) and is part of the Humboldt Bay Trail connecting to Eureka. The Arcata Annie and Mary Trail Connectivity Project is

being designed to connect Sunset Avenue to Valley West and the Aldergrove Industrial Park along West End Road in Arcata, and then continue east to the Humboldt Bay Municipal Water District's Park 1 on the Mad River. The County of Humboldt, Caltrans, and Friends of the Annie & Mary Trail continue to work towards completing the gap in the Annie & Mary Trail to connect the City of Blue Lake to Arcata.

Figure 4.2-4 provides a map showing the Existing Truck Routes and Rail Right of Way locations.

4.2.3 Regulatory Framework

Federal

U.S. Department of Transportation

The U.S. Department of Transportation (DOT) is the umbrella agency for federal transportation policies and regulations. The DOT's stated goals are to keep the traveling public safe, increase national mobility, and support the national economy through the transportation system. The DOT oversees several agencies that administer federal statutes for various branches of transportation, including:

- The National Highway Traffic Safety Administration, which is responsible for motor vehicle and highway transportation safety standards and regulations.
- The Federal Highway Administration, which is responsible for laws pertaining to commercial freight and the maintenance and preservation of interstate highways, tunnels, and bridges.
- The Federal Motor Carrier Safety Administration, which is responsible for safety regulation laws for large commercial vehicles.
- The Federal Railroad Administration, which is responsible for regulating the safety and development of the U.S. railroad system.
- The Federal Transit Administration, which provides financial and technical assistance to local public transportation systems.

These agencies support state and local governments in the design, construction, and maintenance of transportation systems through various programs and projects.

Americans with Disabilities Act of 1990

The Americans with Disabilities Act (ADA) of 1990 provides comprehensive rights and protections to individuals with disabilities. The goal of the ADA is to assure equality of opportunity, full participation, independent living, and economic self-sufficiency for people with disabilities. To implement this goal, the United States Access Board, an independent Federal agency created in 1973 to ensure accessibility for people with disabilities, has created accessibility guidelines for public rights-of-way. While these guidelines have not been formally adopted, they have been widely followed by jurisdictions and agencies nationwide in the last decade. The guidelines, last revised in July 2011, address various issues, including roadway design practices, slope and terrain issues, pedestrian access to streets, sidewalks, curb ramps, street furnishings, pedestrian signals, parking, and other components of public rights-of-way.

State

Circulation Element

California law mandates the development of a Circulation Element as part of General Plans (often titled as the "Transportation Element" or "Mobility Element"). The Circulation Element must contain the "general location and extent of existing and proposed major thoroughfares, transportation routes, terminals, any military airports and ports, and other local public utilities and facilities," all correlated with the land use element of the General Plan per Government Code Section 65302 (b). In addition, the General Plan must incorporate "Complete Streets" policies, as described below.

California Complete Streets Act

Assembly Bill (AB) 1358 or the California Complete Streets Act, was signed into law on September 30, 2008. Since January 1, 2011, AB 1358 has required circulation element updates to address the transportation system from a multimodal perspective. AB 1358 states that streets, roads, and highways must "meet the needs of all users in a manner suitable to the rural, suburban, or urban context of the General Plan." The act requires a circulation element to plan for all modes of transportation where appropriate, including walking, biking, car travel, and transit. In addition, AB 1358 requires circulation elements to consider the multiple users of the transportation system, including children, adults, seniors, and the disabled.

California Department of Transportation

The California Department of Transportation (Caltrans) is responsible for planning, designing, constructing, and maintaining all state highways. The jurisdictional interest of Caltrans includes state highways and facilities and extends to improvements to roadways at the interchange ramps serving area freeways. Any federally funded transportation improvements would be subject to review by Caltrans staff and the California Transportation Commission. Any work or traffic control within the state right of way requires an encroachment permit issued by Caltrans. Improvements to intersections along SR 255 and interchanges with SR 101 or SR 299 will require coordination with Caltrans and an encroachment permit.

Senate Bill 743

California Senate Bill 743 (SB 743), passed in 2013, addresses a range of topics and aims to better promote statewide policies that (a) combat climate change by reducing greenhouse gas emissions and particulates; (b) encourage infill development and a diversity of uses instead of sprawl; and (c) promote multi-modal transportation networks, providing clean, efficient access to destinations and improving public health through active transportation.

SB 743 changed the way transportation impact analyses are conducted as part of CEQA compliance. These changes eliminated automobile delay, level of service (LOS), and other similar measures of vehicular capacity or traffic congestion as a basis for determining significant impacts under CEQA. Prior rules treated automobile delay and congestion as an environmental impact. SB 743 required the *CEQA Guidelines* to prescribe an analysis that better accounts for transit and reducing greenhouse gas emissions. In December 2018, Office of Planning and Research (OPR) released the final update to *CEQA Guidelines* consistent with SB 743 that went into effect statewide on July 1, 2020, which state that vehicle miles traveled is "generally" the most appropriate metric of transportation impacts to align local environmental review under CEQA with California's long-term greenhouse gas emissions reduction goals. At the same time as the release of the updated *CEQA Guidelines,* OPR also released a non-binding *Technical Advisory on Evaluating Transportation Impacts in CEQA*, which outlines potential vehicle miles traveled analysis methodologies and thresholds of significance for use by agencies in California based on substantial evidence developed by OPR related to achievement of the State's greenhouse gas emissions reductions targets (OPR 2018).

Although OPR provides recommendations for adopting new impact analysis guidelines, lead agencies have the final say in designing their methodology, provided that the selected analysis methodology aligns with the SB 743 goals to promote infill development, reduce greenhouse gases, and reduce vehicle miles traveled. No particular methodology or metric is mandated; the choice is left to the lead agency. In making this choice, an agency should bear in mind what sort of criteria the legislature had in mind for determining the significance of transportation impacts goals of SB 743. These were expressed in PRC §21099(b)(1), *"Those criteria shall promote the reduction of greenhouse gas emissions, the development of multimodal transportation networks, and a diversity of land uses*." The City has established vehicle miles traveled guidance and thresholds of significance against which the Project is compared; see Threshold b below for a more detailed description of the vehicle miles traveled analysis performed for this document.

Global Warming Solutions Act

Assembly Bill (AB) 32, or the Global Warming Solutions Act, was signed into law on September 27, 2006. AB 32 established a comprehensive program to reduce greenhouse gas (GHG) emissions to combat climate change.

AB 32 requires the California Air Resources Board (CARB) to develop regulations that reduce GHG emissions to 1990 levels by 2020. On January 1, 2012, the GHG rules and market mechanisms, adopted by CARB, took effect and became legally enforceable. The reduction goal for 2020 is to reduce GHG emissions by 25 percent of the current rate to meet 1990 levels and a reduction of 80 percent of current rates by 2050. The AB 32 Scoping Plan contains the main strategies California will use to reduce GHGs. The scoping plan has a range of GHG reduction actions, which include direct regulations, alternative compliance mechanisms, monetary and non-monetary incentives, voluntary actions, market-based mechanisms, and an AB 32 program implementation regulation for funding. In 2016, the Legislature passed Senate Bill (SB) 32, which codifies a 2030 GHG emissions-reduction target of 40 percent below 1990 levels. CARB recognizes cities as “essential partners” in reducing GHG emissions. CARB has developed a Local Government Toolkit with guidance for GHG reduction strategies such as improving transit, developing bicycle/pedestrian infrastructure, increasing city fleet vehicle efficiency, and other strategies.

Sustainable Communities and Climate Protection Act

Senate Bill (SB) 375, or the Sustainable Communities and Climate Protection Act, provides incentives for cities and developers to bring housing and jobs closer together and to improve public transit. The goal is to reduce the number and length of automobile commuting trips, helping to meet the statewide targets for reducing GHG emissions set by AB 32.

SB 375 requires each metropolitan planning organization to add a broader vision for growth to its transportation plan — called a Sustainable Communities Strategy (SCS). The SCS must lay out a plan to meet the region’s transportation, housing, economic, and environmental needs in a way that enables the area to lower GHG emissions. The SCS should integrate transportation, land use, and housing policies to plan for achievement of the emissions target for each region. The Humboldt County Association of Governments (HCAOG) is the applicable metropolitan planning organization for Arcata and the surrounding region (see description of Humboldt County Association of Governments [HCAOG] and the RTP/SCS below).

Regional and Local

Humboldt County Association of Governments

HCAOG is a Joint Powers Agency composed of the seven incorporated cities (Arcata, Blue Lake, Eureka, Ferndale, Fortuna, Rio Dell, and Trinidad), and the County of Humboldt. It is the designated Regional Transportation Planning Agency as well as the Service Authority for Freeway Emergencies (SAFE). The agency is largely responsible for programming state highway, local street and road improvements, public transportation resources, and the roadside call box program. HCAOG also bears responsibility for preparing and implementing the Regional Transportation Plan (RTP). The transportation planning and programming processes are accomplished by a multi-layered committee structure.

Humboldt Regional Transportation Plan: VROOM (Variety in Rural Options of Mobility) 2022-4042

Under its authority as the Regional Transportation Planning Agency for Humboldt County, HCAOG adopts and submits an updated Regional Transportation Plan to the California Transportation Commission and Caltrans every five years. The Regional Transportation Plan is a long-range (20-year) transportation planning document for Humboldt County. The most recent update of the HCAOG RTP was completed in 2022.

The most recent RTP update, VROOM 2022-2042, is a long-range planning document covering a 20-year planning horizon. It charts a course to provide Variety in Rural Options of Mobility (“VROOM” for short). Mobility means the ability to access everyday destinations in a manner that is convenient, affordable, and safe.

The RTP includes strategies that aim to meaningfully reducing the transportation sectors’ levels of greenhouse gas emissions. Achieving a substantial mode shift to more walking, biking and transit trips is a pillar for climate action in Humboldt County. HCAOG also supports the shift to zero-emission vehicles. The RTP contains policies to support zero-emission vehicle fueling infrastructure and to encourage the shift to zero-emission transit vehicles, school buses, and municipal fleets. The RTP advocates strategies to reduce vehicle miles travelled as a

key component of a sustainable transportation system, including effective land use policies to create places with a mix of uses and pleasant, vibrant streetscapes.

The overall goal of the RTP is for Humboldt Count to have a carbon-neutral, multi-modal transportation system that is comprehensive, safe, sustainable and equitable so that that people in the region can travel and move goods by the modes that best suite the individual or business/industry and society at large. Other key regional goals identified in the RTP aim to:

– reduce regional vehicle miles traveled,
– increase transit ridership,
– transition to zero-emission fleets,
– improve accessibility through better land use,
– achieve zero pedestrian and bicyclist fatalities, and
– increase active transportation education.

Priority objectives identified in the RTP are summarized below:

– Active Transportation Mode Share/Complete Streets – Increase multi-modal mobility, balanced mode shares, and/or access.
– Economic Vitality – Support the local or regional economy by improving goods movement and transportation access, efficiency, and cost effectiveness.
– Efficient & Viable Transportation System – Make the transportation system operate more efficiently
– Environmental Stewardship & Climate Protection – Enhance the performance of the transportation system while protecting and enhancing the natural environment.
– Equitable & Sustainable Use of Resources – Advocate for costs and benefits (financial, environmental, health, and social) to be shared fairly.
– Safety and Health – Increase safety for all roadway users.

Humboldt Transit Development Plan

The 2023-2028 Transit Development Plan (TDP) was prepared for the Humboldt County Association of Governments (HCAOG) to help provide guidance to local agencies on service programs, capital improvements and financial strategies to improve the public transit services in Humboldt County over a five-year period. Recommended alternatives in the TDP include:

– Adjust Schedule to Better Match University Class Schedules – The TDP identified adjustments to transit schedules that allowed more time for students to get to class from campus stops would encourage more transit use. The TDP recommends the Red and Gold Routes to be operated during Cal Poly Humboldt class sessions, and the Orange Route while classes are out of session in the summer.
– Cal Poly Express Route Services (contingent on funding): Express services would be provided between Cal Poly Humboldt, Arcata Transit Center, and downtown Eureka in Peak Periods. The shorter route and fewer stops allow express runs to be provided every 30 to 40 minutes.

Humboldt Regional Bicycle Plan

The 2018 Regional Bike Plan prepared by HCAOG identifies bikeway system projects that could help make bicycling throughout Humboldt County a safe, convenient, and practical means of transportation. The plan states that HCAOG will work with and support local jurisdictions and local Native American Tribes to plan, install and maintain local bikeway networks, as well as to collaborate to build a comprehensive regional bicycle network linking cities, unincorporated areas, counties, the California Coastal Trail, and the Pacific Coast Bike Route. It states that Humboldt's regional bicycle network shall have:

– Regional bikeways that link communities and connect to local bicycle networks and facilities;
– Local bikeways that link to major activity centers, public transportation, recreation, and other destinations;

- Bicycle-friendly streets, as consistent with “Complete Streets” policies, designed with best current practices, and innovative treatments where appropriate;
- Comprehensive facilities that support bicycle travel, including, but not limited to, directional signage, bike maps, sheltered parking, and changing stations; and
- Bicycle facilities integrated to access other modes of transportation (e.g., driving, carpooling, public transit).

HCAOG encourages local jurisdictions to adopt the National Association of City Transportation Officials design guides, including the Urban Bikeway Design Guide and/or the Federal Highway Administration’s Small Town and Rural Multimodal Networks as their primary guides for designing innovative bicycle facilities.

The Regional Bike Plan identifies the following proposed bikeways in Arcata as short-term regional priority projects (not yet completed):

- Annie & Mary Trail
- 11th Street Corridor (Janes Road to Bayview Street) – Class II / Class III
- F Street (7th Street to 14th Street) – Class I / II
- Sunset Avenue east (L.K. Wood Boulevard to Jay Street) – Class I

Humboldt Regional Pedestrian Plan

This plan adopted by HCAOG in 2008 helps to guide the planning of countywide pedestrian infrastructure. The Annie & Mary rail corridor is listed as a location for consideration for future trail construction.

Humboldt Regional Trails Master Plan

This plan was prepared by HCAOG in 2010. It identifies the Annie & Mary Trail as an important segment of the regional trail system to help connect multiple jurisdictions throughout the county.

City of Arcata Pedestrian and Bicycle Master Plan

The City adopted a Pedestrian and Bicycle Master Plan, last updated in 2010, that identifies pedestrian and bicycle conditions and various proposed improvements. This plan identifies projects to improve accessibility for pedestrians and bicyclists throughout Arcata, including identifying the Annie & Mary Trail as an important commuter, transportation, and recreation opportunity (City of Arcata 2010a). The City will continue to rely on the Pedestrian and Bicycle Master plan to guide multi-modal investment and will continue to work with HCAOG to incorporate current and future bicycle and pedestrian improvement projects and policies into regional documents (Humboldt Regional Bicycle Plan, etc.) as warranted.

City of Arcata Local Road Safety Plan

The City started working on the Local Road Safety Plan in 2021. The LRSP is a data-driven plan expected to identify safety issue throughout the City, develop future safety goals incorporating concerns from the public and a variety of stakeholders, expand methods for monitoring and evaluating the success of existing and future safety efforts, and help develop, prioritize, and implement future roadway safety improvement projects. Anticipated areas of focus for the City’s Local Road Safety Plan will be to increase pedestrian and bicyclist safety throughout the City with additional emphasis and analysis around local schools, reduce speeding, reduce impaired (DUI) driving, implement safety focused education programs, improve connectivity and access to transit, reduce intersection crashes, reduce improper yielding incidents, reduce hit and run incidents, and reduce total collisions and injury severity citywide.

City of Arcata Local Coastal Program

There are no transportation policies in the City of Arcata’s Local Coastal Plan applicable to the Project.

City of Arcata West End Specific Plan

This plan is based on market study focused on Happy Valley Industrial Park and Aldergrove Industrial Business Condo projects (City of Arcata 2018). The plan describes the need for pedestrian and bicycle network improvements and notes that the Annie & Mary Trail Connectivity project will help provide alternative transportation routes.

City of Arcata Parks and Recreation Master Plan

This plan notes that desires for recreational trails is increasing locally and nationally (City of Arcata 2010b). Developing trail systems, such as the Annie & Mary Trail, that connect parks, natural areas, businesses, commercial, and residential sections of town can help to support the health and wellness of communities and surrounding environment.

City of Arcata General Plan 2020

The current General Plan 2020 contains policies and standards related to transportation and circulation and describes the City's existing and proposed transportation system at the time it was adopted but would be replaced by the proposed General Plan 2045.

The General Plan 2020 contains a Transportation Element that comprehensively addresses transportation. This includes travel demand and transportation system management, bus transit, streets and highways, bicycle and pedestrian facilities, parking, trail routes, and transportation improvement funding. It contains policy direction for maintaining a balanced transportation system, with choices for transit, bicycle, and pedestrian as well as private vehicle transportation modes. It identifies implementation measures to help achieve each policy objective.

The General Plan 2020 Transportation Element identified the following Guiding Principles and Goals relevant to transportation:

A. Provide a transportation system which allows save and efficient travel.
B. Create a transportation system which provides a choice of travel modes.
C. Provide for increased use of alternatives to the single-occupant vehicle, including walking, bicycling, public transit, carpooling/vanpooling, and ridesharing.
D. Manage the street and highway system to promote more efficient use of existing capacities rather than increase the number of travel lanes.
E. Create a multimodal transportation system that will improve the livability of residential neighborhoods, including use of methods to calm or slow traffic and reduce through-traffic on local neighborhood streets.
F. Educate residents, employees, and students about the importance of using alternative forms of transportation instead of the single-occupant automobile.
G. Promote land use patterns that encourage walking, rolling, bicycling, and public transit use.
H. Establish a set of curb parking prices that are high enough to drive more active and shared transportation.

The General Plan 2020 Transportation Element includes the following policies and accompanying objectives:

Policy CM-1: Balanced Transportation System with Choice of Modes.

Objective. *Create and maintain a balanced transportation system with choice of bus transit, bicycle, and pedestrian as well as private automobile modes. Reduce the percentage of trips that are made by automobile and provide the opportunity and facilities to divert trips from automobiles to other modes.*

Policy CM-2: Travel Demand Management

Objective. *Reduce the percentage of automobiles and reduce the annual vehicle-miles of travel.*

Policy CM-3: Bus Transit System

Objective. *Maintain a bus transit system which connects and serves major commercial and employment areas within Arcata, Cal Poly Humboldt, public schools, and higher density residential areas. Increase average citywide transit mode share of daily person trips to 5% from the 1998 level of 3%.*

Policy CM-4: Circulation Maps and Context Sensitive Street Design

Objective. *Plan an internal circulation system consistent with Arcata's small-town, non-metropolitan character which: 1) efficiently utilizes existing facilities and reduces need for investment in new or expanded street and highway facilities or capacities; 2) improves connectivity of streets to provide for direct routes between origins and destinations; 3) has a high quality of regular maintenance and repair; and 4) maintains a level of service which minimizes delays, but allows for higher levels of congestion during the short peak periods on weekdays.*

Policy CM-5: Bicycle and Pedestrian Facilities

Objective. *Create a complete, interconnected bicycle and pedestrian circulation system. Provide a pedestrian and bicycle system which serves commuter as well as recreational travel.*

Policy CM-6: Parking Supply and Parking Management

Objective. *Provide an adequate supply of parking in perimeter lots downtown. Minimize the impacts of Humboldt State University parking into adjacent neighborhoods. Ensure that new development provides an adequate but not excessive supply of parking.*

Policy CM-7: Rail and Freight Transportation

Objective. *Provide a transportation system which adequately serves the freight shipment needs of the City's industrial and commercial uses. Recognize that freight transportation via truck or railroad is an essential element of the area's economic base.*

Policy CM-8: Financing Transportation Improvements

Objective. *Ensure that adequate funding is available to implement transportation improvements required to adequately serve the amount of growth allowed by the land use plan. Ensure that private development provides on-site transportation improvements and contributes an appropriate share of funding for off-site improvements.*

In addition, each of the Transportation Element policies includes sub-policies that provide direction for City actions aimed at achieving each of the policy objectives. The includes sub-policies that direct the City to invest in alternative modes, promote land use and development patterns that encourage walking, bicycling and transit use by emphasizing high density and mixed land- use patterns which translate into higher transit and pedestrian travel in the downtown and neighborhood commercial areas, and maintain a bus system that connects key land uses. This also includes sub-policies that define the City's functional street classifications with an accompanying map showing the citywide street classification network, describe types of bikeways, and describes minimum requirements for pedestrian facilities.

Proposed City of Arcata General Plan 2045

The proposed General Plan 2045 is described in detail in Chapter 2 Project Description. It includes a "Circulation and Mobility" Element that would replace the General Plan 2020 Transportation Element. The City's Pedestrian and Bike Master Plan (adopted 2010) informed this update.

The General Plan 2045 Circulation and Mobility Element provides an updated description of the existing and proposed transportation system, describes proposed policies and standards, and is correlated with the Land Use Element of the General Plan 2045. The proposed General Plan 2045 Circulation and Mobility Element has been updated to expand efforts to provide Complete Streets with a more balanced and convenient multi-modal

transportation network that meets the needs of all users of streets, roads and highways (including bicyclists, pedestrians, children, persons with disabilities, motorists, movers of commercial goods, users of public transportation, and seniors) for travel in a manner that is appropriate within the context of our community and places the safety of people first, both outside of vehicles and within them. Figure 4.2-5 illustrates the proposed vehicular network as described in the General Plan 2045 Circulation and Mobility Element, and Figure 4.2-6 illustrates the proposed bikeway and trailway network.

In addition, the General Plan 2045 Gateway Area Plan Element proposes to convert two-way streets into one-way couplets on 8th Street and 9th Street (continuation west of I Street). This would allow new opportunities for implementing active transportation (bicycling and walking) elements as part of the Gateway Area Plan, including the addition of Class IV separated bikeways. Class IV bikeways facilities are designed within the roadway using barriers such as bollards, raised medians, vehicle parking and other devices creating a physical separation between vehicle traffic and people riding bicycles. Additional active transportation proposals included in the Gateway Area Plan Element include the Shared Street, “Woonerf” concept proposed on 6th Street between K Street and L Street. Through this concept: walking and bicycling are the primary modes emphasized and vehicle traffic is de-emphasized. Through traffic calming, lowered speed limits and enhanced streetscapes, shared streets allow more public space opportunities that prioritize people over vehicles.

Outside of the Gateway Area Plan boundary, the General Plan 2045 Circulation and Mobility Element received minor changes from the Arcata General Plan 2020 with a clear renewed emphasis on safety, reflected in new language intended to ensure slow speeds and traffic calming are prioritized on all City streets, and de-emphasize Level of Service (LOS) as a criterion for evaluating impacts of new proposed development, instead relying on methods that better measure a project’s transportation-related environmental impacts such as vehicle miles traveled. Other changes include updated descriptions of the existing circulation system, travel patterns, travel demand and traffic operations; updates to the planned future circulation system; minor enhancements to the goals and policies; and updated implementation programs.

The General Plan 2045 Circulation and Mobility Element modifies the Guiding Principles and Goals of the 2020 General Transportation Element to state the following:

A. Provide a connected multimodal transportation and mobility system that contributes directly to the safety, health, economic vitality, and quality of life of all people in Arcata.
B. Create a transportation system that incentivizes a choice of travel modes and is safe, accessible, comfortable, accommodating, and welcoming to all users. Put safety first in all mobility planning, policies, and projects.
C. Provide for increased use of active and shared transportation modes as alternatives to the single-occupant vehicle, including walking, rolling, bicycling, public transit, carpooling/vanpooling, and ridesharing.
D. Prioritize investment and transportation planning which shifts the City's transportation system from being car-centric to one in which transit and active transportation are competitive or superior to single-occupancy vehicles in terms of convenience, perceived and actual safety, and accessibility for all residents.
E. Manage the street and highway system to promote more efficient use of existing facilities rather than increase the number of travel lanes or make other capacity enhancements.
F. Create a multimodal transportation system for people of all mobility levels that will improve the livability of residential neighborhoods, including use of methods to calm or slow traffic and reduce through-traffic on local neighborhood streets.
G. Educate residents, employees, and students about the importance of using alternative forms of transportation and mobility instead of the single-occupant automobile.
H. Promote land use patterns that encourage walking, rolling, bicycling, and public transit use.
I. Establish a set of fee-based parking prices that are high enough to drive more active and shared transportation.
J. The City recognizes that safe mobility is a right of all people in Arcata.

The General Plan 2045 Circulation and Mobility Element generally retains the existing mobility concepts reflected in policies and objectives contained in the General Plan 2020 Transportation Element, with minor refinements throughout. Primary areas of focus for updates included a de-emphasis of Level of Service as a management consideration for City streets as well as policy related to parking provisions and single-occupancy vehicle use, and updates to Policy CM-4 to incorporate Complete Streets policy.

Policy CM-1: Balanced Transportation System with Choice of Modes

Objective. *Create and maintain a balanced transportation system with choice of bus transit, bicycle, and pedestrian as well as private automobile modes. Reduce the percentage of trips that are made by automobile and provide the opportunity and facilities to divert trips from automobiles to other modes. In planning for improvements to the overall circulation system, design the system to accommodate the planned amount of growth outlined in other policies. Ensure the circulation system supports a functioning, safe, sustainable multi-modal network. Support increased demands for all efficient forms of mobility emphasizing alternative modes pedestrians, bicycles, and other non-motorized or shared transit options, then vehicles, and trucks, in an effort to induce demand of multimodal transit alternatives and implement transportation demand management strategies, in keeping with citywide Circulation Element policies.*

Applicable sub-policies:

- ***CM-1a: Complete Streets.*** *The City shall direct the design, construction, reconstruction, repair and maintenance efforts on the City's streets, bridges, pathways, and sidewalks, creating a comprehensive, integrated transportation network that is safe, accessible, comfortable, accommodating, and welcoming to users of all ages, races, ethnicities, incomes, and physical abilities, and all modes of transportation, particularly those walking, rolling, biking, and using transit, and in doing so the City shall apply a Complete Streets framework in all applicable and feasible transportation projects to allow the safe, comfortable, convenient and accessible use of streets for all street users. Throughout the City, design sidewalks and street crossings for maximum accessibility. Accessibility features may include but are not limited to widening sidewalks, requiring high-visibility/striped crosswalks, installing bulb-outs, pedestrian activated crossing signals, and aligning ramps with path-of-travel. Where the urban grid pattern is interrupted or incomplete, evaluate opportunities to continue the circulation block patterns with new connections that consist of entirely non-vehicular active transportation facilities.*
- ***CM-1b: Investment in alternative modes.*** *In order to provide a realistic and cost-effective balance between travel modes, the City shall emphasize investment in alternative modes (bikeways, etc.) as a priority over increasing vehicular capacities of streets.*
- ***CM-1c: Interconnections and transfers between travel modes.*** *The City shall provide and maintain a Transit Center to facilitate interconnection and transfers between bus routes and systems. As funding permits, Transit Center facilities shall be improved to encourage its use as a multi-modal transfer point. Pedestrian and bicycle amenities shall be provided at other locations which serve as modal transfer points such as bus stops and park-and-ride lots.*
- ***CM-1d: Intercity travel.*** *The City shall coordinate with Humboldt County and Caltrans to provide adequate facilities for vehicles, buses, and bicycles to serve intercity demand. Joint efforts may include transportation improvements outside of Arcata which serve intercity travel, such as bicycle links, timed-transfer bus stops, park-and-ride lots, and regional transit service and development of park-and-ride lots in Arcata to reduce intercity vehicular travel.*
- ***CM-1e: Critical transportation facilities.*** *Critical transportation facilities for emergency vehicle access and emergency evacuation shall be maintained and improved as a priority need. However, when determining needed improvements, ease and speed of emergency vehicle access shall at all times be weighed against safe design for all street users. Critical transportation facilities include the major routes into and out of the City such as Highways 101, 299, and 255, their interchanges with City streets and primary intra-city street connections including Samoa Boulevard, 11th Street, "G" and "H" Streets, Sunset Avenue, L.K. Wood Boulevard, Alliance Road, Janes Road, and Giuntoli Lane. Due to the*

potential for structural failure of these facilities in a seismic emergency, alternative routes and procedures for their use shall be identified.

- ***CM-1f: Parking and public transit service study.*** *The City shall undertake a comprehensive study of parking and public transit service options for the downtown/uptown area and Cal Poly Humboldt, with cost/revenue implications presented for each option. This study shall be undertaken jointly with Cal Poly Humboldt.*
- ***CM-1g: Mobility equity.*** *The City will adopt policies, pursue plans, and implement programs and projects that further transportation and mobility equity. Safe mobility is a right of all people in Arcata.*

Policy CM-2: Travel Demand Management

Objective. *Reduce the percentage of automobiles and reduce the annual vehicle-miles of travel.*

Applicable sub-policies:

- ***CM-2a: Land use development patterns.*** *The City encourages and supports travel demand management efforts. The City shall promote land use and development patterns that encourage walking, bicycling and transit use. In recognition of the link between land use and transportation, the land use plan shall discourage low density, homogenous land-use patterns that foster automobile travel and are impractical to serve with transit. Land use planning shall emphasize high density and mixed land- use patterns which translate into higher transit and pedestrian travel in the downtown and neighborhood commercial areas. Infill, redevelopment, and reuse of underutilized property at higher densities shall be encouraged prior to outward expansion of City boundaries. The following land use measures are emphasized:*
  1. *Mixed-use neighborhood centers within transit corridors which include housing and commercial services near employment.*
  2. *Land use patterns which maximize linking trip opportunities by assembling uses, thus allowing people to take care of a variety of daily needs with a single trip.*
  3. *Clustering of higher density housing and incorporation of residential units on upper floors of commercial buildings.*
  4. *Integration of new housing into neighborhood shopping centers, including Sunny Brae, Westwood, and Valley West.*
  5. *Pedestrian-oriented land use and urban design, including the following elements:*
     a. *Pedestrian-scale block patterns;*
     b. *Incorporate pedestrian and bicycle amenities into public and private projects;*
     c. *Design streets for multi-modal use;*
     d. *Integrate transit stop facilities into public and private projects;*
     e. *Orient buildings and houses to the street;*
     f. *Provide attractively landscaped streets and buffers;*
     g. *Preserve existing and historic urban fabric;*
     h. *Eliminate blank wall facades;*
     i. *Incorporate bicycle routes and enhancements in public and private projects.*
  6. *A fixed urban services boundary to reduce sprawl and infrastructure costs.*
  7. *Focused growth along existing or planned transit corridors rather than extension of transit to serve new isolated development.*
  8. *Prevention of large areas of single uses. Isolated single-use developments at the edge of the City could encourage automobile travel for commuting and errands.*
  9. *Provision of convenience retail and services in ground floor space in the downtown to accommodate the needs of employees and reduce the need for mid-day automobile trips.*
  10. *Adopt and maintain zoning regulations that allow for a mix of land uses in order to reduce vehicle trips and the overall need for automobile use.*

Policy CM-3: Bus Transit Policy

Objective. *Maintain a bus transit system which connects and serves major commercial and employment areas within Arcata, Cal Poly Humboldt, public schools, and higher density residential areas. Strive to add additional routes to meet future demands and increase average citywide transit mode share of daily person trips to 12% from the 2020 level of 3%.*

Applicable sub-policies:

- ***CM-3a: 5-year transit plans.*** *The City shall maintain the existing A&MRTS routes (as shown in Figure CM-e), frequency, and level of service as funding permits.*
- ***CM-3b: Regional transit service.*** *Short- and long-range transit plans shall be coordinated with the regional transit service provided by the Redwood Transit System. The City supports regional transit plans which improve service and timed transfers and reduce headways for intercity travel. In the interest of enhanced coordination and efficiency for local and regional service, the City shall continually evaluate alternatives to existing services including potential mergers with the Humboldt Transit Authority or other service providers.*
- ***CM-3c: Bus route system.*** *Public transportation is both a civil right and a critical climate solution and should be designed to provide service competitive with automobile travel in terms of access, convenience and comfort. Potential improvements to the transit system should be assessed according to the best available evidence of both need and existing and induced demand. In order to increase safety and access to basic needs, work with relevant transit agencies, major employers, key user groups, and area schools to plan for enhanced public transit and school bus lines and new stops to both accommodate the new growth and serve existing community needs.*
- ***CM-3d: Transfers between routes and systems.*** *The public transit system shall provide convenient transfers between routes, other transit services, and other modes of travel such as bike share locations with racks for one-way trip use. The Arcata Transit Center shall serve as the primary multi-modal transfer station. Bus stops should be located near municipal parking lots or future park-and-ride lots. The A&MRTS and Redwood Transit System schedules shall be coordinated to provide a timed-transfer system at key stops.*
- ***CM-3e: Bus stops.*** *Existing bus stops should be improved and new bus stops on future routes should be designed with appropriate amenities and features. Design elements include either bus stop lanes or bus turnouts. Bus stop design amenities which increase rider comfort and feeling of safety and encourage walking and bicycling are emphasized, including shelters, benches, lighting, shade trees, signs, information kiosks, waste receptacles, paved surfaces, facilities for disabled and alter-abled riders, and secure bicycle parking. Prioritize covered seating at all bus stop locations wherever feasible. Bus stop areas should be consistently maintained and cleaned, including vandalism repair and graffiti removal. Developers shall be required to provide bus stops and amenities on their frontage if the property is located on an existing or future bus route and is an appropriate location for a stop. Pedestrian and bicycle access should be provided to neighborhood bus stops.*
- ***CM-3f: Transit subsidies.*** *The City supports continued A&MRTS contract services with Cal Poly Humboldt to provide subsidized fares to its students and employees. This revenue source, which allows these users to ride without cost to the individual, is the single most important Transportation Demand Management strategy for Arcata.*
- ***CM-3g: Transit implications of new development.*** *The engineering department and A&MRTS shall evaluate proposed new development projects and make recommendations prior to project approval regarding transit improvements and road designs.*
- ***CM-3h: Use of Micro-transit.*** *The City shall study investigate the possibility of pairing its traditional fixed-route bus system with an on-demand micro-transit system which could serve lower density areas and feed into the fixed route system to increase transit mode share.*

Policy CM-4: Circulation Maps and Context Sensitive Street Design Policy

Objective. *Plan the circulation network consistent with Figure CM-k and Figure CM-i to create Complete Streets solutions that are appropriate to individual contexts; that best serve the needs of all people using streets and that support the land-use, climate, safety, and environmental quality targets and policies of the City and which: 1) efficiently utilizes existing facilities and reduces need for investment in new or expanded street and highway facilities or capacities; 2) improves connectivity of streets to provide for direct routes between origins and destinations; 3) has a high quality of regular maintenance and repair; and 4) to the extent feasible, maintains a level of service which minimizes delays, acknowledging LOS is not a high priority of the City in street design.*

Applicable sub-policies:

- ***CM-4a: Freeways and Highways.*** *The following standards shall apply to State Routes 101 and 299, and State Route 255:*
  1. *No additional travel lanes. The City does not support development of any additional through-travel lanes to State Routes 101, 299, or 255 in Arcata or nearby areas.*
  2. *Auxiliary lanes. The City does not support construction of auxiliary lanes between existing interchanges, or any new interchanges, on State Route 101.*
  3. *Interchange improvements. The City supports interchange improvements that increase safety and reduce potential conflicts created by unrestricted access from freeway off-ramps.*
  4. *Landscaping. The City encourages Caltrans to maintain and improve landscaping along freeway corridors in Arcata and surrounding areas to improve aesthetics and provide a visual and noise buffer.*
  5. *Undesignated right of way. All public rights of way with no land use designation (i.e. freeways, highways and associated interchanges) shall be used for transportation purposes only, including multi-modal use. All land uses within these rights of way shall be for transportation or related (i.e. lighting, drainage, utilities, pedestrian and bicycle) purposes.*
- ***CM-4b: Vehicular Circulation.*** *The following shall apply to vehicular circulation routes:*
  1. *Alternative street cross-sections. The Engineering Department shall prepare alternative cross-sections for existing and proposed new arterial, collector, and local streets utilizing a smaller right-of-way and that reduces traffic speed and shall be designed to allow the safe, comfortable, convenient and accessible use of streets for all roadway users.*
  2. *No additional vehicular travel lanes. Street projects shall not be designed solely to improve vehicular traffic flow and LOS shall be de-emphasized in street capacity planning and design. If congestion occurs, it shall be managed using alternative methods such as diversion of trips to other travel modes or intersection improvements. Construction of additional vehicle travel lanes shall not be considered unless it supports the land-use, climate, safety, and environmental quality targets and policies of the City.*
  3. *Improvements at intersections. Improvements at intersections shall be designed to allow the safe, comfortable, convenient and accessible use of streets for all roadway users.*
     a. *Minor improvements at intersections. Minor projects to improve traffic safety include redistributing lane allocations and coordination of traffic signals. The City shall consider developing traffic signals and signalized pedestrian crossings to accommodate new or denser land uses, traffic patterns, and safety concerns, especially in the Downtown, Gateway Area, and the Giuntoli/Valley West neighborhood.*
     b. *Minimize the installation of new traffic signals. New traffic signals shall be provided only in instances where there is no feasible alternative to relieve a demonstrated safety problem at an intersection (based on documented collisions). Alternatives which shall be studied prior to signals include roundabouts or installation and monitoring of all-way stop signs.*
- ***CM-4c: Slowing traffic.*** *The City shall employ a range of measures to reduce speeds and "calm" traffic throughout the City to improve safety and comfort for those walking, rolling, biking, and taking transit:*

1. *Transportation Safety Committee. The Transportation Safety Committee holds regular public meetings and reviews matters related to traffic safety in Arcata and make recommendations to the Council, Commissions, or City staff as appropriate. Measures requested by residents or property owners, or initiated by City staff, that intended to slow traffic shall/should be presented to the Transportation Safety Committee for recommendations. The Transportation Safety Committee shall make recommendations after a public meeting where any public comments are heard.*
2. *Measures should be context sensitive and may include the installation of physical infrastructure, such as street trees, speed bumps, speed humps, narrowing streets, mid-block crossings, and bulb outs, while ensuring that the techniques employed have the effect of slowing traffic without compromising emergency access.*
3. *The installation of speed tables, humps and lumps shall adhere to the then current City of Arcata policy regarding installation of speed tables, humps and lumps for residential and local streets administered by the Department of Building and Engineering.*
4. *All neighborhood streets shall remain open to through vehicle travel unless there is a demonstrated warranted application of safe streets policy that cannot be adequately addressed through the measures identified above, as determined by the City Engineer.*

- ***CM-4d: Street maintenance.*** *The Pavement Management System shall be maintained to identify and prioritize street maintenance projects in the City's Capital Improvement Program (CIP). The maintenance program shall include regular street cleaning and repair of pavement, sidewalks, multi-use paths, and bicycle lanes, and pay particular attention to conditions that discourage bike usage.*

Policy CM-5: Bicycle and Pedestrian Facilities

Objective. *Create a complete, interconnected bikeway system and pedestrian network. Increase the percentages of person trips via walking and bicycling, which serves the full range of mobility needs.*

Applicable sub-policies:

- ***CM-5a: Overall bicycle route system and connectivity.*** *Bicycle trails and facilities are shown in Figure CM-i. The bikeway system shall be improved and expanded consistent with the City of Arcata Pedestrian & Bicycle Master Plan and applicable Regional Transportation Plans prepared by the Humboldt County Association of Governments (HCAOG) to serve new development and activity centers. Routes that provide access to and between major destinations including public facilities, schools, parks and open space, employment, and shopping, shall be the highest priority. Future improvements may be made which upgrade bike routes to a higher class. The City shall:*
  1. *Regularly (at least every five years) update the City of Arcata Pedestrian & Bicycle Master Plan and coordinate planning efforts with Caltrans and the Humboldt County Association of Government's bicycle plans and advocacy groups to provide continuous bicycle routes.*
  2. *Maintain existing bicycle routes and provide additional routes where feasible connecting the various neighborhoods with Cal Poly Humboldt. Class IV bike lanes shall be provided on routes with the highest bicycle demand where there is sufficient right of way; in areas with insufficient right of way, Class II lanes shall be considered.*
  3. *Improve and maintain bicycle infrastructure including removal of height differences between pavement and gutter pans, smooth pavement on street edges, drainage inlet grates, and street cleaning to remove debris from street shoulders.*
  4. *Continue to implement Pedestrian & Bicycle Master Plan bicycle boulevard project, including the public awareness campaign about the form, functions, and routes of the bicycle boulevards, with messages that bicycle boulevards are preferred routes for bicyclists and pedestrians and do not exclude motor vehicle traffic.*
  5. *Emphasize Class IV bike lanes where greatest benefit, and not in conflict with other community values or amenities where warranted.*
  6. *The presence of on-street parking may be eliminated in favor of adding or enhancing non-motorized facilities, such as sidewalks, bike lanes, landscaping, Class I trails, etc.*
  7. *Class II bicycle facilities (i.e., standard bike lanes) may be converted to Class IV bicycle facilities*

(i.e., protected bike lanes), which may necessitate adjustments to the dimensions of other features.

- ***CM-5b: Bikeway system and pedestrian network standards.*** *The City of Arcata Pedestrian & Bicycle Master Plan and Humboldt County Association of Governments (HCAOG) Humboldt Regional Bicycle Plan contain appropriate design standards and guidelines for the proposed bikeway system and pedestrian network improvements in the City of Arcata. Continue to work with regional partners and HCAOG to plan improvements to the bikeway system and pedestrian network.*

  1. *Right of way opportunities. As opportunities arise, the City shall utilize existing or acquire new easements or right of way for Class I bikeways. Such opportunities may include connecting dead-end streets in new developments with existing neighborhoods, along streets with excess width and unpaved right of way, along drainage channels or creeks, or along abandoned railroad rights of way.*

- ***CM-5c: Bicycle parking facilities.*** *Secure bicycle parking facilities shall be provided at important activity centers, civic facilities, apartment complexes, employment centers, shopping centers, major bus stops, and schools. Bicycle parking facilities include racks, lockers, and bollards.*

  Developers shall be required to provide a minimum number of bicycle parking devices at convenient and visible ground-floor locations within the development. Bicycle parking should be located in an interior location near an entrance whenever feasible. The required number of bicycle parking spaces shall be calculated as a proportion of the number of users.

  Designate locations for public, outdoor bike lockers coordinated with public transit stops accessible in the public right-of-way.

- ***CM-5d: Pedestrian network enhancements.*** *Prioritize implementation of improved pedestrian facilities and enhancements linking residential areas with important destinations such as health care, education, employment, shopping, and recreation with priority given to neighborhoods with the greatest need (disadvantaged communities, etc.). The following pedestrian improvements and safety enhancements should be considered in future planning for these areas:*

  1. *Close sidewalk gaps.*
  2. *Install vertical curbs to keep vehicles from parking on sidewalks.*
  3. *Reduce street crossing distance with curb extensions and smaller curb radii.*
  4. *Use on-street parking as a pedestrian buffer.*
  5. *Install textured crosswalks.*
  6. *Provide adequate street lighting focused on crossings.*
  7. *Restrict parking near crosswalks to improve sight distance.*
  8. *Install rumble strips on approaches to crosswalks.*
  9. *Plant street trees or place street trees in planters in the parking lane.*
  10. *Relocate intersection stop bars five feet back from crosswalks to improve driver and pedestrian visibility.*
  11. *Install wayfinding signage where appropriate.*
  12. *In all newly created roadways, incorporate curb extensions (“bump outs”) or other design features to increase pedestrian visibility and safety at crosswalks, calm traffic speeds, and provide space for rain gardens, tree planting, street furnishings, and other amenities.*
  13. *Connect the City to the Downtown/Plaza core with safe and attractive pedestrian friendly walking routes that incorporate art and street lighting.*

- ***CM-5e: Pedestrian pathways and multi-use trails.*** *Pedestrian pathways or multi-use trails for the exclusive use of non-motorized transportation modes should be provided. Pathways may be long facilities located along corridors or short facilities providing direct access through development projects or connecting areas not directly accessible by streets. Pathways should be planned to serve the full range of mobility needs for people of all ages, races, ethnicities, incomes, and physical abilities. The following shall apply to pedestrian pathways or multi-use trails:*

  1. *Easement or right of way dedication. Dedication of easements or rights of way for pathways*

through new private developments may be required.

2. *Cooperation with local and regional agencies and jurisdictions. The City shall cooperate with other agencies to establish and maintain off-street pathways and trails utilizing creek, utility, and railroad right of way.*
3. *Other Locations. Other potential locations for multi-use paths are within the North Coast Railroad right of way from Giuntoli Lane to Samoa Boulevard, along the west side of Samoa Boulevard/Old Arcata Road east of State Route 101, and along the perimeter of Arcata Bay towards Manila.*
4. *Create separated walk/bike lanes in multi-use trails with explanatory signage on placement and how to safely pass, as deemed necessary based on increased use in future.*
5. *Provide sidewalks or multi-modal trails on both sides of all streets.*
6. *Support ride share in various modes (car, bike, etc.) through public and private infrastructure, and encourage systems designed to provide access to shared facilities. Improvements and programs should include public options, such as bike share racks or carpool parking, public-private partnerships for vehicle share, and private facilities or programs, such as projecCM-based car share.*
7. *In general, retain the current total linear feet of Class I trails within the City, even if current facilities must be realigned or relocated to other routes. In limited circumstances, the City shall retain the discretion to allow an applicant to demonstrate removal or relocation of Class I Trail sections would improve active transportation access and connectivity. Collaborate with the Great Redwood Trail Agency and other landowners and agencies to retain and expand the Class I trail and Class 4 bikeways throughout the City.*
8. *Reduce vehicle trips from other parts of the City by creating pedestrian and bicycle-friendly corridors that draw residents and visitors to enter the various neighborhoods via means other than motorized vehicles. Fulfill the potential of the existing and planned Class I trails by planning for expanded connections that will draw bikes/peds from between activity centers.*

- ***CM-5f: Sidewalks.*** *A continuous and interconnected system of sidewalks shall be provided throughout the City. The existing standard right of way of most arterials, collectors, and local streets (fifty feet) permits a five-foot sidewalk in each direction, the minimum width to comply with Americans with Disabilities Act (ADA) requirements. Some commercial areas in downtown Arcata should have wider sidewalks to accommodate higher levels of pedestrian traffic and window-shopping. The following standards shall apply to sidewalks:*

  1. *Sidewalk continuity. Gaps in existing sidewalks should be closed to provide a continuous pathway. Cul-de-sacs should be discouraged because they disrupt pedestrian connectivity.*
  2. *Sidewalk widths. New development projects shall be required to construct or reconstruct sidewalks along the property frontage in accordance with adopted City standards. Explore sidewalk widening strategies that include land dedication or easements to create unobstructed accessible pedestrian pathways.*
  3. *Sidewalk Requirements. Where adequate width exists to maintain ADA clearance, sidewalk pedestrian amenities should be provided in the downtown commercial area. These include benches, bicycle parking, pedestrian-scale lighting, street trees, flower boxes, trash receptacles, drinking fountains, and awnings. Private development projects shall be required to include sidewalk improvements; other landowners are encouraged to provide improvements.*
  4. *Sidewalk Maintenance. Sidewalk facilities shall be systematically inspected and maintained to clean and repair damaged surfaces and remove impediments such as poles, newspaper racks, and other obstructions that interfere with pedestrian flow.*

- ***CM-5g: Retention of railroad right of way.*** *The Great Redwood Trail Authority, as the holder of the former North Coast Railroad Authority right of way, is encouraged to maintain railroad rights-of-way through railbanking for interim use as a multi-purpose trail. The City may consider purchase of right of way should the Authority decide to sell. Railroad right of way may potentially be used for creation of multi-use trails. Long range potential uses of railroad right of way include an exclusive bus transitway or passenger rail service.*

- ***CM-5h: Rails to trails conversions.*** *The City supports plans to convert abandoned railroad rights-of-way to provide multi-use trails. Planning efforts shall be coordinated with federal, state, and regional agencies to obtain funds to purchase or lease abandoned lines if the railroad authority selects not to dedicate the right of way. If feasible, active railroad lines may be used for multi-use trail purposes.*

Policy CM-6: Parking Supply and Parking Management

Objective. *Manage parking to reduce the incentive for single occupancy vehicle use.*

Applicable sub-policies:

- ***CM-6a: Downtown parking.*** *The following shall apply to parking within the Downtown area:*
  1. *Smart Meter System. The City shall explore implementing a smart parking meter system in the Downtown area to manage parking demand while generating revenue to support public transit and/or active transportation.*
  2. *In-lieu fee for on-site parking. Payment of a fee in-lieu of providing required parking spaces should be required in the Central Commercial District or for Landmark Historic Structures. Fees collected shall be used exclusively to fund municipal off-street parking lots or alternative travel mode facilities.*
  3. *On-site parking standards. The City should reduce or eliminate the parking standards applicable within the downtown area. New development is encouraged to pay in-lieu fees rather than provide parking on-site within the immediate Plaza area. Any on-site parking in the downtown should be located to the rear or side of buildings. Park and ride, car shares, downtown parking benefits districts, and other measures to encourage alternative transportation shall be considered.*
- ***CM-6b: Parking in neighborhoods impacted by Cal Poly Humboldt.*** *The City shall employ the following measures to reduce the impacts of University related parking on the surrounding neighborhoods:*
  1. *Management of on-street parking. Metered on-street parking shall continue to be provided along local streets in the neighborhoods south of Cal Poly Humboldt to prevent all-day parking by students.*
  2. *Preferential parking zones. The restrictive residential permit parking program shall be maintained for neighborhoods severely impacted by Cal Poly Humboldt to provide residents and their visitors more on-street parking and to discourage students from driving to campus.*
  3. *Other parking management approaches. Alternative parking management approaches shall be considered if the student population and parking demand increases. Alternative approaches include time limit parking without meters, increasing no-parking zones to decrease supply of spaces, and implementing a strictly enforced tow-away policy. The City encourages Cal Poly Humboldt to reduce parking impacts on the City.*
- ***CM-6c: Parking standards for new development.*** *The City's should continue to specify maximum parking requirements for new development and eliminate minimum parking requirements. Parking lots should be located, where feasible, to the rear or side of commercial and multi-family residential buildings.*
- ***CM-6d: Shared or joint-use parking for commercial development.*** *Reductions in the individual use parking requirements should be considered where two or more uses provide joint parking. Developers of projects with appropriate land uses for effective shared parking are encouraged to provide joint parking facilities. Examples of compatible land uses include office buildings and any use that generates primarily an evening parking demand such as restaurants and theaters.*

Policy CM-7: Freight Transportation

Objective. *Provide a transportation system which adequately serves the freight shipment needs of the City's industrial and commercial uses. Recognize that freight transportation via truck is an essential element of the area's economic base.*

Applicable sub-policies:

- ***CM-7a: Truck routes.*** *The circulation system shall be planned to provide truck mobility to serve all commercial and industrial land uses in Arcata. Specific truck routes are designated in Figure CM-f, although other highways, arterials, and collector streets may be designated in the future. The City shall actively enforce truck routes and speed limits.*

Policy CM-8: Financing Transportation Improvements

Objective. *Ensure that adequate funding is available to implement transportation improvements required to adequately serve the amount of growth allowed by the land use plan. Ensure that private development provides on-site transportation improvements and contributes an appropriate share of funding for off-site improvements.*

Applicable sub-policies:

- ***CM-8a: Developer responsibilities and exactions.*** *Developers shall be required to construct transportation improvements along their property frontages. Where appropriate, a traffic impact study shall be required which identifies on-site and off-site impacts and mitigation measures.*

  The developer shall be required to provide all necessary access and circulation facilities within the property and such facilities shall be designed to meet City standards. The following improvements may be required, based on the individual context and the needs of all people using streets and the right-of-way; and that support the land-use, climate, safety, and environmental quality targets and Complete Streets policies of the City:

  1. *If development is located on an existing street:*
     a. *Dedication of right of way;*
     b. *Bicycle lane and parking lane;*
     c. *Reconstruction of curb, gutter and sidewalk;*
     d. *Transit facilities and landscaping within the right of way.*
  2. *If development is located in a new growth area not served by streets:*
     a. *Dedication of right of way to construct a street to connect the project site to a public street, which accommodates all modes of transportation, particularly those walking, rolling, biking and using transit;*
     b. *Construction of the street and connecting intersection(s) to City standards;*
     c. *After the dedication is accepted, the City will maintain the street.*
  3. *In all instances, the developer shall be responsible for mitigating any off-site mobility impacts of the proposed development in a manner consistent with the policies of this plan. Measures may include installation of additional pedestrian, bicycle and transit amenities to encourage alternative travel modes; or implementation of Transportation Demand Management measures.*
- ***CM-8b: Subdivision improvements.*** *All on-site transportation infrastructure shall be constructed using standards approved by the City. Developers are required to establish mechanisms, such as homeowners associations, to provide future maintenance of on-site streets and intersections that are not dedicated. The City may elect to require streets connecting to a public street to be dedicated to the City.*
- ***CM-8c: Traffic/Vehicle Miles Traveled impact fees.*** *The City may adopt a citywide traffic impact fee to fund transportation improvements to mitigate the mobility impacts of new development based on a Vehicle Miles Traveled (VMT) or similar analysis. The traffic impact fee may substitute in whole or in part for the off-site mitigation requirements described in Policy CM-8a, but would be in addition to the developer's responsibility for on-site and frontage improvements. The traffic impact fee may be used to fund roadway extensions, intersection improvements, safety improvements, transit facility improvements, and pedestrian and bicycle facilities or amenities.*

- ***CM-8d: Transit finance.*** *A&MRTS should continue to fund capital and operating expenses through fare box revenue, Cal Poly Humboldt, and state and federal subsidies. The City will explore the possibility of new development contributing a one-time fee towards A&MRTS capital expenses through the citywide traffic mitigation fee ordinance and funding transit through parking meter revenues where feasible.*

4.2.4 Evaluation Criteria

The Project would cause a significant impact related to transportation, as defined by Appendix G of the CEQA Guidelines, if it would:

- (a) Conflict with program, plan, ordinance or policy addressing the circulation system, taking into account all modes of transportation including transit, roadway, bicycle, and pedestrian facilities;
- (b) Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)-Transportation Projects- vehicle miles traveled;
- (c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment); or
- (d) Result in inadequate emergency access.

4.2.5 Methodology

Based on the evaluation criteria above, the methodology for assessing impacts under thresholds a, c and d is qualitative in nature and considers the existing regulations in place that would minimize potential impacts related to transit, roadway, bicycle, and pedestrian facilities; geometric design features; and emergency access.

Threshold b evaluates whether the project would conflict or be inconsistent with CEQA Guidelines Section 15064.3(b), which describes specific considerations for analyzing transportation impacts as amended on July 1, 2020 pursuant to SB 375, which aims to better promote statewide policies that: (a) combat climate change by reducing greenhouse gas emissions and particulates; (b) encourage infill development and a diversity of uses instead of sprawl; and (c) promote multi-modal transportation networks, providing clean, efficient access to destinations and improving public health through active transportation. Section 15064.3(b) states that vehicle miles traveled is “generally” the most appropriate measure of transportation impacts. No particular methodology or metric is mandated by section 15064.3(b) and the methodology or metric is left to the lead agency, bearing in mind the criteria the legislature had in mind for determining the significance of transportation impacts in SB-743. These were expressed in Public Resource Code section 21099(b)(1), which states: “[t]hose criteria shall promote the reduction of greenhouse gas emissions, the development of multimodal transportation networks, and a diversity of land uses.”

The methodology used in this analysis is identified via Technical Memorandum dated March 27, 2023, (Appendix G of this Draft EIR) that was developed for use by the City in establishing an interim ordinance for SB 743 implementation in Arcata. The methodology is based on the Sacramento Blueprint Project, which studied how smart growth policies could lead to reductions in vehicle miles traveled. The Sacramento Blueprint Project changed how transportation impacts were analyzed, because it demonstrated that conventional travel demand models have inherent biases that make them insensitive to the effects of residential and employment density, neighborhood design, and a diversity of land uses near one another (the 3 Ds). It went a step further and developed procedures external to a traffic model to forecast the effects of the 3 Ds on travel behavior.

The methodology consists of determining the land use characteristics of each study area (neighborhood, city, county, etc.) and then assessing the potential for interacting with complementary land uses through non-auto trips. Data shows that when housing is near retail and services, people will walk or bike to those uses at least some of the time, and if they drive, the trips will be short (i.e., low vehicle miles traveled trips). Similarly, the likelihood of people walking or biking to work, rather than driving, depends on the distance between their homes and workplaces. Measures of proximity are also measures of the potential for vehicle miles traveled reduction.

The methodology establishes an impact threshold that aims to achieve a higher degree of land use diversity (and thus a lower rate of vehicle miles traveled per capita) than existing regional averages for Humboldt County. Using the land use diversity methodology described above impacts are considered less than significant provided the local diversity index for Arcata is at least 4 precent more diverse than the existing countywide average.

4.2.6 Impacts and Mitigation Measures

Impact TR-a: Would adoption and implementation of the General Plan 2045 conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

The General Plan 2045 builds on prior regional and planning efforts, including the Humboldt Regional Transportation Plan, Humboldt Regional Bicycle Plan, Humboldt Regional Pedestrian Plan, Humboldt Transit Development Plan, and the City of Arcata Bicycle and Pedestrian Plan. The General Plan 2045 includes policies, objectives and implementation measures concerning the circulation system, and describes the City's existing and proposed transportation system, that are contained in the Circulation and Mobility Element and Gateway Area Plan Element of the General Plan 2045. Key components relevant to the circulation system are summarized in the Project Description (Chapter 2) and in the Regulatory Framework section of this chapter (see Section 4.2.3). Key findings with regard to potential conflicts between the General Plan 2045 and applicable plans, programs and ordinances relevant to the circulation system are that:

- The Project supports the overall goal and key objectives of the Regional Transportation Plan (VROOM 2022-2042) that aim to provide a multi-modal transportation system that reduces vehicle miles traveled and carbon emissions, increase transit ridership and rates of bicycling and walking, and improves safety. The General Plan 2045 includes: sub-policy CM-1 Complete Streets that mandates provision of a balanced multi-modal transportation system; Policy CM-2 that requires travel demand management and promotes land use development patterns that would reduce vehicle miles traveled and carbon emissions; Policy CM-3 that directs the City to maintain bus service that connects key destinations; Policy CM-4 that requires context sensitive street design; and Policy CM-5 that mandates provision of citywide bikeway and pedestrian network to increase rates of bicycling and walking. In addition, proposed circulation network changes contained in the Gateway Area Plan Element would support VROOM goals and objectives by modifying streets to better facilitate active transportation.
- The Project aims to create a complete bicycle and pedestrian system and increase rates of bicycling and walking and incorporates proposed bikeway and pedestrian facilities identified in the Regional Bicycle Plan and Arcata Bicycle and Pedestrian Plan.
- The Project includes Policy CM-3 Bus Transit that supports the Humboldt Transit Development Plan including the provision of efficient transit routes that aim to increase the rate of transit ridership. In addition, the Project promotes land use and development patterns that encourage high density and mixed land- use patterns which translate into higher transit and pedestrian travel in the downtown and neighborhood commercial areas.
- The Project supports the provision of pedestrian and transit access provisions consistent with ADA requirements. The General Plan 2045 Circulation and Mobility Element includes a sub-policy CM-5h (Sidewalks), which requires the provision of sidewalks to meet ADA clearance requirements. In addition, the General Plan 2045 Circulation and Mobility Element includes sub-policies requiring pedestrian-oriented design and pedestrian network enhancements that aim to reduce sidewalk gaps that further improve accessibility.
- The Project is consistent with the Complete Streets Act. The General Plan 2045 includes sub-policy CM-1a Complete Streets that mandates provision of a balanced multi-modal transportation system consistent with the Complete Streets Act. The General Plan 2045 Circulation and Mobility Element also includes Policy CM-4 that requires context-sensitive street design policy to support the provision of Complete Streets.

Based on these key findings: the Project is not anticipated to conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact TR-b: Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?

As described in the Methodology subsection of Section 4.2.5, Impact Analysis, transportation impacts due to the Arcata General Plan 2045 relevant to CEQA Guidelines Section 15064.3(b) were analyzed by comparing the City's land use diversity score with implementation of General Plan 2045 to the existing countywide land use diversity score average. Higher land use diversity scores correlate with reduced rates of vehicle miles traveled.

Under existing conditions: the City of Arcata's overall score of 81.5 means that it is 18.5 points away from the ideal score. Since the countywide average score is 74.3, or 25.7 points from perfect, Arcata's score is 28% better than the countywide average.

Under future (year 2045) conditions with the Project: the City of Arcata's overall score would improve to 83.9, indicating that Arcata's land use patterns would be more diverse than under existing conditions, and would continue to generate lower rates of vehicle miles traveled than the Countywide average. Since Arcata's land use diversity score would continue to be higher than the impact threshold of 75.4, this impact would be less than significant.

Table 4.2-1 Land Use Diversity Assessment

	Land Use Diversity Score
Citywide Diversity Score (Existing Conditions)	81.5
Countywide Diversity Score (Existing Conditions)	74.3
Impact Threshold (4% higher than existing Countywide Diversity Score)	75.4 or lower
Citywide Diversity Score (Year 2045 with Project Conditions)	**83.9**
Impact Finding	**Less than Significant**

Note: Higher scores represent diverse land use patterns anticipated to generate lower rates of vehicle miles traveled, while lower scores represent less-diverse land use patterns anticipated to result in higher rates of vehicle miles traveled.
Source: GHD 2023.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact TR-c: Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

The Project is a program-level planning effort which does not directly address geometric design features. However, numerous planned projects are mentioned in the proposed Circulation and Mobility Element, including:

– Extension of 8th Street and 9th Street one-way couplets
– Roundabouts and mini-roundabouts at several locations along arterial roads
– New roadways connecting new development or existing roadways
– New bikeways including Class I Multi-use paths, trails, and other on-street bikeways

All roadways, bikeways, and intersection improvements will be designed to City or Caltrans engineering and safety standards, as appropriate.

The proposed Circulation and Mobility Element includes sub-policy CM-4c (Slowing Traffic) that aims to improve safety; this sub-policy states:

The City shall employ a range of measures to reduce speeds and "calm" traffic in various commercial areas, near schools, public recreation areas and in residential neighborhoods to improve safety and comfort for those walking, rolling, biking, and taking transit.

1. *Transportation Safety Committee. The Transportation Safety Committee holds regular public meetings and reviews matters related to traffic safety in Arcata and make recommendations to the Council, Commissions, or City staff as appropriate. Measures requested by residents or property owners, or initiated by City staff, that intended to slow traffic shall/should be presented to the Transportation Safety Committee for recommendations. The Transportation Safety Committee shall make recommendations after a public meeting where any public comments are heard.*
2. *Measures should be context sensitive and may include the installation of physical infrastructure, such as street trees, speed bumps, speed humps, narrowing streets, mid-block crossings, and bulb outs, while ensuring that the techniques employed have the effect of slowing traffic without compromising emergency access.*
3. *The installation of speed tables, humps and lumps shall adhere to the then current City of Arcata policy regarding installation of speed tables, humps and lumps for residential and local streets administered by the Department of Building and Engineering.*
4. *All neighborhood streets shall remain open to through vehicle travel unless there is a demonstrated safety problem that cannot be adequately addressed through the measures identified above.*

Future development under the General Plan 2045 would also be required to comply with street design standards, Manual of Uniform Traffic Control Devices requirements, fire code requirements and zoning regulations, ensuring that the adoption of the General Plan 2045 would result in less-than- significant impacts with respect to design hazards.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact TR-d: Result in inadequate emergency access?

Implementation of the General Plan 2045 would allow for increased development and population growth, which would increase the number of users on the City's transportation system. While traffic flows and patterns could change, therefore potentially slowing response times, the traffic operational analysis and resulting level of service (LOS) indicates that the proposed street and highway system will have sufficient capacity to ensure adequate emergency access provisions to accommodate increased population and growth. Additionally, The Project contains the following Circulation and Mobility Element sub-policy CM-1e (Critical transportation facilities) which states that:

- *Critical transportation facilities for emergency vehicle access and emergency evacuation shall be maintained and improved as a priority need. However, when determining needed improvements, ease and speed of emergency vehicle access shall at all times be weighed against safe design for all street users. Critical transportation facilities include the major routes into and out of the City such as Highways 101, 299, and 255, their interchanges with City streets and primary intra-city street connections including Samoa Boulevard, 11th Street, "G" and "H" Streets, Sunset Avenue, L.K. Wood Boulevard, Alliance Road, Janes Road, and Giuntoli Lane. Due to the potential for structural failure of these facilities in a seismic emergency, alternative routes and procedures for their use shall be identified.*

Future development under the General Plan 2045 would be required to comply with existing regulations, including fire code, building code, street design standards, and zoning regulations that address site-specific provisions related to emergency access. This will further ensure that the adoption of the General Plan 2045 would result in less-than-significant impacts with respect to emergency access.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

4.2.7 Cumulative Impacts

Impact TR-C-1: Would the Project contribute to a cumulatively significant impact to Transportation?

Cumulative developments in the region that are outside the City's sphere of influence would only be considered cumulatively considerable based on the evaluation criteria (described in section 4.2.4) if it were to result in conflicts between the General Plan 2045 with applicable circulation system plans, cause local rates of vehicle miles traveled in Arcata to exceed regional averages; or result in design hazards or inadequate emergency access. There are no reasonable, foreseeable cumulative developments in the region that would have such an effect.

The analysis of impacts TR-a, TR-b, TR-c, and TR-d is based on anticipated future conditions under the General Plan 2045 though the horizon year of 2045 that includes anticipated cumulative development within the City's Sphere of Influence, including the forecasted range of population growth and private development, and completion of the planned transportation network. Reasonably foreseeable future land use activities within the City's Sphere of Influence are therefore already accounted for by those assessments, and no cumulative significant impacts are anticipated to occur due to future development within the City's Sphere of Influence.

Based on this assessment, the potential for cumulative transportation impacts attributable to subsequent projects would be less than significant.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

5.0 Natural Environment

5.1 Introduction

The Natural Environment refers to ecological and physical resources throughout the study area. Arcata's natural resources are a significant component of the community. The City is integrated with and surrounded by agricultural lands, forests, streams and creeks, wetlands, hillsides, bay and tidelands. These resources provide ecological, recreational, and economic values for the community and surrounding areas.

This Draft EIR analyzes the potential effects of the adoption and implementation of the General Plan 2045 on the environment under the applicable environmental resource categories listed in the CEQA Initial Study Checklist (Appendix G of the 2023 CEQA Guidelines). Draft EIR Chapter 5, Natural Environment, addresses environmental resource areas potentially impacted by the General Plan 2045 in the following sections:

– 5.2 Agricultural and Forest Resources
– 5.3 Biological Resources
– 5.4 Geology and Soils
– 5.5 Hydrology and Water Quality
– 5.6 Mineral Resources
– 5.7 Wildfire

For each environmental resource area, the section describes the existing environmental and regulatory setting, discusses the environmental impacts associated with the adoption and implementation of the General Plan 2045, identifies feasible mitigation measures to reduce or eliminate those impacts, and provides conclusions on significance.

5.2 Agriculture and Forest Resources

This section evaluates the potential impacts related to agriculture and forest resources resulting from adoption and implementation of General Plan 2045. To provide the basis for this evaluation, the Setting section below describes the agriculture and forestry setting. The Regulatory Framework section describes the regulatory background that applies to the General Plan 2045. The Impact Analysis section establishes the thresholds of significance, evaluates potential impacts to agriculture and forest resources resulting from adoption and implementation of General Plan 2045, and identifies the significance of impacts.

5.2.1 Study Area

For impact assessment related to agriculture and forestry resources, the City limits were used as the study area (see Figure 2-1 – City of Arcata Planning Areas). Although there is mention of the Arcata Bottom in General Plans 2020 and 2045, the Arcata Bottom is outside of City limits and General Plan policy does not have regulatory authority within surrounding unincorporated lands. Therefore, the focus of this section is the City limits due to the proposed scope of infill development, which will occur only within the City.

5.2.2 Setting

Arcata's agricultural lands are primarily located outside of the study area and includes the Arcata Bottom. These lands are currently used primarily for flowers, silage and hay production, food production, and livestock grazing. The Arcata Bottom is former tidal lands and were diked and drained in the late 1800s and early 1900s for agricultural production. There are 1,036 acres of land zoned and designated Agriculture Exclusive within the study area. This is approximately 14% of the total land area within City limits.

Although Arcata is generally urbanized within City limits, much of the underlying soils could be considered "prime" soils for farmland under certain conditions and criteria. The quality of these underlying soils but lack of evaluation by the California Department of Conservation or the U.S. Department of Agriculture's (USDA's) Natural Resource Conservation Service make it difficult to evaluate and differentiate between prime agricultural soils and bona fide prime agricultural *lands* within City limits, and require the application of other state criteria for evaluation of prime agricultural land and potential impacts to those lands within City limits.

According to Public Resources Code Section 21060.1(b) and Government Code Section 51201(c), which is further described within the CEQA subsection of Section 5.2.3 below, there are 150 parcels and one right-of-way area considered vacant or undeveloped (comprising approximately 90.5 acres) that can be considered "prime agricultural land" within City limits (see Figure 5.2-1 – Prime Agricultural Lands within City Limits). Parcels that contain structures or other development were not included in this analysis because they are less likely to be utilized for agriculture and therefore would not meet definitions (3) and (4) of "prime agricultural land" per Government Code Section 51201(c).

The Project study area is located on generally flat and gently sloping bottomlands between Humboldt Bay and the forested hillslopes. Soils within the City limits are variable and have been predominantly disturbed and compacted due to prior City developments and improvement activities and from adjacent residences, businesses, and schools, and associated utility infrastructure. The Coastal Zone overlaps into the southern portion of the City limits (see Figure 2-1 – City of Arcata Planning Areas). Much of the area zoned for agricultural purposes in the Coastal Zone was historically wetlands and tidal marsh; however, has largely been diked and filled for agricultural purposes.

The agricultural lands in and around Arcata produce crops of raspberries, strawberries, lilies, daffodils, potatoes, corn, artichokes, hay (forage for cattle), and a number of other shallow-rooted crops. There is community support for the continuation of dairy, beef, vegetable, fodder, and flower production in the City and the Planning Area (Figure 2-1), and recognition that protection of agricultural values, as well as open space and recreational values, is important.

5.2.3 Regulatory Framework

Federal

Federal Farmland Protection Policies

Under the Federal Farmland Protection Policy Act (FPPA), projects are subject to FPPA requirements if they may irreversibly convert farmland (directly or indirectly) to non-agricultural use and are completed by, or with the assistance of, a federal agency. The Natural Resources Conservation Service is charged with oversight of the FPPA. The proposed Project is funded with federal funds, and occurs on historic pastureland, warranting consideration under the FPPA.

The Natural Resources Conservation Service uses a Land Evaluation and Site Assessment system to establish a farmland conversion impact rating score on proposed sites of federally funded and assisted projects. The assessment is conducted on the Farmland Conversion Impact Rating form. According to this form, if the site does not contain Prime, Unique, Statewide or Local Important Farmland, then the FPPA does not apply. In California, maps of these different farmland types are prepared by the Department of Conservation through the Farmland Mitigation and Monitoring Program (FMMP).

Humboldt County has not been mapped through FMMP, and accordingly the study area does not contain the designations mentioned above. Therefore, the requirements of the FPPA would not apply to this Project. Consideration of any potential future classification of agricultural lands in the study area in the absence of FMMP mapping is discussed under CEQA below.

US Department of Agriculture Natural Resource Conservation Service

There is not a single definition of prime agricultural land. The Land Capability Classification System, the Land Inventory and Monitoring System, and the Storie Index Rating system are each used by the U.S. Department of Agriculture (USDA) Natural Resource Conservation Service in its effort to survey soils and assess agricultural lands throughout the United States. Prime farmlands are defined by the USDA in the following manner:

> *Prime farmlands are soils that are best suited to food, feed, forage, fiber, and oilseed crops. Such soils have properties that favor the economic production of sustained high yields of crops. The soils need only to be treated and managed by acceptable farming methods.*

The following are two definitions of urban land found on the Natural Resource Conservation Service website that suggest that infill sites within City limits would likely not be considered as prime agricultural land by the Natural Resource Conservation Service:

> *Urban Land. Areas so altered or obstructed by urban works or structures that identification of soils is not feasible.*
>
> *Urban and built-up areas. A land cover/use category consisting of residential, industrial, commercial, and institutional land; construction sites; public administrative sites; railroad yards; cemeteries; airports; golf courses; sanitary landfills; sewage treatment plants; water control structures and spillways; other land used for such purposes; small parks (less than 10 acres) within urban and built-up areas; and highways, railroads, and other transportation facilities if they are surrounded by urban areas. Also included are tracts of less than 10 acres that do not meet the above definition but are completely surrounded by Urban and built-up land. Two size categories are recognized in the NRI: areas of 0.25 acre to 10 acres, and areas of at least 10 acres.*

State

Farmland Conservancy Program Act

State farmland protection policy is described in the California Farmland Conservancy Program Act (Public Resources Code Section 10201-10202). The California Farmland Conservancy Program Act recognizes the importance of the state's agricultural lands economically, culturally, and in terms of food security, as well as the threat to those lands from development. The agricultural conservation strategy established by the California Farmland Conservancy Program Act involves appropriating state funds for the voluntary purchase of agricultural easements, together with restrictions on development through local planning and zoning.

California Environmental Quality Act (CEQA)

The study area has not been mapped through FMMP, and accordingly does not contain the designations mentioned below. Consideration of any potential future classification of agricultural lands in the study area in the absence of FMMP mapping is discussed under CEQA below.

The Department of Conservation has mapped and designated farmlands in cooperation with county governments through the Farmland Mapping and Monitoring Program (FMMP). The FMMP designates lands in the following categories, from greater to lower agricultural value (as a general rule). Those designations are: (1) Prime; (2) Farmland of Statewide Importance; (3) Unique Farmland; (4) Farmland of Local Importance; (5) Grazing Land; (6) Urban and Built-Up Land; (7) Other Land; and (8) Water. For environmental review purposes under CEQA, the categories of Prime Farmland, Farmland of Statewide Importance, Unique Farmland, Farmland of Local Importance, and Grazing Land constitute 'agricultural land' (Public Resources Code Section 21060.1).The Department of Conservation identifies and maps these areas, as defined below, based on water availability, soil temperature range, acid-alkali balance, water table location, soil sodium content, flooding, erodibility, permeability, rock fragment content, and rooting depth.

Prime Farmland: Farmland with the best combination of physical and chemical features able to sustain long term agricultural production. This land has the soil quality, growing season, and moisture supply needed to produce sustained high yields. Land must have been used for irrigated agricultural production at some time during the four years prior to the mapping date.

Unique Farmland: Farmland with the special combination of soil quality, location, growing season, and moisture supply needed to produce sustained high quality and/or high yields of a specific crop when treated and managed according to current farming methods. This land is usually irrigated but may include non-irrigated orchards or vineyards as found in some climatic zones in California. Land must have been used for irrigated agricultural production at some time during the four years prior to the mapping date.

Farmland of Statewide Importance: Farmland other than Prime Farmland which has a good combination of physical and chemical characteristics for the production of crops but with minor shortcomings, such as greater slopes or less ability to store soil moisture. Land must have been used for irrigated agricultural production at some time during the four years prior to the mapping date.

Farmland of Local Importance: Land of importance to the local agricultural economy as determined by each county's board of supervisors and a local advisory committee. Farmland of Local Importance is either currently producing or has the capability of production; but does not meet the criteria of Prime, Statewide or Unique Farmland. There are no farmlands of local importance mapped in City limits.

Grazing Land: Land on which the existing vegetation is suited to the grazing of livestock. This category was developed in cooperation with the California Cattlemen's Association, University of California Cooperative Extension, and other groups interested in the extent of grazing activities.

Urban and Built-up Land: Land occupied by structures with a building density of at least 1 unit to 1.5 acres, or approximately 6 structures to a 10-acre parcel. This land is used for residential, industrial, commercial, construction, institutional, public administration, railroad and other transportation yards, cemeteries, airports, golf courses, sanitary landfills, sewage treatment, water control structures, and other developed purposes.

Other Land: Land not included in any other mapping category. Common examples include low density rural developments; brush, timber, wetland, and riparian areas not suitable for livestock grazing; confined livestock, poultry or aquaculture facilities; strip mines, borrow pits; and water bodies smaller than forty acres. Vacant and non-agricultural land surrounded on all sides by urban development and greater than 40 acres is mapped as Other Land.

CEQA requires lead agencies to potential impacts to agricultural resources at least in part based on the FMMP. However, in areas where lands have not been mapped through the FMMP (such as the study area), PRC Section 21060.1(b) states a property is considered "prime agricultural land" if its meets any of the following definitions provided at Government Code (GOV) Section 51201(c):

> *(c) "Prime agricultural land" means any of the following:*
>
> 1. *All land that qualifies for rating as class I or class II in the Natural Resource Conservation Service land use capability classifications.*
> 2. *Land which qualifies for rating 80 through 100 in the Storie Index Rating.*
> 3. *Land which supports livestock used for the production of food and fiber and which has an annual carrying capacity equivalent to at least one animal unit per acre as defined by the United States Department of Agriculture.*
> 4. *Land planted with fruit- or nut-bearing trees, vines, bushes, or crops which have a non-bearing period of less than five years and which will normally return during the commercial bearing period on an annual basis from the production of unprocessed agricultural plant production not less than two hundred dollars ($200) per acre.*

As stated, by this definition approximately 150 parcels within City limits can be considered to contain "prime agricultural land". This determination of which lands can be considered "prime agricultural land" per PRC Section 21060.1(b) is discussed in more detail in Section 5.2.5 and Impact AG-a of Section 5.2.6.

Under CEQA, an impact on an agricultural resource is considered significant if a Project would result in an impact to or conversion of Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, or to "prime agricultural land" in the absence of the other designations. A Land Evaluation and Site Assessment evaluation is an optional model to assess impacts on agricultural resources and was not performed for this Project.

California Coastal Act

The study area contains lands within the Coastal Zone boundary. There are 873 acres of land zoned and designated Agriculture Exclusive within the Coastal Zone. This is approximately 84% of the total land area zoned for agricultural use within City limits. The California Coastal Act (Coastal Act) contains the Government Code policies relevant to the conversion of agricultural land in the Coastal Zone to natural resource uses including:

> ***Public Resources Code Section 30113***
>
> *"Prime agricultural land" means those lands defined in paragraph (1), (2), (3), or (4) of subdivision (c) of Section 51201 of the Government Code.*
>
> ***Public Resources Code Section 30241.5***
>
> *Agricultural land; determination of viability of uses; economic feasibility evaluation*
>
> a. *If the viability of existing agricultural uses is an issue pursuant to subdivision (b) of Section 30241 as to any local coastal program or amendment to any certified local coastal program submitted for review and approval under this division, the determination of "viability" shall include, but not be limited to, consideration of an economic feasibility evaluation containing at least both of the following elements:*

1. *An analysis of the gross revenue from the agricultural products grown in the area for the five years immediately preceding the date of the filing of a proposed local coastal program or an amendment to any local coastal program.*

2. *An analysis of the operational expenses, excluding the cost of land, associated with the production of the agricultural products grown in the area for the five years immediately preceding the date of the filing of a proposed local coastal program or an amendment to any local coastal program.*

   For purposes of this subdivision, "area" means a geographic area of sufficient size to provide an accurate evaluation of the economic feasibility of agricultural uses for those lands included in the local coastal program or in the proposed amendment to a certified local coastal program.

b. The economic feasibility evaluation required by subdivision (a) shall be submitted to the commission, by the local government, as part of its submittal of a local coastal program or an amendment to any local coastal program. If the local government determines that it does not have the staff with the necessary expertise to conduct the economic feasibility evaluation, the evaluation may be conducted under agreement with the local government by a consultant selected jointly by local government and the executive director of the commission.

Public Resources Code Section 30242

All other lands suitable for agricultural use shall not be converted to nonagricultural uses unless (1) continued or renewed agricultural use is not feasible, or (2) such conversion would preserve prime agricultural land or concentrate development consistent with Section 30250. Any such permitted conversion shall be compatible with continued agricultural use on surrounding lands.

Local

This section includes the City's existing General Plan 2020 policies, City Local Coastal Program policies, and the proposed General Plan 2045 policies related to agriculture and forest resources.

City of Arcata General Plan 2020

The General Plan 2020 addresses agriculture and forest resources in its Resource Conservation and Management Element. The following policies from the General Plan 2020 were used to analyze the difference in existing versus proposed policies in the General Plan 2045.

Policy RC-5: Agricultural Resources Management

Objective. *Protect and enhance agricultural uses on prime agricultural lands within the City, and encourage more productive agricultural use of agriculturally suitable lands.*

Applicable sub-policies:

- ***RC-5a: Promotion of and participation in agricultural production within the City.*** *Diverse and intensive agricultural production and increased participation shall be promoted, in order to maintain the value of agricultural lands, improve the economic base, and increase employment and food production. The City does not, however, advocate more intensive agricultural uses and practices that would have adverse environmental impacts. Agricultural operations, such as Community Supported Agriculture (CSA) are strongly encouraged.*

- ***RC-5b:*** *Agricultural Advisory Committee – The City shall appoint an Agricultural Advisory Committee to advise on agricultural issues and programs. The responsibilities of the committee shall include, but are not limited to:*

  1. *Development of a Community and Farm Protection Ordinance, as well as conflict resolution protocol.*

2. *Development of programs (educational, leasing, and purchase) that will encourage responsible productive uses of agricultural lands.*
3. *Identification of lands for preservation and/or acquisition programs.*
4. *Maintain a database of resources available to farmers, such as Williamson Act advantages, conservation easements, organic farming practices, and marketing strategies.*

- ***RC-5c: Community and farm protection.*** *Maintaining a compatible relationship between agricultural and residential uses will be based on:*

  1. *Recognizing the rights of owners of productive agricultural land to make agricultural use of their land.*
  2. *Identifying and minimizing potential conflicts between agricultural operations and adjacent residential, commercial, and community facility uses.*
  3. *A Community and Farm Protection Ordinance shall provide a foundation for minimizing conflicts, educating the community, and a protocol for mediating unresolved disputes. Once adopted, the ordinance shall be mailed to all owners of agricultural and adjacent lands and disclosed to affected property owners at the time of parcel transfer*

- ***RC-5d: Permanent protection for agricultural lands.*** *Protection of agricultural resources shall be secured through the purchase of conservation easements, development rights, and outright acquisition. The City shall work in conjunction with other entities such as land trusts, whenever possible, to preserve agricultural buffers and maintain and enhance agricultural uses on prime agricultural soils.*

Policy RC-6: Forest Resources Management

Objective. *Protect and enhance private and public forest lands (Community and Jacoby Creek) to maintain the integrity of the ecosystem while providing timber production, recreation, and habitat values.*

Applicable sub-policies:

- ***RC-6a: Management of Arcata Community Forest.*** *The City's forest management plan includes the following policies:*

  1. ***Recreation and aesthetic resources management.*** *The community forest will emphasize dispersed, day-use opportunities. Recreational use shall not be allowed to impact other resources such as fish, wildlife, or watershed.*
  2. ***Timber resource management.*** *To ensure the sustainable and long-term production of forest products, the rate of harvesting must not exceed the rate of production. Long-term productivity refers to the continuing ability of the forest to produce timber while retaining the associated values of watershed, wildlife, soils, recreation and aesthetics. This is dependent upon the use of management practices that do not allow for the deterioration or impairment of soil productivity or the alteration of the natural landscape beyond its ability to recover. For planning purposes, long term means that exceeding fifty years.*
  3. ***Watershed resource management.*** *Water quality, soil, riparian, and aquatic biological productivity shall be maintained and enhanced through the application of City forest management standards and the implementation of watershed improvement projects.*
  4. ***Wildlife resource management.*** *Wildlife habitat is managed to promote species diversity and to ensure that populations of indigenous species are maintained. This can best be achieved through the maintenance and enhancement of habitat values. Habitat values which lead to species diversity include the following elements: breeding, foraging, watering, rearing, hiding and thermal cover.*
  5. ***Vegetation and botanical resources.*** *Maintain the native component of species found in the redwood forest, both by controlling exotics and managing for a species mix that would be found naturally in the redwood forest.*

- ***RC-6b: Management of Jacoby Creek Forest.*** *The management policies for the Jacoby Creek Forest are the same as those for the Arcata Community Forest, listed above, except that the Jacoby Creek Forest is not open to recreational use.*
- ***RC-6c: Allocation of forest fund revenues.*** *At least twenty percent of net forest fund revenues, derived from timber cutting, shall be directed towards park acquisition, maintenance, and development. This can include acquisition of stream corridors, and riparian and greenbelt areas. These areas contribute to the diversity of parks and, in the case of linear parks along stream corridors, provide passive recreation areas compatible with the environment. The acquisition of open space shall be emphasized as an appropriate use for the remaining revenues.*
- ***RC-6d: Management practices for private timberlands.*** *The management of private timberlands shall be encouraged to use current principles of sustainable forestry for all aspects of forest use and function: recreation; timber production; biodiversity; air and water quality; and carbon storage. Timber owners are encouraged to apply for conservation easements, certified forestry, or compensation for carbon storage.*
- ***RC-6e: Timber harvest plans.*** *The City, in cooperation with California Department of Forestry, shall request review of all Timber Harvest Plans (THP) within the Planning Area. The City shall review THPs for measures that protect water quality, control erosion and flooding, and preserve the City viewshed. The city shall recommend that THPs which do not include these measures not be approved.*
- ***RC-6f: Urban conversions.*** *The sustainable management of timber resources, and related uses, shall be encouraged, so that the long term economic return from productive timber production will provide sufficient incentives to prevent urban conversions. Urban conversions are discouraged within the Urban Services Boundary.*
- ***RC-6g: Setbacks.*** *Development adjacent to the Community Forest boundary shall be setback at least 150 feet, unless this would make the use of the parcel infeasible for its designated purpose. However, larger setbacks may be required to prevent exposure to potential hazards and to maintain forest integrity.*
- ***RC-6h: Monitoring.*** *Monitoring of forest practices, to ensure consistency with adopted management and harvest plans, shall be carried out as an implementation measure of this Element. The general objectives of the monitoring will be to:*

    1. *Determine the effectiveness of management practices at multiple scales (i.e., individual sites to watersheds).*
    2. *Validate ecosystem functions and processes have been maintained as predicted.*

City of Arcata Local Coastal Plan

The following policies within the City of Arcata's Local Coastal Plan (1989) that regulate agriculture or forest resources include the following.

Section 30241

The maximum amount of prime agricultural land shall be maintained in agricultural production to assure the protection of the area's agricultural economy, and conflicts shall be minimized between agricultural and urban land uses through all of the following:

a. *By establishing stable boundaries separating urban and rural areas, including, where necessary, clearly defined buffer areas to minimize conflicts between agricultural and urban land uses.*
b. *By limiting conversions of agricultural lands around the periphery of urban areas to the lands where the viability of existing agricultural use is already severely limited by conflicts with urban uses and where the conversion of the lands would complete a logical and viable neighborhood and contribute to the establishment of a stable limit to urban development.*

c. By permitting the conversion of agriculture land surrounded by urban uses where the conversion of the land would be consistent with Section 30250.

d. By developing available lands not suited for agriculture prior to the conversion of agriculture lands.

e. By assuring that public service and facility expansions and non-agricultural development do not impair agricultural viability, either through increased costs or degraded air and water quality.

f. By assuring that all divisions of prime agricultural lands, except those conversions approved pursuant to subdivision (b) of this section, and all development adjacent to prime agricultural lands shall not diminish the productivity of such prime agricultural lands.

Section 30241.5

All other lands suitable for agricultural use shall not be converted to non-agricultural uses unless (1) continued or renewed agricultural use is not feasible, or (2) such conversion would preserve prime agricultural land or concentrate development consistent with Section 30250. Any such permitted conversion shall be compatible with continued agricultural use on surrounding lands.

Proposed City of Arcata General Plan 2045

The following policies within the proposed General Plan 2045 that regulate agriculture or forest resources include the following.

Policy RC-5: Agricultural Resources Management

Objective. *Protect and enhance agricultural uses on prime agricultural lands within the City and encourage more productive agricultural use of agriculturally suitable lands.*

Applicable sub-policies:

- ***RC-5a: Promotion of and participation in agricultural production within the City.*** *Diverse and intensive agricultural production and increased participation in agricultural production, shall be promoted, in order to maintain the value of agricultural lands, improve the economic base, and increase employment and food production. The City does not, however, advocate more intensive agricultural uses and practices that would have adverse environmental impacts. Agricultural operations, such as Community Supported Agriculture (CSA) are strongly encouraged.*
- ***RC-5b: Community and farm protection.*** *Maintaining a compatible relationship between agricultural and residential uses shall be based on:*
    1. *Recognizing the rights of owners of productive agricultural land to make agricultural use of their land.*
    2. *Identifying and minimizing potential conflicts between agricultural operations and adjacent residential, commercial, and community facility uses.*
- ***RC-5c: Permanent protection for agricultural lands.*** *Protection of agricultural resources shall be secured through the purchase of conservation easements, development rights, and outright acquisition. The City shall work in conjunction with other entities such as land trusts, whenever possible, to preserve agricultural buffers and maintain and enhance agricultural uses on prime agricultural soils.*

Policy RC-6: Forest Resources Management

Objective. *Protect and enhance private and public forest lands (e.g. the Arcata Community Forest Tracts) to maintain the integrity of the ecosystem while providing timber production, recreation, and habitat values.*

Applicable sub-policies:

- ***RC-6a: Management of Arcata Community Forest.*** *The City's 2022 Forest Management Plan includes the following policies:*

1. ***Recreation and aesthetic resources management.*** *The community forest will emphasize dispersed, day-use opportunities. Recreational use shall not be allowed to impact other resources such as fish, wildlife, or watershed.*
2. ***Timber resource management.*** *To ensure the sustainable and long-term production of forest products, the rate of harvesting must not exceed the rate of production. Long-term productivity refers to the continuing ability of the forest to produce timber while retaining the associated values of watershed, wildlife, soils, recreation and aesthetics. This is dependent upon the use of management practices that do not allow for the deterioration or impairment of soil productivity. For planning purposes, long term means that exceeding fifty years.*
3. ***Watershed resource management.*** *Water quality, soil, riparian, and aquatic biological productivity shall be maintained and enhanced through the application of City forest management standards and the implementation of watershed improvement projects.*
4. ***Wildlife resource management.*** *Wildlife habitat is managed to promote species diversity and to ensure that populations of indigenous species are maintained. This can best be achieved through the maintenance and enhancement of habitat values. Habitat values that lead to species diversity include the following elements: breeding, foraging, watering, rearing, hiding and thermal cover.*
5. ***Vegetation and botanical resources -*** *Maintain the native biodiversity of species found in a redwood forest habitat, both by controlling exotics and managing for a species mix that would naturally occur in a redwood forest habitat.*

- ***RC-6b: Management of Jacoby Creek Forest.*** *The management policies for the Jacoby Creek Forest are the same as those for the Arcata Community Forest, listed above, except that the Jacoby Creek Forest is not open to recreational use.*
- ***RC-6c: Allocation of forest fund revenues.*** *Forest fund revenues, derived from timber harvest and carbon projects shall be deposited into a special revenue account within the City to be utilized for forest management purposes. Excess net forest fund revenues, when available, may be directed towards park acquisition, maintenance, and development. This can include acquisition of stream corridors, and riparian and greenbelt areas. These areas contribute to the diversity of parks and, in the case of linear parks along stream corridors, provide passive recreation areas compatible with the environment. The acquisition of open space shall be emphasized as an appropriate use for the remaining revenues.*
- ***RC-6d: Management practices for private timberlands.*** *The management of private timberlands shall be encouraged to use current principles of sustainable forestry for all aspects of forest use and function: recreation; timber production; biodiversity; air and water quality; and carbon storage. Timber owners are encouraged to apply for conservation easements, certified forestry, or compensation for carbon storage.*
- ***RC-6e: Timber harvest plans.*** *The City, in cooperation with California Department of Forestry, shall request review of all Timber Harvest Plans (THP) within the Planning Area. The City shall review THPs for measures that protect water quality, control erosion and flooding, and preserve the City viewshed. The city shall recommend that THPs that do not include these measures not be approved.*
- ***RC-6f: Urban conversions.*** *The sustainable management of timber resources, and related uses, shall be encouraged, so that the long-term economic return from productive timber production will provide sufficient incentives to prevent urban conversions. Urban conversions are discouraged within the Urban Services Boundary.*
- ***RC-6g: Setbacks.*** *Development adjacent to the Community Forest boundary shall be setback at least 150 feet, unless this would make the use of the parcel infeasible for its designated purpose. However, larger setbacks may be required to prevent exposure to potential hazards and to maintain forest integrity.*
- ***RC-6h: Monitoring.*** *Monitoring of forest practices, to ensure consistency with adopted management and harvest plans, shall be carried out as an implementation measure of this Element. The general objectives of the monitoring will be to:*

1. *Determine the effectiveness of management practices at multiple scales (i.e., individual sites to watersheds).*
2. *Validate ecosystem functions and processes have been maintained as predicted.*

Non-industrial Timber Management Plan

The Non-industrial Timber Management Plan is a long-term management option and permit available to timber land ownerships of less than 2,500 acres that was adopted in 1999. The Plan covers the Arcata Community Forest and the Jacoby Creek Forest. Elements include a description of timber stand characteristics, a description of proposed activities within each management unit, a description of cultural or historical records, and information on threatened or endangered plant or animal species. The Plan also stipulates that the landowner must practice uneven age management and demonstrate and document sustainable harvesting. The Plan is required by the State, and amendments and deviations are sent to CAL FIRE as lead agency for review and approval.

5.2.4 Evaluation Criteria and Significance Thresholds

Under criteria based on Appendix G of the CEQA Guidelines, the Project would be considered to have a significant impact on agricultural or forest resources if it would result in any of the following:

– Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the FMMP of the California Resources Agency, to non-agricultural use;
– Conflict with existing zoning for agricultural use or a Williamson Act contract;
– Conflict with existing zoning for, or cause rezoning of, forest land (as defined in PRC Section 12220(g)), timberland (as defined by PRC Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g));
– Result in the loss of forest land or conversion of forest land to non-forest use; or
– Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use.

5.2.5 Methodology

The study area used to analyze potential impacts to agricultural and forest resources predominantly contains developed land where residences, businesses and industrial operations exist. Some areas of undeveloped open space exist within the study area, portions of which are used for agriculture. Lands within the study area have not been formally analyzed by the Department of Conservation to determine if they meet the criteria for being designated as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance. In accordance with PRC Section 21060.1(b), areas that have not been surveyed and classified through the Farmland Mapping and Monitoring Program can be considered “prime agricultural land” if they meet one of the four definitions provided at Government Code Section 51201(c):

1. All land that qualifies for rating as class I or class II in the Natural Resource Conservation Service land use capability classifications.
2. Land which qualifies for rating 80 through 100 in the Storie Index Rating.
3. Land which supports livestock used for the production of food and fiber and which has an annual carrying capacity equivalent to at least one animal unit per acre as defined by the United States Department of Agriculture.
4. Land planted with fruit- or nut-bearing trees, vines, bushes, or crops which have a nonbearing period of less than five years and which will normally return during the commercial bearing period on an annual basis from the production of unprocessed agricultural plant production not less than two hundred dollars ($200) per acre.

To determine which parcels within City limits can be considered prime agricultural land, parcels were first considered either developed or undeveloped. Developed parcels were defined to contain paved streets, paved

parking lots, railroad tracks, or structures with a foundation. Undeveloped parcels were considered to contain open space, fencing, storage of equipment or temporary structures that do not include a foundation (such as sheds), graveled streets or graveled parking lots. For the purposes of this impact analysis to determine areas of prime agricultural land, developed parcels were not considered because those parcels would have less likelihood to meet definitions 3 or 4 above. Developed and undeveloped land was considered at the parcel level, i.e., if a parcel contains a structure and open space (i.e., yard) the entire parcel is considered developed. Per this definition, the study area is predominantly developed "Urban and Built-Up Land" but contains pockets of undeveloped parcels which could be considered "Prime agricultural land" under certain circumstances and are further analyzed below.

The Arcata Community Forest tracts are located within the study area which contain second-growth redwood forest. A significant impact would occur if implementation of the proposed General Plan 2045 would result in inconsistencies or conflicts on these lands with the adopted goals and policies of applicable rules and regulations. The impact analysis included in this section is based on the determination of prime farmland, unique farmland or farmland of statewide importance using Public Resources Code 21060.1 (as described in impact question (a)), and lands zoned as Timber Production Zone, and potential anticipated development in those locations.

5.2.6 Impacts and Mitigation Measures

Impact AG-a: **Would the adoption and implementation of the General Plan 2045 convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland) as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program (FMMP) of the California Resources Agency, to non-agricultural use?**

The FMMP designates lands in the following categories, from greater to lower agricultural value (as a general rule). Those designations are: (1) Prime; (2) Farmland of Statewide Importance; (3) Unique Farmland; (4) Farmland of Local Importance; (5) Grazing Land; (6) Urban and Built-Up Land; (7) Other Land; and (8) Water. The Department of Conservation identifies and maps these areas based on water availability, soil temperature range, acid-alkali balance, water table location, soil sodium content, flooding, erodibility, permeability, rock fragment content, and rooting depth.

The study area has not been mapped through FMMP, and accordingly does not contain the designations mentioned above. Due to the developed condition of the majority of the study area, lands within City limits not specifically zoned for agricultural use would generally be considered as Urban and Built-Up Land with limited opportunity to be used as economically viable farmland, regardless of the underlying quality of the soils.

In total, there are approximately 150 parcels, amounting to approximately 89.26 acres, that can be considered prime agricultural land due to their meeting definition 1 or 2 as described in the 'Methodology" section, above (see Figure 5.2-1 – Prime Agricultural Lands within City Limits). Of that total, within the Infill Opportunity Zones, there are two undeveloped parcels and one right of way area within the Downtown Area totaling approximately 1.40 acres, four undeveloped parcels within the Valley West Area totaling approximately 3.70-acres, 13 undeveloped parcels in the Craftsman's Mall Area totaling approximately 9.96 acres, and 13 undeveloped parcels in the Gateway Area totaling approximately 8.00 acres. Additionally, there are 118 undeveloped parcels and one right of way area totaling 67.46 acres located outside of the Infill Opportunity Zones but within City limits. Definitions 1 and 2 above, Land Capability Class and Storie Index, were the two predominant factors used to determine if undeveloped land met the prime agricultural land definition.

The portions of undeveloped lands in the Infill Opportunity Zones that meet one of the criteria above are shown in Table 5.2-1 below.

Table 5.2-1. Undeveloped parcels within Infill Opportunity Zones considered Prime Agricultural Land

Infill Opportunity Zone	APN	Approx. Acreage	Soil Type	Rationale (NRCS 2023, Humboldt County 2023)
Downtown	021-102-004	0.08	185 – Timmons and Lepoil soils, 0-2% slopes	LCC of 1 (irrigated) or 2 (non-irrigated)
	ROW – no APN	1.26	127 – Jollygiant, 0-2% slopes	LCC of 2 (irrigated or non-irrigated)
	021-164-018	0.07	127 – Jollygiant, 0-2% slopes	LCC of 2 (irrigated or non-irrigated)
Valley West	507-362-055	2.44	210 – Dungan	LCC of 1 (irrigated) or 2 (non-irrigated)
	507-362-057	0.56	210 – Dungan	LCC of 1 (irrigated) or 2 (non-irrigated)
	507-301-074	0.28	210 – Dungan	LCC of 1 (irrigated) or 2 (non-irrigated)
	507-301-047	0.41	210 – Dungan	LCC of 1 (irrigated) or 2 (non-irrigated)
Craftsman's Mall	505-051-022	1.72	185 & 186 – Timmons and Lepoil	LCC of 1 (irrigated) or 2 (non-irrigated); LCC of 2 (irrigated or non-irrigated)
	505-041-011	0.23	185 – Timmons and Lepoil soils, 0-2% slopes	LCC of 1 (irrigated) or 2 (non-irrigated)
	505-041-012	0.13	185 – Timmons and Lepoil soils, 0-2% slopes	LCC of 1 (irrigated) or 2 (non-irrigated)
	505-041-013	0.14	185 – Timmons and Lepoil soils, 0-2% slopes	LCC of 1 (irrigated) or 2 (non-irrigated)
	505-042-022	0.08	186 – Timmons and Lepoil soils, 2-9%	LCC of 2 (irrigated or non-irrigated)
	505-042-018	0.12	185 – Timmons and Lepoil soils, 0-2% slopes	LCC of 1 (irrigated) or 2 (non-irrigated)
	503-372-004	0.30	186 – Timmons and Lepoil soils, 2-9%	LCC of 2 (irrigated or non-irrigated)
	503-372-005	0.31	186 – Timmons and Lepoil soils, 2-9%	LCC of 2 (irrigated or non-irrigated)
	503-372-006	1.17	186 – Timmons and Lepoil soils, 2-9%	LCC of 2 (irrigated or non-irrigated)
	505-012-004	1.10	186 – Timmons and Lepoil soils, 2-9%	LCC of 2 (irrigated or non-irrigated)
	507-071-017	0.37	186 – Timmons and Lepoil soils, 2-9%	LCC of 2 (irrigated or non-irrigated)
	507-071-004	1.84	210 – Dungan	LCC of 1 (irrigated) or 2 (non-irrigated)

	021-211-005	0.92	127 – Jollygiant, 0-2% slopes	LCC of 2 (irrigated or non-irrigated)
	021-174-011	0.85	127 – Jollygiant, 0-2% slopes	LCC of 2 (irrigated or non-irrigated)

It is possible that some of the parcels within the core of the City could be considered prime agricultural land under certain circumstances; however, these lands are either currently zoned for other uses (residential, industrial), are on small, urban parcels with disturbed soils, are within the core of the City, and have been consistently converted to and planned for non-agricultural uses over the past hundred years. If mapped by the California Resources Agency, none of the listed parcels would quality as Prime or Unique Farmland, or Farmland of Statewide Importance, as none of the parcels have been used for primarily agricultural production in the last 4-year period. Regardless, the proposed form-based code and other City land use policy may allow development to occur on lands considered prime agricultural land from this analysis, and although these lands are not serving an existing agricultural function some meet at least one of the requirements of the four prime agricultural land criteria listed above (definition 1 or 2).

Although development under the proposed General Plan 2045 has the potential to result in development of prime agricultural land using this definition in absence of FMMP mapping, the City's plan to prioritize development within the core of the City would preserve agricultural land and other natural resources outside of City limits. The potential impact to agricultural resources is greater when implementing development goals that do not prioritize infill development, such as urban sprawl. Lands outside of City limits, i.e., the Arcata Bottom, are currently utilized for and are highly suitable for agricultural production and would potentially be threatened by sprawl development. Under the General Plan 2045, sprawl is explicitly discouraged through adoption of the City's greenbelt designation, which protects rural and agricultural lands within the City's Planning Area. Although adoption and implementation of the General Plan 2045 may result in the development of lands that are not being used for agricultural purposes but are considered prime agricultural land, the overarching benefit to agricultural resources is greater from infill development than it would be from sprawl. Therefore, while this potential impact could otherwise be considered significant and unavoidable due to the potential conversion of prime agricultural lands, the potential for conversion provides an overarching benefit to agricultural resources due to the limitation of sprawl on lands outside of the City limits.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact AG-b: Would adoption and implementation of the General Plan 2045 conflict with existing zoning for agricultural use, or a Williamson Act contract?

All future proposed development would be in compliance with City zoning. Two adjacent parcels are under a Williamson Act contract (APNs: 507-092-003 and 507-092-033) located east of Alliance Road (Humboldt County 2023). This area is outside of an Infill Opportunity Zone and is not prioritized for development. Potential future development would need to be in conformance with Williamson Act guidelines and would likely be limited to agricultural accessory buildings. No impact would occur.

Mitigation Measures: No mitigation is necessary

Level of Significance: No impact

Impact AG-c: Would adoption and implementation of the General Plan 2045 conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?

There are no changes to zoning of forest land under the proposed General Plan 2045. There are no substantial changes to forest management policies between the General Plan 2020 and 2045, see policy RC-6a and RC-6b. No impact would occur.

Mitigation Measures: No mitigation is necessary

Level of Significance: No impact

Impact AG-d: Would adoption and implementation of the General Plan 2045 result in the loss of forest land or conversion of forest land to non-forest use?

It is possible that areas of vegetation may be removed to accommodate development, particularly within the Infill Opportunity Zones. However, potential removal of trees during infill development would be minor, if at all, and removal of trees would typically require a permit and likely require mitigation to offset the loss of that vegetation. The City is committed to protecting and stewarding forest resources and their proposed infill development strategy would protect contiguous forest stands within and adjacent to the City boundary. A less than significant impact would occur.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact AG-e: Would adoption and implementation of the General Plan 2045 involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

As discussed throughout this section, the City's strategy of promoting infill development is being carried out to protect natural resources and contiguous working lands outside of the City boundary. Therefore, implementation of the General Plan 2045 would overwhelmingly protect agricultural and forest resources and help prevent future conversions. No impact would occur.

Mitigation Measures: No mitigation is necessary

Level of Significance: No impact

5.2.7 Cumulative Impacts

Impact AG-C-1: Would adoption and implementation of the General Plan 2045 contribute to a cumulatively significant impact to Agriculture and Forest Resources?

As discussed above, under the proposed General Plan 2045 the City would uphold forest management and stewardship practices and no adverse impact to forest resources would occur. It is possible that some of the developable parcels within the core of the City could be considered prime agricultural land under certain circumstances; however, these lands are currently zoned for other uses (residential, industrial) and are within the core of the City, and not supporting agricultural uses. The adoption and implementation of General Plan 2045 would have a less than significant impact associated with agriculture and forest resources due to its focus on infill development, which would reduce the likelihood of City-derived development or annexation of agricultural or forest resources outside of the City limits.

Projects considered under the cumulative impact analysis are listed in Table 1.10-1 – Projects Considered for Cumulative Impacts, and one project (the Foster Ave Solar project) appears to potentially pose an impact to agricultural resources if solar panels were to displace agricultural lands. Renewable energy projects listed in Table 1.10-1 may also pose similar threats to agricultural resources if the projects are sited on existing, former or potential agriculture land. However, this potential impact is speculative, and these projects may be designed to retain agricultural resources thereby avoiding potential impacts to agricultural resources, i.e., energy infrastructure can be sited on existing structures. Additional environmental review would occur on lands outside of City jurisdiction. Given that the General Plan 2045 upholds protections to agricultural resources (via policies RC-5a, RC-5b, and RC-5c) and would not enable development of structures within active agriculture operations, implementation of the General Plan 2045 in conjunction with the projects listed in Table 1.10-1 would not cause a cumulative adverse impact to agricultural resources. The General Plan 2045 would not cause an adverse impact to forest resources, therefore there is no cumulative impact to forest resources.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

5.3 Biological Resources

This section evaluates the potential impacts related to biological resources resulting from adoption and implementation of the General Plan 2045. To provide the basis for this evaluation, the Setting section describes the biological setting. The Regulatory Framework section describes the regulatory background that applies to the General Plan 2045. The Impact Analysis section establishes the thresholds of significance, evaluates potential impacts to biological resources, and identifies the significance of impacts.

Of the comment letters received in response to the Notice of Preparation circulated for the proposed General Plan 2045, there were multiple comments specific to biological resources including consideration of open space, streams, wetlands and wetland protection measures, riparian corridors, buffers for these habitat types, habitat mitigation, sea level rise, conversion of biological resources, impacts to migratory birds specifically from collision with potential buildings and lighting from said buildings in the Gateway Area, and impacts to Environmentally Sensitive Habitat Areas.

5.3.1 Study Area

For impact assessment related to biological resources, the City limits were used as the study area (see Figure 2-1 – City of Arcata Planning Area). For the purposes of this analysis, a California Natural Diversity Database search was conducted using the City limits and a one-mile buffer to account for the mobility of wildlife and migration of plants over time, as is typical best practice for biological inventories when determining potential presence of species and associated potential impacts.

5.3.2 Setting

Existing Habitat Conditions

The City is situated on a coastal terrace at the north edge of Arcata Bay, the northern basin of Humboldt Bay, which is one of the most ecologically diverse embayments on the Pacific coast. Many of the tide lands surrounding Humboldt Bay were diked and drained in the late 1800s for pasture and remain in agricultural use today. Eastern portions of the City contain redwood forest, an ancient and spectacular plant community unique to the Pacific north coast. West of the City (and outside the study area) lies forested dunes ecosystem recognized as a highly complex ecosystem on the northwest coast of North America. Numerous watercourses meander through the City and empty into Arcata Bay. Freshwater, brackish and saltwater marshes throughout the study area are highly productive, sensitive habitats requiring special protection. See Figure 5.3-1 for an overview of vegetation types within and adjacent to the study area.

Existing Habitat within the Gateway Area

The Gateway Area is predominantly developed with industrial and commercial operations. There are pockets of undeveloped, vegetated open space predominantly located along the western fringe of the Gateway Area (see Figure 5.3-1). It should be noted that the spatial resolution of the land cover classification data shown in Figure 5.3-1 is coarse and should be considered a guide to the land cover types within the study area and not be considered with high precision. For example, the area shown as Annual Grasses and Forbs (purple) along the northwestern portion of the Gateway Area contains a 4.75-acre developed area. Additionally, a wetland is located in the western extent of the Gateway Area (see Figure 5.3-2) and the Jolly Giant Creek riparian corridor and an approximate 4.25-acre patch of annual grasses is located in the northeastern portion of the Gateway Area. The Gateway Area contains no public parks, recreational facilities, or publicly accessible open spaces, other than the Rail-to-Trail project along L Street. Existing habitat consists of grassland, approximately 600 feet of Jolly Giant Creek and its riparian corridor, the wetland which contains a willow canopy, and street trees. The majority of Jolly Giant Creek flows underground.

Existing Habitat within the Remaining Infill Opportunity Zones

The Downtown Area is highly developed. The grassy plaza area is the only vegetated open space area; however, it is highly maintained and not considered to provide high quality habitat for wildlife (see Figure 5.3-1). Craftsman's Mall Area is predominantly developed with housing and industrial uses (mill yard) and contains forested habitat and open grassland north of the mill yard, and a patch of grassland on the southern extent. The Valley West Area is predominantly developed with commercial businesses and contains patches of open grassland and street trees. No contiguous forestland occurs in the Valley West Area. It should be noted that Figure 5.3-1 does not accurately depict the habitat within the Craftsman's Mall and Valley West areas because it incorrectly depicts vegetated polygons which are actually developed. No wetlands occur in the Downtown, Craftsman's Mall or Valley West Areas (see Figure 5.3-2).

Aquatic Resources

The study area contains freshwater wetlands, salt marsh, tidally influenced slough channels, creeks and a segment of the Mad River. Wetlands predominantly consist of palustrine wetlands, which includes all nontidal wetlands dominated by trees, shrubs, emergent herbaceous plants, or emergent mosses or lichens, where salinity is less than 0.5 parts per thousand. As shown on Figure 5.3-2, the study area is dominated by palustrine emergent wetlands which include wetlands that contain rooted herbaceous plants as the tallest life form with at least 30% areal coverage, and to a lesser degree includes palustrine scrub shrub which are wetland that contain woody plants less than 20 feet tall that are the dominant life form (with at least 30% areal coverage), and palustrine forested wetlands which contain trees greater than 20 feet as the dominant life form with at least 30% areal coverage (FGDC 2013). The jurisdiction of aquatic resources - whether it is regulated by the U.S. Army Corps of Engineers and/or the Regional Water Quality Control Board under the Clean Water Act or Porter Cologne Act - depends on whether aquatic resources meet the definition of a Water of the U.S. or Water of the State which is described in Section 5.3.3 below. In general, most aquatic resources are considered Waters of the State, however a relatively permanent surface-level hydrologic connection is required for an aquatic resource to be considered a Water of the U.S. Most wetlands are located in the southern and western extents of the study area. Salt marsh habitat is considered an estuarine system which consists of deepwater tidal habitats and adjacent tidal wetlands that are usually semi-enclosed by land but have open, partial connectivity to the ocean, or in this case Humboldt Bay. Salt marsh is concentrated along the bayfront portion of the study area.

The following river, creeks, sloughs, and associated riparian habitat are located within the study area: Mad River, Jacoby Creek, Beith Creek, Grotzman Creek, Campbell Creek, Jolly Giant Creek, Janes Creek, Gannon Slough, Butchery Slough, and McDaniel Slough.

Sensitive Natural Communities and Environmentally Sensitive Habitat Areas

Sensitive Natural Communities are vegetation types (or natural communities) that are ranked either 1 through 3 by NatureServe's Heritage Methodology in terms of global and state rarity. Global rarity ranking appears as "G1, G2, G3, G4 or G5", and state rarity ranking appears as "S1, S2, S3, S4 or S5". Natural Communities with ranks of S1 through S3 are considered Sensitive Natural Communities to be addressed in the environmental review process. Environmentally Sensitive Habitat Areas (ESHA) is a term used in the Coastal Zone and it is often times synonymous with Sensitive Natural Communities. Riparian habitat is considered ESHA.

Special-Status Plant Species

The California Native Plant Society Inventory for Rare Plants was consulted for a list of rare plants that could potentially occur in the study area. The California Natural Diversity Database was also consulted for vegetation communities that may occur within the study area. See Table 5.3-1 - Potential for Special Status Species to Occur within the Study Area, for a summary of special status plants evaluated in this section which includes federally, or state threatened, endangered or candidate species, or species with a rare ranking of 1 or 2 by the California Native Plant Society. See Figure 5.3-3 for an overview of special status plants within the study area and a one-mile buffer.

Wildlife and Avian Resources

The U.S. Fish and Wildlife Service (USFWS) Information for Planning and Consultation (IPaC) website was consulted for a list of federally listed species and critical habitat that might be present within the study area. Additionally, the California Natural Diversity Database list of special status species was reviewed for species that may potentially occur in the study area. The study area contains habitat suitable for special status species, including federally and state listed species. See Table 5.3-1 for a summary of special status wildlife species that may occur in the study area which includes federally, or state threatened, endangered or candidate species, or species considered a “Species of Special Concern” by California Department of Fish and Wildlife (CDFW). See Figure 5.3-3 for an overview of special status wildlife species within the study area and a one-mile buffer.

Table 5.3-1 Potential for Special-status Species to Occur within the Study Area

Species	Status	Habitat Requirements[1]	Potential to Occur within Study Area
Mammals			
Sonoma Tree Vole (*Arborimus pomo)*	CDFW Species of Special Concern	Nests high in the canopy in wet, old-growth forests.	Low Potential. Suitable habitat is absent from the study area.
Fisher (*Pekania pennanti)*	Federal Proposed Threatened, CA Threatened, CDFW Species of Special Concern	Late-successional coniferous or mixed forests. Key habitat components include relatively large diameter trees, high canopy closure, large trees (hardwood and conifer) with cavities, and large down wood.	Low Potential. Suitable habitat is absent from the study area.
Pacific Marten (*Martes caurina*); Coastal DPS	Federal Threatened;	Found in north coast coniferous forests; uses cavities, snags, logs and rocky areas for cover and denning. Needs large areas of mature, dense forest.	No Potential. Suitable habitat is absent from within and adjacent to the study area.
Townsend's Big-eared Bat (*Corynorhinus townsendii)*	CDFW Species of Special Concern	Uses caves, mines, and isolated buildings (e.g., barns) for day and night roosting, maternity roosting, and hibernacula. Occasionally uses hollow trees and bridges for day or night roosting.	Moderate Potential. Habitat is present in the study area via vegetation and structures.
Birds			
Marbled Murrelet (*Brachyramphus marmoratus*)	Federal Threatened; CA Endangered	Found along coast from Eureka to Oregon border and from Half Moon Bay to Santa Cruz. Nests in old growth redwood-dominated forests up to six miles from the ocean. Often found in Douglas-fir. Crepuscular species.	Low Potential. Suitable habitat is absent from the study area.
Mountain Plover (*Charadrius montanus)*	CDFW Species of Special Concern	Breeds on open plains at moderate elevations. Winters in short-grass plains and fields, plowed fields, and sandy deserts. Usually not found near bodies of water or even wet soil.	Low Potential. Suitable habitat is absent from the study area.
Western Snowy Plover (*Charadrius nivosus nivosus)*	Threatened	Breeds on coastal beaches. Generally breeding occurs above the high tide line on coastal beaches, sand spits, dune-backed beaches, sparsely vegetated dunes, beaches at creek and river mouths, and salt pans at lagoons and estuaries.	Low Potential. Habitat is absent from the study area. This species observed in sandy beaches within a few miles of the study area.
Yellow Rail (*Coturnicops noveboracensis)*	CDFW Species of Special Concern	Breeding birds typically inhabit fresh and brackish-water marshes, preferring the higher (drier) margins. Summers in the eastern Sierra Nevada.	High Potential. Suitable habitat is present within the study area.
Yellow-billed Cuckoo (*Coccyzus americanus*)	Federal Threatened; CA Endangered	Found in riparian forests, particularly dense willow mixed with cottonwoods with lower story of blackberry, nettles or wild grape.	Moderate Potential. Suitable habitat is present within the study area; however, this species is extremely rare.

Species	Status	Habitat Requirements[1]	Potential to Occur within Study Area
White-tailed Kite (*Elanus leucurus)*	CDFW Fully Protected	Common in savannas, open woodlands, marshes, desert grasslands, partially cleared lands, and cultivated fields.	High Potential. Habitat is present within the study area and this species has been observed within the study area.
American Peregrine Falcon (*Falco peregrinus anatum)*	CDFW Fully Protected	Breeds in open landscapes with cliffs (or skyscrapers) for nest sites.	Moderate Potential. Open landscapes are present within the study area, however suitable cliffs are absent or marginal.
Bald Eagle (*Haliaeetus leucocephalus*)	Federal De-listed; CA Endangered; CDFW Fully Protected	Ocean shore, lake margins, and rivers for both nesting and wintering. Most nests within one mile of water.	High Potential. Habitat is present within the study area and this species has been observed within the study area.
Bryant's Savannah Sparrow (*Passerculus sandwichensis alaudinus)*	CDFW Species of Special Concern	Inhabit grasslands with few trees, including meadows, pastures, grassy roadsides, sedge wetlands, and cultivated fields planted with cover crops like alfalfa. Near oceans, they also inhabit tidal saltmarshes and estuaries.	High Potential. Suitable habitat is present within the study area.
Northern Spotted Owl (*Strix occidentalis caurina*)	Federal Threatened; CA Threatened	Found in old-growth north coast coniferous forest, or in mixed stands of old-growth and mature trees. Occasionally found in younger forests with patches of big trees.	Moderate Potential. Suitable habitat is marginally present within the study area (and the community forest is being managed to promote NSO habitat via the City's Habitat Retention Agreement), however may exist adjacent to the study area.
Fish			
Tidewater Goby (*Eucyclogobius newberryi)*	Federal Endangered; CDFW Species of Special Concern	Inhabits lagoons formed by streams running into the sea.	High Potential. Suitable habitat is present within the study area.
Green Sturgeon (*Acipenser medirostris)*	Federal Threatened; CDFW Species of Special Concern	Found in riverine, estuarine, and marine habitats along the west coast of North America, spending substantial portions of their lives in marine waters.	Moderate Potential. Suitable habitat is marginally present within the study area (Mad River).
Longfin Smelt (*Spirinchus thaleichthys)*	Federal Candidate: CA Threatened	Found in bays, estuaries, and nearshore coastal areas, and migrate into freshwater rivers to spawn.	High Potential. Suitable habitat is present within the study area.
Eulachon (*Thaleichthys pacificus)*	Federal Threatened	Found near the bottom of the continental shelf, usually at depths of 20-200m. Spawning occurs within tidal influence of river mouth.	High Potential. Suitable habitat is present within the study area.

Species	Status	Habitat Requirements[1]	Potential to Occur within Study Area
Coho Salmon (*Oncorhynchus kisutch); Southern Oregon/Northern California ESU*	Federal Threatened; CA Threatened	Spawning occurs in small streams with stable gravel substrates. The remainder of the life cycle is spent foraging in estuarine and marine waters of the Pacific Ocean.	High Potential. Suitable habitat is present within the study area. This species has been observed in the study area.
Steelhead Trout (*Oncorhynchus mykiss irideus pop. 48); Northern California DPS summer-run*	Federal Threatened; CA Endangered	Spawn in fast-flowing, gravel-bottomed, well-oxygenated rivers and streams.	High Potential. Suitable habitat is present within the study area.
Steelhead Trout (*Oncorhynchus mykiss irideus pop. 49); Northern California DPS winter-run*	Federal Threatened	Spawn in fast-flowing, gravel-bottomed, well-oxygenated rivers and streams.	High Potential. Suitable habitat is present within the study area. This species has been observed in the study area.
Chinook Salmon (*Oncorhynchus tshawytscha)*	Federal Threatened	Juveniles may spend 3 months to 2 years in freshwater before migrating to estuarine areas and then into the ocean to feed and mature. They prefer streams that are deeper and larger than those used by other Pacific salmon species.	High Potential. Suitable habitat is present within the study area.
Coastal Cutthroat Trout (*Oncorhynchus clarkii clarkii)*	CDFW Species of Special Concern	Inhabit a large range along the Pacific coast. They prefer estuaries, lagoons, and small, low-gradient coastal streams.	High Potential. Suitable habitat is present within the study area. This species has been observed in the study area.
Pacific Lamprey (*Entosphenus tridentatus)*	CDFW Species of Special Concern	Typically found in stream and river reaches that have relatively stable flow conditions. Spawning occurs in medium-sized rivers and smaller tributary streams, and ammocoetes typically found in slackwater areas with soft substrate. Anadromous species.	High Potential. Suitable habitat is present within the study area. This species has been observed in the study area.
Western Brook Lamprey (*Lampetra richardsoni*)	CDFW Species of Special Concern	Typically found in stream and river reaches that have relatively stable flow conditions. Spawning occurs in medium-sized rivers and smaller tributary streams, and ammocoetes typically found in slackwater areas with soft substrate.	High Potential. Suitable habitat is present within the study area.
Reptiles			
Western Pond Turtle (*Emys marmorata)*	CDFW Species of Special Concern	Inhabits calm and quiet ponds, marshes, and pools.	High Potential. Suitable habitat is present within the study area.
Amphibians			
Pacific Tailed Frog (*Ascaphus truei)*	CDFW Species of Special Concern	Inhabits cold, fast-moving streams with cobblestone bottoms.	High Potential. Suitable habitat is present within the study area. This species has been observed in the study area.

Species	Status	Habitat Requirements[1]	Potential to Occur within Study Area
Foothill Yellow-legged Frog (*Rana boylii); North Coast DPS*	CDFW Species of Special Concern	Typically inhabits rocky streams and rivers with rocky substrate and open, sunny banks, in forests, chaparral, and woodlands.	High Potential. Suitable habitat is present within the study area. This species has been observed in the study area.
Northern Red-legged Frog (*Rana aurora)*	CDFW Species of Special Concern	Typically found in woods adjacent to streams. Found in humid forests, woodlands, grasslands, and streamsides with plant cover. Breeding habitat is in permanent water sources (lakes, ponds, streams, etc.).	High Potential. Suitable habitat is present within the study area. This species has been observed in the study area.
Southern Torrent Salamander (*Rhyacotriton variegatus)*	CDFW Species of Special Concern	Found in shallow, cold, clear, well-shaded streams, waterfalls and seepages, particularly those running through talus and under rocks all year, in mature old-growth forests.	High Potential. Suitable habitat is present within the study area. This species has been observed in the study area.
Insects			
Crotch Bumble Bee (*Bombus crotchii*)	CA Candidate	Inhabits grasslands and shrublands and requires a hotter and drier environment than other bumble bees (Los Padres Forest Watch 2023). Occurs in coastal California east to the Sierra-Cascade crest. Food plant genera include *Antirrhinum*, *Phacelia*, *Clarkia*, *Dendromecon*, *Eschscholzia*, and *Eriogonum*.	Low Potential. Suitable climate (hot and dry) does not typically occur within the study area.
Western Bumble Bee (*Bombus occidentalis*)	CA Candidate	Once widespread across the Pacific northwest, Rocky Mountains and western plains. Theories of their decline due to disease from commercial bee rearing. Species occurs in a variety of climates. They are now largely confined to high-elevation sites and areas east of the Cascade crest (ODFW 2023), and presumably east of the Sierra Nevada crest.	Low Potential. Suitable habitat (high elevation sites) not present in the study area. Species extremely rare.
Monarch Butterfly (*Danaus plexippus*)	Federal Candidate	Utilizes milkweed as the sole host plant for the Monarch Butterfly caterpillar. Can be found in closed-cone coniferous forest. Winter roosts located along California coast from Mendocino to Baja, in wind-protected tree groves.	High Potential. Species may be present if milkweed is present. Many pollinator gardens exist within the study area which contain milkweed.
Plants			
western lily (*Lilium occidentale)*	Federal Endangered; CA Endangered	Grows at the edges of sphagnum bogs and in forest or thicket openings along the margins of ephemeral ponds and small channels. It also grows in coastal prairie and scrub near the ocean where fog is common.	High Potential. Suitable habitat is present within the study area.
minute pocket moss (*Fissidens pauperculus*)	CA Rare Plant Rank 1B.2	Grows on damp soil along the coast. In dry streambeds and on stream banks in north coast coniferous forests. 30-1025 m.	High Potential. Suitable habitat is present within the study area.

Species	Status	Habitat Requirements[1]	Potential to Occur within Study Area
cylindrical trichodon (*Trichodon cylindricus*)	CA Rare Plant Rank 2B.2	Grows in openings on sandy or clay soils on roadsides, stream banks, trails or in field in broadleaf upland forests, coniferous forests, meadows and seeps. 35-2005 m.	High Potential. Suitable habitat is present within the study area.
pink sand-verbena (*Abronia umbellata var. breviflora*)	CA Rare Plant Rank 1B.2	Grows in dune systems, usually in the foredunes and interdunes with sparse cover. This species is usually closest to the ocean. 0-75 m.	No Potential. Suitable habitat does not occur within the study area.
seaside bittercress (*Cardamine angulata*)	CA Rare Plant Rank 2B.1	Grows in wet areas, streambanks, in north coast coniferous forests. 5-515 m.	High Potential. Suitable habitat is present within the study area.
Humboldt Bay owl's-clover (*Castilleja ambigua var. humboldtiensis*)	CA Rare Plant Rank 1B.2	Grows in coastal salt marsh. 0-20 m.	High Potential. Suitable habitat is present within the study area.
Point Reyes salty bird's-beak (*Chloropyron maritimum ssp. palustre*)	CA Rare Plant Rank 1B.2	Grows in coastal salt marsh. 0-115 m.	High Potential. Suitable habitat is present within the study area.
seaside pea (*Lathyrus japonicus*)	CA Rare Plant Rank 2B.1	Grows in coastal dunes. 3-65 m.	No Potential. Suitable habitat does not occur within the study area.
ghost-pipe (*Monotropa uniflora*)	CA Rare Plant Rank 2B.2	Broadleafed upland forest; north coast coniferous forest. Often grows under redwoods or western hemlock. 15-855 m.	High Potential. Suitable habitat is present within the study area.
Howell's montia (*Montia howellii*)	CA Rare Plant Rank 2B.2	Grows in meadows and seeps, north coast coniferous forests, and vernally wet sites often on compacted soil. 10-1,215 m.	High Potential. Suitable habitat is present within the study area.
wolf's evening-primrose (*Oenothera wolfii*)	CA Rare Plant Rank 1B.1	Grows in coastal bluff scrub, coastal dunes, coastal prairie and lower montane coniferous forest usually in sandy substrates, and at mesic sites. 0-125 m.	Moderate Potential. Marginal habitat is present within the study area, however higher quality habitat is available outside of the study area.
Siskiyou checkerbloom (*Sidalcea malviflora ssp. patula*)	CA Rare Plant Rank 1B.2	Grows in coastal bluff scrub, coastal prairie, north coast coniferous forest, and open coastal forests. Usually found in roadcuts. 5-1,255 m.	High Potential. Suitable habitat is present within the study area.
coast checkerbloom (*Sidalcea oregana ssp. eximia*)	CA Rare Plant Rank 1B.2	Grows in meadows and seeps in north coast coniferous forests. Often found near meadows in gravelly soil. 5-1,805 m.	High Potential. Suitable habitat is present within the study area.
western sand-spurrey (*Spergularia canadensis var. occidentalis*)	CA Rare Plant Rank 2B.1	Grows in coastal salt marsh. 0-3 m.	High Potential. Suitable habitat is present within the study area.

Species	Status	Habitat Requirements[1]	Potential to Occur within Study Area
alpine marsh violet (*Viola palustris*)	CA Rare Plant Rank 2B.2	Grows in swampy, shrubby places within coastal scrub or coastal bogs. 0-150 m.	High Potential. Suitable habitat is present within the study area.
northern clustered sedge (*Carex arcta*)	CA Rare Plant Rank 2B.2	Grows in bogs and fens in north coast coniferous forests, usually at mesic sites. 60-1,405 m.	High Potential. Suitable habitat is present within the study area.
Lyngbye's sedge (*Carex lyngbyei*)	CA Rare Plant Rank 2B.2	Grows in marshes and swamps (brackish and freshwater). 0-200 m.	High Potential. Suitable habitat is present within the study area.
northern meadow sedge (*Carex praticola*)	CA Rare Plant Rank 2B.2	Grows in moist to wet meadows. 15-3,200 m.	High Potential. Suitable habitat is present within the study area.

Notes:

[1]: Habitat descriptions soured from the California Natural Diversity Database (CDFW 2023) unless otherwise noted.

California Rare Plant Ranks (CRPR):

- 1A = CRPR List 1A: Plants presumed extinct in California
- 1B = CRPR List 1B: Plants rare, threatened or endangered in California and elsewhere
- 2 = CRPR List 2: Plants rare, threatened or endangered in California, but more common elsewhere.

Potential to Occur:

No Potential Habitat on and adjacent to the Project Area is clearly unsuitable for the species requirements (cover, substrate, elevation, hydrology, plant community, site history, disturbance regime).

Low Potential Few of the habitat components meeting the species requirements are present, and/or the majority of habitat on and adjacent to the Project Area is unsuitable or of very poor quality. The species is not likely to be found in the Project Area.

Moderate Potential Some of the habitat components meeting the species requirements are present, and/or only some of the habitat on or adjacent to the Project Area is unsuitable. The species has a moderate probability of being found in the Project Area.

High Potential All of the habitat components meeting the species requirements are present and/or most of the habitat on or adjacent to the Project Area is highly suitable. The species has a high probability of being found in the Project Area.

Table compiled from CDFW California Natural Diversity Database, U.S. Fish and Wildlife Service (USFWS) Information for Planning and Consultation (IPaC) Species List, and the Rare Plant Inventory Database from California Native Plant Society searches of the Arcata North and Arcata South USGS 7.5 Minute Quadrangles (CDFW 2023, USFWS 2023, CNPS 2023). Potential to occur is determined based on habitat availability and nearest known documented records.

5.3.3 Regulatory Framework

Many sensitive biological resources in California, including species, habitats, and aquatic resources, are protected and/or regulated by federal, state, and local laws and policies. Those applicable to the General Plan 2045 are summarized below.

Federal

Clean Water Act Section 404

The Clean Water Act (1977, as amended) establishes the basic structure for regulating discharges of pollutants into Waters of the U.S. It gives the U.S. Environmental Protection Agency (EPA) the authority to implement pollution control programs, including setting wastewater standards for industry and water quality standards for contaminants in surface waters. The Clean Water Act makes it unlawful for any person to discharge any pollutant from a point source into navigable waters, without a permit under its provisions.

Proposed discharges of dredged or fill material into Waters of the U.S. require U.S. Army Corps of Engineers (USACE) authorization under Section 404 of the Clean Water Act [33 U.S.C. 1344]. Regulations implementing Clean Water Act Section 404 define “Waters of the U.S.” to include intrastate waters (such as, lakes, rivers, streams, wetlands, and natural ponds) that the use, degradation, or destruction of could affect interstate or foreign commerce. Wetlands are defined for regulatory purposes as “areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions” (33 Code of Federal Regulations [CFR] 328.3; 40 CFR 230.3). Projects are reviewed by USACE under standard (i.e., individual) or general (i.e., nationwide, programmatic, or regional) permits. The type of permit process used to consider a project is determined by the USACE and based on project parameters.

Clean Water Act Section 401

In California, the State Water Resources Control Board (SWRCB) and nine Regional Water Quality Control Boards (RWQCBs) review projects for compliance with State and Federal water quality standards under Section 401 of the Clean Water Act. In Humboldt County, the North Coast RWQCB (NCRWQCB) is responsible for certifying that a federally permitted project meets state water quality objectives (§401 Clean Water Act, and Title 23 CCR 3830, et seq.) before the permit is issued. Activities in areas that are outside of the jurisdiction of the USACE (e.g., isolated wetlands, vernal pools, or stream banks above the ordinary high water mark) are regulated by the nine RWQCBs, under the authority of the Porter-Cologne Act, and may require the issuance of either individual or general waste discharge requirements (see below). As required the City would submit permit registration documents (notice of intent, risk assessment, site maps, SWPPP, annual fee, and certifications) to the SWRCB. The SWPPP would address pollutant sources, best management practices, and other requirements specified in the Order. The SWPPP would include erosion and sediment control measures, and dust control practices to prevent wind erosion, sediment tracking, and dust generation by construction equipment. A Qualified SWPPP Practitioner would oversee implementation of the Project SWPPP, including visual inspections, sampling and analysis, and ensuring overall compliance.

Executive Order 11990

Executive Order 11990 (1977) furthers the protection of wetlands through avoidance of long and short-term adverse impacts associated with the destruction or modification of wetlands where practicable. The order requires all federal agencies managing federal lands, sponsoring federal projects, or funding state or local projects to assess the effects of their actions on wetlands. The agencies are required to follow avoidance, mitigation, and preservation procedures. The Presidential Wetland Policy of 1993 and subsequent reaffirmation of the policy in 1995 supports protection and restoration of wetlands, while advocating for increased fairness of federal regulatory programs.

Executive Order 13112, Invasive Species

Executive Order 13112 was issued in 1999 to enhance federal coordination and response to the complex and accelerating problem of invasive species. It provides policy direction to promote coordinated efforts of federal, state, and local agencies in monitoring, detecting, preventing, evaluating, managing, and controlling the spread of invasive species and increasing the effectiveness of scientific research and public outreach affecting the spread and impacts of invasive species.

Federal Endangered Species Act

The Endangered Species Act (ESA) of 1973 (16 USC 1531 *et seq*.) establishes a national policy that all federal departments and agencies provide for the conservation of threatened and endangered species and their habitats. The Secretary of the Interior and the Secretary of Commerce are designated in the ESA as responsible for: (1) maintaining a list of species likely to become endangered within the foreseeable future throughout all or a significant portion of its range (threatened) and that are currently in danger of extinction throughout all or a significant portion of its range (endangered); (2) carrying out programs for the conservation of these species; and (3) rendering opinions regarding the impact of proposed federal actions on listed species. The ESA also outlines what constitutes unlawful taking, importation, sale, and possession of listed species and specifies civil and criminal penalties for unlawful activities.

Pursuant to the requirements of the ESA, an agency reviewing a project within its jurisdiction must determine whether any Federally listed or proposed species may be present in the project region, and whether the proposed project would result in "take" of such species. The ESA prohibits "take" of a single threatened and endangered fish or wildlife species except under certain circumstances and only with authorization from USFWS or NOAA Fisheries through a permit under Section 7 (for federal entities or federal actions) or 10(a) (for non-federal entities) of the Act. "Take" under the ESA includes activities such as "harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct." USFWS regulations define harm to include "significant habitat modification or degradation." On June 29, 1995, a U.S. Supreme Court ruling further defined harm to include habitat modification "…where it actually kills or injures wildlife by significantly impairing essential behavioral patterns, including breeding, feeding, or sheltering." Of note, federally listed plants are not protected from take, although it is illegal to collect or maliciously harm them on Federal land.

In addition, an agency reviewing a project is required to determine whether the project is likely to jeopardize the continued existence of any species proposed to be listed under the ESA or result in the destruction or adverse modification of critical habitat for such species (16 USC 1536[3][4]). Critical Habitat is defined by the ESA as a specific geographic area containing features essential for the conservation of an endangered or threatened species. Under Section 7 of the ESA, critical habitat should be evaluated if designated for Federally listed species that may be present in the project vicinity and/or potentially impacted by the Project.

Coastal Zone Management Act

The Coastal Zone Management Act was passed in 1972 and established a national policy and national program for the management, beneficial use, protection, and development of land and water resources of the nation's coastal zones. The voluntary national program was meant to encourage coastal states to develop and implement coastal zone management plans. The California Coastal Act (further described below) is the foundation of the California Coastal Management Program which is California's coastal zone management plan. The Coastal Zone Management Act requires that federal development activities and development requiring federal permits or funding affecting land or water areas or resources within the coastal zone are consistent with the provisions of the act and approved coastal zone management plans. In California, outside of San Francisco Bay, the California Coastal Management Program is implemented and enforced by the California Coastal Commission.

Migratory Bird Treaty Act

The Migratory Bird Treaty Act (MBTA) of 1918 (16 USC 703-711) as amended established federal responsibilities for the protection of nearly all species of birds, their eggs, and nests. A migratory bird is defined as any species

or family of birds that live, reproduce, or migrate within or across international borders at some point during their annual life cycle. The MBTA prohibits the take, possession, buying, selling, purchasing, or bartering of any migratory bird listed in 50 CFR Part 10, including feathers or other parts, nests, eggs, or products, except as allowed by implementing regulations (50 CFR 21). Only exotic species such as Rock Pigeons (*Columba livia*), House Sparrows (*Passer domesticus*), and European Starlings (*Sturnus vulgaris*) are exempt from protection.

Bald and Golden Eagle Protection Act

The Bald and Golden Eagle Protection Act (BGEPA) was originally enacted in 1940 in order to protect the national emblem of the United States, the Bald Eagle. At that time, the Bald Eagle was experiencing significant population pressures from hunting, egg collection, and habitat loss (Buehler 2000). This act was expanded in 1962 to include protections for the Golden Eagle (*Aquila chrysaetos*), which was also experiencing precipitous population declines due to habitat loss, hunting, and electrocution from power lines (Kochert et al. 2002).

The current federal statute as amended (16 U.S.C. 668-668d) includes criminal penalties for anyone, including individuals, associations, partnerships, and corporations who “take, possess, sell, purchase, barter, offer to sell, purchase or barter, transport, export or import, at any time or in any manner any bald eagle commonly known as the American eagle or any golden eagle, alive or dead, or any part, nest, or egg thereof” without a permit (16 U.S.C. § 668a).

A BGEPA take permit may be required if a proposed activity is near an active or inactive eagle nest, roosting site, or foraging site. This is particularly true if the project is near breeding habitat (as opposed to wintering habitat or migratory stop-over sites). The act applies to all activities that may impact eagles, including projects without a federal nexus. If there is a possibility that the project could “non-purposefully take” eagles (unavoidable take associated with, but not the purpose of an activity) the USFWS may issue a programmatic take permit. In this case, the permit would be subject to conditions or mitigation measures to minimize impacts. Post-construction monitoring and annual reports may also be required (50 CFR 22.26).

Humboldt Bay National Wildlife Refuge Complex Comprehensive Conservation Plan

The Humboldt Bay National Wildlife Refuge Complex includes Humboldt Bay National Wildlife Refuge and Castle Rock National Wildlife Refuge. The Humboldt Bay National Wildlife Refuge is located in the vicinity of Eureka and Arcata with refuge units distributed around Humboldt Bay. One of the units, the Jacoby Creek Unit, is partially within City limits and is located west of Highway 101 approximately between the Bayside Cutoff and Arcata Marsh. The U.S. Fish and Wildlife Service prepared a Comprehensive Conservation Plan to guide management of fish, wildlife, plants, other natural resources, and visitor uses on the Humboldt Bay NWR Complex between 2009 and 2024.

State

California Environmental Quality Act

Rare or endangered plant or wildlife species are defined in the CEQA Guidelines Section 15380. Endangered means that survival and reproduction in the wild are in immediate jeopardy. Rare means that a species is either presently threatened with extinction or that it is likely to become endangered within the foreseeable future. A species of animal or plant shall be presumed to be rare or endangered if it is listed in 14 California Administrative Code 670.2 or 670.5, or 50 CFR 17.11 or 17.12 pursuant to the ESA as threatened or endangered.

California Coastal Act

The California Coastal Act (California Public Resources Code [PRC] Sections 30000 et seq) was enacted by the State Legislature in 1976 to provide long-term protection of California’s 1,100-mile (1,770 kilometers) coastline for the benefit of current and future generations. California Coastal Act policies constitute the standards used by the California Coastal Commission in its coastal development permit decisions and for the review of local coastal programs prepared by local governments and submitted to the California Coastal Commission for approval.

These policies are also used by the California Coastal Commission to review federal activities that affect the coastal zone (see Coastal Zone Management Act above). Among other things, the policies require:

– Protection and expansion of public access to the shoreline;
– Protection, enhancement and restoration of environmentally sensitive habitats;
– Protection of productive agricultural lands, commercial fisheries and archaeological resources; and
– Protection of the scenic beauty of coastal landscapes and seascapes;

The California Coastal Act defines an "environmentally sensitive habitat area" (ESHA) as an "area in which plant or animal life or their habitats are either rare or especially valuable because of their special nature or role in an ecosystem and which could be easily disturbed or degraded by human activities and developments" (Section 30107.5). Three important elements define an ESHA:

1. A geographic area can be designated ESHA because of the presence of individual species of plants or animals or because of the presence of a particular habitat;
2. In order for an area to be designated as ESHA, the species or habitat must be either rare or it must be especially valuable; and,
3. The area must be easily disturbed or degraded by human activities.

Section 30240 states in part that:

– ESHA shall be protected against significant disruption of habitat values, and only uses dependent on such resources shall be allowed within such areas.
– Development in areas adjacent to ESHA and parks and recreation areas shall be sited and designed to prevent impacts which would significantly degrade those areas and shall be compatible with the continuance of those habitat and recreation areas.

While there is not a specific list of habitats considered to be ESHA for the state or county, the California Coastal Commission through the California Coastal Act and counties or municipalities through local coastal programs are the jurisdictional agencies that exert authority in identifying and protecting ESHA during project review and permitting. In order for the California Coastal Commission to determine if areas are to be classified as ESHA's, they often refer to CDFW's list of statewide Sensitive Natural Communities. Sensitive Natural Communities are defined by California Natural Diversity Database as those with a State ranking of 1, 2 or 3 (S1, S2, or S3). The California Coastal Commission generally considers Sensitive Natural Communities to be ESHAs. Thus, the Sensitive Natural Communities discussed in Impact BIO-b would also likely be considered ESHA under the California Coastal Act.

Additional Coastal Act policies relevant to the proposed Project include:

Section 30231

The biological productivity and the quality of coastal waters, streams, wetlands, estuaries, and lakes appropriate to maintain optimum populations of marine organisms and for the protection of human health shall be maintained, and where feasible, restored through, among other means, minimizing adverse effects of wastewater discharges and entrainment, controlling runoff, preventing depletion of ground water supplies and substantial interference with surface water flow, encouraging wastewater reclamation, maintaining natural vegetation buffer areas that protect riparian habitats, and minimizing alteration of natural streams.

Section 30233

(a) The diking, filling, or dredging of open coastal waters, wetlands, estuaries, and lakes shall be permitted in accordance with other applicable provisions of this division, where there is no feasible less environmentally damaging alternative, and where feasible mitigation measures have been provided to minimize adverse environmental effects, and shall be limited to the following:

(1) *New or expanded port, energy, and coastal-dependent industrial facilities, including commercial fishing facilities.*

(2) *Maintaining existing, or restoring previously dredged, depths in existing navigational channels, turning basins, vessel berthing and mooring areas, and boat launching ramps.*

(3) *In wetland areas only, entrance channels for new or expanded boating facilities; and in a degraded wetland, identified by the Department of Fish and Game pursuant to subdivision (b) of Section 30411, for boating facilities if, in conjunction with such boating facilities, a substantial portion of the degraded wetland is restored and maintained as a biologically productive wetland; provided, however, that in no event shall the size of the wetland area used for such boating facility, including berthing space, turning basins, necessary navigation channels, and any necessary support service facilities, be greater than 25 percent of the total wetland area to be restored.*

(4) *In open coastal waters, other than wetlands, including streams, estuaries, and lakes, new or expanded boating facilities.*

(5) *Incidental public service purposes, including, but not limited to, burying cables and pipes or inspection of piers and maintenance of existing intake and outfall lines.*

(6) *Mineral extraction, including sand for restoring beaches, except in environmentally sensitive areas.*

(7) *Restoration purposes.*

(8) *Nature study, aquaculture, or similar resource-dependent activities.*

Section 30607.1

Where any dike and fill development is permitted in wetlands in conformity with this division, mitigation measures shall include, at a minimum, either acquisition of equivalent areas of equal or greater biological productivity or opening up equivalent areas to tidal action; provided, however, that if no appropriate restoration site is available, an in-lieu fee sufficient to provide an area of equivalent productive value or surface areas shall be dedicated to an appropriate public agency, or such replacement site shall be dedicated to an appropriate public agency, or such replacement site shall be purchased before the dike or fill development may proceed. Such mitigation measure shall not be required for temporary or short-term fill or diking: provided, that a bond or other evidence of financial responsibility is provided to assure that restoration will be accomplished in the shortest feasible time.

Porter-Cologne Water Quality Control Act

The Porter-Cologne Water Quality Control Act (Porter Cologne) was passed in 1969 and assigns overall authority for water rights and water quality protection to the SWRCB and directs the nine RWQCBs to develop and enforce water quality standards within their boundaries. Through Porter-Cologne, the RWQCBs are responsible for regulating any activity, including waste discharges, that would, or that have the potential to, impair the beneficial uses of water bodies.

The SWRCB utilizes waste discharge requirements to regulate activities that may affect waters of the state or that may discharge water in a diffuse matter. As described above, any federally sponsored or permitted activity that may result in a discharge to a water body must be certified under Clean Water Act Section 401 that the proposed activity would comply with state water quality standards. In practice, a Clean Water Act Section 401 Water Quality Certification incorporates a “General Waste Discharge Requirement for Dredge and Fill Discharges”, so a project specific waste discharge requirement is not typically required. A waste discharge requirement is, however, required when a Clean Water Act Section 401 Water Quality Certification is not, or if the project is particularly complex.

In the Project Area, the NCRWQCB regulates construction in Waters of the U.S. and Waters of the State, including activities in wetlands, under both the Clean Water Act and Porter Cologne (California Water Code, Division 7).

Executive Order W-59-93, State Wetland Conservation Policy

The California Wetlands Conservation Policy (Executive Order W-59-93) establishes a primary objective to "ensure no overall net loss…of wetlands acreage and values in California." The RWQCBs implement this policy and the Basin Plan Wetland Fill Policy, both of which require mitigation for wetland impacts.

California Endangered Species Act

The California Endangered Species Act (CESA) includes provisions for the protection and management of species listed by the State of California as endangered, threatened, or designated as candidates for such listing (California Fish and Game Code (FGC) Sections 2050 through 2085). The CESA generally parallels the main provisions of the ESA and is administered by CDFW, which maintains a list of state threatened and endangered species as well as candidate species. The CESA requires consultation "to ensure that any action authorized by a state lead agency is not likely to jeopardize the continued existence of any endangered or threatened species or result in the destruction or adverse modification of habitat essential to the continued existence of the species" (Section 2053). California plants and animals declared to be endangered or threatened are listed in 14 California Code of Regulations (CCR) 670.2 and 14 CCR 670.5, respectively. The State prohibits the incidental take of species listed pursuant to CESA or candidate species unless that take is permitted by CDFW. Under CESA, "take" is defined as to "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill." It does not include protection of habitat unless alteration or removal of habitat would result in direct "take" (as defined above) of an individual animal.

California Fish and Game Code (FGC) - Birds of Prey and Native Nesting Birds

Section 3503 of the FGC prohibits the take, possession, or needless destruction of the nest or eggs of any bird. Subsection 3503.5 specifically prohibits the take, possession, or destruction of any birds in the orders Falconiformes (hawks and eagles) or Strigiformes (owls) and their eggs or nests. These provisions, along with the federal MBTA, essentially serve to protect nesting native birds. Non-native species, including the European Starling, Rock Dove, and House Sparrow, are not afforded protection under the MBTA or FGC.

California FGC - Fully Protected Species

The CDFW enforces the FGC, which provides protection for "fully protected birds" (Section 3511), "fully protected mammals" (Section 4700), "fully protected reptiles and amphibians" (Section 5050), and "fully protected fish" (Section 5515). As fully protected species, the CDFW cannot authorize any project or action that would result in "take" of these species even with an incidental take permit.

Species of Special Concern

The CDFW maintains a list of Species of Special Concern. A Species of Special Concern is a species, subspecies, or distinct population of an animal native to California that currently satisfies one or more of the following (not necessarily mutually exclusive) criteria:

– is extirpated from the State or, in the case of birds, is extirpated in its primary season or breeding role;
– is listed as Federally-, but not State-, threatened or endangered; meets the State definition of threatened or endangered but has not formally been listed;
– is experiencing, or formerly experienced, serious (noncyclical) population declines or range retractions (not reversed) that, if continued or resumed, could qualify it for State threatened or endangered status; or
– has naturally small populations exhibiting high susceptibility to risk from any factor(s), that if realized, could lead to declines that would qualify it for State threatened or endangered status.

Species of Special Concern are species that are declining in California, and if current population and habitat trends continue could warrant listing pursuant to CESA or the ESA. Species of Special Concern receive consideration under CEQA.

Native Plant Protection Act

The CDFW administers the California Native Plant Protection Act (Sections 1900–1913 of the FGC). These sections allow the California Fish and Game Commission to designate rare and endangered plant species and to notify landowners of the presence of such species. Section 1907 of the FGC allows the Commission to regulate the "taking, possession, propagation, transportation, exportation, importation, or sale of any endangered or rare native plants." Section 1908 further directs that "[n]o person shall import into this state, or take, possess, or sell within this state, except as incident to the possession or sale of the real property on which the plant is growing, any native plant, or any part or product thereof, that the Commission determines to be an endangered native plant or rare native plant."

Sensitive Natural Communities

The Manual of California Vegetation Online, describes California vegetation types, also known as "natural communities," and categorizes them into a hierarchical structure of alliances and associations. CDFW's California Natural Diversity Database evaluates the rarity and threats to these natural communities and ranks them into set categories, known as a state ranking. Alliances and associations with a California Natural Diversity Database State ("S") ranking of S1 through S3 are defined as Sensitive Natural Communities and impacts to them should be assessed during CEQA project review. State ranking includes the following:

– S1 = Critically Imperiled – Critically imperiled in the state because of extreme rarity (often five or fewer occurrences) or because of some factor(s) such as very steep declines making it especially vulnerable to extirpation from the state.
– S2 = Imperiled – Imperiled in the state because of rarity due to very restricted range, very few populations (often 20 or fewer), steep declines, or other factors making it very vulnerable to extirpation from the state.
– S3 = Vulnerable – Vulnerable in the state due to a restricted range, relatively few populations (often 80 or fewer), recent and widespread declines, or other factors making it vulnerable to extirpation.
– S4 = Apparently Secure – Uncommon but not rare; some cause for long-term concern due to declines or other factors.
– S5 = Secure – Common, widespread, and abundant in the state.

California Invasive Plant Council

The California Invasive Plant Council (Cal-IPC) keeps an inventory categorizing plants that threaten California's natural areas. The inventory includes invasive plants that currently cause environmental damage or economic harm in California as well as a "Watch List" of plants that are a high risk of becoming invasive in the future. The inventory represents the best available knowledge of invasive plant experts in California. Categorization is based on an assessment of ecological impacts, conducted with transparent science-based criteria and expert review. The inventory has no regulatory authority, rather is intended to be utilized as a management resource. The categorization or ratings of Cal-IPC plants are in accordance with the following:

– **High** – These species have severe ecological impacts on physical processes, plant and animal communities, and vegetation structure. Their reproductive biology and other attributes are conducive to moderate to high rates of dispersal and establishment. Most are widely distributed ecologically. European beachgrass and dense-flowered cordgrass are Cal-IPC rated as High.
– **Moderate** – These species have substantial and apparent-but generally not severe-ecological impacts on physical processes, plant and animal communities, and vegetation structure. Their reproductive biology and other attributes are conducive to moderate to high rates of dispersal, though establishment is generally dependent upon ecological disturbance. Ecological amplitude and distribution may range from limited to widespread.

- **Limited** – These species are invasive, but their ecological impacts are minor on a statewide level or there was not enough information to justify a higher score. Their reproductive biology and other attributes result in low to moderate rates of invasiveness. Ecological amplitude and distribution are generally limited, but these species may be locally persistent and problematic.
- **Alert** – An Alert is listed on species with High or Moderate impacts that have limited distribution in California but may have the potential to spread much further.
- **Watch** – These species have been assessed as posing a high risk of becoming invasive in the future in California.

Public Trust Lands

The State Lands Commission (SLC) has jurisdiction and management authority over all public trust lands, including ungranted tidelands, submerged lands, and the beds of navigable lakes and waterways. All tidelands and submerged lands, granted or ungranted, as well as navigable lakes and waterways, are subject to the protections of the common law Public Trust Doctrine which requires they be managed for the benefit of the public consistent with the provisions of Public trust (e.g., commerce, navigation, fisheries, recreation). Review by the SLC and issuance of a new, or amendment of an existing surface lease may be required for a project under SLC jurisdiction. No lands within the Project Area are under the jurisdiction of the SLC, and therefore no lease or permit from the SLC is warranted.

Local

City of Arcata General Plan 2020

The General Plan 2020 addresses biological resources within the Open Space Element, and Resource Conservation and Management Element. The following policies from the General Plan 2020 were used to analyze the difference in existing versus proposed policies in the General Plan 2045.

Policy OS-1: Overall Open Space System

Objective: Designate, maintain, and enhance the quality, and increase the amount of permanently protected open space in the Arcata Planning Area, including natural resource areas; resource production areas; outdoor recreation areas; and areas subject to health and safety hazards. These areas are to be protected, linked together in a network wherever practical for accessibility, managed for resource production and maintained for enjoyment by City residents and visitors.

Applicable sub-policies:

- ***OS-1a: Designation of open space lands with native biotic resources and ecosystems**. The native biotic resources of the forested western slopes of Fickle Hill, river and creek riparian zones, the Arcata and Aldergrove Marshes, and Arcata Bay tidelands and sloughs are unique ecosystems that have important habitat values in addition to their other open space values. These areas as designated on Map OS-a shall be protected as open space for their resource values.*
- ***OS-1b: Open Space Plan Map**. The areas designated as open space are shown on Figure OS-a. Generally, these lands are designated as A-E, NR, or PF on the land use map. Other lands, where identified open space resources have been preserved through easements or other means, are also subject to this element's policies.*
- ***OS-1c: Relationship to Resource Conservation and Management and Public Safety Elements**. This element identifies hazard areas that shall be maintained as open space for the benefit of the community. The policies of this element and policies found in the Public Safety Element provide common direction for the designation and avoidance of hazard areas. The natural open space features of these areas, such as vegetation, shall be retained, except where they contribute to instability or increase hazards.*

- ***OS-1d: Linkages between open space areas****. Linkage of open space lands, especially along biological corridors and greenways, is important for animal migration, nonmotorized vehicle transportation, and community recreation, and shall be encouraged. Trails along levees or adjacent to railroad tracks and street rights-of-way can serve as links to parks, open space, and natural areas. Easements shall also be considered as a lower cost alternative to preserving links between open space.*
- ***OS-1e: Appropriate uses and development limitations within open space lands****. Certain open space areas contain wetlands and other critical habitat and must be preserved in a natural condition and enhanced. Other areas can accommodate managed activities such as mining and timber harvesting, subject to sustainable yield policies RC-6 and RC-8 in the Resource Conservation & Management Element, while other areas shall be designated for interpretive and recreational use. Each designated open space area of the City shall be evaluated by the appropriate City advisory board (e.g., Creeks & Wetlands Committee) to determine the resources present, the acceptable level of use, and appropriate preservation. The management of, and development in, open space areas are subject to applicable policies of the Resource Conservation and Management and Land Use Elements.*
- ***OS-1f: Designation of lands with scenic, aesthetic, historic, and cultural value****. The City has scenic routes, including State Route 101 and Samoa Boulevard; vistas, including the forested slopes of Fickle Hill and the Arcata Bottoms; and areas of historic and cultural value, such as the Plaza. The open and natural characteristics of these areas shall be maintained. Policies for retaining scenic vistas and landscape features are included in the Community Design Element of the General Plan.*
- ***OS-1g: Public and private ownership and management of open space.*** *Open space resource areas are owned and managed by the City, state agencies, land trusts, corporations, and private individuals. The City shall set the standard for responsible resource land stewardship through its management of the Community Forest, marshes, parks, and other resource lands, and encourage other public and private entities, entrusted with the ownership and management of similar resource areas, to consider natural resource values to the community in all long-term use decisions.*
- ***OS-1h: Greenbelt.*** *Preserving greenbelts of agricultural and other open space lands is an effective method of defining urban development limits. The City shall encourage the County to preserve agricultural designations in the City's Planning Area. The City also supports greenbelt preservation through land and conservation easement acquisition.*

  These measures will help preserve visual and associative links to nature and reinforce the distinction between the City and adjacent communities.
- ***OS-1i: Acquisition of open space areas.*** *There are several privately held land parcels, including forested property on the west slopes of Fickle Hill, which would contribute significantly to the City's open space system. The City shall pursue acquisition of these parcels, from willing sellers, for their open space values. Joint funding for land acquisition will be coordinated with County, regional and state agencies.*

Policy OS-2: Natural Resources Protection and Enhancement

Objective: *Designate, maintain, and enhance natural resource areas, including sensitive habitat areas, necessary to sustain plant and animal life and native biological diversity.*

Applicable sub-policies:

- ***OS-2a: Open space plan map designations for natural resource protection.*** *Publicly held lands containing creeks, wetlands, other open water, marsh, sensitive habitat, forests, and other important natural resources are designated on the Open Space Map.*
- *OS-2b: Development limitations and management for maintenance of biotic resources and diversity, including aquatic resources and sensitive habitats – Creeks marshes, and wetlands are significant components of Arcata's natural open space system. The City shall restore and maintain this system for the benefit of residents, visitors, fish, and wildlife.*

The Arcata Bay and tidelands represent an important natural edge and open space feature of the City. Buildings, landform alterations, or access routes in this area shall be of a design and scale that preservers open space and natural characteristics and maintains public views to the Bay.

Local creeks which flow openly through the developed portion of the community shall have biological corridors and greenways established and shall be maintained as visual assets to any developments which adjoin them.

The natural features of the Mad River corridor, Arcata's creeks and adjacent areas, marshes, and other wetland areas, shall be retained.

Unique vegetation and wildlife areas shall remain in a natural condition. Such areas include sand dunes and backdune woodlands, eel grass area, salt marshes, and special habitats (tern and osprey nesting areas, cormorant rookery, harbor seal area and egret roost). The policies of this element shall also call for protection for habitat of species that become threatened in the future.

Policy OS-3: Open Space for Managed Production of Resources

Objective: *Designate and conserve resource areas, including forest and agricultural lands, fisheries and aquaculture, groundwater, and mineral resources, for their sustainable, long-term productive capabilities.*

Applicable sub-policies:

- ***OS-3a: Designations for forest, agriculture, fisheries, aquaculture, groundwater, and mineral resource uses and management.*** *All publicly held lands, and some privately held lands adjacent to the Community Forest and east of Aldergrove Industrial Park, actively managed for production of forest, fisheries, aquaculture and mineral resources are designated as Natural Resource [NR] on the General Plan Land Use Element map. Productive agricultural lands are designated on the Open Space Map.*
- ***OS-3b: Development limitations and management for productive resource areas.*** *The policies of the Resource Conservation and Management Element shall be followed for the development and management of productive resource lands. This includes policies for: Natural Biological Diversity; Streams Management; Wetlands Management; Baylands and Tidelands; Agricultural and Forest Resources; and Water, Energy, Soils and Mineral Resources. The City shall require that management of open space resources be consistent with these and other applicable General Plan policies.*

Policy OS-4: Open Space for Outdoor Recreation and Coastal Access

Objective: *Designate and secure public access to a sufficient supply of land and water areas with recreation resource value, including parks, forests, coastal areas, baylands, and stream corridors, to meet the outdoor recreation needs of Arcata residents and visitors*

Applicable sub-policies:

- ***OS-4a: Designations for park lands and outdoor recreation areas.*** *All publicly held park lands and outdoor recreation areas are designated as Public Facility [PF] on the General Plan Land Use Element map. The natural resources present on these lands are also subject to the applicable policies of the Resource Conservation & Management Element. Recreation areas are mapped on Figure OS-a.*
- ***OS-4b: Coastal access policy.*** *The City shall maintain coastal access corridors to Arcata Bay and other public use areas and public trust lands within the coastal zone.*

  Coastal Access routes include:

  1. *Access from Samoa Boulevard to Arcata Bay via South "I" and "G" Streets*
  2. *Access to Mad River Beach via Mad River Road*
  3. *Access to Manila Dunes via Samoa Boulevard*

- ***OS-4c: Relationship to the Parks and Recreation Element.*** *This element contains policies for management of open space lands designated for outdoor recreation. The Parks and Recreation Element contains goals and policy direction for: providing a of recreation opportunities; sharing facilities; park and recreation program efficiency; environmental compatibility; and user safety.*

Policy OS-5: Open Space in Health and Safety Hazard Areas

Objective: *Designate health and safety hazard areas such as seismic fault and liquefaction zones, unstable soils or slopes, floodplains, areas susceptible to wildland fire, and watershed/reservoir safety zones. Provide appropriate protections, or restrictions, to minimize unnecessary exposure of people and property to health and safety hazards.*

Applicable sub-policies:

- ***OS-5a: Designation of open space for public safety.*** *Designated open space for public safety is shown on Figure OS-a. Setbacks for seismic faults and liquefaction zones, unstable soils or steep slopes, mapped Flood Hazard Zone A, areas susceptible to wildland fire, and watershed/reservoir safety zones, shall be established as part of the development review process. Where severe safety considerations exist (e.g., within the Alquist-Priolo Zone), open space easements shall be granted to the City to protect people and property from health and safety hazards.*

  Open space areas, with slopes 15% or greater shall retain their natural landform features; excavation shall be restricted, according to the City's adopted grading ordinance, and removal of vegetation shall be limited to selected thinning of timber stands and removal of hazard trees.

  Open Space areas that are flood-prone may be used for agricultural and recreational purposes but shall be kept free from urban development. A flood plain overlay zone shall be applied to all Natural Resource [NR] and Agricultural [AE] areas subject to inundation according to the Flood Insurance Rate Map Hazard Boundary Map) developed by the Federal Emergency Management Agency (FEMA) or the Federal Insurance Administration.

- ***OS-5b: Development limitations and management for health and safety hazard areas.*** *The policies of the Public Safety Element shall be followed for all development activity in areas with known or suspected safety hazards. In particular, seismic hazards, other geologic hazards, and flood hazards policy topics are applicable.*

Policy RC-1: Natural Biological Diversity/Ecosystem Function

Objective: *Set an overarching policy that emphasizes the overall value of biological diversity and the fact that all natural resources are optimized when they function as part of a healthy ecosystem.*

Applicable sub-policies:

- ***RC-1a: Maintain biological and ecological integrity.*** *Maintaining ecological balance, system function, biological integrity, and natural diversity is the primary focus of the Resource Conservation and Management Element. Protecting ecological functions of natural habitats, and natural drainage and infiltration processes, will enhance natural ecosystems in the Planning Area. Ecological system functions elements and processes are maintained through the following measures:*

  1. *The structure and composition of ecological systems within the City shall contain the same native plant and animal species, in the same relative abundances and proportions, which are found in the least-disturbed natural ecosystems in the Planning Area.*
  2. *The ecological functions performed by ecological systems in the City shall resemble the functions of the least-disturbed natural ecosystems in the Planning Area.*
  3. *Ecological systems and natural processes are not disrupted by exotic organisms to a significant degree.*
  4. *Ecological systems and natural processes are not to be disrupted by land use activities to a significant degree (e.g., a culvert or other drainage device that blocks fish passage).*

An "adaptive management" approach shall be utilized to maintain ecological and biological integrity, including monitoring the status of ecological systems in the City and adjusting City implementation of this Plan, in order to more closely approximate the conditions provided in the Planning Area's least-disturbed natural ecosystems.

- ***RC-1b: Non-native plant and animal species.*** *Some non-native species, such as pampas grass (Cortaderia jubata), Himalaya berry (Rubus discolor), Scotch broom (Cytisus scoparius), blue gum eucalyptus (Eucalyptus globulus), English ivy (Hedera helix), English holly (Ilex aquifolium), and cotoneaster (Cotoneaster franchetii), are invasive exotics that can and do displace native species. The presence of these non-native species reduces the area's natural diversity, biological integrity and aesthetics. Only native species, or species demonstrated to be non-invasive, shall be used in public landscapes and are to be strongly encouraged in private landscapes. The City shall provide public information that explains why invasive species are a problem. The City shall also maintain a program that recommends effective but non-toxic eradication measures and eradicates non-native species on public lands where they are displacing native species.*
- ***RC-1c: Habitat value protection.*** *Environmentally sensitive habitat areas (ESHA) shall be protected against any significant disruption of their habitat values, and only uses dependent on and compatible with maintaining those resources shall be allowed within ESHAs. Proposed development in areas adjacent to ESHAs shall be sited and designed to prevent impacts which would significantly degrade such areas and must be compatible with the continuance of such habitat areas.*
- ***RC-1d: Sensitive habitat definition.*** *The City declares the following to be ESHAs within the Planning Area:*
  1. *Rivers, creeks, sloughs, and associated riparian habitats: Mad River; Jacoby Creek; Beith Creek; Grotzman Creek; Campbell Creek; Jolly Giant Creek; Janes Creek; Gannon Slough; Butcher Slough; and McDaniel Slough.*
  2. *Wetlands, estuaries, and associated riparian habitats: Arcata Bay; Mad River Slough; Liscom Slough; Butcher Slough; the Aldergrove marshes and ponds; and the Arcata Marsh and Wildlife Sanctuary.*
  3. *Other unique habitat areas: waterbird rookeries; shorebird concentration sites; habitat for all rare, threatened, or endangered species on federal or state lists; and vegetated dunes.*
  4. *Public Trust lands such as grazed or farmed wetlands (i.e., diked/reclaimed former tidelands).*
- ***RC-1e: Threshold of City review for sensitive habitat effects.*** *Development on parcels designated Natural Resource [NR] on the Land Use Plan Map, or within 250 feet of such a designation, or development potentially affecting a sensitive habitat area, shall be required to be in conformance with applicable habitat protection policies of this Element. All proposed development plans, including grading and drainage plans, submitted as part of a planning entitlement application for these areas, shall show the precise locations of all sensitive habitat areas on the site plan.*
- ***RC-1f: Sensitive habitat buffer requirement.*** *A setback separating all permitted development from adjacent sensitive habitat areas shall be required. The purpose of such setbacks shall be to prevent any degradation of the ecological functions provided by the habitat area as a result of the development. The following shall apply to such setbacks:*
  1. *The minimum width of setbacks for streams and wetlands shall be as provided in policies RC-2 and RC-3, respectively.*
  2. *The minimum width of all other habitat setbacks shall be 100 feet, unless the designated setback would eliminate all reasonable use of the property.*
  3. *A definition and map of sensitive habitat will be maintained by the City.*
- ***RC-1g: Sensitive habitat information required in development application review****. Where there is a question regarding the boundary, buffer requirements, location, or current status of an ESHA identified pursuant to General Plan policies, the public or private applicant shall provide the City with the following:*

1. *Base map delineating topographic lines, adjacent roads, and location of dikes, levees, flood control channels, and tide gates, as applicable.*
2. *Vegetation map, including identification of species that may indicate the existence or nonexistence of a sensitive environmental habitat area.*
3. *Soils map delineating hydric and non-hydric soils.*
4. *Census of animal species indicating the existence, or non-existence, of an environmentally sensitive habitat area.*

This information shall be provided to the Department of Fish and Game, US Fish and Wildlife Service, National Marine Fisheries Service, and other affected agencies for review and comment. Any comments and recommendations provided by the Department shall be immediately sent to the applicant for his or her response. The decision concerning the boundary, location, or current status of the environmentally sensitive habitat area in question shall be based on the substantial evidence in the record and supported by written findings.

- ***RC-1h: Habitat integration for ecological integrity and development of a protected habitat corridor system.*** *An ecological connection network plan for linking native habitats in the Planning Area, and all of the environmentally sensitive habitat areas identified in this Plan, shall be prepared. The network shall incorporate all existing large areas (or "nodes") of habitat for fish and wildlife species (such as marshes and forests) and "linkages" or "corridors" of natural habitat (such as stream zones and sloughs) for migration and species movement. The plan will link large "nodes" of natural habitat together with the "linkage" connections as a functioning ecological network. Nodes and linkages shall include a "core" of natural ecosystem elements and shall provide a protected "buffer" along the outer margins of the core habitat which shall function to protect the ecological values in the "core" habitat.*
- ***RC-1i: Use of biocides and other compound with biological consequences.*** *Pesticides herbicides and insecticides (biocides); hormones and antibiotics (growth promoters); and hydrocarbon-based compounds, used both commercially and individually, can accumulate to toxic levels in biological organisms, including humans. Certain of these substances, even at low levels, can affect reproductive health.*

  The City shall maintain and make available a current list of alternative, environmentally-safe products for controlling unwanted vegetation and pests, growing crops and enhancing production of animal products. The use of substances and compounds which can accumulate to toxic levels is restricted by the City (Pesticide Ordinance), and a program for fostering the reduction in private use shall be developed and implemented.

Policy RC-2: Streams Conservation and Management

Objective: *Enhance, maintain, and restore the biological integrity of entire steamcourses (headwaters to mouth), and their associated riparian habitats, as natural features in the City's landscape.*

Applicable sub-policies:

- ***RC-2a: Designation of protected streams****. The provisions of this policy shall apply to those streams shown on the Protected Watercourse Map (Figure RC-a). These watercourses and their associated riparian areas serve as habitat for fish and wildlife, provide space for the flow of stormwater runoff and flood waters, and furnish open space and recreational areas for city residents.*
- ***RC-2b: Environmental Buffer Area (EBA).*** *A streamside protection area is hereby established along both sides of the streams identified on the City Watercourse Map. The purpose of the EBA is to remain in a natural state in order to protect streams' ecosystems and their associated riparian habitat areas. The EBA shall include:*

  1. *In areas where existing development, as defined in the Land Use Code, is adjacent to the stream,*

the EBA shall be not less than 25 feet outward on both sides of the stream, measured from the top of bank.

2. *In all other locations within the City, the EBA shall not be less than 100 feet outward on both sides of the stream, measured from the top of bank.*
3. *In locations within the City having significant areas of riparian vegetation exceeding 100 feet in width measured from the top of bank, the EBA shall be expanded to encompass all of the riparian vegetation, except in no case shall the EBA exceed 250 feet in width from the top of bank on either side of the stream.*

EBAs outside of the City shall follow the policies in the Humboldt County Framework Plan, regarding Streamside Management Areas.

- ***RC-2c: Allowable uses and activities in Environmental Buffer Areas.*** *The following compatible land uses and activities may be permitted in EBAs, subject to all other policies in this Element, including those requiring avoidance of impacts and other mitigation requirements:*

  1. *Outside the Coastal Zone:*
     a. *Agricultural operations compatible with maintenance of riparian resources;*
     b. *Fencing along property boundaries and along EBA setback boundaries to prevent bank erosion and degradation of natural riparian vegetation by livestock;*
     c. *Maintenance of existing roads, driveways, and structures;*
     d. *Construction of public road crossings;*
     e. *Forest management practices as permitted by the State of California or Arcata's Forest Management Plan;*
     f. *Construction and maintenance of foot trails for public access;*
     g. *Construction and maintenance of utility lines;*
     h. *Resource restoration projects;*
     i. *Emergency or preventive removal of sediment and vegetation for flood control purposes (only when authorized by the City of Arcata).*
  2. *In the Coastal Zone*
     a. *All uses and activities listed in (1) above;*
     b. *Public coastal access improvements;*
     c. *Boat launching facilities.*
  3. *If the provisions herein would result in any legal parcel, not on Public Trust lands, created prior to the date of this plan, being made unusable in its entirety for any purpose allowed by the land-use plan, exceptions to the foregoing may be made to allow a reasonable economic use of the parcel, subject to approval of a conditional use permit. Any land use, construction, grading, or removal of vegetation which is not listed above shall be prohibited.*

- ***RC-2d: The Wetland and Stream Protection Combining (WSP) Zone.*** *The WSP zone of the Land Use and Development Code shall be applied to all streamside protection areas. [The WSP zone should be a land use designation under the NR district, e.g., NR-WSP, NR-AG, NR-TPZ.]*
- ***RC-2e: Review and approval of projects affecting streamside protection areas.*** *Applications for development on any parcel which is located partially or wholly within an SPA shall be subject to the requirements of Policy RC-1 and RC-2.*
- ***RC-2f: Conservation easement.*** *Dedication of a conservation easement, or equivalent deed restriction, encompassing the area within the EBA shall be required as a condition of approval of any discretionary planning permit, including design review, when any portion of the project site falls within*

an EBA. Such easements may be conveyed to the City of Arcata, to another governmental agency which shall manage the easement to protect the EBA's functions, or to an appropriate non-profit entity.

- ***RC-2g: Maintenance of streams as natural drainage systems.*** *Arcata's creeks carry a significant amount of the City's stormwater. Drainage controls shall be enforced through implementation of the Drainage Master Plan, to protect water quality, and minimize erosion, sedimentation and flood impacts to City creeks. A comprehensive stream maintenance program shall be prepared to augment stormwater utility rehabilitation projects designed to improve flow capacity, minimize channel erosion, and enhance riparian habitat.*
- ***RC-2h: Restoration of degraded creek resources.*** *Portions of Janes, Jolly Giant, Campbell, and Grotzman Creeks are culverted or covered, causing degradation of creek resources. Streams such as Janes Creek have tide gates which are barriers that prevent anadromous salmonids from accessing critical habitat. Furthermore, recreational use has degraded riparian vegetation along upland reaches of certain creeks (e.g., Jolly Giant, Campbell, and Jacoby Creeks) within Redwood Park and the Community Forest. Lack of vegetation along creek courses can cause erosion, resulting in water and airborne impacts. Restoration activities for improving degraded stream resources shall include:*

  1. *Uncovering of creek courses in public rights-of-way, as part of public works improvement projects.*
  2. *Encouraging landowners to restore degraded EBA and stream resources, including native riparian vegetation establishment and exotic species removal, as part of a new development or renovation.*
  3. *Controlling uses that are damaging to upland reaches of creeks in the Community Forest and Redwood Park.*
  4. *Removing or modifying barriers such as tide gates that prevent migrating anadromous salmonids which are federally listed endangered species from reaching their critical habitat.*
  5. *Exclusionary fencing to keep livestock out of the EBA.*

     The Streams Management Plan shall be implemented to provide guidance for rehabilitation and management of creeks that flow through Arcata. The SMP addresses new and modified development along creeks, and existing activities in creek zones. Stream rehabilitation projects shall be designed to maintain or improve flow capacity, trap sediments and other pollutants which decrease water quality, minimize channel erosion, prevent new sources of pollutants from entering the stream, and enhance instream and riparian habitat.

Policy RC-3: Wetlands Management

Objective: *To protect existing wetlands areas and their functional capacities and values, maintain a standard of "no net loss" in area and value, restore degraded wetland areas, enhance wetlands functions, and create additional wetland areas to replace historical losses.*

Applicable sub-policies:

- ***RC-3a: Requirement for wetland delineation and study.*** *All proposed development applications shall include a site plan that shows the precise location of any wetlands that exist on the subject property. Any application for development on a parcel where wetlands may be present shall include a wetland reconnaissance or delineation report as follows:*

  1. *The reconnaissance or wetlands delineation and report shall be based upon field investigations and shall be prepared by a professional or technical expert qualified in wetlands biology or plant ecology.*
  2. *For purposes of this plan, wetlands shall include coastal zone lands where one or more of the following three characteristics are present or non-coastal zoned lands where two or more of the following three characteristics are present:*

     d. *Source of water (surface or subsurface) which is present for sufficient periods to promote hydric soils formation or growth of hydrophytic plant species;*

     e. *Hydric soils; or*

f. Hydrophytic plants.

3. Where a reconnaissance indicates the probable existence of wetlands, marsh reeds detailed wetland delineation shall be required, including a map with the best available contour information showing where each of the three factors are present and the precise boundaries of any areas which are determined to be wetlands.

4. If wetlands of any size are found to exist on the property, an analysis of the potential functional or habitat value of the wetlands shall be provided.

- ***RC-3b: Filling of wetlands.*** *The following shall apply:*

1. Filling of wetlands shall be prohibited in the Coastal Zone, unless it can be demonstrated that:

a. The wetland restrictions, if imposed would render a parcel, not subject to the Public Trust, unusable for any use permitted by the land use plan;

b. There is no feasible, environmentally superior alternative to wetland fill for development of a permitted use; and

c. The fill is the least amount necessary to allow development of permitted uses.

2. Filling of wetlands outside the Coastal Zone may be permitted only when the following has been demonstrated by the project proponent:

a. The fill is the least amount necessary to allow a reasonable and harmonious configuration of development on the parcel;

b. The wetlands proposed to be filled are small and isolated, and have limited functional value when compared to larger, contiguous wetland areas.

3. Filling of wetlands shall only be authorized if appropriate mitigation, resulting in "non net loss" in area and value of wetlands is provided. Mitigation may consist of creating and maintaining a new wetland of equal or greater functional capacity and value than the wetland proposed to be filled, restoration of previously degraded wetlands, or enhancement of existing wetland areas.

- ***RC-3c: Designation of Environmental Buffer Areas (EBA).*** *An EBA shall be established to separate all permitted development from adjacent existing wetlands which are to be preserved in a natural state and new wetland areas which are created as a mitigation. The EBA's purpose is to remain in a natural state in order to protect wetland ecosystems and their associated habitat areas from destruction or degradation. The extent of the EBA shall be established based upon analyses and recommendations contained in a site-specific wetland delineation study but shall include the wetland area and a setback area which shall generally range from a 50-foot minimum to a 100-foot maximum. Specific findings, based on evidence provided for City review, shall be required for setbacks less than 100 feet.*

- ***RC-3d: Allowable uses and activities in Environmental Buffer Areas.*** *The following compatible land uses and activities may be permitted in EBAs, subject to all other policies in this Element, including those requiring avoidance of impacts and other mitigation requirements:*

1. Resource restoration or enhancement projects.

2. Farming, consistent with policy RC-3l.

3. Outdoor recreation activities, such as bird watching, hiking, boating, horseback riding, and similar activities.

4. Education, scientific research, and use of nature trails.

5. Drainage ditches when compatible with wetland function.

6. Minor modification of existing, serviceable structures.

7. Fencing to prevent livestock from degrading wetlands and riparian vegetation.

Any use, construction, grading, or removal of vegetation which is not listed above shall be prohibited.

- ***RC-3e: Wetland and Stream Protection Combining (WSP) Zone.*** *The WSP zone of the City's Land Use Code shall be applied to all Wetland Protection Areas.*

- ***RC-3f: Review and approval of projects affecting Environmental Buffer Areas.*** *Applications for development on any parcel which is located partially or wholly within an EBA shall be subject to the requirements of Policy RC-1 and RC-3.*
- ***RC-3g: Conservation easements.*** *Dedication of a conservation easement, or equivalent deed restriction, encompassing the area within the EBA shall be required as a condition of approval of any discretionary action, including design review, when any portion of the project site falls within an EBA. Such easements may be conveyed to the City of Arcata, another governmental agency, or City-approved non-profit entity which shall manage the easement to protect the EBA's functions.*
- ***RC-3h: Designation of wetland protection zones.*** *The WSP Zone shall be applied to wetlands, wetland setbacks, wetland buffer areas and modified wetland buffer areas, as defined in the City's Land Use Code, at the time of development review and approval.*

  A wetlands map, maintained by the City, will show the general location of wetlands, riparian corridors, and uplands within the City limits and urban services zone. All development within or adjacent to the areas identified on the map as wetlands or riparian corridors shall comply with City Wetlands Development Standards and shall include the following:

  1. *A wetland delineation.*
  2. *A mitigation plan for impacted areas.*
  3. *Setback areas from delineated wetlands.*
  4. *Easements for onsite delineated wetlands.*
  5. *Permitted and protected uses/activities within delineated wetland areas.*
  6. *Fencing to prevent livestock from degrading wetlands and riparian vegetation.*

  A Wetlands Buffer Area shall be required to protect the areas shown as wetlands on the Wetlands Map. All development within the buffer areas shall comply with the Wetlands Buffer Area Development Standards of the Coastal Land Use and Development Guide.
- ***RC-3i: Management of Arcata Marsh for wetlands values as well as wastewater treatment.*** *The marsh and wildlife sanctuary serves a variety of purposes and functions, including providing wetland habitat for a variety of species, wastewater treatment, and recreational use. These purposes shall be balanced for the benefit of all users.*
- ***RC-3j: Minimum mitigation requirements for wetland impacts.*** *Diking or filling a wetland that is otherwise in accordance with the policies of this General Plan, shall, at a minimum, require the following mitigation measures, monitoring program, and funding.*

  1. *A detailed restoration plan, monitoring program, and funding source for each site shall be required as part of the project application. The restoration plan shall include provisions for restoration to equal or greater wetland biological productivity. The monitoring program shall include reporting requirements that document mitigation success. Dedication of the land to a public agency, purchase, or other stewardship method which permanently restricts the use of the site to habitat and open space purposes, shall be required. The site shall be dedicated, purchased, or other stewardship agreed upon, and mitigation funding shall be provided, prior to any permitted diking or filling.*
  2. *Areas adequate to maintain functional capacity shall be opened to tidal action, or other sources of surface water shall be provided. This provision shall apply to diked or filled areas which themselves are not environmentally sensitive habitat areas, but would become so if, as part of a restoration program, they are opened to tidal action or provided with other sources of surface water. All of the provisions for restoration, purchase (if necessary), and dedication described under part 1 shall apply to any program or activity performed pursuant to this policy.*
  3. *Mitigation shall, to the maximum extent feasible, be of the same type as the wetland to be filled (e.g., freshwater marsh for freshwater marsh, saltwater marsh for saltwater marsh, etc.).*
  4. *Where no suitable private or public restoration or enhancement sites are available, or where a wetlands mitigation bank in Arcata's Planning Area has been established that provides suitable*

replacement area, an in-lieu fee may be required to be paid. The fees shall be paid to an appropriate public agency for use in the restoration or enhancement of an area of equivalent productive value or surface area, or to the entity managing the wetlands mitigation bank.

- ***RC-3k: Wetland functional capacity maintenance requirement**. Diking, filling, or dredging of a wetland or estuary shall maintain or enhance the functional capacity of these resources. Functional capacity means the ability of the wetland or estuary to be physically and biologically self-sustaining and to maintain natural species diversity. In order to establish that the functional capacity is being maintained, all of the following must be demonstrated:*

  1. *Presently occurring plant and animal populations in the ecosystem will not be altered in a manner that would impair the long-term stability of the ecosystem (i.e., natural species diversity, abundance and composition are essentially unchanged as the result of the project).*
  2. *A species that is rare or endangered will not be significantly adversely affected.*
  3. *Consumptive (e.g., fishing, aquaculture and hunting) or non-consumptive (e.g., water quality and research opportunity) values of the wetland or estuary ecosystem will not be significantly reduced.*

- ***RC-3l: Uses allowed in diked/reclaimed former tidelands**. Allowable uses and development in grazed or farmed wetlands are limited to uses compatible with the Public Trust. These uses are specified in Land Use Element Policy LU-6 and are summarized below.*

  1. *Agricultural operations limited to accessory structures, apiaries, field and truck crops, livestock raising, greenhouses (provided they are not located on slab foundations and crops are grown in the existing soil on site), and orchards.*
  2. *Farm-related structures, including barns, sheds, and farmer-occupied housing, necessary for the performance of agricultural operations. Such structures may be located on an existing grazed or farmed wetland parcel only if no alternative upland location is available for such purpose and the structures are sited and designed to minimize adverse environmental effects on Public Trust resources and uses. No more than one primary and one secondary residential unit shall be allowed per parcel.*
  3. *Restoration projects.*
  4. *Nature study, aquaculture, and similar resource-dependent activities compatible with Public Trust resources and uses.*
  5. *Incidental public service purposes which may temporarily impact the resources of the area (such as burying cables or pipes).*

     Expanding farming operations into non-farmed wetlands, by diking or otherwise altering the functional capacity of the wetland is not permitted. Farm-related structures (including barns, sheds, and farm-owner occupied housing) necessary for the continuance of the existing operation of the farmed wetlands may be located on an existing farmed wetland parcel, only if no alternative upland location is viable for such purpose and the structures are sited and designed to minimize the adverse environmental effects on the farmed wetland. Clustering and other construction techniques to minimize both the land area covered by such structures and the amount of fill necessary to protect such structures will be required.

Policy RC-4: Open Waters of Arcata Bay & Tidelands

***Objective**: Maintain existing Bay wetlands and tide lands, protect them from urban and agricultural encroachments, or degradation, and manage the open waters of Arcata Bay for their wildlife, fisheries, navigation and ecological values and recreation and tourism uses.*

- ***RC-4a: Protection of open waters/tideland areas of Arcata Bay.** The tidal and water areas of Arcata Bay constitute a fragile Public Trust resource and access shall be controlled to avoid resource degradation, while maintaining the public's right to navigation. Tidal marshes shall be enhanced and maintained, especially in the areas of McDaniel, Gannon, and Butcher's Sloughs, to protect wetland values.*

- ***RC-4b: Access to Arcata Bay.*** *The following routes are designated as Public Access Corridors and are to be properly signed and identified as approved Bay access points.*

  1. *"I" Street from Samoa Boulevard, south through the Arcata Marsh and Wildlife Sanctuary to the boat launching facility on Arcata Bay.*
  2. *South "G" Street south of "H" Street, to Highway 101.*
  3. *Highway 101 from Samoa Boulevard (Highway 255), south to Bayside Cutoff.*
  4. *Samoa Boulevard from Highway 101 west to Mad River Slough.*

  A system of foot trails and interpretive sites shall be established along the Arcata Bay shore westward to the City limit, subject to the following guidelines.

  1. *All planning and development in the area that is both South of Samoa Boulevard and west of State Route 101 and which is identified as tidelands, former tidelands, wetlands or riparian corridor on the adopted Wetlands Map shall be reviewed by the Creeks & Wetlands Committee and coordinated with California Department of Fish and Game.*
  2. *Development in the area bounded by Butcher's Slough and Gannon Slough should occur in conjunction with management of the National Wildlife Refuge and the Arcata Marsh and Wildlife Sanctuary.*
  3. *Motorized vehicles shall be restricted to paved roads and parking lots.*
  4. *Pedestrians shall be restricted to designated trails and facilities.*
  5. *Valid scientific and educational studies of wetlands and tidelands are encouraged.*

- ***RC-4c: Coastal-dependent and public trust uses of Arcata's tidelands.*** *Tidelands of Arcata Bay support a variety of wildlife as well as human activities. The following provisions shall be made for managing tideland areas.*

  1. *New development shall not restrict access to the shoreline. Access to coastal areas shall be required for new development.*
  2. *Tidelands and water areas of Arcata Bay shall be designated Natural Resource Public Trust Lands [NR-PTL] and identified as passive use recreational areas.*
  3. *The Arcata Marsh and Wildlife Sanctuary shall be designated as Natural Resource [NR] and the recreational component of the project identified as a passive use recreational area.*
  4. *The continued use of the tideland for scientific and educational studies is encouraged.*
  5. *The Arcata Marsh and Wildlife Sanctuary (AMWS) shall be maintained, and new facilities shall be consistent with the AMWS plan adopted by the City Council.*
  6. *The South "I" Street boat launch shall be enhanced and maintained to accommodate small watercraft and windsurfing.*
  7. *The placement of interpretive sites along the Arcata Bay shore, including Nature and Wildlife Centers, shall be coordinated with other agencies, and serve as an educational focal point for Arcata's natural resource areas.*
  8. *Access on the levee from the AMWS westward to the City limit will be provided for passive recreation and nature observation.*

- ***RC-4d: Diking, dredging filling, and shoreline structures.*** *Diking, filling, or dredging of Bay waters, wetlands, and estuaries shall be permitted where it has been demonstrated that the Public Trust resources and values are being protected, and mitigation measures have been provided, which minimize adverse environmental effects, for the following limited uses.*

  1. *Incidental public service purposes including but not limited to, burying cables and pipes, and maintaining existing dikes and public facilities.*
  2. *Maintaining a channel adequate to serve the boat ramp at current levels of use.*
  3. *Resource restoration purposes.*
  4. *Nature study, aquaculture, or similar Public Trust resource dependent activities.*
  5. *Agriculture and currently practiced within existing farmed wetlands but not including the expansion*

thereof.

In order to protect existing development, shoreline structures (such as dikes or tidegates) that may alter the natural shoreline, may be permitted only when they do not effect any federally listed species and no other feasible, less environmentally-damaging alternative is available, and only when not located within a wetland, unless the wetland will be the primary beneficiary of the structure.

The disposal of dredge spoils on existing wetlands shall not be permitted unless such disposal is necessary for either a Public Trust resource restoration project or for the maintenance of existing agricultural operations in farmed wetlands. Fill will be allowed for aquaculture projects if it can be shown that it is necessary for the project, is required to be located within the wetland, and there is no other feasible, less environmentally damaging, alternative.

- ***RC-4e: Aquaculture use of coastal wetlands/tidelands**. To protect aquaculture activities in Arcata Bay, the City shall:*

  1. *Ensure that its wastewater discharge does not aggravate existing coliform loading problems in Arcata Bay.*
  2. *Take measures to reduce coliform loading of perennial streams within its jurisdiction, as part of a stream maintenance program. These measures shall include controlling identified sources of coliform loading such as septic tank leachate and runoff from agricultural operations.*

  Aquaculture shall not adversely impact natural ecological processes nor native wildlife or fisheries or their habitat in the Bay. No new aquaculture uses shall be permitted unless it can be demonstrated that adequate precautions will be taken to prevent new adverse impacts to natural ecological processes. The City shall continue its management of:

  1. *Integrated wetland enhancement and wastewater treatment.*
  2. *The tidelands, for commercial and native oyster harvesting.*

- ***RC-4f: Management of bayfront and marsh areas for coastal access, recreation, and tourism**. Tidelands and water areas of Arcata Bay shall be designated Natural Resource-Public Trust Land [NR-PTL] and protected from uncontrolled access. The following guidelines shall be used when permitting access to these areas:*

  1. *Motorized vehicles shall be restricted to paved roads and parking lots.*
  2. *Pedestrians shall be restricted do designated trails and facilities.*
  3. *Valid scientific and educational studies of the wetlands and tidelands shall be encouraged.*

  New development shall not restrict public access to the shoreline. Public access to the shoreline shall be required of new development. Where consistent with the Humboldt Bay National Wildlife Refuge's Management Plan, controlled public access to the Refuge's Jacoby Creek Unit shall be developed along Arcata Bay from the AMWS to the City's westward limit.

Policy RC-5: Agricultural Resources Management

***Objective.** Protect and enhance agricultural uses on prime agricultural lands within the City and encourage more productive agricultural use of agriculturally suitable lands.*

Applicable sub-policies:

- ***RC-5a: Promotion of and participation in agricultural production within the City.** Diverse and intensive agricultural production and increased participation shall be promoted, in order to maintain the value of agricultural lands, improve the economic base, and increase employment and food production. The City does not, however, advocate more intensive agricultural uses and practices that would have adverse environmental impacts. Agricultural operations, such as Community Supported Agriculture (CSA) are strongly encouraged.*

- ***RC-5b: Agricultural Advisory Committee****. The City shall appoint an Agricultural Advisory Committee to advise on agricultural issues and programs. The responsibilities of the committee shall include, but are not limited to:*
  1. *Development of a Community and Farm Protection Ordinance, as well as conflict resolution protocol.*
  2. *Development of programs (educational, leasing, and purchase) that will encourage responsible productive uses of agricultural lands.*
  3. *Identification of lands for preservation and/or acquisition programs.*
  4. *Maintain a database of resources available to farmers, such as Williamson Act advantages, conservation easements, organic farming practices, and marketing strategies.*
- ***RC-5c: Community and farm protection.*** *Maintaining a compatible relationship between agricultural and residential uses will be based on:*
  1. *Recognizing the rights of owners of productive agricultural land to make agricultural use of their land.*
  2. *Identifying and minimizing potential conflicts between agricultural operations and adjacent residential, commercial, and community facility uses.*
  3. *A Community and Farm Protection Ordinance shall provide a foundation for minimizing conflicts, educating the community, and a protocol for mediating unresolved disputes. Once adopted, the ordinance shall be mailed to all owners of agricultural and adjacent lands and disclosed to affected property owners at the time of parcel transfer.*
- ***RC-5d: Permanent protection for agricultural lands.*** *Protection of agricultural resources shall be secured through the purchase of conservation easements, development rights, and outright acquisition. The City shall work in conjunction with other entities such as land trusts, whenever possible, to preserve agricultural buffers and maintain and enhance agricultural uses on prime agricultural soils.*

Policy RC-6: Forest Resources Management

Objective. *Protect and enhance private and public forest lands (Community and Jacoby Creek) to maintain the integrity of the ecosystem while providing timber production, recreation, and habitat values.*

Applicable sub-policies:

- ***RC-6a: Management of Arcata Community Forest.*** *The City's forest management plan includes the following policies:*
  1. ***Recreation and aesthetic resources management.*** *The community forest will emphasize dispersed, day-use opportunities. Recreational use shall not be allowed to impact other resources such as fish, wildlife, or watershed.*
  2. ***Timber resource management.*** *To ensure the sustainable and long-term production of forest products, the rate of harvesting must not exceed the rate of production. Long-term productivity refers to the continuing ability of the forest to produce timber while retaining the associated values of watershed, wildlife, soils, recreation and aesthetics. This is dependent upon the use of management practices that do not allow for the deterioration or impairment of soil productivity or the alteration of the natural landscape beyond its ability to recover. For planning purposes, long term means that exceeding fifty years.*
  3. ***Watershed resource management.*** *Water quality, soil, riparian, and aquatic biological productivity shall be maintained and enhanced through the application of City forest management standards and the implementation of watershed improvement projects.*
  4. ***Wildlife resource management.*** *Wildlife habitat is managed to promote species diversity and to ensure that populations of indigenous species are maintained. This can best be achieved through the maintenance and enhancement of habitat values. Habitat values which lead to species diversity include the following elements: breeding, foraging, watering, rearing, hiding and thermal*

cover.

5. ***Vegetation and botanical resources.*** *Maintain the native component of species found in the redwood forest, both by controlling exotics and managing for a species mix that would be found naturally in the redwood forest.*

- ***RC-6b: Management of Jacoby Creek Forest.*** *The management policies for the Jacoby Creek Forest are the same as those for the Arcata Community Forest, listed above, except that the Jacoby Creek Forest is not open to recreational use.*
- ***RC-6c: Allocation of forest fund revenues.*** *At least twenty percent of net forest fund revenues, derived from timber cutting, shall be directed towards park acquisition, maintenance, and development. This can include acquisition of stream corridors, and riparian and greenbelt areas. These areas contribute to the diversity of parks and, in the case of linear parks along stream corridors, provide passive recreation areas compatible with the environment. The acquisition of open space shall be emphasized as an appropriate use for the remaining revenues.*
- ***RC-6d: Management practices for private timberlands.*** *The management of private timberlands shall be encouraged to use current principles of sustainable forestry for all aspects of forest use and function: recreation; timber production; biodiversity; air and water quality; and carbon storage. Timber owners are encouraged to apply for conservation easements, certified forestry, or compensation for carbon storage.*
- ***RC-6e: Timber harvest plans.*** *The City, in cooperation with California Department of Forestry, shall request review of all Timber Harvest Plans (THP) within the Planning Area. The City shall review THPs for measures that protect water quality, control erosion and flooding, and preserve the City viewshed. The city shall recommend that THPs which do not include these measures not be approved.*
- ***RC-6f: Urban conversions.*** *The sustainable management of timber resources, and related uses, shall be encouraged, so that the long-term economic return from productive timber production will provide sufficient incentives to prevent urban conversions. Urban conversions are discouraged within the Urban Services Boundary.*
- ***RC-6g: Setbacks.*** *Development adjacent to the Community Forest boundary shall be setback at least 150 feet, unless this would make the use of the parcel infeasible for its designated purpose. However, larger setbacks may be required to prevent exposure to potential hazards and to maintain forest integrity.*
- ***RC-6h: Monitoring.*** *Monitoring of forest practices, to ensure consistency with adopted management and harvest plans, shall be carried out as an implementation measure of this Element. The general objectives of the monitoring will be to:*

  1. *Determine the effectiveness of management practices at multiple scales (i.e., individual sites to watersheds).*
  2. *Validate ecosystem functions and processes have been maintained as predicted.*

Policy D-2: Downtown (Central-commercial) Design

Objective. *Maintain and continue to develop a built environment which accentuates the Plaza and surrounding downtown lands designated in the Commercial-Central use category as the commercial and cultural hub of the city, maintains the historical flavor of building and site design, integrates bicycle and pedestrian facilities, and which incorporates appropriate trees and other "softscape" elements.*

Applicable sub-policies:

- ***D-2d: Street trees****. The City shall encourage the installation of street trees within the downtown area. The City shall develop a comprehensive street tree planting and maintenance program which includes the following components:*

  1. *Identification of streets where trees may be installed.*

2. *Standards for the location of street trees; generally, locations will either be in wells located between on-street parallel parking areas, in cutouts within the sidewalk where the sidewalk is of sufficient width (7 feet or more), or in containers where the preceding locations are not workable.*
3. *Standards for spacing between street trees (usually 20 to 35 feet on center).*
4. *Specification of a list of acceptable tree species and the appropriate streets and locations for each species.*
5. *Standards for size of trees and specifications for their installation (i.g. size of well, staking, materials).*
6. *Identification of responsibilities, procedures, and standards for tree maintenance. Where space is insufficient for street trees, trees may be incorporated into the landscape design on private property adjacent to the street property line.*

Policy D-3: Scenic Routes, Resources, and Landscape Features

Objective. *Identify and protect scenic routes, resources and landscape features. Retain natural features, coastal scenic resources, and scenic vistas as important aesthetic components of the built environment and visual and associative links to nature. Minimize impairment and obstructions of scenic views to the minimum necessary to allow reasonable development.*

Applicable sub-policies:

- ***D-3e: Arcata Bay – Open waters, shoreline, and tidal marshes.*** *Proposed land uses and development shall not significantly alter the natural appearance or landforms of the waters, shoreline, and tidal marshes of Arcata Bay, which are designated in the natural resource land-use category. Where these resources are visually degraded, developments shall be required to restore or enhance their appearance. Development within the area bounded by Samoa Blvd., Butcher's Slough and Gannon Slough shall include local native plant landscaping, screenings and other measures to ensure compatibility with scenic coastal resources and with the educational, recreational, wildlife and other uses of the Humboldt Bay National Wildlife Refuge and the Arcata Marsh and Wildlife Sanctuary.*
- ***D-3i: Preservation of hedgerows (windrows, or rows of trees).*** *Preservation of the following windrows, hedgerows, or groves of trees shall be encouraged:*
  1. *The cypress windrows separating Arcata Heights from the Sunset neighborhood.*
  2. *The trees along the north and western edges (Alliance Road) of the Sunset neighborhood.*
  3. *The trees on the small knoll adjacent to State Route 101 south of Spear Avenue.*
  4. *The windrow of trees adjacent to the west side of the State Route 101 between 7th and 14th Streets.*
  5. *Windrows in the Arcata Bottom.*
  6. *The row of trees along the westerly side of State Route 101 at the State Route 299 interchange.*
  7. *The groves of eucalyptus and other trees which line Bayside Road between Union Street and Crescent Way.*
  8. *The elm trees on J Street between 14th and 16th Streets.*
  9. *Redwood Grove at 7th and Union, and Bayside Road to be left intact.*
- ***D-3j: Streamside riparian areas.*** *Creeks or drainage channels and any associated riparian vegetation shall be retained in a natural state and incorporated into site design as a visual asset to development which adjoin them.*

Policy D-4: Subdivision Design

Objective. *Achieve subdivision design that accommodates orderly growth; assures proper development of land and access to lots; promotes open space retention; ensures adequate circulation, utilities, and services; preserves existing landforms; and retains significant vegetation.*

Applicable sub-policies:

- ***D-4d: Retention of natural features.*** *Design of subdivisions shall be based upon an analysis of the natural conditions and features of the site. To the maximum extent practicable, development shall be located to preserve natural features and avoid areas of environmental sensitivity, including but not limited to: wetlands, significant or mature trees or stands of trees, creekside riparian habitat areas, floodplain areas, and areas with slopes greater than thirty percent. Residential structures, including decks and balconies, shall not extend into significant natural areas.*

Proposed City of Arcata General Plan 2045

The following policies within the proposed General Plan 2045 that regulate agriculture or forest resources include the following:

Policy OS-1: Overall Open Space System

Objective: *Designate, maintain, and enhance the quality, and increase the amount of permanently protected open space in the Arcata Planning Area, including: natural resource areas; resource production areas; outdoor recreation areas; and areas subject to health and safety hazards. These areas are to be protected, linked together wherever practical for habitat connectivity, managed for resource production, and maintained for enjoyment by City residents and visitors.*

Applicable sub-policies:

- ***OS-1a: Designation of open space lands with native biotic resources and ecosystems****. The native biotic resources of the forested western slopes of Fickle Hill, river and creek riparian zones, the Arcata and Aldergrove Marshes, and Arcata Bay tidelands and sloughs are unique ecosystems that have important habitat values in addition to their other open space values. These areas as designated on Map OS-a shall be protected as open space for their resource values.*
- ***OS-1b: Open Space Plan Map.*** *The areas designated as open space are shown on Figure OS-a. Generally, these lands have Agriculture-Exclusive (A-E), Natural Resource (NR), or Public Facility (PF) land use designations. Other lands, where identified open space resources have been preserved through easements or other means, are also subject to this element's policies.*
- ***OS-1c: Relationship to Resource Conservation and Management and Public Safety Elements.*** *Identified hazard areas shall be maintained as open space for the benefit of the community. The policies of this element and Public Safety Element policies provide common direction for hazard area designation and avoidance. The natural open space features of these areas, such as vegetation, shall be retained, except where they contribute to instability or increased hazards.*
- ***OS-1d: Linkages between open space areas.*** *Open space links, especially in biological corridors and greenways, is important for wildlife migration, non-motorized vehicle transportation, and community recreation, and shall be encouraged. Trails along levees or adjacent to railroad tracks and street rights-of-way can serve as links to parks, open space, and natural areas. Easements shall also be considered as a lower cost alternative to preserving links between open space. The City shall preserve or create corridors in underserved areas, such as the Valley West neighborhood, to prepare for future linkages.*
- ***OS-1e: Appropriate uses and development limitations within open space lands.*** *Certain open space areas contain wetlands and other critical habitat and must be preserved in a natural condition and enhanced. Other areas can accommodate managed activities such as mining and timber harvesting, subject to sustainable yield policies RC-6 and RC-8 in the Resource Conservation & Management Element, while other areas shall be designated for interpretive and recreational use. Each designated open space area shall be evaluated by the appropriate City advisory board (e.g., Wetlands & Creeks, Forest Management Committee) to determine resources present, acceptable use levels, and appropriate management. Open space area management and use are guided by applicable Resource Conservation and Management and Land Use Element policies. Allow for the development*

of existing vacant and underutilized properties with low natural resource value as a strategy to permanently protect high resource value open space and provide high-quality open space.

- ***OS-1f: Designation of lands with scenic, aesthetic, historic, and cultural value.*** *The City has scenic routes, including Highway 101 and State Route 255 - Samoa Boulevard; vistas, including the forested slopes of Fickle Hill, the Arcata Bottoms; and areas of historic and cultural value, such as the Plaza. The open and natural characteristics of these areas shall be maintained. Policies for retaining scenic vistas and landscape features are included in the Design and Arcata Gateway Area Plan Elements.*
- ***OS-1g: Public and private ownership and management of open space.*** *Open space resource areas are owned and managed by the City, state agencies, tribal governments, land trusts, corporations, and private individuals. The City shall set the standard for responsible resource land stewardship through its management of the Community Forest, marshes, parks, and other resource lands, and encourage other public and private entities, entrusted with the ownership and management of similar resource areas, to consider natural resource values to the community in all long-term use decisions.*
- ***OS-1h: Greenbelts.*** *"Greenbelt" is a general term that refers to natural, undeveloped, and/or agricultural lands that surround urban areas. Preserving greenbelts of agricultural and other open space lands is an effective method of defining urban development limits. The City shall encourage the County to preserve agricultural designations in the City's Planning Area. The City also supports greenbelt preservation through land and conservation easement acquisition.*
- *These measures will help preserve visual and associative links to nature and reinforce the distinction between the City and adjacent communities.*
- ***OS-1i: Additional open space area identification and acquisition.*** *There are land parcels, including forested property on the west slopes of Fickle Hill, and lands around Arcata Bay which would contribute significantly to the City and regional open space systems. The City shall continue to pursue, or coordinate with land trusts, for acquisition, from willing sellers, to expand the amount of open space and also for conservation easements to preserve open space values of private parcels. Joint land acquisition funding will be coordinated with County, regional and state agencies. Community Forest acquisitions and acquisitions to benefit sea level rise adaptation will continue to be a priority. Other acquisition priorities shall be based on capital, operation and maintenance costs, accessibility, resource preservation, ability to complete or enhance an existing open space linkage system and unique environmental features. Lands acquired outside of the City Limits should be annexed pursuant to the Growth Management Element.*

Policy OS-2: Natural Resources Protection and Enhancement

Objective: *Designate, maintain, and enhance natural resource areas, including sensitive habitat areas, necessary to sustain plant and animal life and native biological diversity.*

Applicable sub-policies:

- ***OS-2a: Open space plan map designations for natural resource protection.*** *Publicly held lands containing creeks, sloughs, wetlands, other open water, sensitive habitat, forests, and other important natural resources are designated on the Open Space Map (OS-a). While this map is comprehensive, it is not exhaustive. Additional natural resource lands suitable for protections may be identified through site specific studies and or develop in new areas due to changing environmental conditions.*
- ***OS-2b: Development limitations and management for maintenance of biotic resources and diversity, including aquatic resources and sensitive habitats****. Creeks and wetlands are significant components of Arcata's natural open space system. The City shall restore and maintain this system for the benefit of tribal members, residents, visitors, fish, and wildlife.*

The Arcata Bay and tidelands represent an important natural edge and open space feature of the City. Buildings, landform alterations, or access routes in this area shall be of a design and scale that preservers open space and natural characteristics and maintains public views to the Bay.

Local creeks which flow openly through the developed portion of the community shall have biological corridors and greenways established and shall be maintained as visual assets to any developments which adjoin them. Daylighting of channelized or culverted creeks is encouraged where feasible, with a special emphasis on Jolly Giant Creek.

The natural features of the Mad River corridor, Arcata's creeks and adjacent areas, marshes, and other wetland areas, shall be retained.

Unique vegetation and wildlife areas shall remain in a natural condition. Such areas include sand dunes and backdune woodlands, eel grass areas, salt marshes, and special habitats (tern and osprey nesting areas, cormorant, night heron and egret rookeries, and harbor seal resting areas). The policies of this element shall also call for protection for habitat of species that become threatened in the future.

Policy OS-3: Open Space for Managed Production of Resources

Objective: *Designate and conserve resource areas, including forest and agricultural lands, fisheries and aquaculture, groundwater, and mineral resources, for their sustainable, long-term productive capabilities.*

Applicable sub-policies:

- ***OS-3a: Designations for forest, agriculture, fisheries, aquaculture, groundwater, and mineral resource uses and management****. All publicly held lands, and some privately held lands adjacent to the Community Forest and east of Aldergrove Industrial Park, actively managed for production of forest, fisheries, aquaculture and mineral resources are designated as Natural Resource [NR] on the General Plan Land Use Element map. Productive agricultural lands are designated on the Open Space Map.*
- ***OS-3b: Development limitations and management for productive resource areas****. The policies of the Resource Conservation and Management Element shall be followed for the development and management of productive resource lands. This includes policies for: Natural Biological Diversity; Streams Management; Wetlands Management; Baylands and Tidelands; Agricultural and Forest Resources; and Water, Energy, Soils and Mineral Resources. The City shall require that open space resource management be consistent with these and other applicable General Plan policies.*

Policy OS-4: Open Space for Outdoor Recreation and Coastal Access

Objective: *Designate and secure public access to a sufficient supply of land and water areas with recreation resource value, including parks, forests, coastal areas, baylands, and stream corridors, to meet the outdoor recreation needs of Arcata residents and visitors*

Applicable sub-policies:

- ***OS-4a: Designations for park lands and outdoor recreation areas****. All publicly held park lands and outdoor recreation areas are designated as Public Facility [PF] on the General Plan Land Use Element map. The natural resources present on these lands are also subject to the applicable policies of the Resource Conservation & Management Element. Recreation areas are mapped on Figure OS-a.*
- ***OS-4b: Coastal access policy****. The City shall maintain coastal access corridors to Arcata Bay and other public use areas and public trust lands within the coastal zone.*

  Coastal Access routes include:

  1. *Access from Samoa Boulevard to Arcata Bay via South "I" and "G" Streets*
  2. *Access to Mad River Beach via Mad River Road*

3. *Access to Manila Dunes via Samoa Boulevard*

- ***OS-4c: Relationship to the Parks and Recreation Element**. This element contains policies for management of open space lands designated for outdoor recreation. The Parks and Recreation Element contains goals and policy direction for: providing a of recreation opportunities; sharing facilities; park and recreation program efficiency; environmental compatibility; and user safety.*

Policy OS-5: Open Space in Health and Safety Hazard Areas

***Objective:** Designate health and safety hazard areas such as seismic fault and liquefaction zones, unstable soils or slopes, floodplains, areas susceptible to wildland fire, and watershed/reservoir safety zones for risks such as dam and tsunami inundation. Provide appropriate protections, or restrictions, to minimize unnecessary exposure of people and property to health and safety hazards.*

Applicable sub-policies:

- ***OS-5a: Designation of open space for public safety.** Designated open space for public safety is shown on Figure OS-a. Setbacks for seismic faults and liquefaction zones, unstable soils or steep slopes, mapped Flood Hazard Zone A, areas susceptible to wildland fire, and watershed/reservoir safety zones, shall be established as part of the development review process. Where severe safety considerations exist (e.g., within the Alquist-Priolo Zone), open space easements shall be granted to the City to protect people and property from health and safety hazards.*

  Open space lands, with slopes 15% or greater shall retain their natural landform features; excavation shall be restricted, according to the City's adopted grading ordinance, and removal of vegetation shall be limited to selected thinning of timber stands and removal of hazard trees.

  Open Space areas that are flood-prone may be used for agricultural and recreational purposes but shall be kept free from urban development. A flood plain overlay zone shall be applied to all Natural Resource [NR] and Agricultural [AE] areas subject to inundation according to the Flood Insurance Rate Map (Flood Hazard Boundary Map) developed by the Federal Emergency Management Agency (FEMA) or the Federal Insurance Administration.

- ***OS-5b: Development limitations and management for health and safety hazard areas.** Public Safety Element policies shall be followed for all development activity in areas with known or suspected safety hazards. In particular, seismic hazards, other geologic hazards, and flood hazards policy topics are applicable. Areas of high fire risk shall also be subject to defensible space, non-flammable materials and suppression measures as applicable.*

Policy RC-1: Natural Biological Diversity/Ecosystem Function

***Objective:** Set an overarching policy that emphasizes the value of biological diversity, and the optimal function of natural resources as part of a healthy ecosystem.*

Applicable sub-policies:

- ***RC-1a: Maintain biological and ecological integrity.** Maintaining ecological balance, system function, biological integrity, and natural diversity is the primary focus of the Resource Conservation & Management Element. Protecting the ecological functions of natural habitats, and natural drainage and infiltration processes, will enhance natural ecosystems in the Planning Area. Ecological functions and processes are maintained through the following measures:*

  1. *The structure and composition of ecological systems within the City shall contain the same native plant and animal species, in the same relative abundances and proportions, that are found in the least-disturbed natural ecosystems in the Planning Area.*
  2. *The ecological functions performed by ecological systems in the City shall resemble the functions of the least-disturbed natural ecosystems in the Planning Area.*
  3. *Ecological systems and natural processes shall not be disrupted by non-native organisms to a significant degree.*

4. *Ecological systems and natural processes shall not be disrupted by land use activities to a significant degree (e.g., a culvert or other drainage device that restricts flow or blocks fish passage).*

An "adaptive management" approach shall be used to maintain ecological and biological integrity, including monitoring the status of ecological systems in the City and adjusting the City's implementation of this Plan, in order to more closely approximate the conditions provided in the Planning Area's least-disturbed natural ecosystems.

- ***RC-1b: Non-native plant species.*** *Some non-native plant species, such as pampas grass (Cortaderia jubata), Himalayan blackberry (Rubus discolor), Scotch broom (Cytisus scoparius), blue gum eucalyptus (Eucalyptus globulus), English ivy (Hedera helix), English holly (Ilex aquifolium), cotoneaster (Cotoneaster franchetii), and reed canary grass (Phalaris arundinacea) are invasive and displace native species. The presence of these non-native species reduces the area's natural biodiversity, biological integrity and aesthetics. Only native plant species, or species demonstrated to be non-invasive, shall be used in public landscapes, and native plant species shall be strongly encouraged in private landscapes. The City shall provide public information on invasive plant species, maintain a program that recommends effective but non-toxic eradication measures for invasive plant species, and eradicate non-native plant species on public lands where they are displacing native species.*
- ***RC-1c: Protection of Environmentally Sensitive Habitat Areas.*** *Environmentally sensitive habitat areas (ESHA) shall be protected against any significant disruption of their habitat values, and only uses dependent on and compatible with maintaining those resources shall be allowed within ESHAs. Proposed development in areas adjacent to ESHAs shall be sited and designed to prevent impacts that would significantly degrade such areas, and must be compatible with the continuance of such habitat areas.*
- ***RC-1d: Identification of Environmentally Sensitive Habitat Areas****. The City declares the following to be ESHAs within the Planning Area:*

  1. *Rivers, creeks, sloughs, and associated riparian habitats: Mad River; Jacoby Creek; Beith Creek; Fickle Hill Creek; Grotzman Creek; Campbell Creek; Jolly Giant Creek; Janes Creek; Gannon Slough; Butcher Slough; and McDaniel Slough.*
  2. *Wetlands, estuaries, and associated riparian habitats: Arcata Bay; Mad River Slough; Liscom Slough; Butcher Slough; the Aldergrove marshes and ponds; and the Arcata Marsh and Wildlife Sanctuary.*
  3. *Other important habitat areas: waterbird rookeries; shorebird concentration sites; habitat for all rare, threatened, or endangered species on federal or state lists; and vegetated dunes.*
  4. *Public Trust lands such as = diked and drained former tidelands that are grazed.*
- ***RC-1e: Threshold of City review for sensitive habitat effects.*** *Development on parcels designated Natural Resource [NR] on the Land Use Plan Map, or within 250 feet of such a designation, or development potentially affecting a sensitive habitat area, shall be required to be in conformance with applicable habitat protection policies of this Element. All proposed development plans, including grading and drainage plans, submitted as part of a planning entitlement application for these areas, shall show the precise locations of all sensitive habitat areas on the site plan.*
- ***RC-1f: Sensitive habitat buffer requirement.*** *A setback shall be required separating all permitted development from adjacent sensitive habitat areas. The purpose of such setbacks shall be to prevent any degradation of the ecological functions provided by the habitat area as a result of the development. The following shall apply to such setbacks:*

  1. *The minimum width of setbacks from development to streams and wetlands shall be as provided in policies RC-2 and RC-3, respectively.*
  2. *The minimum width of setbacks from development to all other types of sensitive habitat shall be 100 feet, unless the designated setback would eliminate all reasonable use of the property.*
  3. *A definition and map of sensitive habitat will be maintained by the City.*

- ***RC-1g: Sensitive habitat information required in development application review.*** *Where there is a question regarding the boundary, buffer requirements, location, or current status of an ESHA identified pursuant to General Plan policies, the public or private applicant shall provide the City with the following:*

  1. *Base map delineating topographic lines, adjacent roads, and location of dikes, levees, culverts, flood control channels, and tide gates, as applicable.*
  2. *Vegetation map, including identification of species that may indicate the existence or nonexistence of a sensitive environmental habitat area.*
  3. *Soils map delineating hydric and non-hydric soils.*
  4. *Census of animal species indicating the existence, or non-existence, of an environmentally sensitive habitat area.*

  This information shall be provided to the California Department of Fish and Wildlife (CDFW), U.S. Fish and Wildlife Service, NOAA Fisheries (also known as the National Marine Fisheries Service), and other affected agencies for review and comment. Any comments and recommendations provided by these state and federal agencies shall be immediately sent to the applicant for their review. The decision concerning the boundary, location, or current status of the environmentally sensitive habitat area in question shall be based on the substantial evidence in the record and supported by written findings.

- ***RC-1h: Habitat integration for ecological integrity and development of a protected habitat corridor system.*** *An ecological connection network plan for linking native habitats in the Planning Area, and all of the environmentally sensitive habitat areas identified in this Plan, shall be prepared. The network shall incorporate all existing large areas (or "nodes") of habitat for fish and wildlife species (such as marshes and forests) and "linkages" or "corridors" of natural habitat (such as stream zones and sloughs) for migration and species movement. The plan will link large "nodes" of natural habitat together with the "linkage" connections as a functioning ecological network. Nodes and linkages shall include a "core" of natural ecosystem elements and shall provide a protected "buffer" along the outer margins of the core habitat that shall function to protect the ecological services in the "core" habitat.*

- ***RC-1i: Use of biocides and other compound with biological consequences.*** *Pesticides, herbicides and insecticides (biocides); hormones and antibiotics (growth promoters); and hydrocarbon-based compounds, used both commercially and individually, can accumulate to toxic levels in biological organisms, including humans. Certain of these substances, even at low levels, can affect reproductive health.*

- *The City shall maintain and make available a current list of alternative, environmentally-safe products for controlling unwanted vegetation and pests, growing crops and enhancing production of animal products. The use of substances and compounds that can accumulate to toxic levels is restricted by the City (Pesticide Ordinance).and the City shall develop a program for fostering the reduction of pesticides in private use.*

Policy RC-2: Streams Conservation and Management

Objective: *Enhance, maintain, and restore the biological integrity of entire stream courses (headwaters to mouth), and their associated riparian habitats, as natural features in the City's landscape.*

Applicable sub-policies:

- ***RC-2a: Designation of protected streams.*** *The provisions of this policy shall apply to those streams shown on the Protected Watercourse Map (Figure RC-a). These watercourses and their associated riparian areas serve as habitat for fish and wildlife, provide space for the flow of stormwater runoff and flood waters, and furnish open space and recreational areas for city residents.*

- ***RC-2b: Environmental Buffer Area (EBA).*** *A streamside protection area is hereby established along both sides of the streams identified on the City Watercourse Map. The purpose of the EBA is to remain in a natural state in order to protect stream ecosystems and their associated riparian habitat areas.*

- ***RC-2c: Allowable uses and activities in Environmental Buffer Areas.*** *The following compatible land uses and activities may be permitted in EBAs, subject to all other policies in this Element, including those requiring avoidance of impacts and other mitigation requirements:*

  1. *Outside the Coastal Zone:*
     a. *Agricultural operations compatible with maintenance of riparian resources;*
     b. *Fencing along property boundaries and along EBA setback boundaries to prevent bank erosion and degradation of natural riparian vegetation by livestock;*
     c. *Maintenance of existing roads, driveways, and structures;*
     d. *Construction of public road crossings;*
     e. *Forest management practices as permitted by the State of California or Arcata's Forest Management Plan;*
     f. *Construction and maintenance of foot trails for public access;*
     g. *Construction and maintenance of utility lines;*
     h. *Resource restoration projects;*
     i. *Emergency or preventive removal of sediment and vegetation for flood control purposes (only when authorized by the City of Arcata).*
  2. *In the Coastal Zone*
     a. *All uses and activities listed in (1) above;*
     b. *Public coastal access improvements;*
     c. *Boat launching facilities.*
  3. *If the provisions herein would result in any legal parcel, not on Public Trust lands, created prior to the date of this plan, being made unusable in its entirety for any purpose allowed by the land-use plan, exceptions to the foregoing may be made to allow a reasonable economic use of the parcel, subject to approval of a conditional use permit. Any land use, construction, grading, or removal of vegetation that is not listed above shall be prohibited.*

- ***RC-2d: The Wetland and Stream Protection Combining (WSP) Zone.*** *The WSP zone of the Zoning Code shall be applied to all streamside protection areas. [The WSP zone should be a land use designation under the NR district, e.g., NR-WSP.]*
- ***RC-2e: Review and approval of projects affecting streamside protection areas.*** *Applications for development on any parcel that is located partially or wholly within an SPA shall be subject to the requirements of Policy RC-1 and RC-2.*
- ***RC-2f: Conservation easement.*** *Dedication of a conservation easement, or equivalent deed restriction, encompassing the area within the EBA shall be required as a condition of approval of any discretionary planning permit, including design review, when any portion of the project site falls within an EBA. Such easements may be conveyed to the City of Arcata, to another governmental agency that shall manage the easement to protect the EBA's functions, or to a mutually agreeable non-profit entity.*
- ***RC-2g: Maintenance of streams as natural drainage systems.*** *Arcata's creeks carry a significant amount of the City's stormwater runoff. Drainage controls shall be enforced through implementation of the Drainage Master Plan, to protect water quality, and to minimize erosion, sedimentation and flood impacts to City creeks. A comprehensive stream maintenance program shall be prepared to augment stormwater utility rehabilitation projects designed to maintain or improve flow capacity, trap sediment and other pollutants that impair water quality, minimize channel erosion, prevent new sources of pollutants from entering the stream, and enhance instream and riparian habitat.*
- ***RC-2h: Restoration of degraded creek resources.*** *Portions of Janes, Jolly Giant, Campbell, and Grotzman Creeks are culverted or covered, causing degradation of creek resources. Tide gates on*

creek systems can be barriers that prevent anadromous salmonids from accessing critical habitat. Furthermore, recreational use can degrade riparian vegetation along upland reaches of certain creeks (e.g., Jolly Giant, Campbell, and Jacoby Creeks) within Redwood Park and the Community Forest. Lack of vegetation along creek courses can cause erosion, resulting in water quality and air quality impacts. Restoration activities for improving degraded stream resources shall include:

1. *Uncovering of creek courses in public rights-of-way, as part of public works improvement projects.*
2. *Encouraging landowners to restore degraded EBA and stream resources, including native riparian vegetation establishment and invasive species removal, as part of a new development or renovation.*
3. *Controlling uses that are damaging to upland reaches of creeks in the Community Forest and Redwood Park.*
4. *Removing or modifying barriers such as tide gates that prevent migrating anadromous salmonids which are federally listed endangered species from reaching their critical habitat.*
5. *Exclusionary fencing to keep livestock out of the EBA.*
6. *Identifying and addressing sources of pollutants that adversely impact water quality, if applicable.*

Policy RC-3: Wetlands Management

Objective: *To protect existing wetlands areas and their functional capacities and services, maintain a standard of "no net loss" of wetland area and services, restore degraded wetland areas, enhance wetlands functions, and create additional wetland areas to replace historical losses.*

Applicable sub-policies:

- ***RC-3a: Requirement for wetland delineation and study.*** *All proposed development applications shall include a site plan that shows the precise location of any wetlands that exist on the subject property. Any application for development on a parcel where wetlands may be present shall include a wetland reconnaissance or delineation report.*
- ***RC-3b: Filling of wetlands.*** *The following shall apply:*
  1. *Filling of wetlands shall be prohibited in the Coastal Zone, unless it can be demonstrated that:*
     a. *The wetland restrictions, if imposed would render a parcel, not subject to the Public Trust, unusable for any use permitted by the land use plan;*
     b. *There is no feasible, environmentally less damaging alternative to wetland fill for development of a permitted use; and*
     c. *The fill is the least amount necessary to allow development of permitted uses.*
  2. *Filling of wetlands outside the Coastal Zone may be permitted only when the following has been demonstrated by the project proponent:*
     a. *The fill is the least amount necessary to allow a reasonable and harmonious configuration of development on the parcel;*
     b. *The wetlands proposed to be filled are small and isolated, and have limited functional services when compared to larger, contiguous wetland areas.*
  3. *Filling of wetlands shall only be authorized if appropriate mitigation, resulting in "non net loss" in the area and value of wetlands is provided. Mitigation may consist of creating and maintaining a new wetland of equal or greater functional capacity and services than the wetland proposed to be filled, restoration of previously degraded wetlands, or enhancement of existing wetland areas.*
- ***RC-3c: Designation of Environmental Buffer Areas for Wetlands****. An Environmental Buffer Area shall be established to separate all permitted development from adjacent existing wetlands that are to be preserved in a natural state, and from new wetland areas that are created as mitigation of wetland infill. The Environmental Buffer Area's purpose is to remain in a natural state in order to protect*

wetland ecosystems and their associated habitat areas from destruction or degradation. The extent of the Environmental Buffer Area shall be established based upon analyses and recommendations contained in a site-specific wetland delineation study.

- ***RC-3d: Allowable uses and activities in Environmental Buffer Areas for Wetlands.*** *The following compatible land uses and activities may be permitted in Environmental Buffer Area for Wetlands, subject to all other policies in this Element, including those requiring avoidance of impacts and other mitigation requirements:*

  1. *Resource restoration or enhancement projects.*
  2. *Farming, consistent with policy RC-3l.*
  3. *Outdoor recreation activities, such as bird watching, hiking, boating, horseback riding, and similar activities.*
  4. *Education, scientific research, and use of nature trails.*
  5. *Drainage ditches when compatible with wetland function.*
  6. *Minor modification of existing, serviceable structures.*
  7. *Fencing to prevent livestock from degrading wetlands and riparian vegetation.*

  Any use, construction, grading, or removal of vegetation that is not listed above shall be prohibited.

- ***RC-3e: Wetland and Stream Protection Combining (WSP) Zone****. The WSP zone of the City's Zoning Code shall be applied to all Wetland Protection Areas.*

- ***RC-3f: Review and approval of projects affecting Environmental Buffer Areas for wetlands****. Applications for development on any parcel that is located partially or wholly within an Environmental Buffer Area for wetlands shall be subject to the requirements of Policy RC-1 and RC-3.*

- ***RC-3g: Conservation easements.*** *Dedication of a conservation easement, or equivalent deed restriction, encompassing the area within the Environmental Buffer Area for wetlands shall be required as a condition of approval of any discretionary action, including design review, when any portion of the project site falls within an Environmental Buffer Area. Such easements may be conveyed to the City of Arcata, or another governmental agency, or a City-approved non-profit entity that shall manage the easement to protect the Environmental Buffer Area's functions.*

- ***RC-3h: Designation of wetland protection zones.*** *The WSP Zone shall be applied to wetlands, wetland setbacks, wetland buffer areas and modified wetland buffer areas, as defined in the City's Zoning Code, at the time of development review and approval.*

  A wetlands map, maintained by the City, will show the general location of wetlands, riparian corridors, and uplands within the City limits and urban services zone. All proposed development within or adjacent to the areas identified on the map as wetlands or riparian corridors shall comply with City Wetlands Development Standards. A Wetlands Buffer Area shall be required to protect the areas shown as wetlands on the Wetlands Map. All proposed development within the buffer areas shall comply with the Wetlands Buffer Area Development Standards of the Coastal Zoning Ordinance.

- ***RC-3i: Management of Arcata Marsh for wetlands services as well as wastewater treatment****. The Arcata Marsh and Wildlife Sanctuary serves a variety of purposes and functions, including providing wetland habitat for a variety of species, wastewater treatment, and recreational use. These purposes shall be balanced for the benefit of all users.*

- ***RC-3j: Minimum mitigation requirements for wetland impacts.*** *Diking or filling a wetland that is otherwise in accordance with the policies of this General Plan, shall, at a minimum, require mitigation measures, monitoring program, and acceptable funding.*

- ***RC-3k: Wetland functional capacity maintenance requirement.*** *Diking, filling, or dredging of a wetland or estuary shall maintain or enhance the functional capacity of these resources. Functional capacity means the ability of the wetland or estuary to be physically and biologically self-sustaining and to maintain natural species diversity. In order to establish that the functional capacity is being maintained, all of the following must be demonstrated:*

1. *Presently occurring plant and animal populations in the ecosystem will not be altered in a manner that would impair the long-term stability of the ecosystem (i.e., natural species diversity, abundance and composition are essentially unchanged as the result of the project).*
2. *A species that is rare or endangered will not be significantly adversely affected.*
3. *Consumptive uses (e.g., fishing, aquaculture and hunting) or non-consumptive functions (e.g., water quality improvement and research opportunity) of the wetland or estuary ecosystem will not be significantly reduced.*

- ***RC-3l: Uses allowed in diked and drained reclaimed former tidelands.*** *Allowable uses and development in grazed or farmed wetlands are limited to uses compatible with the Public Trust doctrine. These uses are specified in Land Use Element Policy LU-6 and are summarized below.*

1. *Agricultural operations limited to accessory structures, apiaries, field and truck crops, livestock raising, greenhouses (provided they are not located on slab foundations and crops are grown in the existing soil on site), and orchards.*
2. *Farm-related structures, including barns, sheds, and farmer-occupied housing, necessary for the performance of agricultural operations. Such structures may be located on an existing grazed or farmed wetland parcel only if no alternative upland location is available for such purpose and the structures are sited and designed to minimize adverse environmental effects on Public Trust resources and uses. No more than one primary and one secondary residential unit shall be allowed per parcel.*
3. *Restoration projects.*
4. *Nature study, aquaculture, and similar resource-dependent activities compatible with Public Trust resources and uses.*
5. *Incidental public service purposes that may temporarily impact the resources of the area (such as burying cables or pipes).*

   Expanding farming operations into non-farmed wetlands, by diking or otherwise altering the functional capacity of the wetland is not permitted. Farm-related structures (including barns, sheds, and farm-owner occupied housing) necessary for the continuance of the existing operation of the farmed wetlands may be located on an existing farmed wetland parcel, only if no alternative upland location is viable for such purpose and the structures are sited and designed to minimize the adverse environmental effects on the farmed wetland. Clustering and other construction techniques to minimize both the land area covered by such structures and the amount of fill necessary to protect such structures will be required.

Policy RC-4: Open Waters of Arcata Bay & Tidelands

Objective: *Maintain existing Bay wetlands and tide lands, protect them from urban and agricultural encroachments or degradation, and manage the open waters of Arcata Bay for their wildlife, fisheries, and ecological services, as well as navigation, recreation, and tourism uses.*

- ***RC-4a: Protection of open waters and tideland areas of Arcata Bay.*** *The open water areas and tidelands of Arcata Bay constitute a fragile Public Trust resource and access shall be controlled to avoid resource degradation, while maintaining the public's right to navigation. Tidal marshes shall be enhanced and maintained, especially in the areas of McDaniel, Gannon, and Butcher's Sloughs, to protect wetland services.*
- ***RC-4b: Access to Arcata Bay.*** *The following bicycle and pedestrian routes are designated as Public Access Corridors and shall be properly signed and identified as approved Bay access points.*

1. *"I" Street from Samoa Boulevard, south through the Arcata Marsh and Wildlife Sanctuary to the boat launching facility on Arcata Bay.*
2. *South "G" Street south of "H" Street, to Highway 101.*
3. *Humboldt Bay Trail from Samoa Boulevard (Highway 255), south to Bayside Cutoff and beyond.*
4. *Samoa Boulevard from Highway 101 west to Mad River Slough.*

A system of foot trails and interpretive sites shall be established along the Arcata Bay shore westward to the City limit, subject to the following guidelines.

1. *All planning and development in the area that is both south of Samoa Boulevard and west of Highway 101, and that is identified as tidelands, former tidelands, wetlands or riparian corridor on the adopted Wetlands Map shall be reviewed by the Wetlands and Creeks Committee and coordinated with California Department of Fish and Wildlife.*
2. *Development in the area bounded by Butcher's Slough and Gannon Slough shall occur in conjunction with management of the USFWS National Wildlife Refuge, Arcata Marsh and Wildlife Sanctuary and the Jacoby Creek Gannon Slough Wildlife Area.*
3. *Motorized vehicles shall be restricted to paved roads and parking lots.*
4. *Pedestrians shall be restricted to designated trails and facilities.*
5. *Valid scientific and educational studies of wetlands and tidelands are encouraged with a City Nature Area Entrance Permit.*

- ***RC-4c: Coastal-dependent and Public Trust uses of Arcata's tidelands.*** *Tidelands of Arcata Bay support a variety of wildlife as well as human activities. The following provisions shall be made for managing tideland areas.*

  1. *Tidelands and open water areas of Arcata Bay shall be designated Natural Resource Public Trust lands [NR], and identified as passive use recreational areas.*
  2. *The Arcata Marsh and Wildlife Sanctuary shall be designated as Natural Resource [NR] and the recreational component of the project identified as a passive use recreational area.*
  3. *The continued use of the tidelands for scientific and educational studies is encouraged.*
  4. *The Arcata Marsh and Wildlife Sanctuary shall be maintained, and any new facilities shall be built consistent with the Arcata Marsh and Wildlife Sanctuary plan adopted by the City Council.*
  5. *The South "I" Street boat launch shall be enhanced or relocated to accommodate small watercraft and windsurfing.*
  6. *The placement of interpretive sites along the Arcata Bay shore, including Nature and Wildlife Centers, shall be coordinated with other agencies, and serve as an educational focal point for Arcata's natural resource areas.*
  7. *Access on the levee from the Arcata Marsh and Wildlife Sanctuary westward to the City limit shall be provided for passive recreation and nature observation.*

- ***RC-4d: Diking, dredging filling, and shoreline structures.*** *Diking, dredging, or filling of Bay waters, wetlands, and estuaries is discouraged and only permitted where it has been demonstrated that the Public Trust resources and values are being protected, and mitigation measures have been provided, which minimize adverse environmental effects, for the following limited uses:*

  1. *Incidental public service purposes including but not limited to, burying cables and pipes, and maintaining existing dikes and public facilities.*
  2. *Maintaining a channel adequate to serve the boat ramp at current levels of use.*
  3. *Resource restoration purposes.*
  4. *Nature study, aquaculture, or similar Public Trust resource dependent activities.*
  5. *Agriculture and currently practiced within existing diked former tidelands but not including the expansion thereof.*

  In order to protect existing development, shoreline structures (such as dikes or tide gates) that may alter the natural shoreline, shall be permitted only when they do not adversely affect any federally listed endangered or threatened species; and no other feasible, less environmentally-damaging alternative is available, and only when the structures are not located within a wetland, unless the wetland will be the primary beneficiary of the structure.

  The placement of dredge material on existing wetlands shall not be permitted unless such placement is necessary for either a Public Trust resource restoration project, or for the maintenance of existing agricultural operations in diked former tidelands. Wetland fill shall be allowed for aquaculture projects if

it can be shown that it is necessary for the project, is required to be located within the wetland, and there is no other feasible, less environmentally-damaging, alternative.

- ***RC-4e: Aquaculture use of coastal wetlands and tidelands.*** *To protect aquaculture activities in Arcata Bay, the City shall:*

  1. *Ensure that its wastewater discharge does not exacerbate existing problems with coliform bacteria levels in Arcata Bay.*
  2. *Take measures to reduce coliform loading of perennial streams within its jurisdiction, as part of a stream maintenance program. These measures shall include controlling identified sources of coliform loading such as septic tank leachate and runoff from agricultural operations.*

  Aquaculture shall not adversely impact natural ecological processes nor native wildlife or fisheries or their habitat in the Bay. No new aquaculture uses shall be permitted unless it can be demonstrated that adequate precautions will be taken to prevent new adverse impacts to natural ecological processes. The City shall continue its management of:

  1. *Integrated wetland enhancement and wastewater treatment.*
  2. *The tidelands, for commercial and native oyster harvesting.*
- ***RC-4f: Management of bayfront and marsh areas for coastal access, recreation, and tourism.*** *Tidelands and open water areas of Arcata Bay shall be designated Natural Resource-Public Trust land [NR-PT] and protected from uncontrolled access. The following guidelines shall be used when permitting access to these areas:*

  1. *Motorized vehicles shall be restricted to paved roads and parking lots.*
  2. *Pedestrians shall be restricted do designated trails and facilities.*
  3. *Valid scientific and educational studies of the wetlands and tidelands shall be encouraged.*

  New development shall not restrict public access to the shoreline. Public access to the shoreline shall be required of new development. Where consistent with the Humboldt Bay National Wildlife Refuge's Management Plan, controlled public access to the Refuge's Jacoby Creek Unit shall be developed along Arcata Bay from the AMWS to the City's westward limit.

Policy RC-5: Agricultural Resources Management

Objective. *Protect and enhance agricultural uses on prime agricultural lands within the City and encourage more productive agricultural use of agriculturally suitable lands.*

Applicable sub-policies:

- ***RC-5a: Promotion of and participation in agricultural production within the City.*** *Diverse and intensive agricultural production and increased participation in agricultural production, shall be promoted, in order to maintain the value of agricultural lands, improve the economic base, and increase employment and food production. The City does not, however, advocate more intensive agricultural uses and practices that would have adverse environmental impacts. Agricultural operations, such as Community Supported Agriculture (CSA) are strongly encouraged.*
- ***RC-5b: Agricultural Advisory Committee****. The City shall appoint an Agricultural Advisory Committee to advise on agricultural issues and programs. The responsibilities of the committee shall include, but are not limited to:*

  1. *Development of a Community and Farm Protection Ordinance, as well as conflict resolution protocol.*
  2. *Development of programs (educational, leasing, and purchase) that will encourage responsible productive uses of agricultural lands.*
  3. *Identification of lands for preservation and/or acquisition programs.*
  4. *Maintain a database of resources available to farmers, such as Williamson Act advantages, conservation easements, organic farming practices, and marketing strategies.*

- ***RC-5c: Community and farm protection.*** *Maintaining a compatible relationship between agricultural and residential uses shall be based on:*
    1. *Recognizing the rights of owners of productive agricultural land to make agricultural use of their land.*
    2. *Identifying and minimizing potential conflicts between agricultural operations and adjacent residential, commercial, and community facility uses.*
    3. *A Community and Farm Protection Ordinance shall provide a foundation for minimizing conflicts, educating the community, and a protocol for mediating unresolved disputes. Once adopted, the ordinance shall be mailed to all owners of agricultural and adjacent lands and disclosed to affected property owners at the time of parcel transfer.*
- ***RC-5c: Permanent protection for agricultural lands.*** *Protection of agricultural resources shall be secured through the purchase of conservation easements, development rights, and outright acquisition. The City shall work in conjunction with other entities such as land trusts, whenever possible, to preserve agricultural buffers and maintain and enhance agricultural uses on prime agricultural soils.*

Policy RC-6: Forest Resources Management

Objective. *Protect and enhance private and public forest lands (e.g., the Arcata Community Forest Tracts) to maintain the resiliency and integrity of the ecosystem while protection timber production, recreation, habitat values, and opportunities for education and research.*

Applicable sub-policies:

- ***RC-6a: Management of Arcata Community Forest.*** *The City's 2022 Forest Management plan includes the following policies:*
    1. *Recreation and aesthetic resources management. The community forest will emphasize dispersed, day-use opportunities. Recreational use shall not be allowed to impact other resources such as fish, wildlife, or watershed.*
    2. *Timber resource management. To ensure the sustainable and long-term production of forest products, the rate of harvesting must not exceed the rate of production. Long-term productivity refers to the continuing ability of the forest to produce timber while retaining the associated values of watershed, wildlife, soils, recreation and aesthetics. This is dependent upon the use of management practices that do not allow for the deterioration or impairment of soil productivity. For planning purposes, long term means that exceeding fifty years.*
    3. *Watershed resource management. Water quality, soil, riparian, and aquatic biological productivity shall be maintained and enhanced through the application of City forest management standards and the implementation of watershed improvement projects.*
    4. *Wildlife resource management. Wildlife habitat is managed to promote species diversity and to ensure that populations of indigenous species are maintained. This can best be achieved through the maintenance and enhancement of habitat values. Habitat values that lead to species diversity include the following elements: breeding, foraging, watering, rearing, hiding and thermal cover.*
    5. *Vegetation and botanical resources. Maintain the native biodiversity of species found in a redwood forest habitat, both by controlling exotics and managing for a species mix that would naturally occur in a redwood forest habitat.*
- ***RC-6b: Management of Jacoby Creek Forest.*** *The management policies for the Jacoby Creek Forest are the same as those for the Arcata Community Forest, listed above, except that the Jacoby Creek Forest is not open to recreational use.*
- ***RC-6c: Allocation of forest fund.*** *Forest fund revenues, derived from timber harvest and carbon projects shall be deposited into a special revenue account within the City to be utilized for forest management purposes. Excess net forest fund revenues, when available, may be directed towards park acquisition, maintenance, and development. This can include acquisition of stream corridors, and*

riparian and greenbelt areas. These areas contribute to the diversity of parks and, in the case of linear parks along stream corridors, provide passive recreation areas compatible with the environment. The acquisition of open space shall be emphasized as an appropriate use for the remaining revenues.

- ***RC-6d: Management practices for private timberlands.*** *The management of private timberlands shall be encouraged to use current principles of sustainable forestry for all aspects of forest use and function: recreation; timber production; biodiversity; air and water quality; and carbon storage. Timber owners are encouraged to apply for conservation easements, certified forestry, or compensation for carbon storage.*
- ***RC-6e: Timber harvest plans.*** *The City, in cooperation with California Department of Forestry, shall request review of all Timber Harvest Plans (THP) within the Planning Area. The City shall review THPs for measures that protect water quality, control erosion and flooding, and preserve the City viewshed. The city shall recommend that THPs that do not include these measures not be approved.*
- ***RC-6f: Urban conversions.*** *The sustainable management of timber resources, and related uses, shall be encouraged, so that the long-term economic return from productive timber production will provide sufficient incentives to prevent urban conversions. Urban conversions are discouraged within the Urban Services Boundary.*
- ***RC-6g: Setbacks.*** *Development adjacent to the Community Forest boundary shall be setback at least 150 feet, unless this would make the use of the parcel infeasible for its designated purpose. However, larger setbacks may be required to prevent exposure to potential hazards and to maintain forest integrity.*
- ***RC-6h: Monitoring.*** *Monitoring of forest practices, to ensure consistency with adopted management and harvest plans, shall be carried out as an implementation measure of this Element. The general objectives of the monitoring will be to:*
  1. *Determine the effectiveness of management practices at multiple scales (i.e., individual sites to watersheds).*
  2. *Validate ecosystem functions and processes have been maintained as predicted.*

Policy D-3: Scenic Routes, Resources, and Landscape Features

Objective. *Identify and protect scenic routes, resources, and landscape features. Retain natural features, coastal scenic resources, and scenic vistas as important aesthetic components of the built environment and visual and associative links to nature. Minimize impairment and obstructions of scenic views to the minimum necessary to allow development.*

Applicable sub-policies:

- ***D-3e: Arcata Bay – Open waters, shoreline, and tidal marshes.*** *(No change to text from the General Plan 2020.)*
- ***D-3i: Streamside riparian areas.*** *(formerly Policy D-3j) Creeks or drainage channels and any associated riparian vegetation shall be retained in a natural state and incorporated into site design as a visual asset to development that adjoin them. Design codes should encourage "daylighting" streams on City and private property, and restoration of riparian ecology and function.*

As discussed in detail in Section 5.3.6, Policy D-3i (Preservation of windrows, groves or tree rows) was not carried into the General Plan 2045. These groves are generally non-native, and sometimes invasive, species. Ensuring their preservation for visual purposes is at odds with resource conservation.

Policy D-4: Subdivision Design

Objective. *Achieve subdivision design that accommodates orderly growth; ensures proper development of land and access to lots; promotes open space retention; ensures adequate circulation, utilities, and services; preserves existing landforms; and retains significant vegetation.*

Applicable sub-policies:

- ***D-4d: Retention of natural features.*** *Subdivisions shall be designed considering the natural conditions and features of the site. To the maximum extent practicable, development shall be located to preserve natural features and avoid areas of environmental sensitivity, including but not limited to: wetlands, significant or mature locally native trees or stands of such trees, creekside riparian habitat areas, floodplain areas, and areas with slopes greater than thirty percent. Residential structures, including decks and balconies, shall not extend into significant natural areas.*

City of Arcata Local Coastal Program

The policies within the City of Arcata's Local Coastal Plan that regulate biological resources include Coastal Act policies Section 30607.1, 30121, 30231, 30233 which are listed above and referenced here.

Section 30607.1

Where any dike and fill development is permitted in wetlands in conformity with this division, mitigation measures shall include, at a minimum, either acquisition of equivalent areas of equal or greater biological productivity or opening up equivalent areas to tidal action; provided, however, that if no appropriate restoration site is available, an in-lieu fee sufficient to provide an area of equivalent productive value or surface areas shall be dedicated to an appropriate public agency, or such replacement site shall be dedicated to an appropriate public agency, or such replacement site shall be purchased before the dike or fill development may proceed. Such mitigation measure shall not be required for temporary or short-term fill or diking: provided, that a bond or other evidence of financial responsibility is provided to assure that restoration will be accomplished in the shortest feasible time.

Section 30121

"Wetland" means lands within the coastal zone which may be covered periodically or permanently with shallow water and include saltwater marshes, freshwater marshes, open or closed brackish water marshes, swamps, mudflats, and fens.

Section 30231

The biological productivity and the quality of coastal waters, streams, wetlands, estuaries, and lakes appropriate to maintain optimum populations of marine organisms and for the protection of human health shall be maintained, and where feasible, restored through, among other means, minimizing adverse effects of wastewater discharges and entrainment, controlling runoff, preventing depletion of ground water supplies and substantial interference with surface water flow, encouraging wastewater reclamation, maintaining natural vegetation buffer areas that protect riparian habitats, and minimizing alteration of natural streams.

Section 30233

(a) The diking, filling, or dredging of open coastal waters, wetlands, estuaries, and lakes shall be permitted in accordance with other applicable provisions of this division, where there is no feasible less environmentally damaging alternative, and where feasible mitigation measures have been provided to minimize adverse environmental effects, and shall be limited to the following:

(1) New or expanded port, energy, and coastal-dependent industrial facilities, including commercial fishing facilities.

(2) Maintaining existing, or restoring previously dredged, depths in existing navigational channels, turning basins, vessel berthing and mooring areas, and boat launching ramps.

(3) In wetland areas only, entrance channels for new or expanded boating facilities; and in a degraded wetland, identified by the Department of Fish and Game pursuant to subdivision (b) of Section 30411, for boating facilities if, in conjunction with such boating facilities, a substantial portion of the degraded wetland is restored and maintained as a biologically

productive wetland; provided, however, that in no event shall the size of the wetland area used for such boating facility, including berthing space, turning basins, necessary navigation channels, and any necessary support service facilities, be greater than 25 percent of the total wetland area to be restored.

(4) In open coastal waters, other than wetlands, including streams, estuaries, and lakes, new or expanded boating facilities.

(5) Incidental public service purposes, including, but not limited to, burying cables and pipes or inspection of piers and maintenance of existing intake and outfall lines.

(6) Mineral extraction, including sand for restoring beaches, except in environmentally sensitive areas.

(7) Restoration purposes.

(8) Nature study, aquaculture, or similar resource-dependent activities.

Non-industrial Timber Management Plan

This is a long-term management option and permit available to timber land ownerships of less than 2,500 acres that was adopted in 1999. The plan covers the Arcata Community Forest and the Jacoby Creek Forest. Elements include a description of timber stand characteristics, a description of proposed activities within each management unit, a description of cultural or historical records, and information on threatened or endangered plant or animal species. The plan also stipulates that the landowner must practice uneven age management and demonstrate and document sustainable harvesting. The plan is required by the state, and amendments and deviations are sent to CAL FIRE as lead agency for review and approval.

Northern Spotted Owl Habitat Retention Agreement

The Northern Spotted Owl (*Strix occidentalis caurina*) was federally listed as threatened in 1990. The Habitat Retention Agreement is a voluntary commitment by the City to manage the City's timberland in a manner that maintains and enhances Northern Spotted Owl habitat. The City entered into the agreement in 2008 for areas within the Non-industrial Timber Management Plan. Management commitments include limiting all openings created by timber harvest to 0.99 acres, retaining a greater average post-harvest basal area (square feet per acre) for trees greater than 12-inch diameter breast height, legacy trees, and snags will be recruited and retained to a minimum level of 0.5 per acre, down cull logs will be retained, and NSO surveys/monitoring will be conducted annually.

5.3.4 Evaluation Criteria and Significance Thresholds

For the purpose of this EIR, the evaluation criteria and significance thresholds summarized below are used to determine whether implementation and adoption of the General Plan 2045 would have a significant effect related to biological resources, as defined by Appendix G of the CEQA Guidelines, if it would:

– Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by CDFW, or USFWS;
– Have a substantial adverse effect on any riparian habitat or other Sensitive Natural Community identified in local or regional plans, policies, regulations, or by CDFW or USFWS;
– Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means;
– Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites;
– Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance; or

– Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.

5.3.5 Methodology

The evaluation of potential impacts to biological resources is based on mapped vegetation communities and wetlands (see Figures 5.3-1 and 5.3-2), and database inventory of special status plants and animals (see Table 5.3-1). It should be noted that the data shown on these figures and table are from a publicly accessible database and are displayed at a coarse scale and were not mapped or compiled specifically as a component of the General Plan 2045 or this Draft EIR.

5.3.6 Impacts and Mitigation Measures

Impact Analysis

Impact BIO-a: **Would adoption and implementation of the General Plan have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?**

Construction on Undeveloped Land

Development anticipated under the General Plan 2045 could potentially impact special-status species. Table 5.3-1 lists the special-status species documented within the Arcata North and Arcata South USGS 7.5 min quadrangles, and totals 51 species (comprised of 18 plants, and 33 wildlife species). It should be noted that the study area comprises a portion of each of these quads, and therefore not all of the 51 species documented would occur within the study area (for example, there are no dune habitat species because there are no dunes within the study area).

As described in the Setting, the undeveloped habitat within the Infill Opportunity Zones is limited and predominantly consists of grassland, patches of forest, and approximately 600 linear feet of riparian corridor along Jolly Giant Creek (which is considered ESHA). The remaining areas within the Infill Opportunity Zones are developed.

Under federal and state law, if a project were to be implemented that would modify a public trust resource (such as wetlands, riparian habitat, or a threatened or endangered species), an inventory of the resource to be modified would be compiled and assessed, followed by potential issuance of a permit and mitigation measures to offset the impact. In addition to federal and state regulations, under the proposed General Plan 2045 policies, ecological function would be upheld and protected by the following policies:

- RC-1a* (Maintain biological and ecological integrity);
- RC-1b (Non-native plant and animal species) – states common invasive species and that their presence reduces the area's biological integrity;
- RC-1c (Protection of Environmentally Sensitive Habitat Areas);
- RC-1e* (Threshold of City review for sensitive habitat effects);
- RC-1f (Sensitive habitat buffer requirement);
- RC-1g* (Sensitive habitat information required in development application review); and
- RC-1h* (Habitat integration for ecological integrity and development of protected habitat corridor system).

The asterisked policies denote that there is no change between the proposed policy and the existing General Plan 2020 policies, and therefore there would be no anticipated substantial difference in ecological integrity associated with the General Plan 2045. The policies without an asterisk only have minor updates; no substantial modifications are proposed. These policies were amended to remove language that is already codified in the zoning ordinance; the language changes do not affect the impact of the policy. Policy RC-1c states that ESHA shall be protected against disruption of habitat values and only uses dependent on and compatible with maintaining those resources within ESHA would be allowed. Policy RC-1e require parcels designated as Natural Resources or within 250 feet of such designation to be in conformance with applicable habitat protection policies of the Resource Conservation and Management Element, and to provide maps of the location of ESHA to the City with planning entitlement applications. Policies RC-1f, RC-2b and RC-3c require buffers separating permitted development from adjacent sensitive habitat areas. These buffers around streams, wetlands and other sensitive habitat areas would provide protections to aquatic and semi-aquatic species such as fish and amphibians and would reduce the potential for impacts to occur to species utilizing the sensitive habitat areas. Future developers would need to comply with all applicable permitting requirements in or adjacent to sensitive habitat areas.

Policies RC-2 and RC-3 include protections to streams, wetlands and Baylands and are discussed in impact question Impact BIO-b. Policies in the Open Space Element also include protections to biotic resources. These policies provide a high level of protection to the natural environment (i.e., grasslands, trees, wetlands, and other ESHA).

As a result of existing federal and state regulations protecting natural resources (such as wildlife habitat), and existing and proposed policies under the General Plan 2045 that would require assessment, inventories and buffers for protection of natural resources, it is unlikely that implementation of the General Plan 2045 would have a substantial adverse impact directly or indirectly on a special-status species via construction in undeveloped lands.

Construction Involving Demolition

However, some special-status species may occur within the developed footprint of the study area, particularly within the Infill Opportunity Zones. Future construction in these areas may result in the demolition of existing structures. It is possible that the structures to be demolished may provide habitat for species such as the Townsend's Big-eared Bat, and removal of the structure may result in injury or death to the species which would be a significant impact. To avoid this potential impact, mitigation measure BIO-1 is proposed.

Mitigation Measure BIO-1: Protect Special-Status Bats during Structure Demolition

If a structure is to be demolished, a qualified bat biologist shall conduct pre-construction surveys for special-status bats during the spring or summer prior to construction in areas where potential maternity roosts may be disturbed/removed. If Project work will take place between August 16 and March 31, no surveys shall be required because there will be no impact to roosting bats, as this period is outside of the maternity season. If Project work occurs within the maternity season, survey methodology should include visual examination of suitable habitat areas for signs of bat use and may utilize ultrasonic detectors to determine if special-status bat species utilize the vicinity. If bats exist, species presence and site use patterns should be documented, including roost sites. Bat presence in the Project may vary seasonally and annually. Surveys should be conducted in a manner to detect the presence of hibernating or torpid bats, reproductive colonies and/or migratory stop-over roosts. If no bat utilization or roosts are found, then no further study or action is required. If bats are found to utilize the Project vicinity, or presence is assumed, a bat specialist should be engaged to advise the best method to prevent impact. This may include, but will not be limited to:

- Consultation with the California Department of Fish and Wildlife to determine appropriate measures for protecting bats with young if present, and for implementing measures to exclude non-breeding bat colonies during construction process.
- Phased removal of the structure where selected portions not containing cavities are removed on the first day, with the remainder of the structure removed on the subsequent days.

Mitigation Measure BIO-1 requires surveys and avoidance and minimization of direct and indirect impacts to special status bats during demolition of structures, thereby reducing any potential impacts to a less-than-significant level.

Level of Significance: Less than significant after mitigation

Impact BIO-b: Would adoption and implementation of the General Plan have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or US Fish and Wildlife Service?

Sensitive Natural Communities and riparian habitat are both considered Environmentally Sensitive Habitat Areas (ESHA) and are protected under proposed General Plan 2045 policies RC-1c (Protection of Environmentally Sensitive Habitat Areas), RC-1d (Identification of Environmentally Sensitive Habitat Areas), RC-1e (Threshold of City review for sensitive habitat effects) and RC-1f (Sensitive habitat buffer requirement). These policies would protect against any significant disruption of ESHA habitat values via only allowing land uses dependent on and compatible with maintaining those resources. Development adjacent to ESHA would be designed to prevent impacts that could significantly degrade such areas and must be compatible with the continuance of ESHA areas. The policies state that a setback buffer shall be required separating all permitted development from adjacent sensitive habitat areas. The buffer size depends on the resource and varies between 25 to 250 feet. These policies have been in place under the existing Arcata General Plan 2020, and implementation of the General Plan 2045 would not cause a substantial adverse effect on riparian or other Sensitive Natural Community (ESHA) due to the protective policies in the General Plan 2045. Therefore, a less than significant impact would occur.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact BIO-c: Would adoption and implementation of the General Plan have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Wetlands are protected under the federal Clean Water Act and state Porter-Cologne Act. The Clean Water Act regulates jurisdictional aquatic resources considered “Waters of the U.S.”, and the Porter Cologne Act regulates jurisdictional aquatic resourced considered “Waters of the State.” These definitions have the potential to change over time, by federal and state administration, and by case law. Typically, Waters of the State is a broader definition than Waters of the U.S., and as a result, wetlands in California remain protected at a high caliber compared to wetlands in other states. All projects that dredge, fill, or modify a wetland or other aquatic resource considered a Water of the U.S. and/or Water of the State would be required to obtain permits and likely to perform mitigation to offset impacts to the aquatic resources impacted under the project.

In addition to federal and state regulations, the proposed General Plan 2045 contains policies RC-2 and RC-3 which regulates waterways and wetlands. The objective of Policy RC-2 (Streams Conservation and Management) is to “enhance, maintain and restore the biological integrity of entire stream courses (headwaters to mouth) and their associated riparian habitats, as natural features in the City’s landscape”, and the objective of RC-3 (Wetlands Management) is to “protect existing wetlands areas and their functional capacities and values,

maintain a standard of “no net loss” in area and value, restore degraded wetland areas, enhance wetlands functions, and create additional wetland areas to replace historical losses.”

Policy RC-3a requires all proposed development applications to include a site plan showing the location of any wetlands that exist on the subject property. The reconnaissance-level and delineation-level mapping is to be conducted by a professional or technical expert qualified in wetlands science. Policies RC-3b,-3d, -3e, -3f, -3i, -3j, -3k, -3l remain unchanged since the General Plan 2020 and include details on when filling a wetland is permitted within and outside of the Coastal Zone, allowable land uses within Environmental Buffer Areas (which are either a 50 to 100-foot setback between wetlands and development), requirements that protections will be applied to Wetland Protection Areas and review and approval of projects affecting Environmental Buffer Areas, management of the Arcata marsh, minimum mitigation requirements for wetland impacts, maintenance requirements for wetland functional capacity, and land uses allowed in diked former tidelands. Policies RC-3c, and -3g have minor text updates to them and are functionally equivalent to the General Plan 2020 RC-3c and -3g policies.

Similarly, sub-policies RC-2a through RC-2f are unchanged from the General Plan 2020, and policies RC-2g, and -2h have had minor updates. These policies include protections to streams via designation of protected streams, Environmental Buffer Areas, allowable uses within Environmental Buffer Areas, the Wetland and Stream Protection Combining Zone, review and approval of projects affecting streamside protection areas, conservation easements (as a protective tool), guidelines of stream maintenance and restoration of degraded creek resources.

The majority of policies regulating wetlands and waterways are unchanged from the General Plan 2020, and no substantial updates to policies regulating these resources are proposed. Policies were amended to remove language that is already codified in the zoning ordinance; the language changes do not affect the impact of the policy. Therefore, implementation of the General Plan 2045 would not cause a substantial adverse effect to federally protected wetlands or other waterways because of the strong protective measures already in place. A less than significant impact would occur.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact BIO-d: Would adoption and implementation of the General Plan interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Numerous General Plan 2045 policies uphold biological and ecological integrity. The vast majority of these policies were included in the General Plan 2020 and underwent minor to moderate revisions between the 2020 and 2045 General Plans. The current General Plan 2045 policies that uphold biological and ecological integrity that would protect wildlife habitat and migration include:

- OS-1a: Designation of open space lands with native biotic resources and ecosystems
- OS-1b: Open Space Plan Map
- OS-1d: Linkages between open space areas
- OS-1e: Appropriate uses and development limitations within open space lands
- OS-1g: Public and private ownership and management of open space
- OS-1h: Greenbelt
- OS-1i: Additional open space area identification and acquisition
- OS-2a: Open space plan map designations for natural resource protection

- OS-2b: Development limitations and management for maintenance of biotic resources and diversity, including aquatic resources and sensitive habitats
- OS-3a: Designations for forest, agriculture, fisheries, aquaculture, groundwater, and mineral resource uses and management
- OS-3b: Development limitations and management for productive resource areas
- RC-1a: Maintain biological and ecological integrity
- RC-1b: Non-native plant and animal species
- RC-1c: Protection of Environmentally Sensitive Habitat Areas
- RC-1d: Identification of Environmentally Sensitive Habitat Areas
- RC-1e: Threshold of City review for sensitive habitat effects
- RC-1f: Sensitive habitat buffer requirement
- RC-1g: Sensitive habitat information required in development application review
- RC-1h: Habitat integration for ecological integrity and development of a protected habitat corridor system
- RC-1i: Use of biocides and other compound with biological consequences
- RC-2a: Designation of protected streams
- RC-2b: Environmental Buffer Area (EBA)
- RC-2c: Allowable uses and activities in Environmental Buffer Areas
- RC-2d: The Wetland and Stream Protection Combining Zone (WSP) Zone
- RC-2e: Review and approval of projects affecting streamside protection areas
- RC-2f: Conservation easement
- RC-2g: Maintenance of streams as natural drainage systems
- RC-2h: Restoration of degraded creek resources
- RC-3a: Requirement for wetland delineation and study
- RC-3b: Filling of wetlands
- RC-3c: Designation of Environmental Buffer Areas (EBA)
- RC-3d: Allowable uses and activities in Environmental Buffer Areas
- RC-3e: Wetland and Stream Protection Combining (WSP) Zone
- RC-3f: Review and approval of projects affecting Environmental Buffer Areas
- RC-3g: Conservation easements
- RC-3h: Designation of wetland protection zones
- RC-3i: Management of Arcata Marsh for wetlands values as well as wastewater treatment
- RC-3j: Minimum mitigation requirement for wetland impacts
- RC-3k: Wetland functional capacity maintenance requirement
- RC-3l: Uses allowed in diked/reclaimed former tidelands
- RC-4a: Protection of open waters/tideland areas of Arcata Bay
- RC-4c: Coastal-dependent and public trust uses of Arcata’s tidelands

- RC-4d: Diking, dredging, filling and shoreline structures
- RC-4e: Aquaculture use of coastal wetlands/tidelands
- RC-5c: Permanent protection for agricultural lands
- RC-6a: Management of Arcata Community Forest
- RC-6b: Management of Jacoby Creek Forest
- RC-6c: Allocation of forest fund revenues
- RC-6d: Management practices for private timberlands
- RC-6e: Timber harvest plans
- RC-6f: Urban conversions
- RC-6g: Setbacks
- RC-6h: Monitoring
- D-3e: Arcata Bay – Open waters, shoreline and tidal marshes
- D-3i: Streamside riparian areas
- D-4d: Retention of natural features

One policy in particular, Policy RC-1a, states “ecological systems and natural processes are not to be disrupted by land use activities to a significant degree (e.g., a culvert or other drainage device that blocks fish passage).” This policy would be applied to all projects and would therefore protect wildlife movement. The policies listed above include provisions to protect native vegetation, implement Environmental Buffer Areas around sensitive habitat, protect working lands (which typically provides wildlife habitat), limit urban conversion, and protect waterways and riparian corridors, which collectively protect ecological corridors and thus wildlife movement. Due to the minor revisions of these policies between the General Plan 2020 and proposed General Plan 2045, substantial deviations from the existing high biological integrity are not anticipated to occur under the General Plan 2045.

However, a component of the General Plan 2045 that is substantially different from the General Plan 2020 includes development of four to eight story buildings in the Gateway Area. This aspect may impact migratory and resident bird species, as they may have the potential to strike structures. Although there are pockets of high quality habitat throughout the urbanized area of the City, including within the southwestern portion of the Gateway Area boundary, in general the Gateway Area does not currently provide high quality bird habitat. This is based upon the fragmented and highly disturbed state of suitable habitat and the presence of operating urban industries and structures with industrial effects such as noise and glare. However, the Gateway Area is adjacent to areas with habitat features that support migratory, common, and special status birds, such as the Arcata Marsh, shorelines of the Pacific Ocean, and open areas. Additionally, the Gateway Area is within the Pacific Flyway for migratory birds.

The main impact to bird species would presumably be collisions with or due to the proposed four to eight story buildings. Low-rise buildings are considered four to eleven story buildings, and 56% of bird collisions with low rises resulted in mortality (Loss et al. 2014). Bird-window collisions (also known as bird strikes) are more likely to occur in buildings with extensive glass due to the reflectivity (Audubon 2020, Klem et al. 2009). The height of vegetation present and the amount of light emitted from windows are other factors that contribute to bird collisions (Klem et al. 2009, Ogden 2002). A wide variety of bird species, with varying foraging ecologies, have been reported to strike buildings (Loss et al. 2014). Common and urban adapted species, such as the Dark-eyed Junco (*Junco hyemalis*) and Song Sparrow (*Melospiza melodia*), occur in Arcata and are some of the most commonly reported species to strike buildings (eBird 2023, Loss et al. 2014). Minimizing the proportion of glass to other building materials, minimizing light emission at night, reducing reflective windowpanes, angling windows to reduce reflection, reducing ground cover, and eliminating shrubs and trees from in front of buildings and

windows are all tactics that may decrease the amount of bird collisions (Klem et al. 2009, Loss et al. 2014). Additionally, a recent study found that a UV-reflective film on glass reduced bird collisions (Zyśk-Gorczyńska and Żmihorski 2022). Leadership in Energy and Environmental Design (LEED) certification standards utilize at least one of these approaches, and therefore LEED-certified building would be another approach to reduce bird collision risks (Klem 2009).

To reduce this potential impact, bird-safe glass would be required on all new construction in the Gateway Area where glass or other rigid transparent material occupies 35 percent or more of the building façade, per Gateway Code section 9.29.050. Bird-safe glazing must meet the conditions outlined in the Gateway Code, which require either a patterned glazing treatment or an American Bird Conservancy Threat Factor Rating of 30 or less. With inclusion of bird-safe glass and design parameters, the number of bird-window collisions would be reduced as compared to structures without these features. With inclusion of these policies, a less than significant impact would occur.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact BIO-e: Would adoption and implementation of the General Plan conflict with any local policies or ordinances protecting biological resources such as a tree preservation policy or ordinance?

Predominantly minor revisions have occurred between the General Plan 2020 and General Plan 2045 regarding protections to biological resources, with the exception of the removal of Policy D-3i (Preservation of hedgerows [windrows, or rows of trees]). This policy included language to preserve aesthetic rows of trees specifically planted to act as a windbreak or to serve another purpose, such as privacy, and included specific locations of trees to be preserved. Tree species identified in this policy included predominantly non-native species (cypress, elm, eucalyptus) and the purpose of the policy was intended to protect scenic resources as “important aesthetic components of the built environment”, not as habitat value. These protections to hedgerows are no longer specifically offered through the General Plan. However, the removal of trees would continue to be regulated by existing Arcata City code either via either ministerial or discretionary action. The ministerial permit for tree removal applies to the removal of four or fewer trees within a 10-year period in an area of less than three acres, and a discretionary permit for tree removal applies to all other tree removals (City of Arcata 2020). A Tree Removal Permit must be obtained for the removal, relocation, cutting down, topping or other acts that cause destruction on any tree for tree(s) with a diameter greater than 16-inches or more, or a group of 30 or more trees with diameters more than ten inches, per Chapter 9.58.040 (City of Arcata 2020). Tree removal also requires the City to make the finding that tree(s) to be removed do not contain active nesting or roosting sites that have been identified through the review process or are otherwise known to the review authority as the nests of a listed bird species or bird species of special concern, as determined by a qualified biologist via site visit.

In the absence of Policy D-3i, existing policies in place provide adequate protections to trees via Land Use Code review of proposed tree removal and issuance of either ministerial or discretionary Tree Removal Permits. Therefore, implementation of the General Plan 2045 would not conflict with local policies or ordinances protecting biological resources, including tree preservation policies. A less than significant impact would occur.

Mitigation Measures: No mitigation is necessary

Level of Significance: No impact

Impact BIO-f: Would adoption and implementation of the General Plan conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

Northern Spotted Owl Habitat Retention Agreement (City of Arcata 2008) establishes management commitments to maintain and enhance Northern Spotted Owl habitat in the City's Non-industrial Timber Management Plan areas. The General Plan 2045 includes the Resource Conservation and Management Element Policy RC-6a (Management of Arcata Community Forest) that states that wildlife habitat is managed to promote species diversity and to ensure that populations of indigenous species are maintained. This can best be achieved through the maintenance and enhancement of habitat values. Habitat values that lead to species diversity include the following elements: breeding, foraging, watering, rearing, hiding and thermal cover. This management policy applies to Arcata Community Forest (RC-6a) and Jacoby Creek Forest (RC-6b). Additionally, Policy RC-6 (Urban conversions) discourages urban conversions within the Urban Services Boundary, protecting forest habitat.

The Humboldt Bay National Wildlife Refuge Comprehensive Conservation Plan (USFWS 2009) outlines the purpose(s), vision, goals and objectives of the Humboldt Bay National Wildlife Refuge. The northern 19 acres of the approximate 62-acre Jacoby Creek unit are within the study area. The entire Humboldt Bay National Wildlife Refuge is approximately 5,000 acres. The proposed General Plan contain policies which uphold ecological integrity and do not conflict with the Comprehensive Conservation Plan.

There are no additional adopted Habitat Conservation, Community Conservation, or approval local, regional, or state habitat conservation plans that apply to the study area. Due to the stewardship practices the General Plan 2045 upholds that align with the Northern Spotted Owl Habitat Retention Agreement, there would be no impact.

Mitigation Measures: No mitigation is necessary.

Level of Significance: No impact

5.3.7 Cumulative Impacts

Impact BIO-C-1: Would adoption and implementation of the General Plan contribute to a cumulatively significant impact to biological resources?

All projects listed on Table 1.10-1 would be required to obtain environmental permits and mitigate for impacts to biological resources. The General Plan 2045 includes protective policies to biological resources that do not deviate substantially from the General Plan 2020. Therefore, a substantial difference in management and protections of biological resources between the two General Plans is not anticipated to occur.

It is expected that bird strikes could occur from the addition of low-rise buildings, which for the purposes of this analysis are considered four to eleven story buildings (Loss et al. 2014). There are various strategies that can be implemented to reduce impacts. These include minimizing the proportion of glass to other building materials, minimizing light emission at night from windows, reflective windowpanes, angling windows to reduce reflection, and reducing or eliminating ground cover, shrubs, and trees from in front of buildings and windows. The use of bird-safe glass techniques, such as a UV-reflective film on glass, and the inclusion of LEED building certification standards are other approaches to reduce bird collision risks.

At present, there are no other planned projects that include four to eight story buildings thereby presenting a potential cumulative impact to biological resources, particularly birds. However, it is possible that over time more multi-story buildings will be proposed around Humboldt Bay.

With adherence to applicable federal, state, and local regulations governing biological resources and compliance with the proposed General Plan 2045 policies indicated above, the potential risks associated with biological resources in the study area would be less than significant. As such, cumulative impacts would be less than significant.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

5.4 Geology and Soils

This section evaluates the potential impacts related to geology and soils resulting from adoption and implementation of General Plan 2045. To provide the basis for this evaluation, the Setting section below describes the geology and soils setting. The Regulatory Framework section describes the regulatory background that applies to the General Plan 2045. The Impact Analysis section establishes the thresholds of significance, evaluates potential impacts of geology and soils resulting from adoption and implementation of General Plan 2045, and identifies the significance of impacts.

Multiple comment letters and public meeting comments were received in response to the Notice of Preparation circulated for the proposed General Plan 2045 related to geology and soils. Comments focused on risks to local life and safety and environmental risks with building within earthquake hazard zones, and associated seismic and ground shaking activity, including soil liquefaction, and risks of building additional structures within the identified tsunami hazard zone. Comments related to risks of earthquake hazard zones, and associated seismic and ground shaking activity, including soil liquefaction are addressed below and comments related to tsunami hazard zone evacuation areas and protocols are addressed in Section 3.6 (Hazards and Hazardous Conditions).

The Project is located on generally flat bottomlands and gently sloping hillsides between agricultural lands to the west, forested hillslopes to the east, the Mad River to the north, and Humboldt Bay to the south. Soils within the City limits are variable and have been predominantly disturbed and compacted due to prior City developments and improvement activities and from adjacent residences, businesses, and schools, and associated utility infrastructure. As noted in Chapter 2 - Project Description, the City would adhere to recommendations from project-level investigations, and policies of the General Plan as part of future development guided by the General Plan 2045.

5.4.1 Study Area

For impact assessment related to geology and soils, the City limits were used as the study area. The four proposed infill opportunity zones are discussed in more specific detail in addition to a broad review of Citywide Geology and Soils, since these are anticipated to be the areas of most intensive redevelopment during the planning period of the General Plan 2045 (see Figure 2-3B – Proposed Zoning and Infill Opportunity Zones).

5.4.2 Setting

Regional Geological Setting

The Humboldt Bay region occupies a complex geologic environment characterized by very high rates of active tectonic deformation and seismicity. The region lies just north of the Mendocino Triple Junction, the intersection of three crustal plates (the North American, Pacific, and Gorda plates). North of Cape Mendocino, the Gorda plate is being actively subducted beneath North America, forming what is commonly referred to as the Cascadia subduction zone. In the Humboldt Bay region, deformation along the continental margin occurs as a series of northwest-trending, northeast-dipping thrust faults, and intervening folds. The geomorphic landscape of the Humboldt Bay region is largely a manifestation of the active tectonic processes and a dynamic coastal environment setting.

Local Geological Setting

Arcata is located within the Coast Ranges Geomorphic Province of California, which is characterized by subparallel north- to northwest-trending mountain ranges and intermountain and coastal alluvial valleys and plains. Topography in the province is controlled by the predominant geological structural trends within the Coast Range that generally consist of northwest trending synclines, anticlines, and faulted blocks.

The parcels within the Infill Opportunity Zones are each located in relatively different geological and soil bearing settings. The Gateway and Downtown Infill Areas are at the lowest in elevation ranging from approximately 15 to

25-feet above sea level located at the eastern edge of a broad, coastal alluvial plain to the west ("Arcata Bottom") and bordered by the northeastern portion of Humboldt Bay to the south. The Craftsman Mall Area is the highest in elevation area ranging from approximately 45 to 70-feet above sea level in an upland and uplifted beach terrace and continental depositional environment near the transition to the eastern forested uplands that rapidly rise in elevation. The Valley West Area adjoins the northernmost City limits near the Mad River at an elevation of approximately 40 to 45-feet above sea level and lies within the young Mad River alluvial terrace and adjacent to the broader coastal alluvial plain to the west.

The southernmost boundary, within a couple of blocks to the north and directly south of Samoa Boulevard in the Gateway and Downtown Infill Zones, includes recent Holocene and Pleistocene aged soils derived primarily from mud and silt sediments associated with a former bay environment. The soils are relatively thin and are directly underlain by bay mud, silt, and fine sand units up to several hundreds of feet in thickness. The coastal alluvial plains west and southeast of the study area is a result of historic fluvial deposition from Humboldt Bay (to the south) and vicinity creeks such as Jacoby and Janes Creeks from the east, and Mad River flooding events coming from the north and east.

The Valley West Infill Zone is primarily located on a Holocene Mad River terrace and borings completed here describe fine to coarse grained sediments derived from historical flood events and overbank deposition throughout the vicinity. The coastal plain north of Humboldt Bay and west of the Gateway and Downtown Infill Zones is commonly referred to as the "*Arcata Bottom,*" and is underlain by an unknown thickness of mostly finer (silt and clay) alluvial sediments. Borings from the Arcata Bottom coastal plain have typically encountered less than 100 feet of recent alluvial sediment, but there may be structural or depositional complexities in the subsurface that could influence overall alluvial thickness beneath any particular site. The age of the alluvial plain sediments is not currently known but likely a mix of Holocene and Pleistocene ages. The deeper sediments are likely to be Pleistocene in age and older at depth. The upper sediments are interpreted to be early to middle Holocene in age, reflecting the post-glacial rise in sea level during that period. The depth of the transition from Holocene to Pleistocene age sediments beneath the Arcata Bottom is not known.

The Craftsman Mall Infill Zone is the topographically highest in elevation Infill Opportunity Zone and in the central to northern portion of the City limits. This is most likely to be Pleistocene aged alluvium and other continental derived unconsolidated sedimentary deposits as silt, sand and gravel with a mixing of Pleistocene aged marine terrace deposits as silt and fine sand.

In general, the portion of the study area located west of the forested hillsides that occur east of Highway 101 predominantly contains quaternary alluvium comprised of non-marine and marine parent material (Humboldt County 2002), which was described in more detail above within the Infill Opportunity Zones. The forested hillside to the east is underlain by Pliocene marine sedimentary rock (Humboldt County 2002).

Soils within the Study Area

Soils within the study area are tentatively mapped by the Natural Resources Conservation Service (NRCS) and consist of a variety of soil types and mostly derived from marine and fluvial terrace materials along with bay margin and alluvial terrace silt and sand materials as described above and listed below (see Figure 5.4-1 –Infill Opportunity Zones NRCS Soils).

Soils within the Gateway and Downtown Area Infill Opportunity Zones

The Gateway and Downtown Areas both have the marine terrace derived Timmons and Lepiol Soils and Lepoil-Candymountain Complex Soils, which are relatively deep, well drained, sandy clay loams. The Gateway Area additionally contains: the silty clay loam and poorly drained Jollygiant soil in the central and northwestern portion (Gateway Hub); the gravelly to sandy loam moderately well drained Urban Land-Anthraltic Xerorthents Association Soils predominantly in the Gateway Barrel District and likely including an extensive modification of the site soils, including reworking of the upper soil horizons and placement of a significant amount of imported fill; and the salt marsh/bay derived peat to silty clay loam with very poorly drained Occidental Soil likely underneath portions of the southernmost Gateway Barrel District and all along both sides of Samoa Boulevard.

Soils within Craftsman Mall Area Infill Opportunity Zone

The Craftsman Mall Area predominantly includes relatively deep, well drained, sandy clay loam marine terrace derived Timmons and Lepiol Soils in the southern, central, and northern portions. The Craftsman Mall Area also contains a minor amount of the alluvial derived, relatively deep, well drained, silt loam of the Dungan Soils.

Soils within Valley West Area Infill Opportunity Zone

The Valley West Area soils contain both equal portions of the alluvial derived, relatively deep, well drained, silt loam of the Dungan Soils and the fluvial-alluvial derived, moderately drained, silty to sandy loam of the Mad River Soils.

Soils within the Remaining Study Area

Soils within the remaining study area are predominantly a mix of alluvial bottomland soils (Swainslough), forested upland soil predominantly comprised of: Lepoil-Candymountain, Lepoil-Espa-Candymountain, Coppercreek-slidecreek-tectah complex soils, and urban lands. See Figure 5.4-2 – City of Arcata-NRCS Soils for location of all soil types in the study area. In general, soils located in the western portion of the study area are alluvium derived and are more productive for agriculture than soils in the eastern portion of the study area located along forested hillsides.

Regional Seismic Setting

The Project is located in a complex, dynamic tectonic setting. Due to the dynamic crustal deformation associated with location near the Mendocino Triple Junction, there is a high level of seismicity in the region; the north coast region of California is the most seismically active region in the continental United States. Over sixty earthquakes have produced discernible damage in the region since the mid-1800s (Dengler et al. 1992). Historic seismicity and paleoseismic studies in the area suggest there are six distinct sources of damaging earthquakes in the Humboldt Bay region: 1) the Gorda Plate; 2) the Mendocino fault; 3) the Mendocino Triple Junction; 4) the northern end of the San Andreas fault; 5) faults within the North American Plate (including the Mad River fault zone); and 6) the Cascadia Subduction Zone (Dengler et al. 1992).

Earthquakes originating within the Gorda Plate account for the majority of historic seismicity. These earthquakes occur primarily offshore along left-lateral faults and are generated by the internal deformation within the plate as it moves toward the subduction zone. Significant historic Gorda Plate earthquakes have ranged from magnitude 5.0 to 7.5. The November 8, 1980, earthquake (magnitude 7.2) was generated 30 miles (48 km) off the coast of Trinidad, on a left-lateral fault within the Gorda Plate.

The Mendocino fault is the second most frequent source of earthquakes in the region. The fault represents the plate boundary between the Gorda and Pacific plates, and typically generates right lateral strike-slip displacement. Significant historic Mendocino fault earthquakes have ranged in magnitude from 5.0 to 7.5. The September 1, 1994, magnitude 7.2 event originating west of Petrolia was generated along the Mendocino fault. Available data suggests the maximum magnitude earthquake for the Mendocino fault is magnitude 7.4 (CDMG/USGS, 1996).

The Mendocino Triple Junction was identified as a separate seismic source only after the magnitude 6.0 August 17, 1991 earthquake. Significant seismic events associated with the Triple Junction are shallow onshore earthquakes that appear to range from magnitude 5.0 to 6.0. Raised Holocene age marine terraces near Cape Mendocino suggest larger events are possible in this region.

Earthquakes originating on the northern San Andreas Fault are extremely rare but can be very large. The northern San Andreas Fault is a right lateral strike-slip fault that represents the plate boundary between the Pacific and North American plates. The fault extends through the Point Delgada region and terminates at the Mendocino Triple Junction. The 1906 San Francisco earthquake (magnitude 8.3) caused the most significant damage in the north coast region, with the possible exception of the 1992 Petrolia earthquake (Dengler et. al. 1992).

Earthquakes originating within the North American plate can be anticipated from a number of intraplate sources, including the Mad River fault zone and Little Salmon fault. There have not been large magnitude earthquakes associated with faults within the North American plate, although the December 21, 1954 magnitude 6.5 event may have occurred in the Mad River fault zone. Damaging North American plate earthquakes are expected to range in magnitude from 6.5 to 8.0.

The study area, specifically the Gateway and Downtown Infill Opportunity Areas, lies within the defined fault zone of the “accurately located” Fickle Hill fault, which trends northwest-southeast (DOC 2023). The Valley West Area is located approximately ½ mile south of the Mad River fault.

The Little Salmon fault, located south of Eureka, appears to be the most active fault in the Humboldt Bay region, and is capable of generating very large earthquakes. The Little Salmon fault is a northwest-trending, southwest-vergent reverse fault. Paleoseismic studies of the Little Salmon fault indicate that the fault deforms late Holocene sediments at the southern end of Humboldt Bay (Clarke 1992). Estimates of the amount of fault slip for individual earthquakes along the fault range from 15 to 23 feet (4.5 to 7 meters). Radiocarbon dating suggests that earthquakes have occurred on the Little Salmon fault about 300, 800, and 1,600 years ago. Average slip rate for the Little Salmon fault for the past 6,000 years is between six and ten mm/yr. Based on currently available fault parameters, the maximum magnitude earthquake for the Little Salmon fault is thought to be between 8.0 (CDMG/USGS, 1996) and 8.3 (Geomatrix Consultants 1994).

The Cascadia Subduction Zone represents the most significant potential earthquake source in the north coast region. A great subduction event may rupture along 200 km or more of the coast from Cape Mendocino to British Columbia, may be up to magnitude 9.5, and could result in extensive tsunami inundation in low-lying coastal areas (Clarke 1992). The April 25, 1992 Petrolia earthquake (magnitude 7.1) appears to be the only historic earthquake involving slip along the subduction zone, but this event was confined to the southernmost portion of the fault. Paleoseismic studies along the subduction zone suggest that great earthquakes are generated along the zone every 300 to 500 years. Historic records from Japan describing a tsunami thought to have originated along the Cascadia Subduction Zone suggest the most recent event occurred on January 27, 1700. A great subduction earthquake would generate long duration, very strong ground shaking throughout the north coast region.

5.4.3 Regulatory Framework

Federal

There are no federal policies or regulations relevant to the Project for geology and soils.

State

Alquist-Priolo Earthquake Fault Zoning Act

The Alquist-Priolo Earthquake Fault Zoning Act (California Public Resources Code, Division 2, Chapter 7.5) was passed in 1972 to mitigate the hazard of surface faulting (i.e., ground rupture) to structures designed for human occupancy (CGS 2018). Title 14 of the California Code of Regulations (CCR), Section 3601(e), defines buildings intended for human occupancy as those that would be inhabited for more than 2,000 hours per year. In accordance with the Alquist-Priolo Act, the State Geologist is responsible for delineating regulatory zones, called “earthquake fault zones,” around the surface traces of faults that exhibit evidence of ground rupture during the Holocene Epoch (i.e., the last ~11,700 years). These zones are depicted on USGS 7.5-minute topographic quadrangle maps and published by the CGS. Because many active faults are complex and consist of more than one branch, earthquake fault zones can extend several hundred feet on either side of the mapped fault trace. Within these zones, buildings for human occupancy cannot be constructed unless the building site has been formally investigated by a Professional Geologist who has prepared a geologic report demonstrating that the proposed structure would not lie astride the trace of an active fault.

The study area lies within the Mad River Fault Zone, which contains several faults of poorly known recent seismic activity. One of which is the Fickle Hill Fault that projects through the study area including both the northeastern

portions of the Gateway and Downtown Area Infill Zones (see Figure 5.4-3 – City of Arcata – California Geological Survey Alquist Priolo Zones & Potential Liquefaction). The Fickle Hill Fault is considered an Alquist-Priolo Earthquake Fault Zone (CGS 2023). The possibility of discovering new earthquake fault zones within the study area is a distinct possibility considering the region's history of tectonic activity. The Project does include construction or ongoing use of buildings that meet the criterion for human occupancy around or within the identified Alquist-Priolo Earthquake Fault Zones. Therefore, the regulatory provisions of the Alquist-Priolo Act do apply to the Project.

Seismic Hazards Mapping Act

Like the Alquist-Priolo Act, the Seismic Hazards Mapping Act of 1990 (Public Resources Code [PRC] Sections 2690 to 2699.6) is intended to reduce damage resulting from earthquakes. More specifically, the act sets forth a statewide minimum public safety standard such that buildings for human occupancy do not collapse in response to an earthquake (CGS 2008). While the Alquist-Priolo Act addresses surface fault rupture, the Seismic Hazards Mapping Act addresses other earthquake-related hazards, including strong ground shaking, liquefaction, and seismically-induced landslides. Its provisions are similar in concept to those of the Alquist-Priolo Act in that the State Geologist is charged with identifying and delineating areas at risk of strong ground shaking, liquefaction, landslides, and other corollary hazards. Counties and cities are then tasked regulating development within the mapped Seismic Hazard Zones. In particular, cities and counties are prohibited from issuing development permits for sites within Seismic Hazard Zones until appropriate site-specific geologic and/or geotechnical investigations have been conducted by a state-licensed engineering geologist or civil engineer, and measures to reduce potential damage have been incorporated into the development plans.

Official Seismic Hazard Zone Maps have not yet been prepared for all parts of the State, and the Humboldt Bay area (which contains the study area) is one of the regions that has not been completely mapped for seismic hazards such as liquefaction and landsliding. Humboldt County's Web GIS contains generalized geologic hazard (e.g., liquefaction and landslides) zoning delineations and uses that information as part of the decision-making process in the issuance of County building permits.

California Building Code

The State of California provides minimum standards for building design through the California Building Code (CBC 2019). The CBC applies to building design and construction in the state and is based on the 2018 International Building Code that is in use or has been adopted in the 50 U.S. states. In other words, the CBC represents a modification of the International Building Code unique to the needs and conditions of California. Seismic safety and structural design requirements are set forth in CBC Chapter 16. Chapter 18 provides criteria for geotechnical and structural considerations related to the investigation of soils as well as the design and construction of foundations and retaining walls. Appendix J regulates earthwork grading activities including drainage and erosion control, and construction on unstable soils such as those subject to expansion and liquefaction.

California Public Resources Code

As part of the determination made pursuant to PRC Section 21080.1, the lead agency must determine whether a project would have a significant effect on paleontological resources.

Several sections of the PRC protect cultural resources and PRC Section 5097.5 protects vertebrate paleontological sites located on public land. Under Section 5097.5, no person shall knowingly and willfully excavate upon, or remove, destroy, injure, or deface any prehistoric ruins, vertebrate paleontological site (including fossilized footprints), or any other paleontological, or historical feature situated on public lands, except with the express permission of the public agency that has jurisdiction over the lands. Section 30244 of the PRC requires reasonable mitigation for impacts on paleontological and archaeological resources that occur as a result of development on public lands.

California Coastal Act

The Project Area is within the Coastal Zone. The California Coastal Act contains policies relevant to paleontological resources. The following Coastal Act section is relevant to this analysis:

> ***Public Resources Code Section 30244 Archaeological or paleontological resources***
>
> *Where development would adversely impact archaeological or paleontological resources as identified by the State Historic Preservation Officer, reasonable mitigation measures shall be required.*

Regional and Local

City of Arcata General Plan 2020

The General Plan 2020 contains the following policies relating to geology and soils in the Resource Conservation & Management Element and the Public Safety Element.

According to Figure PS-a (Hazards Map) in the General Plan 2020 Public Safety Element, the study area contains portions considered to have moderate liquefaction potential, with small areas considered to have high liquefaction potential.

> ***Policy RC-9: Soils and Mineral Resources***
>
> ***Objective.*** *Conserve and manage soil and mineral resources.*
>
> *Applicable sub-policies:*
>
> - ***RC-9a: Erosion control measures on slopes and other areas of instability.*** *Policy PS-3 – other Geologic Hazards in the General Plan Public Safety Element includes provisions for protecting steep and unstable slopes, and minimizing erosion and sedimentation. This policy shall be followed as a safety precaution and also to conserve soil resources.*
>
> ***Policy PS-2: Seismic Hazards***
>
> ***Objective.*** *Protect existing and new structures from seismic hazards. Identify and map seismic hazards and assure that any development within such hazard areas does not proceed until geologic and soils conditions are adequately investigated and appropriate geotechnical recommendations, if any, are incorporated into development plans.*
>
> *Applicable sub-policies:*
>
> - ***PS-2b: Mitigation of ground-shaking hazards.*** *Arcata will experience ground-shaking during an earthquake. The City maintains seismic data files that identify areas where ground-shaking will most likely damage buildings and infrastructure. New construction and renovation shall incorporate the most current and effective seismic engineering measures to strengthen building foundations and infrastructure in these areas.*
> - ***PS-2c: Mitigation of surface rupture and groundshaking hazards.*** *The City's Alquist-Priolo Special Studies Zone map (Figure PS-a) and Geologic Hazard Land Use Matric (Table PS-1) identify areas highly susceptible to surface rupture and groundshaking. Construction in these areas shall be restricted, unless it can be demonstrated, in geotechnical reports prepared by qualified personnel, that structures and facilities can be designed to withstand liquefaction hazards induced by seismic events.*
> - ***PS-2d: Requirement for and review of "Geotechnical Reports"****. New building and infrastructure construction, and substantial renovations in areas with seismic hazards, shall incorporate geotechnical report specified measures into project design. Geotechnical reports shall be required for structures or infrastructure in seismic hazard areas. Required reports, prepared by a registered geologist, certified engineering geologist or registered engineer with expertise in seismic engineering, shall recommend*

mitigation for seismic impacts and identify alternative solutions. The City may require independent review of the geotechnical reports.

- ***PS-2g**: **Earthquake-resistant buildings and infrastructure standards.** The current Uniform Building Code standards for strengthening buildings and infrastructure to withstand earthquakes shall be enforced. The competency of existing road and utility networks shall be evaluated and, where necessary, upgraded to withstand the most current ground acceleration standards.*
- ***PS-2h: Public information and disclosure.** The Humboldt Earthquake Education Information Center at Humboldt State University, and the City of Arcata have earthquake/tsunami awareness information that is available to the public. The Center and the City will continue to make the most current information available to help the community prepare for and respond to seismic events.*

Policy PS-3: Other Geologic Hazards

***Objective.** Protect existing and new structures from non-seismic geologic hazards such as unstable slopes and soils. Require that all non-seismic geologic hazards be adequately addressed and mitigated.*

Applicable sub-policies:

- ***PS-3a: Slope stability hazards.** Slope areas greater than 15%, shown on Figure PS-a, and certain less steep slopes with erosive soils may become unstable if disturbed. The City shall restrict grading, vegetation removal, and new construction in areas with unstable soils unless it can be demonstrated that these activities can occur without impacts. All grading of slope areas shall follow natural contours to maximize stability.*
- ***PS-3b**: **Grading standards for erosion and sedimentation control.** The design, extent, and location of grading shall minimize disturbance of the natural terrain and land features and shall not impact offsite areas. Trees and native vegetation shall be retained around graded areas to stabilize hillsides; retain moisture; reduce erosion, siltation and nutrient runoff; and retain the natural beauty of the area. Cleared areas susceptible to erosion shall be stabilized so that no materials are transported offsite.*
- ***PS-3c: Hillside development standards.** The land areas subject to hillside development standards are shown in Figure PS-a. Development on lands within these areas shall be subject to the following standards:*
  - *Each new lot created in areas subject to hillside development standards shall be required to contain a contiguous buildable area of at least 4,000 square feet. All parts of the building area shall have a natural slope of less than 15%. No more than 4,000 square feet of any existing lot which was legally created prior to adoption of this plan, and does not meet the preceding 15% standard, may be disturbed for development.*
  - *At least 50% of the area of any lot undeveloped as of the date of this plan shall be included in a "natural area" which shall remain in a natural, ungraded, undeveloped state. All slopes in excess of 25% shall be included in the natural area.*
  - *Vegetation removal in the natural area of each lot shall be subject to review and approval by the City.*
  - *All access roads and driveways shall be kept to the minimum feasible width and shall be designed to minimize grading and disruption of vegetation.*
  - *Access roads shall not exceed 15% slope for any distance. Individual driveways shall not exceed 17% slope.*
  - *Access roads or driveways shall be designed to avoid steep slopes and shall not have cuts exceeding fifty feet (50') nor fills exceeding twenty-five feet (25') in height.*

- *The design, scope and location of grading for development should cause the minimum disturbance of the terrain and natural features of the land. Unavoidable grading should complement natural land forms. Mass grading of large pads and terraces shall not be permitted.*
- *All manufactured slopes shall be planted or otherwise protected from the effects of storm run-off and erosion.*
- *Time limits to avoid extensive grading during the wet season shall be imposed on new developments.*
- *Any necessary conditions to control erosion and assure site restoration shall be required by the City. Measures shall include short-term controls to minimize erosion at construction sites and long-term controls for minimizing sedimentation and maintaining water quality.*
- *Development in areas subject to development standards should demonstrate a concern for the view of the hills as well as the view from the hill.*

- ***PS-3d: Slope-density land use restrictions.*** *Slopes greater than 25% are to be designated as natural areas and shall not be included in density calculations. Minimum parcel sizes on slopes shall be contingent on the site's ability to accommodate a building site with adequate access and utilities.*
- ***PS-3e: Geotechnical reports.*** *Geotechnical reports shall be prepared for development of areas with unstable slopes and/or erosive soils. These reports will be prepared by qualified professionals, consistent with Policy PS-2d. Measures to ensure slope and soil stability shall be incorporated into the project design.*
- ***PS-3f: [No title].*** *Provide available information, including potential for site slippage, effects of groundwater on slopes and soils, erosion potential, and other hazards, to homebuilders prior to the start of construction.*

City of Arcata General Plan 2045

Policies in the proposed General Plan 2045 relating to geology and soils in the Resource Conservation & Management Element and the Public Safety Element include:

Policy RC-9: Soils and Mineral Resources

Objective. *Conserve and manage soil and mineral resources.*

Applicable sub-policy:

- ***RC-9c: Management of mineral resource (gravel) extraction, processing, and transport.*** *Areas along the Mad River, within and upstream of the City's Sphere of Influence, are currently used for aggregate (i.e., gravel) resource extraction. The City shall encourage Humboldt County to limit the quantity of aggregate extracted to an amount that does not exceed the mean annual recruitment and shall request that Policy RC-1 and RC-2 be applied to protect natural biological diversity and ecosystem functions along the river. The City shall also request that the County not approve or renew permits for commercial mineral resource extraction in A-E designated lands in the City's Planning Area. Mineral resource extraction operations shall not result in additional soil runoff, and shall be consistent with the City's seismic safety policies (see Policy PS-2 in Public Safety Element).*

Policy PS-2: Seismic Hazards

Objective. *Protect existing and new structures from seismic hazards. Identify and map seismic hazards and assure that any development within such hazard areas does not proceed until geologic and soils conditions are adequately investigated and appropriate mitigation measures, if any, are incorporated into development plans.*

Applicable sub-policies:

- ***PS-2a: Development within fault zone/surface rupture areas.*** *The City shall maintain current seismic information that identifies fault zones and probable surface rupture areas. Development in these areas shall be avoided, unless it can be demonstrated that structures and facilities can be designed to withstand effects of faulting and surface rupture. Building setbacks from faults, surface ruptures, and other seismic hazards, as specified in the most current Uniform Building Code, shall be maintained.*
- ***PS-2b: Mitigation of ground-shaking hazards.*** *Arcata will experience ground-shaking during an earthquake. The City maintains seismic data files that identify areas where ground-shaking will most likely damage buildings and infrastructure. New construction and renovation shall incorporate the most current and effective seismic engineering measures to strengthen building foundations and infrastructure in these areas.*
- ***PS-2c: Mitigation of surface rupture and groundshaking hazards.*** *The City's Alquist-Priolo Special Studies Zone map (Figure PS-a) and Geologic Hazard Land Use Matrix (Table PS-1) identify areas highly susceptible to surface rupture and groundshaking. Construction in these areas shall be restricted, unless it can be demonstrated, in geotechnical reports prepared by qualified personnel, that structures and facilities can be designed to withstand liquefaction hazards induced by seismic events.*
- ***PS-2d: Requirement for and review of "Geotechnical Reports.".*** *New building and infrastructure construction, and substantial renovations in areas with seismic hazards, shall incorporate geotechnical report specified measures into project design. Geotechnical reports shall be required for structures or infrastructure in seismic hazard areas. Required reports, prepared by a registered geologist, certified engineering geologist, or registered engineer with expertise in seismic engineering, shall recommend mitigation for seismic impacts and identify alternative solutions. The City may require independent review of the geotechnical reports.*
- ***PS-2g: Earthquake resistant building and infrastructure standards.*** *The current Uniform Building Code standards for strengthening buildings and infrastructure to withstand earthquakes shall be enforced. The competency of existing road and utility networks shall be evaluated and, where necessary, upgraded to withstand the most current ground acceleration standards.*
- ***PS-2h: Public information and disclosure.*** *Redwood Coast Tsunami Work Group (RCTWG) and the City of Arcata have earthquake/tsunami web-based mapping and awareness information that is available to the public. The RCTWG and the City will continue to make the most current information available to help the community prepare for and respond to seismic events.*

Policy PS-3: Other Geologic Hazards and Airspace Protection

Objective. *Protect existing and new structures from non-seismic geologic hazards such as unstable slopes and soils. Require that all non-seismic geologic hazards be adequately addressed and mitigated. Ensure new development does not result in hazards to air navigation.*

Applicable sub-policies:

- ***PS-3a: Slope stability hazards.*** *Slope areas greater than 15%, shown on Figure PS-a, and certain less steep slopes with erosive soils may become unstable if disturbed. The City shall restrict grading, vegetation removal, and new construction in areas with unstable soils unless it can be demonstrated that these activities can occur without impacts. All grading of slope areas shall follow natural contours to maximize stability.*
- ***PS-3b: Grading standards for erosion and sedimentation control.*** *The design, extent, and location of grading shall minimize disturbance of the natural terrain and land features and shall not impact offsite areas. Trees and native vegetation shall be retained around graded areas to stabilize hillsides;*

retain moisture; reduce erosion, siltation and nutrient runoff; and retain the natural beauty of the area. Cleared areas susceptible to erosion shall be stabilized so that no materials are transported offsite.

- ***PS-3c: Hillside development standards.*** *The land areas subject to hillside development standards are shown in Figure PS-a. Development on lands within these areas shall be subject to the following standards:*

  1. *Each new lot created in areas subject to hillside development standards shall be required to contain a contiguous buildable area of at least 4,000 square feet. All parts of the building area shall have a natural slope of less than 15%. No more than 4,000 square feet of any existing lot which was legally created prior to adoption of this plan, and does not meet the preceding 15% standard, may be disturbed for development.*
  2. *At least 50% of the area of any lot undeveloped as of the date of this plan shall be included in a "natural area" which shall remain in a natural, ungraded, undeveloped state. All slopes in excess of 25% shall be included in the natural area.*
  3. *Vegetation removal in the natural area of each lot shall be subject to review and approval by the City.*
  4. *All access roads and driveways shall be kept to the minimum feasible width and shall be designed to minimize grading and disruption of vegetation.*
  5. *Access roads shall not exceed 15% slope for any distance. Individual driveways shall not exceed 17% slope.*
  6. *Access roads or driveways shall be designed to avoid steep slopes and shall not have cuts exceeding fifty feet (50') nor fills exceeding twenty-five feet (25') in height.*
  7. *The design, scope and location of grading for development should cause the minimum disturbance of the terrain and natural features of the land. Unavoidable grading should complement natural landforms. Mass grading of large pads and terraces shall not be permitted.*
  8. *All manufactured slopes shall be planted or otherwise protected from the effects of storm run-off and erosion.*
  9. *Time limits to avoid extensive grading during the wet season shall be imposed on new developments.*
  10. *Any necessary conditions to control erosion and assure site restoration shall be required by the City. Measures shall include short-term controls to minimize erosion at construction sites and long-term controls for minimizing sedimentation and maintaining water quality.*
  11. *Development in areas subject to development standards should demonstrate a concern for the view of the hills as well as the view from the hill.*

- ***PS-3d: Slope-density and land use restrictions.*** *Slopes greater than 25% are to be designated as natural areas and shall not be included in density calculations. Minimum parcel sizes on slopes shall be contingent on the site's ability to accommodate a building site with adequate access and utilities.*

- ***PS-3e: Geotechnical reports.*** *Geotechnical reports shall be prepared for development of areas with unstable slopes and/or erosive soils. These reports will be prepared by qualified professionals, consistent with Policy PS-2d. Measures to ensure slope and soil stability shall be incorporated into the project design.*

- ***PS-3f: Geologic hazard information.*** *Provide available information, including potential for site slippage, effects of groundwater on slopes and soils, erosion potential, and other hazards, to homebuilders prior to the start of construction.*

City of Arcata Land Use Code

The City of Arcata Land Use Code addresses geologic hazards and grading activity within Chapters 9.62 (Geologic Hazard Review) and 9.64 (Grading, Erosion, and Sediment Control). The following sections apply:

9.62: Geologic Hazard Review

Provide procedures for the filing, processing, and approval or disapproval of applications for Geologic Hazard Review, to protect the health, safety, and welfare of the residents of the City by minimizing the risk from carrying out development in areas subject to geologic and/or seismic hazards.

9.64: Grading, Erosion and Sediment Control

Establishes minimum standards and regulations for grading activities as well as construction and post-construction runoff control criteria to prevent unreasonable or unnecessary erosion and sediment production and related degradation of the City's stormwater drainage systems.

City of Arcata Local Coastal Plan

The policies within the City of Arcata's Local Coastal Plan that regulate geology and soils within the City's jurisdiction of the Coastal Zone include the following:

H-2: *The City shall regulate land use in areas of significant natural hazards in the following manner:*

(c) Non-Critical Facilities: Non-critical facilities shall be permitted to locate or expand in areas of potential liquefaction. Non-critical facilities shall be permitted to locate or expand in the 100-year flood plain only if flood proofing measures which meet flood insurance criteria and which are satisfactory to the City are provided, and if it can be shown that such development would not cause additional flooding and/or drainage problems in other areas.

H-3: *For non-critical facilities the City may require site-by-site soils and geologic engineering studies when the Director of Community Development determines that public health and safety could be affected. These studies shall be done by a registered geologist, a registered civil engineer with expertise in soils, or a certified engineering geologist in areas of potential liquefaction and settlement. Potential hazards shall be evaluated using the ground shaking parameters presented in the Seismic Safety Element. The study should show that the proposed project minimizes the potential hazard to life and health.*

5.4.4 Evaluation Criteria and Significance Thresholds

Implementation of the General Plan 2045 would cause a significant impact related to geology and soils, as defined by Appendix G of the CEQA Guidelines, if it would:

– Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:
  - Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault. Refer to Division of Mines and Geology Special Publication 42;
  - Strong seismic ground shaking;
  - Seismic-related ground failure, including liquefaction; or
  - Landslides.
– Result in substantial soil erosion or the loss of topsoil;
– Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the Project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse;
– Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property;
– Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater; or
– Directly or indirectly destroy a unique paleontological resource or site or unique geological feature.

5.4.5 Methodology

Activities with reasonable certainty to occur from implementation of the General Plan 2045 are evaluated in terms of their potential significance to impact (i.e., increase risks associated with) the identified geologic hazards. Where appropriate, impact analysis relied on the California Department of Conservation's online earthquake hazard mapping tool, *EQ Zapp.* Mitigation measures are then described for those impacts determined to be significant.

5.4.6 Impacts and Mitigation Measures

Impact GEO-a.i: Would adoption and implementation of the General Plan 2045 directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

The Project is situated within a seismically active area close to several seismic sources capable of generating moderate to strong ground motions. Given that the study area includes parcels citywide that are delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area, as well as general proximity to other active faults within and offshore of northern California, the study area could be impacted by the rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map.

The study area lies within the Mad River Fault Zone, which contains several faults of poorly known recent seismic activity, and specifically the Fickle Hill Fault that projects through the study area including both the northeastern portions of the Gateway and Downtown Area Infill Zones (see Figure 5.4-3). The Fickle Hill Fault is considered an Alquist-Priolo Earthquake Fault Zone (CGS 2023). The possibility of discovering new Alquist-Priolo Earthquake Fault Zones within the study area is a distinct possibility considering the region's history of tectonic activity.

Activities under the General Plan 2045, which may include building construction, shallow excavation and repaving, could potentially be ruptured by the Fickle Hill fault, resulting in a potentially adverse impact. Policies from the proposed Arcata General Plan 2045 would reduce impacts from seismicity and liquefaction risks, including Policy PS-2, sub-policies PS-2a, PS-2b, PS-2c and PS-2d.

Policy PS-2 includes the requirement to identify and map seismic hazards, and the requirement that development within such hazard areas would not proceed until geologic and soil conditions are adequately investigated and appropriate mitigation measures are incorporated into development plans.

- Sub-policy 2a requires the City to maintain current seismic information that identifies fault zones and probable surface rupture areas, and that development would be avoided in those areas unless it can be demonstrated that structures and facilities can be designed to withstand effects of faulting and surface rupture.
- Sub-policy PS-2b states that new construction and renovation projects shall incorporate the most current and effective seismic engineering measures to strengthen building foundations and infrastructure in areas identified to contain ground shaking during an earthquake.
- Sub-policy PS-2c refers to the City's Alquist-Priolo Special Studies Zone map and Geologic Hazard Land Use Matrix which identify areas highly susceptible to surface rupture and ground shaking. Similar to PS-2a and 2b, sub-policy PS-2c states that construction in areas identified as highly susceptible to surface rupture and ground shaking shall be restricted unless it can be demonstrated in geotechnical reports that structures and facilities can be designed to withstand liquefaction hazards induced by seismic events.
- Sub-policy 2d requires new building and infrastructure and substantial renovations in areas with seismic hazards to incorporate geotechnical report specified measures into project design.

See Section 5.4.3 for exact policy and sub-policy language from the proposed Arcata General Plan 2045. With incorporation of policies from the proposed Arcata General Plan 2045, specifically, Policy PS-2 and sub-policies PS-2a through 2-d, the potential direct or indirect adverse effects from rupture of an earthquake fault would be reduced to a less than significant level.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact GEO-a.ii: Would adoption and implementation of the General Plan 2045 directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving strong seismic ground shaking?

The Project is situated within a seismically active area close to several seismic sources capable of generating moderate to strong ground motions. Given the proximity of the Fickle Hill fault and other significant active faults (the Little Salmon fault to the southwest, the Mad River fault zone to the north, and the Cascadia subduction zone offshore to the west), as well as other active faults within and offshore of northern California, the study area could experience strong ground shaking during the planning horizon.

The Fickle Hill fault is located in the central portion of the study area (within the northern portions of both the Gateway and Downtown Areas) and is currently the only recognized active fault in the study area (DOC 2023). Due to the location of the study area occurring within a recognized active fault, and based on the information available, there is potential for ground surface fault rupture and strong seismic ground shaking to occur. The State requires special studies for structures for human occupancy within Alquist-Priolo earthquake fault zones, of which the Fickle Hill fault is considered one.

Infrastructure within and in close proximity to the active fault already exists and is used daily. However, implementation of the General Plan 2045 through construction of new or renovated building structures and infrastructure could increase the risk of strong seismic ground shaking or exposure to strong seismic ground shaking above existing conditions, which could result in a potentially significant adverse impact. Proposed policies and sub-policies in the Arcata General Plan 2045 would mitigate and reduce this potential risk via assurances that City residents, businesses and agencies are prepared for emergencies and have effective response and recovery plans in place (Policy PS-1 and sub-policies PS-1a through 1h), requirement for review of seismic hazards and incorporation of measures from geotechnical reports (Policy PS-2 and sub-policies PS-2a through 2d). See Section 5.4.3 (above) for Policy and sub-policy text from the proposed Arcata General Plan 2045.

With inclusion of these policies, new development and substantial renovations would have to consider seismicity, include geotechnical measures to reduce risk, demonstrate that proposed facilities would be designed to withstand the potential risk of liquefaction, and require the community to have response plans. The study area is located in a seismically active area and it is not possible to eliminate the risk of strong seismic ground shaking; however, new development will be constructed (sub-policy PS-2b to incorporate the most current and effective seismic engineering measures to strengthen building foundations and the City will provide emergency response plans and standards for community safety (PS-1, sub-policies 1a through 1h). With inclusion of the policies mentioned above, a less than significant impact would occur from implementation of the General Plan 2045.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact GEO-a.iii, a.iv, c, d: Would adoption and implementation of the General Plan 2045 directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving liquefaction, landslides, or otherwise unstable soils?

Liquefaction is a phenomenon involving loss of soil strength and resulting in fluid mobility through the soil. Liquefaction typically occurs when loose, uniformly sized, saturated sand or silt are subjected to repeated

shaking in areas where the groundwater is less than 50 feet below ground surface. In addition to the necessary soil and groundwater conditions, the ground acceleration must be high enough, and the duration of the shaking must be sufficient, for liquefaction to occur. Given strong ground shaking, these conditions appear to have potential to occur within portions of the study area.

Moderate potential for liquefaction-related settlement exists within the study area (see Figure 5.4-3). Within the Infill Opportunity Zones, there is high liquefaction potential within portions of the Valley West and Craftsman's Mall Areas (including a creek corridor in the Craftsman's Mall Area). The Gateway, Downtown and remaining Valley West Areas contain moderate liquefaction potential which is consistent with the majority of the historic City center. Earthquake-related liquefaction could result in sand boils and minor differential settlement in portions of the study area. However, as described above in impact (a) and (b), policies and sub-policies of the proposed Arcata General Plan 2045 exist to reduce and mitigate potential impacts associated with liquefaction (see sub-policies PS-1d and PS-2c). Additionally, all new development in the study area would have to comply with the California Building Code, which requires stringent earthquake-resistant design parameters and common engineering practices requiring special design and construction methods that minimize potential liquefaction or expansive soil-related impacts or reduce to an acceptable level as determined by the California Building Code and City Building Official, in conjunction with consulting geologic engineers as determined necessary. With inclusion of standard California Building Code practices and General Plan 2045 policies, implementation of the General Plan 2045 would not increase the risk of liquefaction or exposure to liquefaction above existing conditions and a less than significant impact would occur.

The study area is predominantly flat, with hillsides located in the eastern extent including Cal Poly Humboldt and the Arcata Community Forest. New development on hillsides has the potential to result in the disturbance of soils and a resulting landslide. However, with inclusion of Policy PS-3 and sub-policy PS-3c, which state that all non-seismic geologic hazards are to be adequately addressed and mitigated, and provides development standards for development on hillsides, potential occurrences of landslides are not anticipated above existing conditions. No impact relating to landslides is anticipated.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact GEO-b: Would adoption and implementation of the General Plan 2045 result in substantial soil erosion or the loss of topsoil?

Construction activities, including cut, fill, removal of vegetation, and operation of heavy machinery would disturb soil and, therefore, have the potential to cause erosion. See Figure 5.4-4 – Slopes Greater than 15% for the location of slopes greater than 15% throughout the study area. These construction activities would be performed in compliance with the Best Management Practices prescribed in the Arcata Municipal Code, North Coast Regional Water Quality Control Board regulations and the California Building Code. Best Management Practices may include silt fences, straw wattles, soil stabilization controls, site watering for controlling dust, and sediment detention basins. Therefore, no substantial soil erosion or loss of topsoil would result from development occurring under the proposed General Plan 2045, and the potential impact would be less than significant.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact GEO-e: Would adoption and implementation of the General Plan 2045 result in soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

Development under the proposed General Plan 2045 would continue to be connected to the City's wastewater treatment system and would not require the use of additional septic tanks or an alternative wastewater disposal system. There would be no impact.

Mitigation Measures: No mitigation is necessary

Level of Significance: No Impact

Impact GEO-f: Would adoption and implementation of the General Plan 2045 directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Paleontological resources are the remains or traces of prehistoric animals and plants. Paleontological resources, which include fossil remains and geologic sites with fossil-bearing strata, are non-renewable and scarce and are a sensitive resource afforded protection under environmental legislation in California. Under California Public Resources Code Section 5097.5, unauthorized disturbance or removal of a fossil locality or remains on public land is a misdemeanor. State law also requires reasonable mitigation of adverse environmental impacts that result from development of public land and affect paleontological resources (Public Resources Code Section 30244).

Implementation of the General Plan 2045 would promote development in the Gateway Area, which has been previously disturbed by predominantly industrial development. Therefore, it is unlikely that paleontological resources would be discovered in this area should construction occur. Development may occur throughout the study area, and in locations where no development currently exists there is a greater possibility of discovering unique paleontological resources or unique geologic features during construction, than compared to already disturbed areas. If paleontological resources were discovered, a potentially significant impact could occur. Mitigation Measure GEO-1 is included in the event that paleontological resources are inadvertently discovered within the study area during construction, reducing the potential impact to less than significant.

Mitigation

Mitigation Measure GEO-1: Inadvertent Discovery of Paleontological Resources

If potential or paleontological resources are encountered during Project subsurface construction activities or geotechnical testing, all work within 50 feet of the find shall be stopped, and a qualified archaeologist funded by the City and approved by the City shall be contacted to evaluate the find, determine its significance, and identify any required mitigation. The applicant shall be responsible for implementing the mitigation prior to construction activities being re-started at the discovery site.

Implementation of Mitigation Measure GEO-1 would reduce this impact to a less-than-significant level for both construction and operation because a plan to address discovery of unanticipated paleontological resources and to preserve and/or record those resources consistent with appropriate laws and requirements would be implemented.

Level of Significance: Less than significant impact with mitigation

5.4.7 Cumulative Impacts

Impact GEO-C-1: Would the adoption and implementation of the General Plan 2045 contribute to a cumulatively significant impact to Geology or Soils?

Subsequent land use activities associated with implementation of the proposed General Plan Update, in combination with other existing, planned, proposed, and reasonably foreseeable developments in the region, may result in cumulative geologic and soil hazards. However, policy provisions in the proposed General Plan 2045 and continued implementation of the City's Municipal Code would ensure that potential development in the study

area is not adversely impacted by cumulative geologic and soil hazards. All new development in the study area, would have to comply with the California Building Code, which requires stringent earthquake-resistant design parameters and common engineering practices requiring special design and construction methods that reduce or eliminate potential liquefaction or expansive soil-related impacts.

Additionally, development involving clearing, grading, or excavation that causes soil disturbance of one or more acres is subject to NPDES and General Plan provisions, which would significantly reduce the potential for substantial erosion or topsoil loss to occur in association with new development by requiring an approved Stormwater Pollution Prevention Plan that provides a schedule for the implementation and maintenance of erosion control measures and a description of erosion control practices, including appropriate design details and a time schedule.

The proposed General Plan 2045 also requires that damage to new structures from seismic, geologic, or soil conditions be prevented to the maximum extent feasible. Site-specific review per California Building Code, including geotechnical reports, required by the City would reduce the proposed General Plan 2045's contribution to cumulative impacts to less than cumulatively considerable, and no further mitigation is required.

Any enhancements to the stream corridors, such as Jolly Giant or Janes Creeks, would include best management practices for erosion control, including measures to avoid sediment entry into creek channels and associated sensitive riparian environments, resulting from standard Clean Water Act permitting requirements. The timing of any planned enhancements is speculative and, if implemented, would occur after public hearings and with City, local, and state regulatory oversight.

With adherence to applicable federal, state, and local regulations governing geology and soils resources and compliance with the proposed Arcata General Plan 2045 policies indicated above, the potential risks associated with geology and soils resources in the study area would be less than significant. As such, cumulative impacts would be less than significant.

Mitigation Measures: No mitigation is necessary

Level of Significance: No impact

5.5 Hydrology and Water Quality

This section evaluates the potential impacts related to hydrology and water quality resulting from adoption and implementation of the General Plan 2045. To provide the basis for this evaluation, the Setting section describes the hydrologic setting. The Regulatory Framework section describes the regulatory background that applies to the General Plan 2045. The Impact Analysis section establishes the thresholds of significance, evaluates potential impacts to hydrology and water quality, and identifies the significance of impacts.

Multiple comments related to hydrology and water quality were received in response to the Notice of Preparation circulated for the proposed General Plan 2045. Comments included those related to sea level rise, tsunami, and flood risks in the Gateway Area as well as the effect of the City's wastewater treatment facilities on water quality. A few letters included questions about construction runoff and emerging groundwater.

5.5.1 Study Area

For impact assessment related to hydrology and water quality, the City's Urban Services Boundary wase used as the study area (see Figure 2-1 – City of Arcata Planning Area).

5.5.2 Setting

Arcata's water resources include the Mad River, a number of creeks, wetlands, tidal streams, Arcata Bay, and groundwater aquifers. Hydrology within the Project Area is driven by precipitation which is influenced by Pacific Ocean and atmospheric weather patterns. Generally, air temperature averages about 52 degrees Fahrenheit, and ranges from the low 30s to around 80 degrees. Average annual rainfall is approximately 38 inches per year, based on historic records for 1961 through 2021. Storms generated by the Pacific Ocean contribute high amounts of annual rainfall between October and March. In some years, additional significant rainfall occurs through April. During the remainder of the year, coastal marine influences result in fog that at times is dense enough to generate moisture in the form of mist. Seasonal rainfall is often high in intensity and results in surface water runoff. Consequently, stream flows are typically high in the winter, and many of Arcata's small streams have little flow in late summer.

Watercourses, Wetlands, Baylands and Tidelands

Nine named creeks flow throughout the City (Resource Conservation Element Figure RC-a Protected Watercourses). The creeks and their associated sloughs provide multiple benefits including flood control, freshwater habitat, riparian habitat, marine habitat, fish and wildlife habitat (e.g., fish spawning and migration, wildlife nesting, roosting, and foraging areas), scenic enjoyment, open space, recreation, educational opportunities, and groundwater recharge. These creeks have their headwaters in the hills on the east side of the city and run through the City into Arcata Bay. A number of Arcata's creeks have been modified with culverts, channels, and coverings. The City has implemented many dozens of stream restoration projects in the last thirty years to address habitat degradation and fish passage limitations, although many restoration opportunities remain. Additionally, the implementation of the City's Municipal Separate Storm System (MS4) Permit has helped to reduce pollutants from a variety of sources, including petroleum products from urban run- off and suspended sediments from soil erosion, from entering the City's creeks and riparian areas.

A short reach of the Mad River borders northern Arcata. The Mad River supports federally protected anadromous salmonids including Chinook salmon, Coho salmon, and steelhead, as well as cutthroat trout. The Mad River is Clean Water Act section 303(d) listed for sedimentation/siltation, temperature, turbidity, and aluminum. The primary pollution sources and issues for the Mad River watershed are forestry-related, urbanization, and industrial and public point sources. The river provides Arcata's primary water supply. Ruth Lake, in Trinity County approximately 70 miles upstream from Arcata, stores Mad River water to provide water supply during summer and fall.

Wetlands are important hydrological and biological resources. Arcata's wetlands include managed constructed wetlands, abandoned log ponds, tidal marshes, diked former tidelands, agricultural wetlands, riparian wetlands, springs, seeps and bogs, and other small wetlands. Throughout low-lying and riparian areas of Arcata there are small wetlands that may be remnants of natural wetlands or a result of development and drainage patterns. The most prominent wetland is the Arcata Marsh and Wildlife Sanctuary and surrounding coastal wetlands, which was constructed and is managed by the City to provide advanced treatment and beneficial use of Arcata's wastewater.

Arcata's tidal waters include parts of Arcata Bay and sloughs connected to the bay. Waterfront marsh lands, mud flats, and open waters within the City limits are owned by the state of California; management of these lands has been granted to the City as a trustee. These lands are used for municipal facilities (including the wastewater treatment plant, corporation yard, and Arcata Marsh and Wildlife Sanctuary), natural resource protection, and aquaculture.

Groundwater

The City is located in the Mad River Valley – Mad River Lowland Basin 1-008.01, which is has a SGMA Basin Priority of Very Low (DWR 2020). The basin is located in the coastal floodplain which stretches from the Freshwater Fault north to the Mad River and to the elevated terrace to the east. Heindon Groundwater Well pumps groundwater from the groundwater basin; providing a secondary source of drinking water for the City (Arcata 2021). The City has not adopted a groundwater management plan for this basin. The relevant water quality control plan is the North Coast Regional Water Quality Control Board's (NCRWQCB's) Basin Plan which establishes thresholds for key water resource protection objectives for both surface waters and groundwater. Important ground water resources in Arcata include several aquifers under the Mad River delta that is now the Arcata Bottom.

Flooding

Arcata could be subject to flooding from the Mad River, local creeks, and Humboldt Bay. The Federal Emergency Management Agency (FEMA) has estimated the areas inundated by floods that occur on average every 100 years (more frequent floods are smaller and would inundate smaller areas; the 100-year flood is commonly used in emergency planning). The Infill Opportunity Zones are not located in FEMA floodplain (Figure 5.5-1). These 100-year flood areas include:

- A small area between Giuntoli Lane and the Mad River;
- Janes Road and much of the neighborhoods east of Janes Road near Mad River Hospital;
- A corridor of about one block on either side of Janes Creek from where West End Road crosses under U.S. 101 southwest through the City to Humboldt Bay;
- Areas of Arcata Bottom;
- Most of the land south of Samoa Boulevard except for most of neighborhoods on E-I streets; and
- Most of the land between Old Arcata Road and the Bay, including U.S. 101.

Arcata is subject to relatively frequent and extensive high flows in several of its small creeks. This problem results from characteristics of the drainage system:

- Arcata creeks originate on the hillsides, so rainfall rapidly drains into the center of town;
- The center of Arcata is relatively flat, so creeks slow down, deposit sediment, and widen in the areas most susceptible to flood damage;
- Accumulation of sediment and debris, and tide gates combined with high tides, reduce the ability of creeks to convey high flows;
- Urbanization causes higher runoff rates and reduces the wetland areas available for high flows to infiltrate to ground water or be detained;

- Creeks and riparian areas have been extensively straightened or channelized and put in culverts, which reduces in-channel storage of floods and can cause flood waters to accumulate more quickly;
- Arcata Bottom subsidence has led to flooding; and
- Dikes along Bay Front tend to impede runoff to Bay.

The worst-case flood of the Mad River would occur if there was a catastrophic failure of Mathews Dam in Trinity County. The California Division of Safety of Dams maintains dam breach inundation mapping for Matthews Dam. A dam breach could inundate portions of Boyd Road area and the Mad River Parkway area.

High tides and storm tides can inundate the bayfront and other low-lying areas of the City. Coastal floods are expected to inundate only the immediate vicinity of tidal waters and none of Arcata's neighborhoods.

Tsunami

Tsunamis may be locally generated or distant sourced, caused by a large earthquake nearby or in other areas of the Pacific Ocean. The tsunami hazard zone within the City generally extends from Humboldt Bay north to Highway 299 and east to Highway 101 (CGS 2021, Figure 5.5-2). The tsunami hazard zone does not extend into the Infill Opportunity Zones, except one block into the Downtown Infill Opportunity Zone near H Street.

Sea Level Rise

The City has conducted vulnerability and risk assessments for sea level rise. Areas that are currently potentially vulnerable to 3.3 feet of sea level rise include natural resource, industrial, and residential areas south of Highway 255 as well as agricultural and some residential areas between Old Arcata Road and Highway 101 (Laird 2018a, 2018b). The vast majority of the Gateway Area is well outside of sea level rise model predictions, however under current conditions, 3.3 feet of sea level rise could reach very minor areas along the very southern edge of the Gateway Area and then only during high tides. The Valley West, Craftsman Mall, and Downtown Infill Opportunity Zones are not vulnerable to 3.3 feet of sea level rise.

Water Quality

This section discusses the quality of Arcata's municipal drinking water, wastewater, surface water, and ground water.

Arcata's primary drinking water is supplied by the Humboldt Bay Municipal Water District. Humboldt Bay Municipal Water District draws source water from aquifer wells (Ranney Wells) below the Mad River, allowing for natural filtration. This water is disinfected with chlorine, and prior to delivery to its distribution system, the City adds fluoride to an optimal level to prevent tooth decay. Ranney Wells is annually monitored, and a Drinking Water Source Assessment in 2002 reported that the source water of the Ranney wells might be vulnerable to activities that contribute to the release of aluminum and barium (California Department of Health and Human Services, 2002). Aluminum is associated with some surface water treatment processes and erosion of natural deposits. Barium is associated with the discharges of oil drilling waste or metal refineries and the erosion of natural deposits. To ensure that tap water is safe to drink, the U.S. Environmental Protection Agency and the State Water Resources Control Board (SWRCB) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. Annual City monitoring is conducted at representative samples points in the drinking water treatment and distribution systems to ensure the City provides safe drinking water and that it follows State and federal regulations and is reported within the City's Water Quality Reports. The City's secondary source of drinking water is Heindon Well which is not actively monitored or used. In the event Heindon Well is activated for drinking water, monitoring would be conducted prior to use to ensure safe drinking water following State and federal regulations.

Wastewater within the City is handled by the Arcata Wastewater Treatment Facility located within the Arcata Marsh. The discharges from the treatment facility are regulated by the California State Water Resources Control Board and the United States Environmental Protection Agency which require the following programs:

- Water quality testing including, but not limited to: Chlorine, coliform, biochemical oxygen demand, digester solids, pH, heavy metals, oil and grease, settable solids, sulfur dioxide, suspended solids and toxicity. These tests can occur on a daily, weekly, monthly, quarterly, semi-annual and annual basis.
- Comprehensive monitoring, permitting and disposal of the City's wastewater solids composition program.
- Comprehensive monitoring and maintenance program for the 240 acres of the Arcata Marsh and Wildlife Sanctuary.

The limits for each of these contaminants are detailed within the City National Pollutant Discharge Elimination System discussed below.

Surface and groundwater quality within Arcata's creeks and storm drains have been investigated to a limited extent by the City, including studies conducted by Cal Poly Humboldt (with City funding) and informal studies conducted by Cal Poly Humboldt engineering and watershed management students, as well as from local agencies such as the Humboldt Waterkeeper (formerly Humboldt Baykeeper). These studies indicate generally high water quality with some exceptions. For example, fecal coliform bacteria (E. coli) counts are high at some times and locations, with Janes Creek discharging the highest amount. This may result from wastewater being improperly discharged to storm drains, sewer leaks, use of riparian areas by domestic animals, or runoff from grazing lands.

Almost all of Arcata's wastewater, storm water, and runoff is eventually discharged into Arcata Bay. Water quality concerns in the Bay focus on aquaculture: the California Health Services Department has the authority to stop commercial oyster harvesting if there is any evidence that oysters could be contaminated by pollution. Coliform bacteria are used as indicators of such contamination. In the past, oyster harvests have been closed when small amounts of sewage have leaked into Arcata storm drains or creeks, resulting in monetary claims being filed against the City by Coast Seafoods. To address this problem, the City has initiated studies of travel times and dilution in City creeks to give the State more information to use in determining whether pollution incidents are likely to affect oyster beds and to avoid unnecessary harvest closures.

5.5.3 Regulatory Framework

Federal

Clean Water Act

The Clean Water Act enacted by Congress in 1972 and amended several times since, is the primary federal law regulating water quality in the United States and forms the basis for several state and local laws throughout the country. It established the basic structure for regulating discharges of pollutants into Waters of the United States. It also gave the EPA the authority to implement federal pollution control programs, such as setting water quality standards for contaminants in surface water, establishing wastewater and effluent discharge limits for various industry categories, and imposing requirements for controlling nonpoint source pollution. At the federal level, the Clean Water Act is administered by the EPA and U.S. Army Corps of Engineers. At the state and regional levels in California, the Clean Water Act is administered in part and enforced by the State Water Resources Control Board (SWRCB) and the nine Regional Water Quality Control Boards (RWQCBs).

Section 303(d) of the Clean Water Act requires state governments to present the EPA with a list of "impaired water bodies," defined as those water bodies that do not meet water quality standards, even after point sources of pollution have been equipped with the minimum required levels of pollution control technology. In accordance with Clean Water Act Section 303(d), the State of California periodically identifies "*those waters within its boundaries for which the effluent limitations ... are not stringent enough to implement any water quality standard applicable to such waters.*" There are no impaired water bodies within the Project Area. Sections 404 and 401 of the Clean Water Act require permitting and state certification for construction and/or other work conducted in "Waters of the United States." Such work includes levee work, dredging, filling, grading, or any other temporary or permanent modification of wetlands, streams, or other water bodies.

National Flood Insurance Program

The FEMA administers the National Flood Insurance Program to provide subsidized flood insurance to communities that comply with FEMA regulations limiting development in floodplains. FEMA also issues Flood Insurance Rate Maps identifying which land areas are subject to flooding. The maps provide flood information and identify flood hazard zones in each community. The design standard for flood protection is established by FEMA, with the minimum level of flood protection for new development determined to be the 1-in-100 annual exceedance probability (i.e., the 100-year flood event).

According to FEMA regulations, "a revision of floodplain delineation based on fill must demonstrate that such fill has not resulted in a floodway encroachment" (44 CFR 65.5 (a) (7)). The State of California model ordinance defines encroachment as "the advance or infringement of uses, plant growth, fill, excavation, buildings, permanent structures or development into a floodplain which may impede or alter the flow capacity of a floodplain." The Floodplain Management and Protection of Wetlands section of the Federal Code of Regulations (44 CFR Section 9.2) states that it is FEMA's environmental review policy to:

1. Avoid long- and short-term adverse impacts associated with the occupancy and modification of floodplains and the destruction and modification of wetlands;
2. Avoid direct and indirect support of floodplain development and new construction in wetlands wherever there is a practicable alternative;
3. Reduce the risk of flood loss;
4. Promote the use of nonstructural flood protection methods to reduce the risk of flood loss;
5. Minimize the impact of floods on human health, safety, and welfare;
6. Minimize the destruction, loss, or degradation of wetlands;
7. Restore and preserve the natural and beneficial values served by floodplains; and
8. Preserve and enhance the natural values of wetlands.

National Pollutant Discharge Elimination System

The National Pollutant Discharge Elimination System (NPDES) permit program was established in the Clean Water Act to regulate industrial and municipal discharges to surface Waters of the United States. NPDES permit regulations have been established for broad categories of discharges including point source municipal waste discharges and nonpoint source stormwater runoff. An NPDES permit is required when proposing to or discharging waste into any surface water of the state. The SWRCB issues NPDES permits to cities and counties through RWQCBs and implements and enforces the NPDES General Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities (Order No. 2009-0009, as amended by Order No. 2010-0014). Order No. 2009-0009 took effect on July 1, 2010 and was amended on February 14, 2011. The Order applies to construction sites that include one or more acre of soil disturbance. Construction activities include clearing, grading, grubbing, excavation, stockpiling, and reconstruction of existing facilities involving removal or replacement.

Federal Antidegradation Policy

The federal antidegradation policy is set forth in 40 Code of Federal Regulations (CFR) Section 131.12. It serves as a catch-all water quality standard to be applied where other water quality standards are not specific enough for a particular waterbody, or where other water quality standards do not address a particular pollutant. SWRCB Order No. 68-16 incorporates the federal antidegradation policy into the state policy for water quality control and ensures consistency with federal Clean Water Act requirements. This federal regulation establishes a three-part test for determining when increases in pollutant loadings or other adverse changes in surface water quality may be permitted, including consideration of existing instream uses and water quality.

State

Porter Cologne Water Quality Control Act

The Porter-Cologne Water Quality Control Act (Porter-Cologne) is the primary statute covering the quality of waters in California. Under Porter-Cologne, the SWRCB allocates water rights, adjudicates water right disputes, develops state-wide water protection plans, establishes water quality standards, and guides nine RWQCBs state-wide. The joint authority of water allocation and water quality protection enables the SWRCB to provide comprehensive protection for California's waters. RWQCB boundaries are based on watersheds and water quality requirements are based on the unique differences in climate, topography, geology, and hydrology for each watershed. The RWQCBs regulate water quality under Porter-Cologne through the standards and objectives set forth in Water Quality Control Plans (also referred to as Basin Plans) prepared for each region. The current 2018 Basin Plan prepared by the North Coast Regional Water Quality Control Board provides a definitive program of actions designed to preserve and enhance water quality and to protect beneficial uses of water in the North Coast Region.

The beneficial uses serve as a basis for determining appropriate water quality objectives for the region. To protect these beneficial uses, the Basin Plan sets forth water-resource protection objectives for inland surface waters spanning many parameters. Basin Plan parameters relevant to potential water quality impacts of Project actions include floating material, suspended material, settleable material, oil and grease, sediment, turbidity, pH, dissolved oxygen, temperature, toxicity, waste discharge and effluent limits, pesticides, and chemical constituents.

North Coast Regional Water Quality Control Board Basin Plan

The Porter-Cologne Water Quality Control Act of 1967, Water Code section 13000 et seq., requires the State Water Resources Control Board (SWRCB) and the nine Regional Water Quality Control Boards (Regional Boards) to adopt water quality criteria to protect State waters. These criteria include the identification of beneficial uses, narrative and numerical water quality standards, and implementation procedures. The criteria for the Project Area are contained in the Basin Plan. The Basin Plan, adopted by the California Regional Water Quality Control Board, North Coast Region, and amended in 2012, establishes a number of policies regarding discharges of wastewater. The Basin Plan also includes a Water Quality Control Plan for the Enclosed Bays and Estuaries of California, and a specific Action Plan for Humboldt Bay. The Action Plan for Humboldt Bay requires surveillance and monitoring, review and assessment of land use activities, and Regional Board coordination with other state and local agencies with regard to protecting water quality in Humboldt Bay. In order to assure protection of waters in Humboldt Bay, the Regional Board closely monitors construction and industrial activities that could potentially impact water quality.

Municipal Separate Storm Sewer System

As of July 1, 2015, all construction projects over one acre within a designated small Phase II municipal separate storm sewer system (MS4) must comply with both the state Construction General Permit and Phase II Small MS4 General Permits, as outlined below:

- National Pollutant Discharge Elimination System (NPDES) General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities Order No. 2009-0009-DWQ NPDES No. CAS000002 (Construction General Permit).

  Post-Construction Permit runoff standards do not need to be met where a project is subject to MS4 Permit Post-Construction Standards. In the event MS4 Requirements are not used, the CGP calls for replicating the pre-project water balance for the 85th percentile, 24-hour runoff event. Regardless of the MS4 requirements, a construction general permit must be obtained, and a construction Storm Water Pollution Prevention Plan must be prepared and submitted to the State Water Board, via SMARTS, with the appropriate Permit Registration Documents, Notice of Intent and appropriate fee. Appropriate Best Management Practices and site monitoring must be outlined in the Stormwater Pollution Prevention Plan and implemented onsite.

- Water Quality Order No. 2013-0001 – DWQ NPDES General Permit No. CAS000004 Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4 Permit).

  Projects that create or replace 5,000 sq ft or more of impervious surface are considered Regulated Projects under this Permit. Regulated Projects must use Site Design Measures, as defined in the Permit, to capture the maximum amount of the 85th percentile, 24-hour storm runoff event. Any runoff that cannot be captured by Site Design Measures must then be routed to an appropriate bioretention facility. Additionally, for projects creating or replacing over one acre of impervious surface, the MS4 Hydromodification Standards must be met. For this geomorphic province, the post-project runoff shall not exceed the estimated pre-project runoff for the 2-year, 24-hour storm event.

- The North Coast Regional Water Quality Control Board is responsible for enforcing the MS4 General Permit within Humboldt County.

In order to help guide communities to meet these MS4 low impact development (LID) requirements, the North Coast Stormwater Coalition, a group of stormwater management staff from the cities of Eureka, Arcata, Trinidad, Fortuna, Fort Bragg, and Yreka, the counties of Humboldt and Mendocino, and Cal Poly Humboldt, as well as local, state, and federal agency representatives, non-profit organizations, tribes, consultants, and engineers, have developed the Humboldt County Low Impact Development Stormwater Manual with which the Project would conform to benefit the public by providing a standardized approach regarding LID designs.

Wetland Riparian Area Protection Policy

The SWRCB adopted a State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State (Procedures), for inclusion in the forthcoming Water Quality Control Plan for Inland Surface Waters and Enclosed Bays and Estuaries and Ocean Waters of California. The Procedures took effect May 28, 2020 and consist of four major elements: 1) a wetland definition; 2) a framework for determining if a feature that meets the wetland definition is a Water of the State; 3) wetland delineation procedures; and 4) procedures for the submittal, review, and approval of applications for Water Quality Certifications and Waste Discharge Requirements for dredge or fill activities. The Procedures, formerly known as the Wetland Riparian Area Protection Policy, has been renamed in order to communicate that the Procedures apply to all discharges of dredged or fill material to waters of the state, not just wetlands.

Section 1601

Section 1601 of the California Fish and Wildlife Code mandates that a public agency seeking to significantly alter the natural flow or modify the bed, channel, or bank of a river, stream, or lake must enter into an agreement with the Department of Fish and Wildlife. The purpose of this agreement is to safeguard the fish and wildlife habitat and preserve the ecological values associated with the affected water body. By ensuring compliance with this requirement, the state aims to protect and maintain the natural environment and its biodiversity.

California Coastal Act

The California Coastal Act (Coastal Act) of 1976 requires any person proposing to develop in the Coastal Zone to obtain a Coastal Development Permit or obtain coverage under a Consistency Determination. The Coastal Zone extends from the State's three-mile seaward limit to an average of approximately 1,000 yards inland from the mean high tide of the sea. In coastal estuaries, watersheds, wildlife habitats, and recreational areas, the Coastal Zone may extend as much as five miles inland. In developed urban areas, the Coastal Zone may extend inland less than 1,000 yards. The City of Arcata is partially within the Coastal Zone. The California Coastal Act contains policies relevant to hydrologic and water quality resources. The following Coastal Act section is relevant to this analysis:

Section 30233 Diking, filling or dredging

The diking filling or dredging of open coastal waters, wetlands, estuaries and lakes shall be permitted in accordance with other applicable provisions of this division where there is no feasible less environmentally damaging alternative, and where feasible mitigation measures have been provided to minimize adverse environmental effects, and shall be limited to the following:

(5) Incidental public service purposes

Section 30253 Minimization of Adverse Impacts

New development shall:

(1) Minimize risks to life and property in areas of high geologic, flood, and fire hazard

Assure stability and structural integrity, and neither create nor contribute significantly to erosion, geologic instability, or destruction of the site or surrounding area or in any way require the construction of protective devices that would substantially alter natural landforms along bluffs and cliffs.

Local

City of Arcata General Plan

The City of Arcata General Plan contains guidelines for hydrology and water quality within the Resource Conservation and Management Element. The following policies from the Arcata General Plan are applicable to the proposed Project.

Policy LU-4: Industrial Land Use

Objective. *Provide for uses which will retain and generate jobs, including labor intensive manufacturing, processing, assembly, warehousing, services, and complementary non-industrial uses, in appropriate locations.*

Applicable sub-policies:

- ***LU-4b: Conversion and reuse of old industrial sites.*** *The City shall encourage the conversion and reuse of abandoned or inactive industrial sites such as closed lumber mill sites. An environmental site assessment will be required for sites where prior uses may have caused soil contamination. Manufacturing uses may be allowed on older I-G sites, where activities are conducted in enclosed spaces and noise, light, air quality, or traffic impacts do not significantly impact adjacent uses.*

Policy PF-1: Water Supply and Delivery

Objective. *Manage the City's potable water resources to ensure adequate quantities for community use, to promote water conservation, to maintain water quality, and not to deplete source supplies.*

Applicable sub-policies:

- ***PF-1a: Water supply.*** *Surface and subsurface water quantities that supply the City are dependent on rainfall and adequate upstream storage.*

  The City shall continually monitor the water quantity and quality in its system and adhere to the Humboldt Bay Municipal Water District's rationing system to ensure that adequate supplies reach all users. The City shall also develop additional water sources to meet current peak use and future use demands.

- ***PF-1c: Water conservation.*** *The City shall use a combination of economic incentives, educational programs, and auditing to promote water conservation. Water rates will continue to be higher for*

consumption above baseline usage. Information about conservation devices such as flow restrictors, and practices such as off-peak irrigation, will be made available to the public. The City shall also implement water conservation measures through the water, wastewater, and drainage master plans, and through leak detection and inflow and infiltration (I/I) reduction programs.

Policy PF-2: Wastewater Collection, Treatment, & Disposal

Objective. *Collect and treat wastewater to achieve safe water quality standards, utilizing the City's internationally renowned marsh treatment facility.*

Applicable sub-policies:

- ***PF-2a: Capacity and management of City wastewater collection system.*** *The wastewater collection system is designed to transport community sewage to the treatment plant. The City shall update its Collection System Maintenance Program, at least every five years, to maintain current projections, management, and contingency programs for wastewater collection. The Plan shall identify needed collection system improvements and anticipated extensions, so that they can be budgeted for in the City's Capital Improvement Program. The City shall continue to monitor groundwater infiltration and surface water inflow (I/I) and take necessary action to ensure that these sources do not cause the collection system or the treatment plant to exceed capacity. The City wastewater collection system shall not be extended beyond the Urban Services Boundary except as provided in Policy GM-4b.*
- ***PF-2b: Arcata Marsh wastewater treatment system.*** *The City shall update its Wastewater Treatment Plant Master Plan, at least every five years, to evaluate the entire system; reflect any changes in treatment standards; ensure wastewater treatment is meeting current standards; verify that there is adequate treatment system capacity; and assure adequate water flows to maintain habitat. The City shall maintain the existing facilities of the Arcata Marsh and Wildlife Sanctuary and construct new facilities consistent with the Marsh Enhancement Plan adopted by the City Council.*
- ***PF-2c: Compliance with California Regional Water Quality Control Board wastewater treatment and discharge standards.*** *The City shall regularly test its wastewater and make necessary adjustments in treatment levels, to ensure that it meets California Regional Water Quality Control Board standards. The City shall also keep its National Pollution Discharge Elimination System Permit (NPDES) current and in compliance with U.S. Environmental Protection Agency standards.*
- ***PF-2d: Composting and disposal of sludge and other system byproducts.*** *The City includes sewage sludge in compost processed at the treatment plant. The City uses this composted material as a soil amendment. The City shall continue this practice as an efficient means of recycling treatment plant by-products and shall investigate the possibility of selling excess compost to generate revenue.*
- ***PF-2e: Treatment of wastewater from other communities.*** *The City, until 2012, accepts for treatment wastewater from the unincorporated community of Fieldbrook. This practice may continue as long as there is adequate treatment system capacity. The City shall not enter into any new agreements for processing wastewater from other communities.*

Policy PF-3: Stormwater Management

Objective. *Implement the City's drainage master plan to utilize natural drainage systems; minimize increases in stormwater runoff, flooding, and erosion; maintain the integrity of stream hydrology; reduce pollutant loads; and acquire easements and properties for effective drainage management.*

Applicable sub-policies:

- ***PF-3a: Utilization of City streams and watercourses as natural drainage systems.*** *Arcata's network of creeks provide a natural drainage system, however, they are very susceptible to damage from urban pollutants carried by runoff, and from drainage facilities that alter creek flows and natural functions. The City shall utilize creeks for urban drainage only when the basic natural functions will not be degraded.*

- ***PF-3b: Control of stormwater runoff, flooding, and erosion.*** *Stormwater runoff, especially at peak flows, can cause significant flooding and erosion if adequate precautions have not been taken. As stated in the Drainage Master Plan, the City shall manage the storm and surface water system in Arcata to maintain a hydrologic balance in order to protect water quality, prevent property damage, provide for the safety and enjoyment of citizens, and preserve and enhance habitat and sensitive areas.*
- ***PF-3c: Stormwater quality.*** *Enforce surface water controls, facilities such as detention basins and natural infiltration areas, and education programs to protect surface and ground-water quality.*
- ***PF-3d: City drainage system.*** *The City shall take a comprehensive approach to drainage system management in order to effectively control the quantity of stormwater runoff, assure water quality, and reduce potential flood damage from peak flows. As stated in the City Drainage Master Plan, the City shall gradually expand the City managed drainage system to:*
    1. *Continue maintenance of all drainage facilities within public right-of-way, regardless of size.*
    2. *Extend responsibility onto private property only when permanent easements are dedicated or otherwise available from the private property owner, and need is established based on technical criteria.*
    3. *Define service limits upstream of the City as the point at which runoff from a publicly (not county) dedicated street enters the drainage system, or when a drainage feature needs repairs/improvements which have public benefits that exceed the cost of said repairs/improvements.*
- ***PF-3e: Easements and properties for drainage management.*** *The City shall secure the easements and properties necessary to complete and maintain the drainage system identified in the Drainage Master Plan.*

Policy OS-1: Overall Open Space System

Objective. *Designate, maintain, and enhance the quality, and increase the amount of permanently protected open space in the Arcata Planning Area, including: natural resource areas; resource production areas; outdoor recreation areas; and areas subject to health and safety hazards. These areas are to be protected, linked together in a network wherever practical for accessibility, managed for resource production, and maintained for enjoyment by City residents and visitors.*

Applicable sub-policies:

- ***OS-1a: Designation of open space lands with native biotic resources and ecosystems.*** *The native biotic resources of the forested western slopes of Fickle Hill, river and creek riparian zones, the Arcata and Aldergrove Marshes, and Arcata Bay tidelands and sloughs are unique ecosystems that have important habitat values in addition to their other open space values. These areas as designated on Map OS-a shall be protected as open space for their resource values.*
- ***OS-1c: Relationship to Resource Conservation and Management and Public Safety Elements.*** *This element identifies hazard areas that shall be maintained as open space for the benefit of the community. The policies of this element and policies found in the Public Safety Element provide common direction for the designation and avoidance of hazard areas. The natural open space features of these areas, such as vegetation, shall be retained, except where they contribute to instability or increase hazards.*

Policy OS-2: Natural Resource Protection and Enhancement

Objective. *Designate, maintain, and enhance natural resource areas, including sensitive habitat areas, necessary to sustain plant and animal life and native biological diversity.*

Applicable sub-policies:

- ***OS-2a Open space plan map designations for natural resource protection.*** *Publicly held lands containing creeks, wetlands, other open water, marsh, sensitive habitat, forests, and other important natural resources are designated on the Open Space Map.*

- ***OS-2b: Development limitations and management for maintenance of biotic resources and diversity, including aquatic resources and sensitive habitats.*** *Creeks, marshes, and wetlands are significant components of Arcata's natural open space system. The City shall restore and maintain this system for the benefit of residents, visitors, fish, and wildlife.*

  The Arcata Bay and tidelands represent an important natural edge and open space feature of the City. Buildings, landform alterations, or access routes in this area shall be of a design and scale that preserves open space and natural characteristics and maintains public views to the Bay.

  Local creeks which flow openly through the developed portion of the community shall have biological corridors and greenways established and shall be maintained as visual assets to any developments which adjoin them.

  The natural features of the Mad River corridor, Arcata's creeks and adjacent areas, marshes, and other wetland areas, shall be retained.

  Unique vegetation and wildlife areas shall remain in a natural condition. Such areas include sand dunes and backdune woodlands, eel grass area, salt marshes, and special habitats (tern and osprey nesting areas, cormorant rookery, harbor seal area and egret roost). The policies of this element shall also call for protection for habitat of species that become threatened in the future.

Policy OS-3: Open Space for Managed Production of Resources

Objective. *Designate and conserve resource areas, including forest and agricultural lands, fisheries and aquaculture, groundwater, and mineral resources, for their sustainable, long-term productive capabilities*

Applicable sub-policies:

- ***OS-3a: Designations for forest, agriculture, fisheries, aquaculture, groundwater, and mineral resource uses and management.*** *All publicly held lands, and some privately held lands adjacent to the Community Forest and east of Aldergrove Industrial Park, actively managed for production of forest, fisheries, aquaculture and mineral resources are designated as Natural Resource [NR] on the General Plan Land Use Element map. Productive agricultural lands are designated on the Open Space Map.*

- ***OS-3b: Development limitations and management for productive resource areas.*** *The policies of the Resource Conservation and Management Element shall be followed for the development and management of productive resource lands. This includes policies for: Natural Biological Diversity; Streams Management; Wetlands Management; Baylands and Tidelands; Agricultural and Forest Resources; and Water, Energy, Soils and Mineral Resources. The City shall require that management of open space resources be consistent with these and other applicable General Plan policies.*

Policy OS-5: Open Space in Health and Safety Hazard Areas

Objective. *Designate health and safety hazard areas such as seismic fault and liquefaction zones, unstable soils or slopes, floodplains, areas susceptible to wildland fire, and watershed/reservoir safety zones. Provide appropriate protections, or restrictions, to minimize unnecessary exposure of people and property to health and safety hazards.*

Applicable sub-policies:

- ***OS-5a: Designation of open space for public safety.*** *Designated open space for public safety is shown on Figure OS-a. Setbacks for seismic faults and liquefaction zones, unstable soils or steep slopes, mapped Flood Hazard Zone A, areas susceptible to wildland fire, and watershed/reservoir*

safety zones, shall be established as part of the development review process. Where severe safety considerations exist (e.g., within the Alquist-Priolo Zone), open space easement shall be granted to the City to protect people and property from health and safety hazards.

Open space areas, with slopes 15% or greater shall retain their natural landform features; excavation shall be restricted, according to the City's adopted grading ordinance, and removal of vegetation shall be limited to selected thinning of timber stands and removal of hazard trees.

Open Space areas that are flood-prone may be used for agricultural and recreational purposes but shall be kept free from urban development. A flood plain overlay zone shall be applied to all Natural Resource [NR] and Agricultural [AE] areas subject to inundation according to the Flood Insurance Rate Map Hazard Boundary Map) developed by the Federal Emergency Management Agency (FEMA) or the Federal Insurance Administration.

- ***OS-5b: Development limitations and management for health and safety hazard areas.*** *The policies of the Public Safety Eleme shall be followed for all development activity in areas with known or suspected safety hazards. In particular, seismic hazards, other geological hazards, and flood policy topics are applicable.*

Policy RC-1: Natural Biological Diversity/ Ecological Function

Objective. *Set an overarching policy that emphasizes the overall value of biological diversity and the fact that all natural resources are optimized when they function as part of a healthy ecosystem.*

Applicable sub-policies:

- ***RC-1c: Habitat value protection.*** *Environmentally sensitive habitat areas (ESHA) shall be protected against any significant disruption of their habitat values, and only uses dependent on and compatible with maintaining those resources shall be allowed within ESHAs. Proposed development in areas adjacent to ESHAs shall be sited and designed to prevent impacts which would significantly degrade such areas, and must be compatible with the continuance of such habitat areas.*
- ***RC-1d: Sensitive habitat definition.*** *The City declares the following to be ESHAs within the Planning Area:*
    1. *Rivers, creeks, sloughs, and associated riparian habitats: Mad River; Jacoby Creek; Beith Creek; Grotzman Creek; Campbell Creek; Jolly Giant Creek; Janes Creek; Gannon Slough; Butcher Slough; and McDaniel Slough.*
    2. *Wetlands, estuaries, and associated riparian habitats: Arcata Bay; Mad River Slough; Liscom Slough; Butcher Slough; the Aldergrove marshes and ponds; and the Arcata Marsh and Wildlife Sanctuary.*
    3. *Other unique habitat areas: waterbird rookeries; shorebird concentration sites; habitat for all rare, threatened, or endangered species on federal or state lists; and vegetated dunes.*
    4. *Public Trust lands such as grazed or farmed wetlands (i.e., diked/reclaimed former tidelands).*
- ***RC-1h: Habitat integration for ecological integrity and development of a protected habitat corridor system.*** *An ecological connection network plan for linking native habitats in the Planning Area, and all of the environmentally sensitive habitat areas identified in this Plan, shall be prepared. The network shall incorporate all existing large areas (or "nodes") of habitat for fish and wildlife species (such as marshes and forests) and "linkages" or "corridors" of natural habitat (such as stream zones and sloughs) for migration and species movement. The plan will link large "nodes" of natural habitat together with the “linkage” connections as a functioning ecological network. Nodes and linkages shall include a "core" of natural ecosystem elements and shall provide a protected "buffer" along the outer margins of the core habitat which shall function to protect the ecological values in the "core" habitat.*

Policy RC-2: Streams Conservation & Management

Objective. *Enhance, maintain, and restore the biological integrity of entire steamcourses (headwaters to mouth), and their associated riparian habitats, as natural features in the City's landscape.*

Applicable sub-policies:

- ***RC-2a: Designation of protected streams.*** *The provisions of this policy shall apply to those streams shown on the Protected Watercourse Map (Figure RC-a). These watercourses and their associated riparian areas serve as habitat for fish and wildlife, provide space for the flow of stormwater runoff and flood waters, and furnish open space and recreational areas for city residents.*
- ***RC-2b: Environmental Buffer Area (EBA).*** *A streamside protection area is hereby established along both sides of the streams identified on the City Watercourse Map. The purpose of the EBA is to remain in a natural state in order to protect streams' ecosystems and their associated riparian habitat areas. The EBA shall include:*

  1. *In areas where existing development, as defined in the Land Use Code, is adjacent to the stream, the EBA shall be not less than 25 feet outward on both sides of the stream, measured from the top of bank.*
  2. *In all other locations within the City, the EBA shall be not less than 100 feet outward on both sides of the stream, measured from the top of bank.*
  3. *In locations within the City having significant areas of riparian vegetation exceeding 100 feet in width measured from the top of bank, the EBA shall be expanded to encompass all of the riparian vegetation, except in no case shall the EBA exceed 250 feet in width from the top of bank on either side of the stream.*

  EBAs outside of the City shall follow the policies in the Humboldt County Framework Plan, regarding Streamside Management Areas.
- ***RC-2c: Allowable uses and activities in Environmental Buffer Areas.*** *The following compatible land uses and activities may be permitted in EBAs, subject to all other policies in this Element, including those requiring avoidance of impacts and other mitigation requirements:*

  1. *Outside the Coastal Zone:*
     a. *agricultural operations compatible with maintenance of riparian resources;*
     b. *fencing along property boundaries and along EBA setback boundaries to prevent bank erosion and degradation of natural riparian vegetation by livestock;*
     c. *maintenance of existing roads, driveways, and structures;*
     d. *construction of public road crossings;*
     e. *forest management practices as permitted by the State of California or Arcata's Forest Management Plan;*
     f. *construction and maintenance of foot trails for public access;*
     g. *construction and maintenance of utility lines;*
     h. *resource restoration projects;*
     i. *emergency or preventive removal of sediment and vegetation for flood control purposes (only when authorized by the City of Arcata).*
  2. *In the Coastal Zone:*
     a. *all uses and activities listed in (1) above;*

b. public coastal access improvements;

c. boat launching facilities.

3. If the provisions herein would result in any legal parcel, not on Public Trust lands, created prior to the date of this plan, being made unusable in its entirety for any purpose allowed by the land-use plan, exceptions to the foregoing may be made to allow a reasonable economic use of the parcel, subject to approval of a conditional use permit. Any land use, construction, grading, or removal of vegetation which is not listed above shall be prohibited.

- ***RC-2d: The Wetland and Stream Protection Combining (:WSP) Zone.*** *The WSP zone of the Land Use and Development Code shall be applied to all streamside protection areas. [The WSP zone should be a land use designation under the NR district, e.g., NR-WSP, NR-AG, NR-TPZ.]*

- ***RC-2e: Review and approval of projects affecting streamside protection areas.*** *Applications for development on any parcel which is located partially or wholly within an SPA shall be subject to the requirements of Policy RC-1 and RC-2.*

- ***RC-2f: Conservation easement.*** *Dedication of a conservation easement, or equivalent deed restriction, encompassing the area within the EBA shall be required as a condition of approval of any discretionary planning permit, including design review, when any portion of the project site falls within an EBA. Such easements may be conveyed to the City of Arcata, to another governmental agency which shall manage the easement to protect the EBA's functions, or to an appropriate non-profit entity.*

- ***RC-2g: Maintenance of streams as natural drainage systems.*** *Arcata's creeks carry a significant amount of the City's stormwater. Drainage controls shall be enforced through implementation of the Drainage Master Plan, to protect water quality, and minimize erosion, sedimentation and flood impacts to City creeks. A comprehensive stream maintenance program shall be prepared to augment stormwater utility rehabilitation projects designed to improve flow capacity, minimize channel erosion, and enhance riparian habitat.*

- ***RC-2h: Restoration of degraded creek resources.*** *Portions of Janes, Jolly Giant, Campbell, and Grotzman Creeks are culverted or covered, causing degradation of creek resources. Streams such as Janes Creek have tide gates which are barriers that prevent anadromous salmonids from accessing critical habitat. Furthermore, recreational use has degraded riparian vegetation along upland reaches of certain creeks (e.g., Jolly Giant, Campbell, and Jacoby Creeks) within Redwood Park and the Community Forest. Lack of vegetation along creek courses can cause erosion, resulting in water and airborne impacts. Restoration activities for improving degraded stream resources shall include:*

  1. Uncovering of creek courses in public rights-of-way, as part of public works improvement projects.
  2. Encouraging landowners to restore degraded EBA and stream resources, including native riparian vegetation establishment and exotic species removal, as part of a new development or renovation.
  3. Controlling uses that are damaging to upland reaches of creeks in the Community Forest and Redwood Park.
  4. Removing or modifying barriers such as tide gates that prevent migrating anadromous salmonids which are federally listed endangered species from reaching their critical habitat.
  5. Exclusionary fencing to keep livestock out of the EBA.

  The Streams Management Plan shall be implemented to provide guidance for rehabilitation and management of creeks that flow through Arcata. The SMP addresses new and modified development along creeks, and existing activities in creek zones. Stream rehabilitation projects shall be designed to maintain or improve flow capacity, trap sediments and other pollutants which decrease water quality, minimize channel erosion, prevent new sources of pollutants from entering the stream, and enhance instream and riparian habitat. [Policies RC-2b, c, f, & h revised by Ordinance No. 1377, September 2008]

Policy RC-7: Water Resources Management

Objective. *Manage Arcata's water resources from a watershed perspective, to maintain surface and subsurface water quality and quantity. Runoff will be managed for the benefit of aquatic habitats.*

Applicable sub-policies:

- ***RC-7a: Protection of surface waters from point and nonpoint pollution sources.*** *The use of natural stormwater drainage systems, which preserve and enhance natural features, shall include the following:*
  1. *Efforts to acquire land or obtain easements for drainage and other public uses of floodplains, where desirable to maintain stream courses in a natural state, shall be supported.*
  2. *Recreational opportunities and aesthetics shall be considered in the design of stormwater detention/retention and conveyance facilities.*
  3. *Sound soil conservation practices shall be required, and impacts of proposed developments, with regard to water quality and effects on watersheds, wetlands and drainage courses, shall be carefully examined.*
  4. *The quality of runoff from urban and suburban development shall be improved through use of appropriate and feasible mitigation measures including, but not limited to, artificial wetlands, grassy swales, infiltration/sedimentation basins, riparian setbacks, oil/grit separators, and other best management practices (BMPs).*
  5. *New development shall be required to mitigate to the maximum extent feasible increases in stormwater peak flows and/or volume. Mitigation measures should take into consideration impacts on the Mad River, Arcata Bay, and adjoining lands in the City and Planning Area.*
  6. *New project designs shall minimize drainage concentrations, maximize permeable surfaces (such as unpaved parking areas) and maintain, to the extent feasible, natural site drainage conditions.*
  7. *New projects that affect the quantity and quality of surface water runoff shall be required to allocate land necessary for detaining post-project flows and/or for incorporating measures to mitigate water quality impacts related to urban runoff. To the maximum extent feasible, new development shall not produce a net increase in peak stormwater runoff.*
- ***RC-7b: Protection of groundwater sources.*** *Septic systems and onsite disposal of toxic substances are the leading causes of groundwater contamination. Septic systems within the Urban Services Boundary shall not be permitted, and incidents of onsite toxics disposal shall be referred to the appropriate county and state agencies.*
- ***RC-7c: Watershed and urban runoff management.*** *To protect structures, critical facilities, existing habitat values and water quality, flooding shall be managed on a watershed basis, using a combination of biotechnical solutions, flood protection practices, and Drainage Master Plan's management practices.*
- ***RC-7d: Water quality monitoring.*** *Water quality and quantity shall be monitored on a regular basis to ensure that City policies are being adhered to.*

Policy PS-2: Seismic Hazards

Objective. *Protect existing and new structures from seismic hazards. Identify and map seismic hazards and assure that any development within such hazard areas does not proceed until geologic and soils conditions are adequately investigated and appropriate mitigation measures, if any, are incorporated into development plans.*

Applicable sub-policies:

- ***PS-2e: Shoreline hazards (tsunami, tidal flooding).*** *A State of California study (Planning Scenario in Humboldt and Del Norte Counties, California, for a Great Earthquake on the Cascadia Subduction*

Zone, Special Publication 115, California Department of Conservation, Division of Mines & Geology, 1995) indicates that the Arcata Bay shoreline and adjacent areas, between McDaniel Slough and Mad River Slough, could be inundated by tsunami run-up. The City shall prohibit the location of critical facilities in the tsunami run-up area, and use available emergency broadcasting systems to communicate tsunami warnings. Should coastal access within the tsunami run-up zone be provided in the future, appropriate evacuation route signage shall be posted.

- ***PS-2f: Failure of Matthews Dam.*** *All new buildings designed for human occupancy or use that are located in the area of potential inundation resulting from a catastrophic failure of Matthews Dam shall have an early-warning system and evacuation plan in place for those persons living and working there.*
- ***PS-2h: Public information and disclosure.*** *The Humboldt Earthquake Education Information Center at Humboldt State University, and the City of Arcata have earthquake/tsunami awareness information that is available to the public. The Center and the City will continue to make the most current information available to help the community prepare for and respond to seismic events.*

Policy PS-3: Other Geologic Hazards

Objective. *Protect existing and new structures from non-seismic geologic hazards such as unstable slopes and soils. Require that all non-seismic geologic hazards be adequately addressed and mitigated.*

Applicable sub-policies:

- ***PS-3a: Slope stability hazards.*** *Slope areas greater than 15%, shown on Figure PS-a, and certain less steep slopes with erosive soils may become unstable if disturbed. The City shall restrict grading, vegetation removal, and new construction in areas with unstable soils unless it can be demonstrated that these activities can occur without impacts. All grading of slope areas shall follow natural contours to maximize stability.*
- ***PS-3b: Grading standards for erosion and sedimentation control.*** *The design, extent, and location of grading shall minimize disturbance of the natural terrain and land features and shall not impact offsite areas. Trees and native vegetation shall be retained around graded areas to stabilize hillsides; retain moisture; reduce erosion, siltation and nutrient runoff; and retain the natural beauty of the area. Cleared areas susceptible to erosion shall be stabilized so that no materials are transported offsite.*

Policy PS-4: Flood Hazards

Objective. *Protect current and future populations and property from flood hazards. Assure that new development within floodplains does not proceed until appropriate mitigation measures are incorporated into development plans.*

Applicable sub-policies:

- ***PS-4a: Floodplain Mapping.*** *The City shall continue participating in the National Flood Insurance Program and maintain the most current Flood Insurance Rate Maps (FIRM) on file. The City shall also continue requesting that the Federal Emergency Management Agency provide hydrographic modeling (using the 1964 flood levels as a benchmark) and an update of flood mapping for the Mad River.*
- ***PS-4b: Limitations to development adjacent to Arcata Bay and along Bay shoreline (tidal flooding, tsunami, failure of dikes or tidegates).*** *The Arcata Bottom and other low lying areas adjacent to Arcata Bay, McDaniel, Butcher's and Gannon Sloughs, and Arcata Marsh are susceptible to flooding from extreme Bay tidal action, tsunami runup, seiche, dike or tidegate failure, heavy rainfall that can't drain, and Mad River flood events. Where not otherwise restricted, habitable structures and related improvements shall be appropriately elevated above flood levels, designed so as not to restrict flood flows, and shall comply with applicable provisions of Resource Conservation and Management Policy RC-2: Streams Conservation and Management, pertaining to Streamside Protection Areas (RC-2b and RC-2c). Land alterations for recreation and natural resource uses shall also not restrict or increase or channelize flood flows in a way that could cause inundation to adjacent areas.*

- ***PS-4c: Limitations on development within Flood Zone.*** *The mapped Floodzone A as determined by FEMA should be kept free of structures and other obstructions that would restrict flood flows. New construction in Flood Zone A shall be elevated, flood-proofed, designed to not constrict flood flows or drainage, and/or include other features, such as access for evacuation and emergency response, to protect human safety and minimize property damage. Landform alterations shall not impede flood flows in adjacent upstream or downstream areas. Any development in the floodplain must be consistent with City floodplain zoning regulations.*
- ***PS-4d: Limitations to development within flood hazard zones.*** *Arcata's creeks and sloughs have the potential to cause localized flooding and shall be maintained to allow the flow of floodwaters. Structures and other land form alterations in areas susceptible to localized flooding, outside areas defined in policies RC-2b and RC-3c, should be setback from the watercourse. Elevated and flood-proofed structures, and/or floodwater detention basins shall be provided to minimize flood damage and prevent any net increase in floodflows upstream or downstream. The City shall promote flood management practices for entire watercourses, to minimize the need for sandbagging and other temporary flood control measures that can have detrimental impacts to adjacent areas.*
- ***PS-4e: Flood Insurance.*** *Flood insurance is available from private insurers to compensate home and business owners for flood-related losses. Flood insurance rates are set by a site's proximity to mapped flood-prone areas. The City shall make information about flood-prone areas available to the public, to aid community residents and business owners in determining whether flood insurance should be purchased.*
- ***PS-4f: Development standards in floodplains (surface drainageways and detention areas).*** *All plans for new construction that could potentially encroach into a floodplain must incorporate measures for flood protection and show that there will be no adverse impact to the carrying capacity of the floodway. Setbacks, easements covering Floodzone A, and minimal use of impervious surfaces are measures strongly encouraged. Elevation of structures, anchoring, flood-proofing, and construction of detention basins are considered secondary and less desirable measures. The City's floodplain administrator shall verify this information and require appropriate certification before any development permits are granted.*
- ***PS-4g: Preventive maintenance of streams and drainageways.*** *Local streams carry the majority of Arcata's floodwaters and shall be maintained for flood protection as well as natural biological functions. All improvements and maintenance shall be done in accordance with the City's Drainage Master Plan.*
- ***PS-4h: Development review.*** *drainage standards and drainage fees. All new development shall meet current City drainage standards and pay all applicable drainage fees. The City shall provide incentives to reduce the amount of impervious surface associated with new and renovated uses by reducing drainage fees.*

Policy PS-6: Hazardous Materials

Objective. *Minimize the personal injury, property damage, and public health risks associated with the production, use, storage, disposal, and transporting of toxic substances or hazardous materials.*

Applicable sub-policies:

- ***PS-6b: Contaminated sites.*** *There are sites in and around the City where wood product milling and production, vehicle and equipment storage and repair, agricultural production, and other uses may have resulted in site contamination. Materials such as lead based paints may also contribute to contamination. Many of these sites are inactive and may be appropriate for alternative uses. Environmental Site Assessments shall be required prior to development review and approval of potentially contaminated sites, and cleanup is required prior to reuse. The City shall record and map sites with known contamination.*

- ***PS-6c: Use of potentially harmful materials on public lands and rights-of-way.*** *The City of Arcata does not use toxic sprays or substances on vegetation in public lands or rights-of-way, and has been persuasive in stopping State agencies, such as Cal-Trans, from using toxic sprays along State rights-of-way within the City limits. The City shall continue this practice and prohibit other public agencies from using toxic sprays or substances within the City limits (see Resource Conservation and Management Element Policy RC-1i).*
- ***PS-6d: Siting of facilities handling hazardous waste.*** *Businesses and agencies that use, store, or produce hazardous materials shall train employees and other users in safe handling and storage procedures, and shall post current Occupational Safety and Health Act (OSHA) and Humboldt County hazardous materials requirements. Businesses shall also comply with Federal "community right-to-know" regulations. The City shall consider proximity to sensitive receptors, such as schools, hospitals and other health care facilities, day care centers, and other immobile populations, when reviewing new facilities and businesses involved in these activities.*

Proposed City of Arcata General Plan 2045

Policy LU-6: Agricultural and Natural Resource Lands

Objectives. *Preserve and promote the sustained production of natural resources; preserve and promote the agricultural, forest, and aquaculture lands; and protect public natural resource/open space lands, including stream courses, wetlands, tidelands, and open space areas. Provide for complementary uses including farm worker housing, processing of agricultural and aquaculture products, and access for timber harvesting, in designated areas.*

Applicable sub-policies:

- ***LU-6e: Restoration of former tidelands.*** *The City of Arcata recognizes the need to restore former tidelands to salt marsh in order to adapt to rising sea levels and promote biodiversity and a safe environment. The City shall encourage and support the restoration of former tidelands, currently zoned Agricultural Residential [A-R] or Agricultural Exclusive [A-E].*

Policy PF-1: Water Supply and Delivery

Objective. *Manage the City's potable water resources to ensure adequate quantities for community use, to promote water conservation, to maintain water quality, and not to deplete source supplies. PF-1a Water supply. Surface and subsurface water quantities that supply the City are dependent on rainfall and adequate upstream storage. The City shall continually monitor the water quantity and quality in its system and adhere to the Humboldt Bay Municipal Water District's rationing system to ensure that adequate supplies reach all users.*

Applicable sub-policies:

- ***PF-1c: Water conservation.*** *The City shall use a combination of economic incentives, educational programs, and auditing to promote water conservation and shall remain in compliance with Humboldt Bay Municipal Water District policy regarding its Five-Stage Water Rationing System. Continue to encourage the use of infrastructure and practices that promote efficient water and energy use such as rain barrels, green roofs, and retention structures. Encourage reduced water demand by requiring water-conserving design and equipment in new construction and encouraging the retrofitting of existing development with water-conserving devices, along with water capture and conservation practices.*

  Water rates will continue to be higher for consumption above baseline usage. Information about conservation devices such as flow restrictors, and practices such as off-peak irrigation, will be made available to the public. Building and site development permits that require connections to the City's water system shall incorporate water conservation design features and best management practices.

The City shall also implement water conservation measures through the water, wastewater, and drainage master plans, and through leak detection and inflow and infiltration (I/I) reduction programs.

In response to water shortages, the City will work cooperatively with the regional water supplier and the supplier's other municipal customers to implement an effective water shortage contingency plan that defines response actions based on the severity of the water shortage. End use prohibitions shall be determined based on current conditions, recommendations of a regional task force, and historic water use data and trends, and will be considered for mandatory penalties, charges and other escalating enforcement actions including education and outreach, issuing a verbal/written warning, penalty assessment, and water service termination. The City may consider imposing sharply graduated excessive use rates and/or excessive use fines, additional forms of water rationing, warnings, and physical flow restrictions to water users who fail to respond to less severe sanctions.

Continue to encourage the use of infrastructure and practices that promote efficient water and energy use such as rain barrels, green roofs, and retention structures. Encourage reduced water demand by requiring water-conserving design and equipment in new construction and encouraging the retrofitting of existing development with water-conserving devices, along with water capture and conservation practices.

- ***PF-1e: Water Loss.*** *The City shall perform annual water loss audits to identify and better understand the type of and quantity of water losses occurring in the water distribution system. The City shall ensure that it meets any water conservation/water loss standards promulgated by the State Water Resources Control Board.*

Policy PF-2: Wastewater Collection, Treatment, & Disposal

Objective. *Collect and treat wastewater to achieve safe water quality standards, utilizing the City's internationally renowned marsh treatment facility.*

Applicable sub-policies:

- ***PF-2a: Capacity and management of City wastewater collection system.*** *The wastewater collection system is designed to transport community sewage to the treatment plant. The City shall update its Sewer System Management Plan, at least every five years, to maintain current projections, management, and contingency programs for wastewater collection. The Plan shall identify needed collection system improvements and anticipated extensions, so that they can be budgeted for in the City's Capital Improvement Program. The City shall continue to monitor groundwater infiltration and surface water inflow (I/I) and take necessary action to ensure that these sources do not cause the collection system or the treatment plant to exceed capacity. The City shall also consider adopting building and land use code policies that provide incentives for design, operation, and technology for buildings and sites to minimize wastewater as well as stormwater loads. The City wastewater collection system shall not be extended beyond the Urban Services Boundary except as provided in Policy GM-4b.*
- ***PF-2b: Arcata wastewater treatment system.*** *The City shall continually review and update its Arcata Wastewater Treatment Facility Operations and Maintenance Manual, at least every five years, to evaluate the entire system; reflect any changes in treatment standards; ensure wastewater treatment is meeting current standards; verify that there is adequate treatment system capacity; and ensure adequate water flows to maintain habitat. The City shall ensure ongoing treatment system planning and investments are consistent with mid- and long-range climate adaptation goals, which balance preserving the City's existing investments with habitat restoration and sea level adaptation priorities. Goals, priorities, planning assumptions, and the best available science on which they are based, shall be reviewed publicly through City committees and the Planning Commission at the discretion of the City Council.*
- ***PF-2c: Protecting, improving and restoring water quality.*** *Protecting surface and ground water quality, preventing water pollution, restoring water quality in waterways and wetlands within the City*

and in receiving waters of California and the United States shall guide design, construction, and operation of the City's water management infrastructure. The City shall use necessary resources to comply with State Regional Water Quality Control Board wastewater treatment and discharge standards. The City shall regularly test its wastewater discharges and make necessary adjustments in treatment processes, to ensure that effluent meets the State Regional Water Quality Control Board and National Pollution Discharge Elimination System (NPDES) permit standards.

- ***PF-2d: Composting and beneficial reuse of biosolids and other system byproducts.*** *The City includes biosolids in compost processed at the treatment plant. The City uses this composted material as a soil amendment. The City shall continue this practice as an efficient means of recycling treatment plant by-products and shall investigate the possibility of selling excess compost to generate revenue. This requires the City to protect the quality of its sludge by implementing an industrial and high-volume discharger wastewater pre-treatment program. (See Policy PF-2g Source Control Program, below.)*

- ***PF-2e: Treatment of wastewater from other communities.*** *The City accepts for treatment wastewater from the Fieldbrook Glendale Community Services District. This practice may continue as long as there is adequate treatment system capacity. The City shall not enter into any new agreements for processing wastewater from other communities, nor shall the City accept additional loadings from any connection from other communities through the Fieldbrook Glendale system.*

- ***PF-2g: Source Control Program.*** *The City shall maintain a source control and pretreatment program that provides the legal authority to regulate non-domestic sewer use to control discharges of industrial waste. The source control and pretreatment program shall include legal authority, local limits, pretreatment permitting, and an enforcement response plan.*

Policy PF-3: Stormwater Management

Objective. *Implement the City's Drainage Master Plan and abide by the MS4 Permit to utilize natural drainage systems; minimize increases in stormwater runoff, flooding, and erosion; maintain the integrity of stream hydrology; and reduce pollutant loads.*

Applicable sub-policies:

- ***PF-3c: Stormwater quality.*** *Implement the City's Phase II MS4 Permit to reduce the discharge of pollutants to the maximum extent practicable and protect water quality. Manage surface water controls, facilities such as detention basins and natural infiltration areas, and education programs to protect surface and ground-water quality.*

Policy OS-1: Overall Open Space System

Objective. *Designate, maintain, and enhance the quality, and increase the amount of permanently protected open space in the Arcata Planning Area, including: natural resource areas; resource production areas; outdoor recreation areas; and areas subject to health and safety hazards. These areas are to be protected, linked together wherever practical for habitat connectivity, managed for resource production, and maintained for enjoyment by City residents and visitors.*

Applicable sub-policies:

- ***OS-1c: Relationship to Resource Conservation and Management and Public Safety Elements.*** *Identified hazard areas shall be maintained as open space for the benefit of the community. The policies of this element and Public Safety Element policies provide common direction for hazard area designation and avoidance. The natural open space features of these areas, such as vegetation, shall be retained, except where they contribute to instability or increased hazards.*

Policy OS-2: Natural Resource Protection and Enhancement

Objective. *Designate, maintain, and enhance natural resource areas, including sensitive habitat areas, necessary to sustain plant and animal life and native biological diversity.*

Applicable sub-policies:

- ***OS-2a Open space plan map designations for natural resource protection.*** *Publicly held lands containing creeks, wetlands, other open water, marsh, sensitive habitat, forests, and other important natural resources are designated on the Open Space Map (Figure OS-a). While this map is comprehensive, it is not exhaustive. Additional natural resource lands suitable for protection may be identified through site specific studies and or develop in new areas due to changing environmental conditions.*

- ***OS-2b: Development limitations and management for maintenance of biotic resources and diversity, including aquatic resources and sensitive habitats. Creeks and wetlands are significant components of Arcata's natural open space system.*** *The City shall restore and maintain this system for the benefit of tribal members, residents, visitors, fish, and wildlife.*

  The Arcata Bay and tidelands represent an important natural edge and open space feature of the City. Buildings, landform alterations, or access routes in this area shall be of a design and scale that preservers open space and natural characteristics and maintains public views to the Bay.

  Local creeks which flow openly through the developed portion of the community shall have biological corridors and greenways established, and shall be maintained as visual assets to any developments which adjoin them. Daylighting of channelized or culverted creeks is encouraged where feasible, with a special emphasis on Jolly Giant Creek.

  The natural features of the Mad River corridor, Arcata's creeks and adjacent areas, marshes, and other wetland areas, shall be retained.

  Unique vegetation and wildlife areas shall remain in a natural condition. Such areas include sand dunes and backdune woodlands, eel grass area, salt marshes, and special habitats (tern and osprey nesting areas, cormorant rookery, night heron and egret rookeries, and harbor seal resting areas). The policies of this element shall also call for protection for habitat of species that become threatened in the future.

Policy RC-1: Natural Biological Diversity/ Ecological Function

Objective. *Set an overarching policy that emphasizes the value of biological diversity and the optimal function of natural resources a as part of a healthy ecosystem.*

Applicable sub-policies:

- ***RC-1d: Identification of Environmentally Sensitive Habitat Areas.*** *The City declares the following to be ESHAs within the Planning Area:*

  1. *Rivers, creeks, sloughs, and associated riparian habitats: Mad River; Jacoby Creek; Beith Creek; Fickle Hill Creek; Grotzman Creek; Campbell Creek; Jolly Giant Creek; Janes Creek; Gannon Slough; Butcher Slough; and McDaniel Slough.*
  2. *Wetlands, estuaries, and associated riparian habitats: Arcata Bay; Mad River Slough; Liscom Slough; Butcher Slough; the Aldergrove marshes and ponds; and the Arcata Marsh and Wildlife Sanctuary.*
  3. *Other important habitat areas: waterbird rookeries; shorebird concentration sites; habitat for all rare, threatened, or endangered species on federal or state lists; and vegetated dunes.*
  4. *Public Trust lands such as diked and drained former tidelands that are grazed.*

Policy RC-2: Streams Conservation & Management

Objective. *Enhance, maintain, and restore the biological integrity of entire steam courses (headwaters to mouth), and their associated riparian habitats, as natural features in the City's landscape.*

Applicable sub-policies:

- ***RC-2b: Environmental Buffer Area (EBA).*** *A streamside protection area is hereby established along both sides of the streams identified on the City Watercourse Map. The purpose of the EBA is to remain in a natural state in order to protect streams' ecosystems and their associated riparian habitat areas. The EBA shall include:*

  1. *In areas where existing development, as defined in the Zoning Code, is adjacent to the stream, the EBA shall be not less than 25 feet outward on both sides of the stream, measured from the top of bank.*
  2. *In all other locations within the City, the EBA shall be not less than 100 feet outward on both sides of the stream, measured from the top of bank.*
  3. *In locations within the City having significant areas of riparian vegetation exceeding 100 feet in width measured from the top of bank, the EBA shall be expanded to encompass all of the riparian vegetation, except in no case shall the EBA exceed 250 feet in width from the top of bank on either side of the stream.*
  4. *EBAs outside of the City shall follow the policies in the Humboldt County Framework Plan, regarding Streamside Management Areas.*

- ***RC-2d: The Wetland and Stream Protection Combining (:WSP) Zone.*** *The :WSP zone of the Zoning Code shall be applied to all streamside protection areas. [The WSP zone should be a land use designation under the NR district, e.g., NR-WSP]*

- ***RC-2f: Conservation easement.*** *Dedication of a conservation easement, or equivalent deed restriction, encompassing the area within the EBA shall be required as a condition of approval of any discretionary planning permit, including design review, when any portion of the project site falls within an EBA. Such easements may be conveyed to the City of Arcata, or to another governmental agency that shall manage the easement to protect the EBA's functions, or to a mutually agreeable non-profit entity.*

- ***RC-2g: Maintenance of streams as natural drainage systems.*** *Arcata's creeks carry a significant amount of the City's stormwater runoff. Drainage controls shall be enforced through implementation of the Drainage Master Plan, to protect water quality, and to minimize erosion, sedimentation and flood impacts to City creeks. A comprehensive stream maintenance program shall be prepared to augment stormwater utility rehabilitation projects designed to maintain or improve flow capacity, trap sediment and other pollutants that impair water quality, minimize channel erosion, prevent new sources of pollutants from entering the stream, and enhance instream and riparian habitat.*

- ***RC-2h: Restoration of degraded creek resources.*** *Portions of Janes, Jolly Giant, Campbell, and Grotzman Creeks are culverted or covered, causing degradation of creek resources. Tide gates on creek systems can be barriers that prevent anadromous salmonids from accessing critical habitat. Furthermore, recreational use can degrade riparian vegetation along upland reaches of certain creeks (e.g., Jolly Giant, Campbell, and Jacoby Creeks) within Redwood Park and the Community Forest. Lack of vegetation along creek courses can cause erosion, resulting in water quality and air quality impacts. Restoration activities for improving degraded stream resources shall include:*

  1. *Uncovering of creek courses in public rights-of-way, as part of public works improvement projects.*
  2. *Encouraging landowners to restore degraded EBA and stream resources, including native riparian vegetation establishment and invasive species removal, as part of a new development or renovation.*
  3. *Controlling uses that are damaging to upland reaches of creeks in the Community Forest and*

Redwood Park.

4. *Removing or modifying barriers such as tide gates that prevent migrating anadromous salmonids which are federally listed endangered species from reaching their critical habitat.*
5. *Exclusionary fencing to keep livestock out of the EBA.*
6. *Identifying and addressing sources of pollutants that adversely impact water quality, if applicable.*

Policy RC-7: Water Resources Management

Objective. *Manage Arcata's water resources from a watershed perspective, to maintain surface water and ground water quality and quantity. Runoff will be managed for the benefit of aquatic habitats, native and non-invasive vegetation, and soil conservation, and to recharge groundwater.*

Applicable sub-policies:

- ***RC-7a Protection of surface waters from point and nonpoint pollution sources.*** *The use of natural stormwater drainage systems, which preserve and enhance natural features, shall include the following:*

  1. *Efforts to acquire land or obtain easements for drainage and other public uses of floodplains, where desirable to maintain stream courses in a natural state, shall be supported.*
  2. *Recreational opportunities and aesthetics shall be considered in the design of stormwater retention, detention, treatment, and conveyance facilities.*
  3. *Sound soil conservation practices shall be required, and impacts of proposed developments, with regard to water quality and effects on watersheds, wetlands and drainage courses, shall be carefully examined.*
  4. *The quality of runoff from urban and suburban development shall be improved through use of appropriate and feasible Best Management Practices (BMPs) including, but not limited to, bioretention basins, artificial wetlands, grassy swales, oil/grit separators, with an emphasis on a Low Impact Development approach to stormwater management.*
  5. *New development shall be required to minimize increases in stormwater peak flows and/or volume, to the extent feasible. Stormwater management measures shall take into consideration potential adverse impacts on the Mad River, Arcata Bay, and adjoining lands in the City and Planning Area.*
  6. *New development projects shall be designed to minimize drainage concentrations, maximize permeable surfaces (such as unpaved parking areas) and maintain, to the extent feasible, natural site drainage conditions.*
  7. *New development projects that may adversely affect the quantity and quality of stormwater runoff shall be required to allocate land necessary for detaining post-project flows and/or for incorporating measures to minimize water quality impacts from urban runoff. To the maximum extent feasible, new development shall not produce a net increase in peak stormwater runoff.*
  8. *All development shall comply with the City's post construction stormwater management program (under the MS4 General Permit) which includes stormwater management measures for site design, source control, runoff reduction, stormwater treatment, and baseline hydromodification controls, as applicable based on project type and size.*

Policy RC-9: Soil and Mineral Resources

Objective. *Conserve and manage soil and mineral resources.*

Applicable sub-policies:

- ***RC-9a: Erosion control measures on slopes and other areas of instability.*** *General Plan Public Safety Element Policy PS-3 - Other Geologic Hazards includes protections for steep and unstable slopes, to minimize erosion, sedimentation and landslides. This policy shall be followed as a safety precaution and also to conserve soil resources.*

Implementation Measures

Applicable Implementation Measures:

- ***Implementation Measure RC-11:*** *Explore Tribal Partnerships in Restoration Project Planning. Explore opportunities for partnerships with the Wiyot Tribe and other Wiyot-Area Tribes when pursuing funding for habitat restoration within the City, and seek guidance from appropriate Tribal representatives as part of the habitat restoration planning process.*

Policy PS-2: Seismic Hazards

Objective. *Protect existing and new structures from seismic hazards. Identify and map seismic hazards and assure that any development within such hazard areas does not proceed until geologic and soils conditions are adequately investigated and appropriate mitigation measures, if any, are incorporated into development plans.*

Applicable sub-policies:

- ***PS-2e: Shoreline hazards (tsunami inundation, tidal flooding****. State of California Geological Survey Seismic Hazards Program probabilistic tsunami hazards modelling and public tsunami hazard area maps for Humboldt County indicate that the Arcata Bay shoreline and adjacent areas, between McDaniel Slough and Mad River Slough including the South G Street, South of Samoa, and portions of the Windsong neighborhood, could be inundated by tsunami run-up. The City shall prohibit the location of critical facilities in the tsunami run-up area, use California Geologic Survey Guidelines for Evaluating and Mitigating Tsunami Hazards when evaluating land use proposals within the tsunami hazard zone, and use available emergency broadcasting systems to communicate tsunami warnings. Should coastal access within the tsunami run-up zone be provided in the future, appropriate evacuation route signage shall be posted.*
- ***PS-2h: Public information and disclosure.*** *Redwood Coast Tsunami Work Group (RCTWG) and the City of Arcata have earthquake/tsunami web-based mapping and awareness information that is available to the public. The RCTWG and the City will continue to make the most current information available to help the community prepare for and respond to seismic events.*

Policy PS-3: Other Geologic Hazards and Airspace Protection

Objective. *Protect existing and new structures from non-seismic geologic hazards such as unstable slopes and soils. Require that all non-seismic geologic hazards be adequately addressed and mitigated. Ensure new development does not result in hazards to air navigation.*

Applicable sub-policies:

- ***PS-3a: Slope stability hazards.*** *Slope areas greater than 15%, shown on Figure PS-a, and certain less steep slopes with erosive soils may become unstable if disturbed. The City shall restrict grading, vegetation removal, and new construction in areas with unstable soils unless it can be demonstrated that these activities can occur without impacts. All grading of slope areas shall follow natural contours to maximize stability.*
- ***PS-3b: Grading standards for erosion and sedimentation control.*** *The design, extent, and location of grading shall minimize disturbance of the natural terrain and land features and shall not impact offsite areas. Trees and native vegetation shall be retained around graded areas to stabilize hillsides; retain moisture; reduce erosion, siltation and nutrient runoff; and retain the natural beauty of the area. Cleared areas susceptible to erosion shall be stabilized so that no materials are transported offsite.*

Policy PS-4 Flood Hazards

Objective. *Protect current and future populations and property from flood hazards. Assure that new development within floodplains does not proceed until appropriate mitigation measures are incorporated into development plans.*

Applicable sub-policies:

- ***PS-4a: Floodplain Mapping.*** *The City shall continue participating in the National Flood Insurance Program and maintain the most current Flood Insurance Rate Maps (FIRM) on file. The City shall also continue requesting that the Federal Emergency Management Agency provide hydrographic modeling (using the 1964 flood levels as a benchmark) and an update of flood mapping for the Mad River using the best available information.*

Policy PS-8: Climate Adaptation and Resiliency

Objective. *The City will continue to support and monitor research about the nature of all hazards in Arcata, including research on prediction and warning systems, community vulnerability and consequences assessments, and improvements to building performance and resilience. The City will continue to pursue efforts that minimize Arcata's contribution to climate change by reducing greenhouse gas emissions and protecting people, the built environment, and the natural environment from the impacts of climate change.*

Applicable sub-policies:

- ***PS-8d: Sea Level Rise.*** *Incorporate consideration of sea level rise and other associated climate impacts into public and private infrastructure and asset design and land use planning. The City shall continue to work with local, regional, state, and federal partners and utilize best available science to maximize the safety, environmental performance and climate adaptability of all new development.*
- ***PS-8g: Traditional ecological knowledge.*** *The City of Arcata acknowledges the value of Indigenous sciences and knowledge and the need for Indigenous perspectives in responding to the climate change crisis. The City shall work to support Indigenous-led climate adaptation approaches and shall work collaboratively with tribes and tribal governments for mitigation, adaptation, and resilience to climate change. This policy applies to all previous policies in this section.*

Proposed City of Arcata General Plan 2045 Gateway Area Plan

Open Space and Conservation Policies

Objective. *Establish an urban environment that enhances and complements stormwater management and the open space environment. Promote public gathering, enjoyment, and active and passive use by a broad range of the community.*

Applicable sub-policies:

- ***GA-6d. Linear Park with Daylighted Creek.*** *Establish a linear park with passive recreational amenities adjacent to daylighted and restored segments of Jolly Giant Creek.*
- ***GA-6h. Jolly Giant Creek.*** *Require the restoration and enhancement of the Jolly Giant Creek north of 11th Street. Encourage the daylighting of creek segments south of 11th Street as part of new development projects. Consider additional opportunities for daylighting Jolly Giant Creek, especially along 10th Street, including bridges, road closures, and other alternatives to expose more open creek miles.*

City of Arcata Land Use Code

The following land use code addresses hydrology and water quality within Chapters 9.64 (Grading, Erosion and Sediment Control) and 9.66 (Urban Runoff Pollution Control).

Section 9.64. Grading Erosion and Sediment Control

Establishes minimum standards and regulations for grading activities as well as construction and post-construction runoff control criteria to prevent unreasonable or unnecessary erosion and sediment production and related degradation of the City's stormwater drainage systems.

Section 9.66. Urban Runoff Pollution Control

Establishes provisions to ensure that activities within Arcata add no new pollutants to waterways and reduce present pollutant levels and sediments which are carried to our area and regional waterways through stormwater runoff.

City of Arcata Local Coastal Program

There are no distinct policies within the City of Arcata's Local Coastal Plan that regulate hydrology and water quality that aren't already stated within the Coastal Act.

Humboldt County General Plan

The goals and policies within the Humboldt County General Plan that regulate hydrology and water quality are located within the Water Resources Element and include the following:

WR-G10.Storm Drainage

Storm drainage utilizing onsite infiltration and natural drainage channels and watercourses, while minimizing erosion, peak runoff, and interference with surface and groundwater flows and stormwater pollution.

WR-P1. Sustainable Management

Ensure that land use decisions conserve, enhance, and manage water resources on a sustainable basis to assure sufficient clean water for beneficial uses and future generations.

WR-P10. Erosion and Sediment Discharge

Ministerial and discretionary projects requiring a grading permit shall comply with performance standards adopted by ordinance and/or conditioned to minimize erosion and discharge of sediments into surface runoff, drainage systems, and water bodies consistent with best management practices, adopted Total Maximum Daily Loads, and non-point source regulatory standards.

WR-P11. County Facilities Management

Design, construct, and maintain County buildings, roads, bridges, drainages, and other facilities to minimize erosion and the volume of sediment in stormwater flows.

WR-P21. Enhance Groundwater Recharge Capacity

Encourage watershed management practices that enhance infiltration of rainfall into the groundwater.

WR-P35. Implementation of NPDES Permit

Implement and comply with the National Pollutant Discharge Elimination Systems (NPDES) Permit issued by the State Water Resources Control Board to the designated portions of the County.

WR-P36. Natural Stormwater Drainage Courses

Natural drainage courses, including ephemeral streams, shall be retained and protected from development impacts which would alter the natural drainage courses, increase erosion or sedimentation, or have a

significant adverse effect on flow rates or water quality. Natural vegetation within riparian and wetland protection zones shall be maintained to preserve natural drainage characteristics consistent with the Biological Resource policies. Stormwater discharges from outfalls, culverts, gutters, and other drainage control facilities that discharge into natural drainage courses shall be dissipated so that they make no significant contribution to additional erosion and, where feasible, are filtered and cleaned of pollutants.

WR-P37. Downstream Stormwater Peak Flows

Peak downstream stormwater discharge shall not exceed the capacity limits of off-site drainage systems or cause downstream erosion, flooding, habitat destruction, or impacts to wetlands and riparian areas. New development shall demonstrate that post-development peak flow discharges will mimic natural flows to watercourses and avoid impacts to Beneficial Uses of Water.

WR-P38. New Drainage Facilities

Where it is necessary to develop additional drainage facilities, they shall be designed to be as natural in appearance and function as is feasible. All drainage facilities shall be designed to maintain maximum natural habitat of streams and their streamside management areas and buffers. Detention/retention facilities shall be managed in such a manner as to avoid reducing streamflows during critical low-flow periods.

WR-P42. Erosion and Sediment Control Measures

Incorporate appropriate erosion and sediment control measures into development design and improvements.

WR-P43. Storm Drainage Design Standards

Drainage design standards for new development shall be adopted by ordinance. The design standards shall ensure that storms of specified intensity, frequency, and duration can be accommodated by engineered drainage systems and natural drainage courses.

WR-P44. Storm Drainage Impact Reduction

Develop and require the use of Low Impact Development (LID) standards consistent with Regional Water Board requirements to reduce the quantity and increase the quality of stormwater runoff from new development and redevelopment projects in areas within the County's MS4 boundary or as triggered under other Regional Water Board permits. For all other watersheds, develop storm drainage development guidelines with incentives to encourage LID standards to reduce the quantity and increase the quality of stormwater runoff from new developments.

WR-P45. Reduce Toxic Runoff

Minimize chemical pollutants in stormwater runoff such as pesticides, fertilizers, household hazardous wastes, and road oil by supporting education programs, household hazardous waste and used oil collection, street and parking lot cleaning and maintenance, use of bioswales and other stormwater best management practices described in the California Stormwater Best Management Practices Handbooks or their equivalent.

Humboldt Bay Area Local Coastal Plan

The policies within the Humboldt Bay Area Plan Local Coastal Plan that regulate hydrology and water quality include the following:

Section 30254. Public Services – Rural

New or expanded public works facilities shall be designed and limited to accommodate needs generated by development or uses permitted consistent with the provisions of this division; provided, however, that it is the intent of the legislature that State Highway Route 1 in rural areas of the coastal zone remain a scenic two-lane road. Special districts shall not be formed or expanded except where assessment for, and provision of, the service would not induce new development inconsistent with this division. Where existing or planned public works facilities can accommodate only a limited amount of new development, services to coastal- dependent land use, essential public services and basic industries vital to the economic health of the region, state, or nation, public recreation, commercial recreation, and visitor- serving land uses shall not be precluded by other development.

Section 30240 – ESHA

a. *Environmentally sensitive habitat areas shall be protected against any significant disruption of habitat values, and only uses dependent on such resources shall be allowed within such areas.*

b. *Development in areas adjacent to environmentally sensitive habitat areas and parks and recreation areas shall be sited and designed to prevent impacts which would significantly degrade such areas, and shall be compatible with the continuance of such habitat areas.*

Section 30233 – Filling of Wetlands

The diking, filling, or dredging of open coastal waters, wetlands, estuaries, and lakes shall be permitted in accordance with other applicable provisions of this division, where there is no feasible less environmentally damaging alternative, and where feasible mitigation measures have been provided to minimize adverse environmental effects, and shall be limited to the following:

(5) Incidental public service purposes, including, but not limited to, burying cables and pipes or inspection of piers and maintenance of existing intake and outfall lines.

Section 30607.1 – Mitigation for Wetland Fill

Where any dike and fill development is permitted in wetlands in conformity with this division, mitigation measures shall include, at a minimum, either acquisition of equivalent areas of equal or greater biological productivity or opening up equivalent areas to tidal action; provided, however, that if no appropriate restoration site is available, an in-lieu fee sufficient to provide an area of equivalent productive value or surface areas shall be dedicated to an appropriate public agency, or such replacement site shall be purchased before the dike or fill development may proceed. Such mitigation measures shall not be required for temporary or short-term fill or diking; provided that a bond or other evidence of financial responsibility is provided to assure that restoration will be accomplished in the shortest feasible time.

Humboldt Bay Receiving Water Monitoring Plan

The Clean Water Act requires point source dischargers to control the amount of conventional, non-conventional, and toxic pollutants that are discharged into the waters of the United States. The control of pollutants discharged is established through effluent limitations and other requirements in NPDES permits. As part of the City of Arcata Municipal Wastewater Treatment Facility 2019 NPDES permit, monitoring of surface water entering the Humboldt Bay is to occur in several locations to ensure compliance with the NPDES permitting: The Arcata Marsh Wildlife Sanctuary (AMWS) and the as-of-yet constructed RSW-001 discharge site.

Monitoring Locations

AMWS. *Areas throughout the AMWS representative of various wetland conditions in accordance with the Special Study required under section VI.C.2.a of the Order. Monitoring of the AMWS shall be implemented in accordance with the work plan approved by the Executive Officer in accordance with*

section VI.C.2.a of the Order. Monitoring results required in accordance with the approved plan shall be submitted annually, by March 1 each year.

***RSW.** Receiving water monitoring location at the tide gate following the point at which the brackish marsh discharges into Humboldt Bay. The Permittee shall monitor the receiving water at Monitoring Location RSW-001 during periods of discharge to the brackish marsh, as follows:*

Table 5.5-1 Receiving Water Monitoring – Monitoring Location RSW-001

Parameter	Units	Sample Type	Minimum Frequency	Required Analytical Test Method
pH	standard units	Grab	Weekly[1]	Part 136[2]
Dissolved Oxygen	mg/L	Grab	Weekly	Part 136
Floatables/Discoloration	--	Visual	Monthly	--
Hardness, Total (as $CaCO_3$)	mg/L	Grab	Monthly	Part 136[2]
Nitrate Nitrogen, Total (as N)	mg/L	Grab	Monthly	Part 136[2]
Salinity	Ppt	Grab	Weekly[1]	Part 136[2]
Specific Conductance	µmhos/cm	Grab	Weekly	Part 136[2]
Temperature	°C	Grab	Weekly[1]	Part 136[2]
Total Dissolved Solids	mg/L	Grab	Monthly	Part 136[2]
Turbidity	NTU	Grab	Monthly	Part 136[2]
CTR Priority Pollutants[3]	µg/L	Grab	Twice per permit term[4]	Part 136[2]

Table Notes:

1. pH, salinity and temperature monitoring must coincide with monthly effluent monitoring for ammonia.

2. Pollutants shall be analyzed using the analytical methods described in 40 C.F.R. part 136 or by methods approved by the Regional Water Board or State Water Board, such as with the current edition of *Standard Methods for Examination of Water and Wastewater* (American Public Health Administration).

3. Those pollutants identified by the California Toxics Rule at 40 C.F.R. section 131.38. Hardness shall be monitored concurrently with the CTR priority pollutant sample.

4. CTR priority pollutant sampling shall be completed no later than June 1, 2023 during a period of discharge to the brackish marsh. Effluent and receiving water monitoring shall occur concurrently.

5.5.4 Evaluation Criteria and Significance Thresholds

The adoption and implementation of the General Plan 2045 would cause a significant impact related to hydrology and water quality, as defined by the CEQA Guidelines, if it would:

– Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality;

– Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the Project may impede sustainable groundwater management of the basin;

– Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

- Result in substantial erosion or siltation on- or off-site;
- Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;
- Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or

- Impede or redirect flood flows.

– In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation; or
– Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan.

5.5.5 Methodology

Impact assessment methodology considered streams and other watercourses, storm drainage information, the FEMA 100-year flood zone, and tsunami hazard area relative to the study area.

Development is currently allowed in areas that are, according to City Sea Level Rise Vulnerability and Risk Analysis (Anderson, Sea Level Rise in the Humboldt Bay Region, 2018; Laird, City of Arcata Sea Level Rise Vulnerability Assessment, 2018), vulnerable to sea level rise. Increased density will be allowed in the Infill Opportunity Zones, none of which are within vulnerable areas during the General Plan 2045 planning horizon. Projected to occur after the planning horizon, 3.3 feet of sea level rise could reach very minor areas along the very southern edge of the Gateway Area during high tides. These areas are associated with Jolly Giant Creek and already developed. Parcels adjacent to Jolly Giant Creek are subject to creek setbacks, preventing additional development that could cause sea level rise related impacts. None of the development allowed under the General Plan 2045 would exacerbate sea level rise within the areas that are vulnerable to 3.3 feet of sea level rise, therefore sea level rise is not discussed further in this analysis.

5.5.6 Impacts and Mitigation Measures

Impact HWQ-a: Would the Project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

Increased development, development intensity, and population growth allowed by the General Plan 2045 could degrade water quality within the City. Potential water quality concerns could include an increase non-point source pollution from new impervious services, construction activity that increase erosion and sedimentation in watercourses, and an increase of pollutants from additional traffic. The General Plan 2045 policies to address water quality standards include:

- *PF-2c: Protecting, improving and restoring water quality. Protecting surface and ground water quality, preventing water pollution, restoring water quality in waterways and wetlands within the City and in receiving waters of California and the United States shall guide design, construction, and operation of the City's water management infrastructure. The City shall use necessary resources to comply with State Regional Water Quality Control Board wastewater treatment and discharge standards. The City shall regularly test its wastewater discharges and make necessary adjustments in treatment processes to ensure that effluent meets the State Regional Water Quality Control Board and National Pollution Discharge Elimination System (NPDES) permit standards.*

- *PF-2g: Source Control Program. The City shall maintain a source control and pretreatment program that provides the legal authority to regulate non-domestic sewer use to control discharges of industrial waste. The source control and pretreatment program shall include legal authority, local limits, pretreatment permitting, and an enforcement response plan.*

- *PF-3c: Stormwater quality. Implement the City's Phase II MS4 Permit to reduce the discharge of pollutants to the maximum extent practicable and protect water quality. Manage surface water controls, facilities such as detention basins and natural infiltration areas, and education programs to protect surface and ground-water quality.*

- *RC-2g: Maintenance of streams as natural drainage systems. Arcata's creeks carry a significant amount of the City's stormwater runoff. Drainage controls shall be enforced through implementation of the Drainage Master Plan, to protect water quality, and to minimize erosion, sedimentation and flood*

impacts to City creeks. A comprehensive stream maintenance program shall be prepared to augment stormwater utility rehabilitation projects designed to maintain or improve flow capacity, trap sediment and other pollutants that impair water quality, minimize channel erosion, prevent new sources of pollutants from entering the stream, and enhance instream and riparian habitat.

- *RC-7a: Protection of surface waters from point and nonpoint pollution sources. The use of natural stormwater drainage systems, which preserve and enhance natural features, shall include the following:*

    1. *The quality of runoff from urban and suburban development shall be improved through use of appropriate and feasible Best Management Practices (BMPs) including, but not limited to, bioretention basins, artificial wetlands, grassy swales, oil/grit separators, with an emphasis on a Low Impact Development approach to stormwater management.*
    2. *New development shall be required to minimize increases in stormwater peak flows and/or volume, to the extent feasible. Stormwater management measures shall take into consideration potential adverse impacts on the Mad River, Arcata Bay, and adjoining lands in the City and Planning Area.*
    3. *New development projects shall be designed to minimize drainage concentrations, maximize permeable surfaces (such as unpaved parking areas) and maintain, to the extent feasible, natural site drainage conditions.*
    4. *New development projects that may adversely affect the quantity and quality of stormwater runoff shall be required to allocate land necessary for detaining post-project flows and/or for incorporating measures to minimize water quality impacts from urban runoff. To the maximum extent feasible, new development shall not produce a net increase in peak stormwater runoff.*
    5. *All development shall comply with the City's post construction stormwater management program (under the MS4 General Permit) which includes stormwater management measures for site design, source control, runoff reduction, stormwater treatment, and baseline hydromodification controls, as applicable based on project type and size.*

The General Plan 2045 includes Implementation Measure RC-5 (Surface Water Quality Ordinance) in the Resource Conservation and Management Element which states, "Implement the City's Municipal Separate Storm Sewer System (MS4) requirements for post-construction activities including Ordinance No. 1463 that sets forth standards for discharge into the stormwater drainage facilities for the City, and establishes a stormwater pollution control program in compliance with the Clean Water Act." Implementation Measure RC-5 would reduce the potential for the construction and operation of projects implemented under the General Plan 2045 to degrade surface or ground water quality.

Additionally, projects implemented under the General Plan 2045 would meet the requirements of the City of Arcata Land Use Code sections on Grading, Erosion and Sediment Control (Policy 9.64). The City's Land Use Code Policy 9.66 (Urban Runoff Pollution Control) ensures that activities within Arcata add no new pollutants to waterways and reduce present pollutant levels and sediments.

There is little reason to expect future development of Arcata to result in the kinds of ground water contamination that has occurred in the past, in part due to state and local laws. The potential to develop sites where past contamination has occurred may cause the contamination to be cleaned up more quickly and completely than if the land was left vacant. General Plan 2045 Policy LU-e (Conversion and reuse of industrial sites) encourages conversion and reuse of abandoned or inactive industrial sites and requires an environmental site assessment for sites where prior uses may have caused soil contamination. Currently, septic systems and onsite disposal of toxic substances are the leading causes of groundwater contamination. General Plan Policy RC-7b (Protection of groundwater sources) does not allow septic systems within the Urban Services Boundary to be permitted and states that incidents of onsite toxics disposal shall be referred to the appropriate county and state agencies.

The General Plan 2045 contains guidelines and policies for surface water and groundwater quality within the Resource Conservation and Management Element, Public Facilities and Infrastructure Element, and Open Space Element. The General Plan 2045 policies, Land Use Code, City's Municipal Separate Storm Sewer System

(MS4) requirements (in compliance with the Clean Water Act), along with other State and federal regulations would reduce water quality impacts to a less than significant level.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact HWQ-b: Would the Project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the Project may impede sustainable groundwater management of the basin?

The adoption and implementation of the General Plan 2045 and associated growth is expected to have relatively little effect on the quantity or quality of groundwater availability in the Mad River Valley Lowland Basin. Most new development would be served by the City's main water supplier, Humboldt Bay Municipal Water District, which sources water from the Mad River. The source of supply from the Humboldt Bay Municipal Water District is adequate to meet Arcata's planned growth; see Section 3.12 (Utilities and Service Systems) for additional information.

New construction could include additional impervious surfaces, which would decrease the area available for rainfall to infiltrate the ground and recharge the underlying water table. The General Plan 2045 encourages infill development in the Infill Opportunity Zones. These Zones are currently urban with a high percentage of impervious surfaces as well as existing roads and utilities. Compared to potential urban sprawl and development in the agricultural or forested areas around Arcata, development in the Infill Opportunity Zones would create less impervious surface, having less impact on existing groundwater recharge.

As described in the Open Space Element and Resource Conservation and Management Element, the City manages forestry, open space, and water resource throughout the City for production of certain resources, ecological function, but also for the recharge of groundwater basins. The City has prioritized the restoration and protection of the wetlands and creeks throughout the City (Policy RC-7, Implementation Measure RC-1); recognizing that these resources provide the benefit of groundwater recharge.

Due to the adequate water supply to serve new development, the General Plan policies and implementation measures discussed above, and State and federal regulations, unsustainable groundwater management would not occur. There would be no impact.

Mitigation Measures: No mitigation is necessary

Level of Significance: No impact

Impact HWQ-c.i: Would the Project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would result in substantial erosion or siltation on- or off-site?

Future development within Arcata would include buildings and paved areas that would increase the total impervious surface area. The Infill Opportunity Zones include areas adjacent to waterways, which could potentially increase the overall surface runoff to, and impact, those adjacent streams and wetlands.

The kinds of hydrologic impacts that can be expected from development near waterways include:

– Increases in the volume and speed of runoff, due to increased impervious areas (roofs, roads, parking spaces, etc.) and changes in vegetation;
– Altered summer base flows resulting from changes in groundwater infiltration, changes in fog condensation resulting from changes in vegetation (e.g., removal of redwood trees), and use of municipal water (e.g., for lawn watering) that drains to creeks;

– Instability in stream channels as they adjust to altered hydrology; and
– Increase in non-point source pollutants.

None of the above Infill Opportunity Zones are located on, or near, open waters or tidal wetlands. Construction of Arcata Wastewater Treatment Facility improvements has been ongoing, and once completed would provide reliable service to the community now and in the future, replace aging critical infrastructure from the late 1980s, reconfigure to a single pass flow through the treatment facility and enhancement wetlands, and upgrade the disinfection system to ultraviolet light (UV) in order to continue to provide wastewater treatment while improving existing levels of regulatory compliance for the protection of water quality and public health.

The City has implemented a master drainage plan and LID policies to minimize increases in stormwater runoff, flooding, and erosion (Policy PF-3, RC-2, WR-P44). The locations of proposed new infill development, the General Plan 2045 policies listed above, and State and federal regulations would reduce water quality impacts to a less than significant level.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact HWQ-c.ii: Would the Project substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?

Projected future development, without controls or mitigation, could result in minor to moderate increases in flooding and put additional people and structures at risk from flooding. Two causes can increase flooding: drainage pattern changes that increase the volume and speed of runoff, and floodplain development that impedes the flow of water.

Arcata could be subject to flooding from the Mad River, including from failure of Mathews Dam, local creeks, and Humboldt Bay. Development of structures within the floodplains puts the structures and their occupants at risk of flooding. Filling the floodplain to place development above the expected high water elevation would reduce the chance of flooding; however, such filling would - by reducing the area available to convey flood flows - increase the height of flood flows.

The Infill Opportunity Zones are located outside of the mapped FEMA floodplains and would not be expected to cause on- or off-site flooding given that post-construction runoff would be detained on site due to City, County and Regional Water Board storm water requirements.

The General Plan 2045 contains guidelines and policies for surface water, stormwater, and floodplain management (City Policy PF-3, RC-2g, RC-7c). This, along with other state and federal regulations, would reduce water quality impacts to a less than significant level.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact HWQ-c.iii: Would the Project create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

Development allowed by the General Plan Update would result in additional impervious surfaces, thereby increasing stormwater runoff to levels that could exceed the capacity of existing or planned stormwater drainage systems, resulting in flooding on- or off-site. The General Plan 2045 Resource Conservation and Management Element and Public Facility and Infrastructure Element include the following Implementation Measures to address stormwater drainage capacity and pollution:

- Imp-RC-5: Surface Water Quality Ordinance. Comply with the Resource Conservation and Management Element which states, “Implement the City’s Municipal Separate Storm Sewer System (MS4) requirements for post-construction activities including Ordinance No. 1463 that sets forth standards for discharge into the stormwater drainage facilities for the City of Arcata and establishes a stormwater pollution control program in compliance with the Clean Water Act.
- Imp-PF-1: Urban Water Management Plan. Update the City Urban Water Management Plan, at least every five years, to assess system efficiency and ensure there is adequate storage capacity and fire flow. The Management Plan will also include economic incentives, education programs, and monitoring measures to promote water conservation.
- Imp-PF-2: Wastewater Collection System Maintenance Program. Update the City Wastewater Collection System Maintenance Program, at least every five years, to assess collection system capacity and condition, ensure there is adequate treatment and disposal capacity, and recommend improvements necessary to reduce groundwater infiltration and surface water inflow. The Maintenance Plan will also include economic incentives, education programs, and monitoring measures to reduce wastewater generation.
- Imp-PF-3: Drainage Master Plan and Phase II MS4 Permit. Update the City Drainage Master Plan to implement current provisions for minimizing increases in stormwater runoff, maintaining the integrity of stream hydrology, and reducing pollutant loads. Implement the City’s MS4 permit requirements through ordinance No. 1463, which sets forth standards for discharge into the stormwater drainage facilities for the City of Arcata and establishes a stormwater pollution control program in compliance with the Clean Water Act.

Projects implemented under the General Plan 2045 would meet the requirements of the City of Arcata Land Use Code sections on Grading, Erosion and Sediment Control (Policy 9.64) and Urban Runoff Pollution Control (Policy 9.66). Ordinance No. 1463 would reduce the potential for the construction and operation of projects implemented under the General Plan 2045 to create or contribute runoff that would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff. The General Plan 2045 policies and implementation measures along with other State and federal regulations would reduce water quality impacts to a less than significant level.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact HWQ-c.iv: Would the Project impede or redirect flood flows?

Portions of the City are within FEMA 100-year flood zones, and the General Plan 2045 land use map allows development within these flood hazard areas. However, development will be concentrated within the Infill Opportunity Zones, which are located outside 100-year flood zones. Projected future development, without controls or mitigation, could result in minor to moderate increases in flooding and put additional people and structures at risk from flooding. Development within a floodplain could impede or redirect the flow of water.

General Plan 2045 Implementation Measure PS-4 (Floodplain mapping and management program) requires the City to update floodplain mapping throughout the planning area, including continued participation with the National Flood Insurance Program. Measure PS-4 also limits development within floodplains that could impede or redirect floods until appropriate mitigation measures, such as discussed in PS-4c, are incorporated into development plans. The General Plan 2045 policies and implementation measures would reduce flood flow redirection or impediment impacts to a less than significant level.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact HWQ-d: Would the Project, in flood hazard, tsunami, or seiche zones, risk release of pollutants due to Project inundation?

The study area is not located near a larger isolated body of water that may be affected by a seiche. Some areas within the study area are located within a tsunami hazard zone and/or the FEMA 100-year flood zone. If a tsunami or large flood event occurred during construction, pollutants from heavy machinery (e.g., diesel) could be released into the environment. Additionally, if construction occurred in an area of known or unknown contamination, pollutants could be released into the environment if the site were inundated by a tsunami or flood event.

According to the State Water Resource Control Board's GeoTracker there are eleven active cleanup sites within the study area, five of which are within the Gateway Area and Downtown Infill Opportunity Zones (see Figure 3.6-1). Of that total, none are within tsunami or flood hazard zones. Additionally, as discussed in Section 3.6 (Hazards and Hazardous Conditions), proposed individual developments within the study area would be required to conduct project-specific environmental screening such as a Phase I Environmental Site Assessment to confirm conditions have not changed from what is shown in (or absent from) the Database Review and/or Geotracker investigations. If new or existing potential significant project-level hazards or hazardous materials impacts are identified, the proposed project would be considered discretionary and would require a site-specific CEQA analysis, potentially including mitigation measures.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact HWQ-e: Would the Project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

The relevant water quality control plan is the North Coast Regional Water Quality Control Board Basin Plan, which establishes thresholds for key water resource protection objectives for both surface waters and groundwater. As required, Projects implemented under the General Plan 2045 would obtain coverage under State Water Resources Control Board Order No. 2009-0009-DWQ, Waste Discharge Requirements for Discharges of Storm Water Runoff Associated with Construction and Land Disturbance Activities, which would include a Stormwater Pollution Prevention Plan. These regulatory requirements and associated requisite monitoring would ensure that a conflict with the Basin Plan does not occur. There would be no impact.

The study area is located in the Mad River Valley – Mad River Lowland Basin 1-008.01, which is has a SGMA Basin Priority of Very Low (DWR 2020). The City has not adopted a groundwater management plan. Therefore, the adoption and implementation of the General Plan 2045 would not conflict with or obstruct implementation of a sustainable groundwater management plan. No impact would occur.

Mitigation Measures: No mitigation is necessary

Level of Significance: No impact

5.5.7 Cumulative Impacts

Impact HWQ-C-1: Would the Project contribute to a cumulatively significant impact to Hydrologic and Water Quality Resources?

As development proceeds under the General Plan 2045, impervious surfaces and the amount of pollutants will increase, impacting surface water and groundwater quality. However, cumulative water quality impacts in the City and the surrounding region would be reduced by implementing best management practices in accordance with the City's and County's NPDES permitting, and implementation of the water quality policies of the General Plan 2045. With the General Plan 2045 policies and implementation actions in place and continued compliance with

the NPDES and other RWQCB regulations, the adoption and implementation of the General Plan 2045 would not have a significant cumulative water quality impact. The General Plan 2045 would minimize potential drainage and flooding impacts and maintain groundwater recharge through management and protection of open space, creeks, and wetlands.

Given that the Project would not result in any significant impacts to hydrology and water quality, and that the projects considered in Table 1.10-1 would not result in a likelihood for significant impacts to hydrology and water quality in or near the study area, the potential for cumulative hydrology and water quality impacts within the study area would be less than significant.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

5.6 Mineral Resources

This section evaluates the potential impacts related to mineral resources resulting from adoption and implementation of the General Plan 2045. No comment letters received in response to the Notice of Preparation circulated for the proposed General Plan 2045 were related to mineral resources.

To provide the basis for this evaluation, the Setting section describes the local setting within the City. The Regulatory Framework section describes the regulatory background that applies to mineral resources, and the Impact Analysis section establishes the thresholds of significance, evaluates potential impacts, and identifies the significance of impacts.

5.6.1 Study Area

For impact assessment related to mineral resources, the City limits were used as the study area (see Figure 2-1 – City of Arcata Planning Areas).

5.6.2 Setting

The predominant mining activity in Humboldt County, outside of the study area, is the extraction of aggregate resources (stone, sand, and gravel). Multiple extraction sites throughout the County produce sand and gravel, metals, stone, and clay. There are no mineral resources, existing mines, major mineral deposits, or critical minerals within the study area (DOC 2022). The mineral resources adjacent to the study area are primarily aggregate deposits found along the Mad River and in the Arcata Bottom. Areas along the Mad River, within and upstream of the City's Sphere of Influence, are currently used for aggregate resource extraction but are not within the identified Study Area.

5.6.3 Regulatory Framework

Federal

There are no federal policies or regulations relevant to the Project for mineral resources.

State

Surface Mining and Reclamation Act

The California Surface Mining and Reclamation Act of 1975 (SMARA) provides policies that regulate surface mining operations and encourages the production, conservation, and protection of the state’s mineral resources. During land use planning, local governments must consider the State Mining and Geology Board’s mineral land classifications. The State Geologist has not classified the land within Humboldt County based on the known or inferred mineral resource potential of that land, pursuant to SMARA classifications.

California Coastal Act

A portion of the study area is within the Coastal Zone. Coastal Act Section 30705 and Section 30233 include provisions related to mineral extraction and natural resource protection but are not relevant to this analysis.

Regional and Local

City of Arcata General Plan 2020

The General Plan 2020 contains guidelines for soils and mineral resources within the Resource Conservation and Management Element and the Open Space Element. The following policies from the General Plan 2020 are applicable to the proposed Project.

Policy RC-9: Soils and Mineral Resources

Objective. *Conserve and manage soil and mineral resources.*

Applicable sub-policy:

- ***RC-9c: Management of mineral resource (gravel) extraction, processing, and transport****. Areas along the Mad River, within and upstream of the City's Sphere of Influence, are currently used for aggregate (i.e., gravel) resource extraction. The City shall encourage Humboldt County to limit the quantity of aggregate extracted to an amount that does not exceed the mean annual recruitment and shall request that Policy RC-1 and RC-2 be applied to protect natural biological diversity and ecosystem functions along the river. The City shall also request that the County not approve or renew permits for commercial mineral resource extraction in A-E designated lands in the City's Planning Area. Mineral resource extraction operations shall not result in additional soil runoff, and shall be consistent with the City's seismic safety policies (see Policy PS-2 in Public Safety Element).*

Policy OS-3: Open Space For Managed Production of Resources

Objective. *Designate and conserve resource areas, including forest and agricultural lands, fisheries and aquaculture, groundwater, and mineral resources, for their sustainable, long-term productive capabilities.*

Applicable sub-policies:

- ***OS-3a: Designations for forest, agriculture, fisheries, aquaculture, groundwater, and mineral resource uses and management.*** *All publicly held lands, and some privately held lands adjacent to the Community Forest and east of Aldergrove Industrial Park, actively managed for production of forest, fisheries, aquaculture and mineral resources are designated as Natural Resource [NR] on the General Plan Land Use Element map. Productive agricultural lands are designated on the Open Space Map.*
- ***OS-3b: Development limitations and management for productive resource areas.*** *The policies of the Resource Conservation and Management Element shall be followed for the development and management of productive resource lands. This includes policies for: Natural Biological Diversity; Streams Management; Wetlands Management; Baylands and Tidelands; Agricultural and Forest Resources; and Water, Energy, Soils and Mineral Resources. The City shall require that open space resource management be consistent with these and other applicable General Plan policies.*

Proposed City of Arcata General Plan 2045

Policy RC-9: Soils and Mineral Resources

Objective. *Conserve and manage soil and mineral resources.*

Applicable sub-policy:

- ***RC-9c: Management of mineral resource (gravel) extraction, processing, and transport.*** *Areas along the Mad River, within and upstream of the City's Sphere of Influence, are currently used for aggregate (i.e., gravel) resource extraction. The City shall encourage Humboldt County to limit the quantity of aggregate extracted to an amount that does not exceed the mean annual recruitment and shall request that Policy RC-1 and RC-2 be applied to protect natural biological diversity and ecosystem functions along the river. The City shall also request that the County not approve or renew permits for commercial mineral resource extraction in A-E designated lands in the City's Planning Area. Mineral resource extraction operations shall not result in additional soil runoff, and shall be consistent with the City's seismic safety policies (see Policy PS-2 in Public Safety Element).*

City of Arcata Land Use Code

The City of Arcata Land Use Code addresses site specific standards related to protection of stream resources near extraction sites.

> ***9.28.100: Wetland Protection (:WP) and Stream Protection (:SP) Combining Zones***
>
> ***A. Purpose****. The :WP combining zone is applied to sites and areas with or adjacent to wetlands. The :SP combining zone is applied to sites and areas with or adjacent to streams and tidelands. Both of the combining zones are intended to protect these significant environmental resources from destruction and degradation, and to retain and enhance the resources as valuable natural, scenic, and recreational amenities as appropriate.*
>
> ***D. Site-Specific Standards.***
>
> *a. APNs 507-381-004, -005, and -007 (collectively, Eureka Ready Mix or ERM), and 507-381-001 (Humboldt Flake Board, which is located completely within the stream buffer area) :SP zone will allow for the continued extraction of rock product from the streambed, as permitted under ERM's existing County extraction permit. The Stream Protection setback will be established prior to the issuance of the first discretionary permit. Existing uses on APNs -004, -005 and -007 may operate in perpetuity unless and until such time as the uses described above cease for a period of three years. Following the three-year period, any new use must conform to IL zoning. (Ord. 1428, eff. 5/1/2015)*

City of Arcata Local Coastal Program

City of Arcata's Local Coastal Program contains no policies related to mineral resources.

Humboldt County Ordinance 2117

Ordinance 2117 implements the provisions of the Surface Mining and Reclamation Act of 1975 (SMARA) and establishes county-wide surface mining regulations. County regulations are intended to protect environmental quality, restrict incompatible land uses, and assure sustainable supply of mineral resources. The Ordinance requires a conditional use permit, reclamation plan, and development standards for all surface mining operations throughout the County.

5.6.4 Evaluation Criteria and Significance Thresholds

The adoption and implementation of the Arcata General Plan 2045 would cause a significant impact related to mineral resources, as defined by Appendix G of the CEQA Guidelines, if it would:

– Result in the loss of availability of a known mineral resource that would be a value to the region and the residents of the state; or
– Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan.

5.6.5 Methodology

Evaluations of potential impacts to mineral resources from the adoption and implementation of the General Plan 2045 were based on review of available documentation, including the California Department of Conservation Mineral Land Classification.

5.6.6 Impacts and Mitigation Measures

Impact MR-a: **Would adoption and implementation of the General Plan result in the loss of availability of a known mineral resource that would be a value to the region and the residents of the state?**

The proposed General Plan 2045 is not expected to significantly affect mineral resources. Infill development would be promoted by General Plan 2045, and construction of additional buildings and roads would use aggregates, such as those extracted within Humboldt County outside of the study area. The General Plan 2045 promotion of infill development, renovations or expansions of existing buildings, and development in areas served by existing roads, would require comparatively less aggregate than that needed for new development requiring building foundations and new road networks. Development is expected to occur at a modest rate.

Extraction rates are not under the direct control of the City. The General Plan 2045 includes the following policy to promote sustainable aggregate extraction to address potential mineral resource impacts:

> ***Resource Conservation Element Policy RC-9c: Management of mineral resource (gravel) extraction, processing, and transport.*** *Areas along the Mad River, within and upstream of the City's Sphere of Influence, are currently used for aggregate (i.e., gravel) resource extraction. The City shall encourage Humboldt County to limit the quantity of aggregate extracted to an amount that does not exceed the mean annual recruitment and shall request that Policy RC-1 and RC-2 be applied to protect natural biological diversity and ecosystem functions along the river. The City shall also request that the County not approve or renew permits for commercial mineral resource extraction in A-E designated lands in the City's Planning Area. Mineral resource extraction operations shall not result in additional soil runoff and shall be consistent with the City's seismic safety policies (see Policy PS-2 in Public Safety Element).*

The General Plan 2045 is not expected to result in the loss of availability of a known mineral resource classified MRZ-2 by the State Geologist that was of value to the region and the residents of the state. Additionally, the infill focus on General Plan 2045 and Policy RC-9c would reduce potential mineral resource impacts. The impact is less than significant.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact MR-b: **Would adoption and implementation of the General Plan result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?**

There are no mineral resources, existing mines, major mineral deposits, or critical minerals within the study area (DOC 2022). There are no locally important mineral resource recovery sites delineated on a local general plan, specific plan or other land use plan within the study area. Because of the infill growth pattern promoted by the plan, little or no expansion of City boundaries is expected. This means that little or no impact is expected from land use changes on locations that are sources of mineral resources outside the study area. No impact would occur.

Mitigation Measures: No mitigation is necessary

Level of Significance: No Impact

5.6.7 Cumulative Impacts

Impact MR-C-1: **Would the Project contribute to a cumulatively significant impact to Mineral Resources?**

Projects considered for cumulative impacts are identified in Table 1.10-1 and some may require the use of aggregate for construction. As discussed in Impact MR-1, General Plan 2045 contains Policy RC-9c for the City to encourage Humboldt County to limit the quantity of aggregate extracted to a sustainable level and to coordinate with the County on commercial mineral resource extraction uses in the City's Planning Area. Additionally, no land use changes are proposed that could limit access to mineral resources. While the development promoted by General Plan 2045 and other cumulative projects would require mineral resources for construction, development would occur over a 20-year planning horizon. Extraction and production levels would be managed at the County level in accordance with the County General Plan and Ordinance 2117. There would be no cumulative impact related to mineral resources.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

5.7 Wildfire

This section evaluates the potential impacts related to wildfire resulting from adoption and implementation of the General Plan 2045. To provide the basis for this evaluation, the Setting section describes the wildfire setting. The Regulatory Framework section describes the regulatory background that applies to the Project. The Impact Analysis section establishes the thresholds of significance, evaluates potential impacts to wildfire, and identifies the significance of impacts.

Of the comment letters received in response to the Notice of Preparation circulated for the proposed Arcata General Plan 2045, there were no comments specific to wildfire.

5.7.1 Study Area

The study area for wildfire includes the City limits and surrounding areas included in the City Planning Boundary (see Figure 2-1 – City of Arcata Planning Areas). The study area was expanded due to the potential for wildfires to spread over large areas.

5.7.2 Setting

A wildfire is a non-structural fire that occurs in vegetative fuels, excluding prescribed fire. Wildfires can occur in undeveloped areas and spread to urban areas where the landscape and structures are not designed and maintained to avoid sparking fire. A wildland-urban interface is an area where development is located in proximity to areas prone to wildland fire. More specifically, the wildland-urban interface exists when a certain set of conditions are present. The National Fire Protection Agency states that these conditions include, but are not limited to, the amount, type, and distribution of vegetation; the flammability of structures in the area and their proximity to fire-prone vegetation and to other combustible structures, weather patterns and general climate conditions, topography, hydrology, and average lot size (NFPA 2009). The United States Forest Service has identified approximately 70 percent of the City as a wildland urban interface (Wildland Urban Interface (WUI) mapping, CAL FIRE Fire and Resource Assessment Program, 2019). Wildland urban interface, or WUI, is the area where structures and other human development meet or intermingle with undeveloped wildland or vegetative fuels. Examples of wildland urban interface could include the neighborhoods near forested hills to the east, open fields to the west of the Gateway Area and north of the Valley West Infill Opportunity Zone, as well as the Arcata Bottoms to the west of the City. However, WUI maps are used as indicators of hazard or risk but are not regulatory in Local Responsibility Area (defined below) that is not mapped as a Very High Fire Hazard Severity Zone (VHFHSZ). The City of Arcata is entirely Local Responsibility Area and there is no VHFHSZ. The Arcata Fire Protection District refers to the guidance of the California State Fire Marshall's FRAP map (Fire and Resource Assessment Program through CAL FIRE) which defines Fire Hazard Severity Zones, as discussed below.

Vegetation acts as the main source of fuel for a potential wildfire. Areas with limited vegetation have a lower risk for wildfires to occur, therefore areas near open spaces may be more likely to experience a wildfire. Climate conditions such as wind, temperature, and humidity are all factors generally used to predict fire behavior. Wind increases the flammability of fuels by removing moisture through evaporation. During a wildfire, wind can carry embers, increasing the fire's range. Higher temperatures and low humidity are also indicative of higher fire risk, increasing flammability of vegetation. Topographic features such as slope as well as overall form of the land effects fire behavior, specifically its intensity, direction, and rate of spread. Fires in flat or gently sloping areas tend to burn slower. Existing hydrology can also have an impact, as streams and rivers tend to channel winds, which can accelerate the fire's speed and direction. The presence of large hydrological features tends to increase humidity and can make areas more resistant to the effects of fire (Humboldt County 2019).

Wildfire Setting of the Study Area

The study area is located primarily within the Arcata Fire Protection District. The Arcata Bottom area west of the City and west of Old Arcata Road and west of SR 299 is a Local Responsibility Area (LRA) and all of the Arcata Fire Protection District lands east of the City boundary is defined as State Responsibility Area. In responding to emergencies, local fire departments work closely with law enforcement, public utilities, the County Office of Emergency Services, and ambulance companies. The upper Jacoby Creek area and a portion of the Planning Area on the western side of Fickle Hill Road about two road miles from the City boundary contain rural residential development and are outside the boundaries any fire related district. The Arcata Fire Protection District will provide “good-will” out-of-district response when requested to these areas and is considering submitting an application to the Humboldt Local Agency Formation Commission to annex these areas. The City limits is located entirely within the boundaries of the Arcata Fire Protection District.

CAL FIRE identifies fire hazard severity zones, which are the likelihood of wildfire hazard, throughout California (CAL FIRE 2022a). Areas throughout the State are classified into fire hazard severity zones of moderate, high, or very high, based on fuel loading, slope, fire weather, and other relevant factors including areas where winds may be a major cause of wildfire spread. CAL FIRE also identifies Federal, State, and Local Responsibility Areas, which each relate to the level of government financially responsible for preparing for, responding to, or mitigating wildfire hazards. Figure 5.7-1 shows the Responsibility Areas and fire hazard severity zones in the study area.

According to the Humboldt County Community Wildfire Protection Plan (County 2019), there have been very few major wildfire events in the Humboldt Bay Area planning unit within recent decades. Only one noteworthy fire near the study area was mentioned. The October 2017 Blue Fire in Blue Lake was caused by downed power lines during high wind conditions. The fire was contained relatively quickly by local and state fire resource; therefore, minimal damage occurred.

Local Responsibility Area

Local Responsibility Area (LRA) are areas where the state is not financially responsible for wildfires and costs associated with a CAL FIRE response, and if requested, costs may be charged to the local agency. The LRA includes the City limits and extends west to the coast. The Arcata Fire Protection District serves the fire suppression and emergency response needs in this area. The Arcata Fire Protection District maintains three fire stations, two located within the City (the Arcata Station at 631 9th Street and the Mad River Station at 3235 Janes Road) to provide rapid response to all incidents within its service area. The Fire Protection District’s boundary extends north past McKinleyville, where the third station is located. Between 2017 to 2022, the Arcata Fire Protection District responded to approximately 125 vegetation fires within the study area; approximately 90 were within the City limits and most did not exceed 0.01 acres in size (personal communication 4/12/23, Justin McDonald, AFPD Fire Chief). Vegetation fires included fires in forests, woodlands, grasses, brush, as well as vegetation burned due to a nearby vehicle fire. In 2007, CAL FIRE developed a draft LRA fire hazard severity zone map for Humboldt County; in which approximately two-thirds of the City was classified as either a moderate or high (CAL FIRE 2007a). CAL FIRE has determined that this county has no Very High Fire Hazard Severity Zones in LRA.; therefore, Humboldt County will not have a Recommended LRA fire hazard severity zone map (CAL FIRE 2008). The 2007 map was not adopted by the City or Arcata Fire Protection District.

The State Responsibility Area (SRA)

The State Responsibility Area (SRA) comprises the area for which the State is financially responsible for preventing and suppressing wildfires. The study area to the east of the City limits is within the SRA and therefore wildfire prevention and suppression is the responsibility of CAL FIRE (CAL FIRE 2007b). Small portions of the study area are also within the boundaries of Humboldt Bay Fire and the Kneeland Fire Protection District. The Arcata Fire Protection District maintains effective automatic and mutual aid agreements with these entities as well as with the Samoa Peninsula Fire Department, Blue Lake Fire Protection District, Fieldbrook Volunteer Fire Department of the Fieldbrook-Glendale Community Services District, and Westhaven Volunteer Fire Department for rapid response to fires within the City and in outlying areas.

The majority of the study area in the SRA is ranked as having a high fire hazard severity index (CAL FIRE 2007b). Areas with moderate fire hazard severity index include the areas surrounding Bayside, potions near the base of Fickle Hill Road, and areas around the Mad River. A small portion of the Planning Area, at the south-eastern-most extent near Kneeland, has a very high fire hazard severity index. The Office of the State Fire Marshal is in the process of updating FHSZ mapping for the State of California as part of an effort to standardize hazard rating classifications across the state. The mapping is still in process but is anticipated to reduce the severity rating of Planning Area around Arcata from high to moderate (CAL FIRE 2022a).

Federal Responsibility Area

Within Federal Responsibility Areas (FRAs), federal agencies, such as the US Forest Service, National Park Service, Bureau of Land Management, United States Department of Defense, United States Fish and Wildlife Service, and Department of the Interior are responsible for wildfire protection. The Samoa Dunes Recreation Area, located along the coast within the Planning Boundary, is managed by the Bureau of Land Management and is in the FRA. A small portion of land along the Humboldt Bay shoreline bordering the southern City limit is located within the FRA.

5.7.3 Regulatory Framework

Federal

The federal government is responsible for responding to wildfires that are on federal lands. FRA land within the study area is managed by Bureau of Land Management and United States Fish and Wildlife Service.

State

California Government Code Section 65302

Government Code Section 65302 establishes standards for developing and updating General Plans, includes fire hazard assessment and Safety Element content requirements.

Related to the Safety Element, the code states,

> *"A safety element for the protection of the community from any unreasonable risks associated with the effects of seismically induced surface rupture, ground shaking, ground failure, tsunami, seiche, and dam failure; slope instability leading to mudslides and landslides; subsidence; liquefaction; and other seismic hazards identified pursuant to Chapter 7.8 (commencing with Section 2690) of Division 2 of the Public Resources Code, and other geologic hazards known to the legislative body; flooding; and wildland and urban fires. The safety element shall include mapping of known seismic and other geologic hazards. It shall also address evacuation routes, military installations, peakload water supply requirements, and minimum road widths and clearances around structures, as those items relate to identified fire and geologic hazards."*
>
> *Additionally, the Safety Element shall "be reviewed and updated as necessary to address the risk of fire for land classified as state responsibility areas, as defined in Section 4102 of the Public Resources Code, and land classified as very high fire hazard severity zones, as defined in Section 51177. This review shall consider the advice included in the Office of Planning and Research's most recent publication of "Fire Hazard Planning, General Plan Technical Advice Series" and shall also include all of the following:*
>
> *A. Information regarding fire hazards, including, but not limited to, all of the following:*
>
> *I. Fire hazard severity zone maps available from the Department of Forestry and Fire Protection.*
>
> *II. Any historical data on wildfires available from local agencies or a reference to where the data can be found.*
>
> *III. Information about wildfire hazard areas that may be available from the United States Geological Survey.*

IV. *General location and distribution of existing and planned uses of land in very high fire hazard severity zones and in state responsibility areas, including structures, roads, utilities, and essential public facilities. The location and distribution of planned uses of land shall not require defensible space compliance measures required by state law or local ordinance to occur on publicly owned lands or open-space designations of homeowner associations.*

V. *Local, state, and federal agencies with responsibility for fire protection, including special districts and local offices of emergency services.*

B. *A set of goals, policies, and objectives based on the information identified pursuant to subparagraph (A) for the protection of the community from the unreasonable risk of wildfire.*

C. *A set of feasible implementation measures designed to carry out the goals, policies, and objectives based on the information identified pursuant to subparagraph (B) including, but not limited to, all of the following:*

I. *(i) Avoiding or minimizing the wildfire hazards associated with new uses of land.*

II. *(ii) Locating, when feasible, new essential public facilities outside of high fire risk areas, including, but not limited to, hospitals and health care facilities, emergency shelters, emergency command centers, and emergency communications facilities, or identifying construction methods or other methods to minimize damage if these facilities are located in a state responsibility area or very high fire hazard severity zone.*

III. *(iii) Designing adequate infrastructure if a new development is located in a state responsibility area or in a very high fire hazard severity zone, including safe access for emergency response vehicles, visible street signs, and water supplies for structural fire suppression.*

IV. *(iv) Working cooperatively with public agencies with responsibility for fire protection.*

D. *If a city or county has adopted a fire safety plan or document separate from the general plan, an attachment of, or reference to, a city or county's adopted fire safety plan or document that fulfills commensurate goals and objectives and contains information required pursuant to this paragraph.*

California Code of Regulations

This is the official code for the State of California and all political subdivisions. It is compiled into Titles, some of which include regulations related to wildfire or emergency response agencies.

Title 8 (Cal/OSHA). *Title 8, Sections 1270 and 6773 establishes fire suppression service standards, including hose size requirements and design of emergency access roads.*

Title 14 (Natural Resources). *Division 1.5 (Department of Forestry and Fire Protection) establishes various wildfire preparedness, prevention, and response regulations.*

Title 19 (Public Safety). *Title 19 of the CCR establishes regulations related to fire prevention and engineering measures for new construction.*

Title 24 (California Building Standards Code). *Title 24 Part 9 is the California Fire Code. It contains regulations for safeguarding life and property from fire and explosion, dangerous conditions arising from the storage, handling, and use of hazardous materials and devices, hazardous conditions in the use or occupancy of buildings or premises, as well as provisions to assist emergency response personnel. Fire-safety-related building standards are cross-referenced in other parts of Title 24. Part 7 includes information related to building materials, systems and/or assemblies to be used in the exterior design and construction of new buildings located within a wildland urban interface area. Section 701A.3.2 requires that new buildings that require building permits must comply with all sections of the chapter if located in any fire hazard severity zone in State Responsibility Areas, any very-high fire hazard severity zone in Local Responsibility Areas, or any wildland-urban interface fire area designated by the enforcing agency.*

California Department of Forestry and Fire Protection

California Department of Forestry and Fire Protection (CAL FIRE) protects the people of California from fires, responds to emergencies, and protects and enhances forest, range, and watershed values providing social, economic, and environmental benefits to rural and urban citizens. CAL FIRE responded to 7,490 wildfire incidents in 2022, which burned a total of 362,455 acres (CAL FIRE 2022b).

Pursuant to Public Resources Code (PRC) Sections 4201-4204 and Government Code Sections 51175-89, CAL FIRE has created Fire Hazard Severity Zone (FHSZ) maps for the state that identify areas that are within state or local responsibility areas for preventing or suppressing fires. These maps identify areas of significant fire hazards based on fuels, terrain, weather, and other relevant factors. The FHSZ zones then define the application of various mitigation strategies to reduce risks associated with wildland fires. State Responsibility Areas (SRAs) were originally mapped by CAL FIRE in 1985 and Local Responsibility Areas (LRAs) in 1996. Within State Responsibility Areas, the Director of CAL FIRE has designated areas as moderate, high and very high fire hazard severity zones. Outside of SRAs, but within LRAs the Director of Cal Fire was charged with recommending the locations of very high fire hazard severity zones. The wildland urban interface is defined in this code as *"a geographical area identified by the state as a 'Fire Hazard Severity Zone' in accordance with the Public Resources Code Sections 4201 through 4204 and Government Code Sections 51175 through 51189, or other areas designated by the enforcing agency to be at a significant risk from wildfires."*

California Public Resources Code Fire Safe Regulations

The California Public Resources Code (PRC) sets forth fire safety regulations that include the following:

- Earthmoving and portable equipment with internal combustion engines must be equipped with a spark arrestor to reduce the potential for igniting a wildland fire (PRC Section 4442).
- Appropriate fire suppression equipment must be maintained during the highest fire danger period – from April 1 to December 1 (PRC Section 4428).
- On days when a burning permit is required, flammable materials must be removed to a distance of 10 feet (3 meters) from any equipment that could produce a spark, fire or flame, and the construction contractor must maintain the appropriate fire suppression equipment (PRC Section 4427).
- On days when a burning permit is required, portable tools powered by gasoline-fueled internal combustion engines must not be used within 25 feet (7 meters) of any flammable materials (PRC Section 4431).
- Section 4290 of the PRC requires the adoption regulations implementing minimum fire safety standards within SRA relating to road standards for fire equipment access; standards for signs identifying streets, roads, and buildings; minimum private water supply reserves for emergency fire use; and fuel breaks and greenbelts.
- Section 4291 of the PRC requires annual defensible space of 100 feet to be provided around all structures in or adjoining any mountainous area or land covered with forest, brush, grass, or other flammable material.

California Health and Safety Code Division 12 (Fires and Fire Protection)

Division 12 [13000-14960] sets state fire regulations to provide for the enforcement of the California Fire Code, mandate the abatement of fire hazards, standards for buildings and fire protection devices, and regulations for specific land uses.

State of California Emergency Response Plan

California has developed the State of California Emergency Response Plan to coordinate emergency services provided by federal, state, and local government agencies. The plan is administered by the State Office of Emergency Services, which coordinates the responses of other agencies such as local fire and police agencies, emergency medical providers, California Highway Patrol (CHP), the California Department of Fish and Wildlife and Caltrans (CGOES 2017).

California Coastal Act

Section 30253 states that *"new development shall minimize risks to life and property in areas of high geologic, flood, and fire hazard."*

Local

This section includes City of Arcata policies and plans for the portions of the Project within City limits and within the Coastal Zone, the Humboldt County policies and plans for the area outside City jurisdiction.

City of Arcata General Plan 2020

The General Plan 2020 contains the following policies relating to wildfire in the Public Service Element.

Policy PS-1: Emergency Preparedness

Objective. *Ensure that the City, its residents, businesses, agencies, and organizations are prepared for emergencies or disasters and have effective response and recovery plans in place.*

Applicable sub-policies:

- ***PS-1a: City Emergency Response Plan.*** *The City shall maintain a comprehensive response plan for emergencies, including seismic events, tsunamis, slope failures, floods, storms, fires, and materials spills or contamination. The plan will provide for timely and coordinated response to emergencies that threaten community residents, property, and vital services. The plan will identify City and other emergency response agencies that should be contacted, and also identify neighborhood resources available for more localized assistance and relief.*
- ***PS-1b: Evacuation routes/transportation facilities.*** *Emergencies such as floods, storms, fires, distantly generated tsunamis, and hazardous materials spills may necessitate immediate evacuation of affected areas. A map of evacuation routes shall be included in City and neighborhood emergency response plans. These plans will also include evacuation methods for residents who are without, or unable to operate, vehicles. An emergency access plan shall be developed for access to the east side of town (east of State Route 101) after a major seismic event.*
- ***PS-1c: Disaster preparedness coordination using the Standardized Emergency Management System.*** *City staff responsible for emergency response shall be trained in Standardized Emergency Management System (SEMS) implementation, which is necessary to receive reimbursement from the State of California for disaster response related costs. This training includes instruction about the Incident Command System (ICS) which is used to manage emergency incidents or non-emergency events.*
- ***PS-1e: Development & design standards for emergency response.*** *New and renovated structures, as well as streets, driveways, and alleyways, shall be designed to provide adequate entry and exit by emergency vehicles and personnel. This includes visible street numbering, emergency vehicle turn-arounds, accessible building entry points and stairways, lighting, and interior evacuation routes.*

Policy PS-5: Fire Hazards

Objective. *Minimize risk of personal injury and property damage resulting from structural (urban) and wildland fires.*

Applicable sub-policies:

- ***PS-5b: Review of development for fire safety.*** *The Arcata Volunteer Fire Department takes an active role in reviewing new development for compliance with fire safety standards. The City shall continue to incorporate Fire Department review to ensure that driveways, turns-arounds, and other access ways have sufficient width, vertical clearance, and turn-around space for fire fighting vehicles. Roadways shall have an all-weather surface and grades shall not exceed the Fire Department's maximum slope standards for emergency access.*

- ***PS-5c: Water supply (fire flow).*** *The City's fire hydrant system provides the primary source of water for fighting urban fires. The City shall maintain fire hydrant spacing so that no residential structure is more than 500 feet from a hydrant and no commercial or industrial structure is more than 300 feet from a hydrant. Each hydrant shall have adequate fittings and be capable of providing adequate water flows to meet Fire Department standards. The City shall maintain adequate fire flows in its water system. Open-water sources such as ponds, swimming pools, private storage tanks, and reservoirs may be used as a secondary water source by fire-fighting apparatus. These sources shall be equipped with appropriate filtering devices or strainers to prevent clogging of water pumps.*
- ***PS-5d: Management of wildland fire hazards.*** *Wildland fires in forested areas of the City can cause property damage and threaten nearby structures. Buildings in forested areas shall use materials such as non-flammable perimeter vegetation and roofing material to prevent exposure to wildland fires. The City shall encourage the Arcata Fire Department to maintain its mutual aid agreement with the California Department of Forestry and Fire Prevention (CDF) to insure rapid response to wildland fires.*

Proposed City of Arcata General Plan 2045

Policies in the proposed General Plan 2045 relating to wildfire in the Public Services Element include:

Policy PS-1: Emergency Preparedness

Objective. *Ensure that the City, its residents, businesses, agencies, and organizations are prepared for emergencies or disasters and have effective response and recovery plans in place.*

Applicable sub-policies:

- ***PS-1g: Humboldt County Operational Area Hazard Mitigation Plan (Hazard Plan).*** *The 2019 Humboldt County Operational Area Hazard Mitigation Plan and City of Arcata Annex is adopted by reference into the General Plan. General Plan policies and actions shall support its goals and objectives and incorporate policies and programs to address the climate vulnerabilities identified in the City of Arcata Annex.*
- ***PS-1h: Severe Weather Hazards.*** *Ensure that utilities, buildings, and infrastructure in the City can meet vital community needs during and after severe weather.*

Policy PS-5 Fire Hazards

Objective. *Minimize risk of personal injury and property damage resulting from structural (urban) and wildland fires.*

Applicable sub-policies:

- ***PS-5b: Review of development for fire safety.*** *The Arcata Fire Protection District (District) reviews new development for compliance with fire safety standards. The City shall continue to incorporate review by the District to ensure that buildings and sites adhere to relevant fire and building codes, including sprinklers, vertical clearance, and turn-around space for fire fighting vehicles.*
- ***PS-5c: Water supply (fire flow).*** *The City's fire hydrant system provides the primary source of water for fighting urban fires. The City shall maintain fire hydrant spacing so that no residential structure is more than 500 feet from a hydrant and no commercial or industrial structure is more than 300 feet from a hydrant. Each hydrant shall have appropriate fittings and be capable of providing adequate water flows to meet the California Fire Code requirements.*

  The City shall maintain adequate fire flows in its water system. Open-water sources such as ponds, swimming pools, private storage tanks, and reservoirs may be used as a secondary water source by fire-fighting apparatus. These sources shall be equipped with appropriate filtering devices or strainers to prevent clogging of water pumps.
- ***PS-5d: Management of wildland fire hazards.*** *Fires in the wildland urban interface (WUI) areas of the City can cause property damage and threaten nearby structures. Buildings in WUI areas shall use*

materials such as non-flammable perimeter vegetation and roofing material to prevent exposure to wildland fires. The City shall support the ongoing implementation of the Humboldt County Community Wildfire Protection Plan and encourage residents in WUI areas to follow its recommendations. The City supports the Fire District in maintaining its mutual aid agreement with the California Department of Forestry and Fire Prevention (CAL FIRE) to insure rapid response to wildland fires.

- ***PS-5e: Wildland Fire Risk Reduction and Defensible Space Around Homes.*** *The City will draw on available local and regional guidance and support efforts to reduce wildland fire risk. To do so, the City encourages creating defensible space around homes and other structures in wildlands and the wildland urban interface. The City shall support programs and plans that reduce wildland fire risk.*

City of Arcata Local Coastal Program

The 1989 City of Arcata Local Coastal Plan classifies fire hazards in the Coastal Zone as "no natural fire hazard" to "low natural fire hazard" and therefore are not considered a significant potential hazard. There are no applicable policies within the City of Arcata Local Coastal Plan that regulates wildfire.

City of Arcata Emergency Operations Plan

The City of Arcata Emergency Operations Plan (EOP), adopted on September 1, 2021, informs the City's response to and recovery from emergencies and disasters as well as outlines coordination among departments and regional partners (City of Arcata 2021). The EOP primarily addresses the following local hazards in the Arcata area: wildfire, major structure fire, extreme weather, flooding, landslides, hazardous materials, oil spill, energy shortage, power outages, earthquake, tsunamis, dam failure, communicable disease outbreak, civil disturbance, and mass casualty incident. The 2021 EOP update integrated results from the Humboldt County Operational Area Hazard Mitigation Plan (Humboldt County 2020a, 2020b) evaluation of hazards affecting the City.

Based on the Humboldt County Operational Area Hazard Mitigation Plan risk assessment, wildfire was ranked 2nd based on the risk it poses to the overall Operational Area and was identified as having a high likelihood of occurring within 25 years. The Hazard Mitigation Plan acknowledged wildfire risks vary throughout the County and wildfire in Arcata was ranked with a probability of occurring infrequently and of low risk severity. While Arcata currently experiences higher humidity and moderate summer temperatures, reducing wildfire risk, climate change could increase the likelihood of extreme weather events that could in turn increase the frequency and severity of wildfires in the Arcata area.

Humboldt County General Plan

The goals and policies within the Humboldt County General Plan that regulate wildfire include the following:

S-G4. Fire Risk and Loss

Development designed to reduce the risk of structural and wildland fires supported by fire protection services that minimize the potential for loss of life, property, and natural resources.

S-P1. Reduce the Potential for Loss

Plan land uses and regulate new development to reduce the potential for loss of life, injury, property damage, and economic and social dislocations resulting from natural and manmade hazards, including but not limited to, steep slopes, unstable soils areas, active earthquake faults, wildland fire risk areas, airport influence areas, military operating areas, flood plains, and tsunami run-up areas.

S-P17. Joint Planning and Implementation

The County shall plan collaboratively with local fire agencies and companies, Cal Fire, and federal fire organizations on countywide fire prevention and response strategies. Implementation shall be coordinated to maximize efficiency and ensure efforts are complimentary.

S-P19. Conformance with State Responsibility Areas Fire Safe Regulations

Development shall conform to Humboldt County State Responsibility Area Fire Safe Regulations.

S-P22. Prescribed Burning

Encourage the use of prescribed burning as a management tool for hazardous fuels reduction, timber management purposes, livestock production, and enhancement of wildlife habitat.

S-P23. Hazardous Fuel Reduction

Encourage land management activities that result in the reduction of hazardous fuels and also support timber management, livestock production, and the enhancement of wildlife habitat, through the use of prescribed burning, hand or mechanical methods, firewise plants, biomass utilization, and animal grazing.

S-P24. Fire Safe Education

Expand fire prevention and mitigation education capacity in the county.

RL-P4. Fire Safety Hazards

Support implementation of State Responsibility Area Fire Safe Standards and Wildland-Urban Interface Building Codes for new development and voluntary programs for fuels reduction, dwelling fire protection and creation of defensible space for existing development.

Humboldt Bay Area Plan Local Coastal Plan

There are no applicable policies in the Humboldt Bay Area Plan pertaining to wildfire.

Humboldt County Emergency Operation Plan

The Humboldt County Emergency Operation Plan (EOP) addresses the planned response to extraordinary emergency situations associated with natural disasters, technological incidents, and national security emergencies in or affecting Humboldt County (Humboldt County 2015). The Federal Emergency Management Agency (FEMA) approved the Humboldt Operational Area Hazard Mitigation Plan on March 20, 2014. The EOP addresses integration and coordination with other governmental levels when required. The EOP accomplishes the following:

- Establishes the emergency management organization required to mitigate any significant emergency or disaster affecting Humboldt County.
- Identifies the policies, responsibilities, and procedures required to protect the health and safety of Humboldt County communities, public and private property, and the environmental effects of natural and technological emergencies and disasters.
- Establishes the operational concepts and procedures associated with field response to emergencies, County Emergency Operations Center activities, and the recovery process.

Humboldt County Operational Area Hazard Mitigation Plan

The Humboldt County Operational Area Hazard Mitigation Plan (HMP) 2019 is a multi-jurisdictional plan to identify and reduce hazards before any type of hazard event occurs (Humboldt County 2020a, 2020b). The Hazard Mitigation Plan aims to reduce losses from future disasters such as dam failure, drought, earthquake, fish losses, flooding, landslide, severe weather, tsunami, and wildfire. The Hazard Mitigation Plan also includes a vulnerability analysis and proposed initiatives designed to minimize future hazard-related damage. The 2019 update was approved by the California Governor's Office of Emergency Services in 2019. In 2020 the Federal Emergency Management Agency determined the HMP is eligible for approval pending adoption by participating jurisdictions. The City adopted the HMP on March 18, 2020, to guide pre- and post-disaster mitigation of the hazards identified.

The HMP included risk assessment modeling that took into account the following:

– hazard identification and profiling,
– Assessment of the impact of hazards on physical, social, and economic assets,
– Identification of particular areas of vulnerability,
– Estimates of the cost of potential damage.

The HMP recommends a list of actions to mitigate wildfire risk and recommends the “Priority Action Recommendations” identified in the Community Wildfire Protection Plan Humboldt Bay Area Planning Unit Action Plan that are pertinent to Arcata (Humboldt County 2019).

Humboldt County Community Wildfire Protection Plan

The Humboldt County Community Wildfire Protection Plan (CWPP) serves as the guiding document for the work of the Humboldt County Fire Safe Council (Humboldt County 2019). It is a planning tool to help secure funding for numerous projects that have helped residents and community groups prepare for the impacts of wildfire. The CWPP contains six goal areas:

1. Wildfire Ignition Prevention: Reduce human-caused wildfire ignitions;
2. Wildfire Preparedness: Increase community resilience and adaptation to wildfire;
3. Disaster Preparedness: Increase resident’s ability to effectively prepare for and survive wildfire;
4. Fire Protection: Support fire protection for people, property, communities, and natural resources;
5. Restoration of Beneficial Fire: Restore beneficial fire at the landscape level;
6. Integrated Planning: Maximize integration of planning efforts to improve community; and ecosystem resilience to wildfire.

The CWPP breaks the county down into 14 planning units in order to gain community feedback and to create individual plans relevant to the particular community. Arcata is located in the Humboldt Bay Planning Unit (Unit 8) which covers all areas within the greater Humboldt Bay Area. The Humboldt Bay Area Plan identifies community assets and values at risk, the wildfire environment, fire protection capabilities, evacuation, community preparedness, wildfire prevention plans, community identified potential projects, and an action plan. The Plan states that evacuation routes within the Planning Unit will depend on the location of the community at risk and law enforcement recommendations based on fire behavior, wind patterns, traffic, and ingress of emergency vehicles. Evacuation from within this unit will take place traveling either north or south along Highway 255. The CWPP also identifies local wildfire prevention plans within the Humboldt Bay Planning Unit, some of which are located within the study area. These include the Upper Jacoby Creek Firewise Action Plan and the Humboldt Redwood Company Fire Plan.

5.7.4 Evaluation Criteria and Significance Thresholds

Under criteria based on Appendix G of the CEQA Guidelines, the Project would result in a significant impact if it was located in or near a State Responsibility Area or lands classified as very high fire hazard severity zones, and would result in any of the following:

– Substantially impair an adopted emergency response plan or emergency evacuation plan;
– Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose Project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire;
– Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in the temporary or ongoing impacts to the environment; or
– Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire instability, or drainage changes.

The following sections describe the anticipated environmental impacts due to wildfire risks from the Project.

5.7.5 Methodology

The impact assessment considered the CAL FIRE fire hazard responsibility zones attributed to the study area, as well as environmental and topographical characteristics of the built and natural environment within the study area. The study area is located partially within and adjacent to the State Responsibility Area for fire protection. The State Responsibility Areas within the study area are generally classified as high or moderate fire hazard severity zones, with a small portion of “very high” severity zoned lands located in the southeast study area boundary, outside of City limits.

5.7.6 Impacts and Mitigation Measures

Impact WDF-a: Would adoption and implementation of the General Plan substantially impair an adopted emergency response plan or emergency evacuation plan?

The City of Arcata Emergency Operations Plan (EOP) informs the City’s response to and recovery from emergencies and disasters, as well as outlines coordination among departments and regional partners (City of Arcata 2021). It includes a brief local hazard analysis, plans and actions that can mitigate the consequences of disasters, preparedness activities, general steps for incident response, and general methods for disaster recovery. The EOP does not identify specific evacuation routes. General Plan 2045 policies are consistent with the EOP. Therefore, no impact would occur.

General Plan 2020 Transportation Element Policy T-1d (also included in General Plan 2045) states that “Critical transportation facilities for emergency vehicle access and emergency evacuation shall be maintained and improved as a priority need.” Critical transportation facilities are identified as “the major routes into and out of the City such as Highways 101, 299, and 255, their interchanges with City streets and primary intra-city street connections including Samoa Boulevard, 11th Street, "G" and "H" Streets, Sunset Avenue, L.K. Wood Boulevard, Alliance Road, Janes Road, and Giuntoli Lane.” Adoption and implementation of the General Plan 2045 would not impair emergency evacuation via these identified routes. No impact would occur.

In March 2020, the City adopted the multi-jurisdictional Humboldt County Operational Area Hazard Mitigation Plan (Humboldt County 2020a, 2020b) to guide pre- and post-disaster mitigation of hazards. The Hazard Mitigation Plan results were integrated into the City’s 2021 EOP. General Plan 2045 includes Public Safety Element Policy PS-1g stating that “General Plan policies and actions shall support [Hazard Mitigation Plan 2019] goals and objectives and incorporate policies and programs to address the climate vulnerabilities identified in the City of Arcata Annex.” The adoption and implementation of the General Plan 2045 would not impair the Hazard Mitigation Plan. Therefore, no impact would occur.

A component of the Arcata General Plan 2045 is to prepare a City Emergency Response Plan (see Policy PS-1a and 1b), which would include a map of evacuation routes and methods for residents who are without or are unable to operate a vehicle. The emergency access plan would include access to the east side of town (east of Highway 101) after a major seismic event. The majority of the neighborhoods in the City have at least two potential evacuation routes in the event of an emergency. Residential areas with only one evacuation route include upper Diamond Drive, California Avenue, Fickle Hill Road, Beverly Way, a portion of Beverly Drive, and others in the Grotzman Creek drainage. Public Safety Element Implementation Measures identifies Measure PS-2 to “evaluate potential alternative routes for residential areas with limited evacuation options. Where there are no feasible alternative routes, identify and implement realistic actions that can provide protection to evacuees from likely hazards.” This is expected to be achieved in Year 2 by the City Manager’s Office, City Environmental Services, Arcata Police Department, and Arcata Fire Protection District. No new policy or land use change would impair existing evacuation routes or place development or people in areas without evacuation routes. Therefore, no impact would occur.

The Humboldt County Emergency Operations Plan does not designate specific evacuation routes, emergency shelter locations, or include policies or procedures with which the Arcata General Plan 2045 would conflict (Humboldt County 2015). Consistent with the Humboldt County Emergency Operations Plan, the General Plan 2045 (Policy PS-1c) identifies the use of Standardized Emergency Management System (SEMS) and Incident

Command System (ICS) to manage emergency incidents or non-emergency events. Therefore, no impact would occur.

The Humboldt County Community Wildfire Protection Plan (CWPP) Humboldt Bay Area Plan identifies community assets and values at risk, the wildfire environment, fire protection capabilities, evacuation, community preparedness, wildfire prevention plans, community identified potential projects, and an action plan (Humboldt County 2019). The CWPP identifies Highway 101 and Highway 255 as primary evacuation routes from Arcata. Old Arcata Road/Myrtle Avenue, Janes Road, Spear Avenue, Alliance Road, and Jackson Ranch Road are alternative evacuation routes. Within the Planning Boundary, numerous smaller roads, including some one-way-in and one-way-out roads, currently connect residences and neighborhoods to Highway 101 and could create serious complications for emergency vehicle responses and access during home evacuations or wildfire burning. To ensure safety of residents, maintaining proper clearance and vegetation removal around structures is critical for effective emergency response. General Plan 2045 policies remain consistent with the CWPP. Policy PS-5d states “The City shall support the ongoing implementation of the Humboldt County Community Wildfire Protection Plan (CWPP) and encourage residents in WUI [wildland urban interface] areas to follow its recommendations.” Additionally, to minimize the risk of personal injury and property damage resulting from urban and wildland fires, General Plan 2045 Public Safety Element Policy PS-5a requires adequate lighting, street numbering, and access to ensure rapid response by fire-fighting vehicles and Policy PS-5e encourages the use of defensible space around structures to reduce wildland fire risk. Policy PS-1f includes expanding the Arcata Community Emergency Services Response Teams program, which is essential for mobilizing neighborhood response to emergencies. For these reasons, implementation of the Arcata General Plan 2045 would not increase the existing risk of wildland fires to people or structures. No impact would occur.

The Arcata General Plan 2045 is consistent with and complimentary to other local and regional emergency response or evacuation plans. Additionally, to ensure adequate emergency access, Public Safety Policy PS-1e requires the design of new and renovated structures to provide adequate entry and exit by emergency vehicles and personnel and Policy PS-5b requires Arcata Fire District review of new development for compliance with fire safety standards. For these reasons and those described above, implementation of the Arcata General Plan 2045 would not substantially impair an adopted emergency response plan or emergency evacuation plan.

Mitigation Measures: No mitigation is necessary

Level of Significance: No impact

Impact WDF-b: Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose study area occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

Infill Opportunity Zones

The Infill Opportunity Zones, where more concentrated development is proposed, are located in areas that are relatively flat and sloped less than 15 percent. They are not located at the base of a hillside. The Infill Opportunity Zones are not forested, although trees and vegetation are present. The areas are largely covered in impervious surfaces or contain existing development. Wildfire ignition risk is low in the Infill Opportunity Zones, though could occur purposely through arson or accidentally through other activities. Accidental ignition could be caused from heavy machinery or equipment used during construction activities, warming fires at camp sites, vehicles, or industrial/agricultural operation. These activities currently occur in the Infill Opportunity Zones; however, construction activity could temporarily increase. The Project would not otherwise increase exposure to wildfire above existing conditions.

Two of the Infill Opportunity Zones (Gateway Area and Valley West) are mapped as near the wildland urban interface per federal guidance. However, federal WUI interpretations are not regulatory, and the State Fire Marshall’s Fire Hazards Severity Maps are used within Local Responsibility Areas, which rely on the Fire and Resource Assessment Program mapping, which analyze the amount and extent of California’s forests and rangelands and identifies Fire Hazard Severity Zones. Parcels within City limits, with a handful of exceptions on

the eastern boundaries of the City, are located within the Local Responsibility Area and are not designated by the State Fire Marshall as Moderate, High, or Very High Fire Risk. All four Infill Opportunity Zones are within the urban core of the city and are not located in close proximity to wooded areas on the outskirts of the city or zones of transition between developed and unoccupied lands.

The General Plan 2045 proposes an infill strategy, avoiding densifying outlying areas of the city, an emphasizing dense development in these infill opportunity zones, reducing the wildland urban interface and unmaintained vegetative fuels. Additionally, structures would be built to meet California Building Code and California Fire Code standards. The policies and programs proposed in the General Plan 2045 listed in Section 5.7.3 (Local Regulatory Framework) would also reduce the potential for exposure to wildland fires through disaster preparedness, management of urban and wildland fire hazards, development review, maintenance of water supply and hydrants, and wildland fire risk reduction programs. The degree of wildland fire hazard would not significantly change with the adoption and implementation of the General Plan 2045 compared to existing conditions. The impact would be less than significant.

Remaining Study Area

Eastern portions of the City and further east into the Planning Boundary is located in the State Responsibility Area. It is generally hilled and sloped greater than 15 percent. Increased development in this area could potentially expose people or structures to risks from downslope or downstream flooding or landslides as a result of runoff, post-fire slope instability, or drainage changes. The adoption and implementation of the General Plan 2045 would not promote increased development in or adjacent to the State Responsibility Area or in areas with very high FHSZ. By encouraging development in the flatter and more urbanized Infill Opportunity Zones, the General Plan 2045 would potentially reduce the exposure of additional people or structures to significant risk related to post-fire conditions that could occur in the State Responsibility Area. Additionally, Public Safety Element Implementation Measure PS-5 and PS-6 require the City to evaluate renewing a cooperative agreement with CALFIRE and to prepare a wildland fire risk reduction program that include funding and outreach to assist landowners in establishing and maintaining defensible space or building retrofits to reduce their vulnerability to wildfire. No impact would occur.

The western portion of the City and further west into the Planning Boundary includes very low slopes in the coastal bottomland near Humboldt Bay and the Pacific Ocean. Coastal winds are common in this area; however, humidity is high due to proximity to the ocean, reducing fire risk. The area mainly consists of pasture lands and could be susceptible to a grassland fire, though also contains a mosaic of low-lying sloughs and agricultural ditches contributing to seasonally moist soil conditions. The presence of large hydrological features tends to increase humidity and can make these areas more resistant to the effects of fire (Humboldt County 2019). Currently development is sparse in this area; therefore, few study area occupants would be subjected to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire. The General Plan 2020 encourages the preservation of open space in this area and intends that the areas should not be developed with urban densities (Policy GM-1d). General Plan 2045 maintains this policy, therefore would not increase the wildfire risk above existing conditions.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact WDF-c: **Would adoption and implementation of the Project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?**

Citywide and Infill Opportunity Zones

No development is proposed or would be approved as part of the General Plan 2045; however, construction associated with future development could result in a low fire ignition risk associated with a potential heavy

machinery accident. In some cases, development could reduce wildland fire risk through the removal of unmanaged vegetation. Potential development sites within the City limits, including the four identified Infill Opportunity Zones, generally have existing infrastructure (including local roadways, powerline, and other utilities) and services are already in place, or readily available. These areas are served by existing City water services and Public Safety Policy PS-5c requires that the City maintains hydrants and adequate fire flows in its water system. Additional discussion of water service is included in Section 3.13 (Utilities and Service Systems). Any future infrastructure projects would be reviewed for compliance with local and regional policies and programs as well as adopted state and local fire codes. It would also require project specific review, including Arcata Fire Protection District review (Policy PS-5b). The adoption and implementation of General Plan 2045 would not significantly exacerbate wildfire risks above existing conditions. A less than significant impact would occur.

Remaining Study Area

The General Plan 2045 does not encourage construction or development in the State Responsibility Area and therefore does not propose the installation or maintenance of associated infrastructure that would significantly exacerbate fire risk or result in temporary or ongoing impacts to the environment. The General Plan 2045 does not propose new roadway or utility extensions into undeveloped areas which would pose additional or increased wildfire risk. Therefore, no impact would occur.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact WDF-d: Would adoption and implementation of the General Plan expose people or structures to significant risks, including downslope or downstream flooding or landslides as a result of runoff, post-fire slope instability, or drainage changes?

Infill Opportunity Zones

The Infill Opportunity Zones, where more concentrated development is proposed, are located in areas that are relatively flat, sloped less than 15 percent, and not within close proximity to hillsides. Because the Project is located in flat urban areas, risk of flooding or landslides associated with post-fire slope instability or changes in drainage is extremely low. Additionally, infill development would occur in or near areas largely covered in impervious surface which would not erode. The adoption and implementation of the General Plan 2045 would not expose people or structures to significant risk. No impact would occur.

Remaining Study Area

The area to the west of the City is generally flat and sloped less than 15 percent. Natural drainages are generally low-lying slough or agricultural ditches. The area mainly consists of pasture lands and could be susceptible to a grassland fire. Currently development is sparse in this area; therefore, fewer people and structures would be subjected to fire impacts in the case of a wildfire. The General Plan 2020 encourages the preservation of open space in this area and intends that the areas should not be developed with urban densities (Policy GM-1d). General Plan 2045 maintains this policy, therefore would not increase the risk above existing conditions. In the event of a fire, post-fire slope instability or drainage changes would not occur, as the area is nearly flat. No impact would occur.

The eastern portion of the City and further east into the Planning Boundary is generally hilled and sloped greater than 15 percent. Increased development in this area could potentially expose people or structures to risks from downslope or downstream flooding or landslides as a result of runoff, post-fire slope instability, or drainage changes. The adoption and implementation of the General Plan 2045 would not promote increased development in the hillside areas beyond existing conditions. By encouraging development in the flatter, urban Infill Opportunity Zones, the General Plan 2045 would potentially reduce the exposure people or structures to significant risk related to post-fire conditions. No impact would occur.

Mitigation Measures: No mitigation is necessary

Level of Significance: No impact

5.7.7 Cumulative Impacts

The geographic boundary for cumulative projects related to wildfire impacts is the City of Arcata Planning Boundary.

Impact WDF-C-1: Would adoption and implementation of the General Plan contribute to a cumulatively significant impact to Wildfire risk?

As discussed in above, the adoption and implementation of General Plan 2045 would have a less than significant impact associated with the exacerbation of wildfire risks. Similar to development supported by the General Plan 2045, other projects identified in Table 1.10-1 could potentially result in accidental ignition of a wildfire during construction or operation given the use of heavy machinery. Cumulative projects would be subject to compliance with applicable federal, state, and local regulations related to safety of construction equipment. Additionally, the study area and the areas of cumulative projects would be served by CAL FIRE or equivalent Fire Department in the event of a wildland fire. The Project's contribution to cumulative impacts related to the exacerbation of wildfire risks would not be cumulatively considerable, and therefore is less than significant.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

6.0 Energy Conservation

6.1 Introduction

The City values environmental sustainability, meaning protecting natural resources and requiring efficient use of land, water, and energy. Energy, whether electric, natural gas, diesel, or otherwise, is used to power the lives of Arcatans. Through the General Plan 2045 update, the City plans to promote energy conservation as well as the development and use of alternative, non-polluting, and renewable energy sources for community power.

This Draft EIR analyzes the potential effects of the adoption and implementation of the General Plan 2045 on the environment under the applicable environmental resource categories listed in the CEQA Initial Study Checklist (Appendix G of the 2023 CEQA Guidelines). Draft EIR Chapter 6, Energy Conservation, addresses environmental resource area potentially impacted by the General Plan 2045 in the following section:

– 6.2 Energy

For the energy environmental resource area, Section 6.2 describes the existing environmental and regulatory setting, discusses the environmental impacts associated with the adoption and implementation of the General Plan 2045, identifies feasible mitigation measures to reduce or eliminate those impacts, and provides conclusions on significance.

6.2 Energy

This section evaluates the potential impacts to energy resources resulting from construction and operation of the Project against significance thresholds derived from applicable local, state or federal policies, or from Appendix G of the CEQA Guidelines. CEQA Guidelines Appendix F, Energy Conservation, predates the inclusion of Energy Resources as an impact category and section within EIRs. The information and analysis recommended by CEQA Guidelines Appendix F, Energy Conservation, is addressed throughout this EIR including (but not exclusive to): this Section; Section 2.0 (Project Description); Section 3.5 (Greenhouse Gas Emissions); and Section 4.2 (Transportation).

6.2.1 Study Area

For impact assessment related to energy resources, the City limits was used as the study area (see Figure 2-1 – City of Arcata Planning Areas).

6.2.2 Setting

Energy Resources

Energy resources in Humboldt County consist primarily of fossil fuels such as natural gas deposits, and local biomass resources sourced from lumber mill wood residue. Most of the primary energy used in Humboldt County is imported, with the exception of biomass energy. Although natural gas deposits exist in Humboldt County, the County imports approximately 90 percent of its natural gas. There is one natural gas pipeline connecting the County to the larger natural gas grid. Active gas wells in Humboldt County are concentrated in the Tompkins Hill Gas Field in the Eel River basin in Humboldt County. There is no record of geothermal production in Humboldt County. Most petroleum-based transportation fuels are imported to the County by barge.

There are two major connections to the larger electric grid. Electric transmission capacity of approximately 70 MW connects Humboldt County to the regional grid. This represents less than half of the County's 170 MW peak electrical demand. Humboldt County generates much of its own electricity, primarily using natural gas and biomass fuels. According to the Humboldt County General Plan 2025 Energy Element Background Technical Report (SERC 2005), the residential, commercial, industrial and agricultural sectors in Humboldt County consumed a total of 940 Gigawatt-hours (GWh) in 2003, and the total peak electrical demand was 158 Megawatts (MW). In 2021, the total electricity usage data for Humboldt County from the California Energy Commission's Energy Reports was 821 GWh, which is a reduction of approximately 119 GWh from the 2003 electrical usage. For natural gas, the total amount consumed for Humboldt County was estimated to be 32.1 million therms (CEC 2021). PG&E power poles and overhead electricity transmission lines are present throughout the vicinity of the Project area.

6.2.3 Regulatory Framework

Federal

There are no federal regulations that apply to the Project related to energy resources in Humboldt County. The federal government granted California authority under the Clean Air Act to implement its own vehicle emissions standards under a specified 'waiver of preemption', subject to review and approval by the EPA. The federal 2019 Safer Affordable Fuel-Efficient Vehicles Rule Part One: One National Program Rule (SAFE-1) rescinded California's authority to implement its own greenhouse gas emissions (GHG) standards and zero emission vehicle sales mandate. Subsequently, the EPA reconsidered the action and restored California's authority to implement the GHG standards and zero emission vehicle sales mandate as part of California's Advanced Clean Car program.

State

Renewable Energy Portfolios

Renewable Portfolio Standard

California's Renewable Portfolio Standard (RPS) requires retail sellers of electric services to increase procurement from eligible renewable energy resources to 33 percent of total retail sales by 2020.

Senate Bill 350

The passage of Senate Bill 350 in 2015 updated the Renewable Portfolio Standard (RPS) to require the amount of electricity generated and sold to retail customers per year from eligible renewable energy resources to increase to 50 percent by December 31, 2030. The bill made other revisions to the RPS program and to certain other requirements on public utilities and publicly owned electric utilities.

Senate Bill 100

RPS was further strengthened in 2018 by the passage of Senate Bill 100, which increases the RPS requirement to 60 percent by 2030, and requires renewable energy and zero-carbon resources supply 100 percent of electric retail sales to end-use customers by 2045, speeding up the state's timeline for moving to carbon-free power sources.

Senate Bill 1020 (100% Clean Electric Grid)

Senate Bill 1020 was passed in 2022 and contains the following goals for delivering eligible renewable energy resource and zero-carbon resources of electric energy to end users:

– 90% by 2035
– 95% by 2040
– 100% by 2045

Additionally, SB 1020 requires all state agencies procure 100 percent of electricity from renewable energy and zero-carbon resources by 2035.

State of California Energy Action Plan

In 2003, the three key energy agencies in California— the California Energy Commission (CEC), the California Power Authority, and the California Public Utilities Commission—jointly adopted an Energy Action Plan which sets goals for California's energy future and memorializes a commitment to achieve these goals through specific actions. In 2005, the California Public Utilities Commission and the CEC jointly prepared a subsequent draft of the Energy Action Plan (Energy Action Plan II) to identify further actions necessary to meet California's future energy needs. To the extent that efficiency, demand response, renewable resources, and distributed generation are unable to satisfy increasing energy and capacity needs, the Energy Action Plan II supports the use of clean and efficient fossil-fuel energy generation. The plan recognizes that concurrent improvements are required to the bulk electricity transmission grid and distribution facility infrastructure to support growing demand centers and the interconnection of new generation, both on the utility and customer side of the meter.

Senate Bill 1389

Senate Bill (SB) 1389, the California Integrated Energy Policy, was adopted in August 2002 and requires the CEC to prepare an Integrated Energy Policy Report (IEPR) for electricity, natural gas, and transportation fuels. The IEPR contains an analysis of the policies and actions that are necessary to ensure that the state has adequate energy resources—including a range of alternative energy resources—to meet its needs. The IEPR also includes recommendations to reduce energy demand and to improve the state's energy infrastructure. The State IEPR is updated annually, with the applicable version reflecting the year 2023.

On-road Vehicles

Assembly Bill 1007 (State Alternative Fuels Plan)

Assembly Bill 1007, (Pavley, Chapter 371, Statutes of 2005) required the CEC to prepare a state plan to increase the use of alternative fuels in California (State Alternative Fuels Plan). The CEC prepared the State Alternative Fuels Plan in partnership with the California Air Resources Board (CARB) and in consultation with other state, federal, and local agencies. The final State Alternative Fuels Plan, published in December 2007, attempts to achieve an 80-percent reduction in greenhouse gas emissions associated with personal transportation, even as California's population increases.

Executive Order N-79-20

This executive order from Governor Newsom, signed on September 23, 2020, requires sales of all new passenger vehicles to be zero-emission by 2035 and additional measures to eliminate harmful emissions from the transportation sector. CARB will develop regulations to mandate that 100 percent of in-state sales of new passenger cars and trucks are zero-emission by 2035 – a target which would achieve more than a 35 percent reduction in greenhouse gas emissions and an 80 percent improvement in oxides of nitrogen emissions from cars statewide. In addition, CARB will develop regulations to mandate that all operations of medium- and heavy-duty vehicles shall be 100 percent zero emission by 2045 where feasible, with the mandate going into effect by 2035 for drayage trucks.

Additionally, Executive Order N-79-20 directs the CARB to develop emission reduction strategies for off-road vehicles (details provided below.)

Advanced Clean Cars

First adopted in 2012, the Advanced Clean Cars I was adopted by CARB to include low emission vehicle and zero emission vehicle regulations for on-road vehicle model years 2015-2025.

The Advanced Clean Cars II regulations were adopted by CARB in 2022 and include the next set of low emission vehicle and zero emission vehicle standards for model years 2026-2035. These standards are anticipated to assist in meeting the federal ambient air quality ozone standards and California's carbon neutrality targets. By 2035 all new passenger cars, trucks and SUVs sold in California will be zero emissions.

Offroad Vehicles

Off-Road Regulation

CARB adopted the In-Use Off-Road Diesel-fueled Fleets Regulation (Off-Road Regulation) in 2007, initially focused on emissions standards for new engines to reduce regional criteria air pollutant, ozone precursor, and diesel particulate matter emissions from off-road equipment. The regulation was further updated with amendments in 2009, 2010, and most recently in 2022. All self-propelled off-road diesel vehicles 25 horsepower (hp) or greater used in California and most two-engine vehicles. Among the requirements, the regulation imposes limits on idling and requires a written idling policy.

The Governor's Executive Order N-79-20 directs CARB to develop and propose strategies to achieve 100 percent zero-emission from off-road vehicles and equipment operations in the State by 2035 where feasible. In November 2022, CARB approved amendments to the Off-Road Regulation. The amendments will require fleets to phase-out use of the oldest and highest polluting off-road diesel vehicles in California; prohibit the addition of high-emitting vehicles to a fleet; and require the use of R99 or R100 renewable diesel in off-road diesel vehicles. The amendments phase-in starting in 2024 through the end of 2036. The amendments further reduce air pollutant emissions from engines, as well as reduce energy consumption by off road equipment.

Assembly Bill 3232 Building Decarbonization

Assembly Bill 3232, signed in 2018, requires the CEC to assess how to reduce greenhouse gas (GHG) emissions from the state's existing building stock by 40 percent below 1990 levels by 2030, in line with the state's

overall GHG emissions limit (SB 32 by Senator Pavley, 2016). The California Building Decarbonization Assessment was approved by the CEC and published in August 2021.

California Building Energy Efficiency Standards

California's Building Energy Efficiency Code, known as Title 24, is designed to reduce wasteful and unnecessary energy consumption in newly constructed and existing buildings. Title 24 regulates how each new home and business is built or altered in California. It includes requirements for the structural, plumbing, electrical, and mechanical systems of buildings, and for fire and life safety, energy conservation, green design, and accessibility in and about buildings. Two sections of Title 24 – Part 6, the California Energy Code, and Part 11, the California Green Building Standards Code or CALGreen Code – contain standards that address GHG emissions related to construction.

The CEC updates the Building Energy Efficiency Standards (Title 24, Parts 6 and 11) every three years by working with stakeholders in a public and transparent process. The version in effect at the time of this document is the 2022 Title 24. Buildings whose permit applications are applied for on or after January 1, 2023, must comply with the 2022 Building Energy Efficiency Standards.

Part 6 California Energy Code

The 2022 Energy Code goals include increasing building energy efficiency, contribute to California's GHG reduction goals, enable pathways for all-electric buildings, reduce new building impacts on the electricity grid, promote demand flexibility and self-utilization of solar energy generation, and provide tools for local government reach codes.

The Energy Code is divided into three basic sets: a mandatory requirement that applies to all buildings, a set of performance standards that vary by climate zone and building type, and a set of alternatives to performance standards. Mandatory requirements for residential buildings include measures to support future electrification of appliances (cooktops, space heating, clothes dryers, and water heaters) when gas equipment is installed, future solar electric installation, and future energy storage system-ready measures. Electrical infrastructure must be provided and reserved to the equipment location for the future installation of electrical appliances.

Part 11 CALGreen Code

CALGreen became a mandatory code beginning January 1, 2011. The code takes a holistic approach to green building by including minimum requirements in the areas of planning and design, energy efficiency, water efficiency and conservation, material conservation and resource efficiency, and environmental quality. The CALGreen code has minimum mandatory standards and two additional tiers of voluntary measures intended to achieve greater levels of efficiency that result in lower levels of GHG emissions. Local governments must enforce the minimum standards and can choose to adopt either Tier 1 or Tier 2 standards to achieve greater positive environmental impacts. CALGreen does not limit the authority of local agencies to make necessary changes based on local climate or topography considerations.

Mandatory requirements for new nonresidential construction include bicycle parking, electric vehicle (EV) charging stations, EV charging readiness requirements for warehouses, grocery stores, and retail stores with planned off-street loading spaces, water efficiency measures, and lighting efficiency measures.

Residential mandatory requirements include EV charging support infrastructure (with exceptions for Accessory Dwelling Units and Junior Accessory Dwelling Units without additional parking facilities).

Regional and Local

The study area is within the City. Therefore, this section includes City of Arcata General Plan and the City's Local Coastal Program policies for the portions of the Project within City limits and within the Coastal Zone.

RePower Humboldt- The Redwood Coast Energy Authority's Comprehensive Action Plan for Energy

The Redwood Coast Energy Authority (RCEA) is a Joint Powers Authority and Community Choice Aggregator recognized by Humboldt County as the regional energy authority and tasked with countywide strategic energy planning implementation, and education.

RCEA's 2019 Update to the Comprehensive Action Plan for Energy (also called "RePower Humboldt") is an action plan to develop and implement sustainable energy initiatives in the county. RCEA will address Humboldt County's supply-side energy needs through its existing Community Choice Energy program and development of new programs and initiatives. RePower Humboldt includes the following goals (RCEA 2019):

> By 2025 100% of RCEA's power mix will be from a combination of state-designated renewable energy sources—solar, wind, biomass, small hydroelectric, and geothermal—and state-designated net-zero-carbon-emission existing large hydroelectric facilities.
>
> By 2030 Humboldt County will be a net exporter of renewable electricity and RCEA's power mix will consist of 100% net-zero-carbon-emission renewable sources.

According to the RCEA's reported 2021 Power Content Label, 33 percent of energy delivered under their 'RePower' program in 2021 was from eligible renewable resources, and another 10.5 percent from large hydroelectric facilities. For the RCEA's 'RePower+' program, 100 percent of energy delivered in 2021 was generated by eligible renewable resources. The RCEA currently anticipates achieving their 2025 and 2030 energy goals (RCEA 2023).

Humboldt Regional Draft Climate Action Plan

Humboldt County is working on preparing a multi-jurisdictional Climate Action Plan with all jurisdictions within the County; however, the County does not have an adopted Climate Action Plan. An updated draft Regional Climate Action Plan was released for public review on April 7, 2022.

The baseline inventory for the region, including the City of Arcata, is 2015. As detailed within the Draft Regional Climate Action Plan, emissions sources loosely follow population within the County, with unincorporated Humboldt County generating approximately 61% of the regional GHG emission, followed by the Cities of Eureka (18%) and Arcata (12%) (Humboldt 2022). The Draft Regional Climate Action Plan states that a key outcome of the plan is:

> *… to reduce greenhouse gas emissions to 40% below 1990 levels* [by 2030] *consistent with statewide targets. Achieving this goal will improve the chances our region can meet the state's longer term goal to become carbon neutral by 2045.*

The Draft Regional Climate Action Plan includes energy efficiency and renewable energy goals and strategies, such as transitioning mobile sources from fossil fuels to renewable fuels; however, the Draft Regional Climate Action Plan is not yet adopted.

City of Arcata Community Greenhouse Gas Reduction Plan

In 2006, the City developed a Community Greenhouse Gas Reduction Plan. The plan focuses on six action areas: energy efficiency, renewable energy, sustainable transportation, waste and consumption reduction, carbon sequestration and other methods, and cross-cutting approaches. In addition to reducing greenhouse gas emissions, it is expected that the implementation of this plan would offer many other community benefits. These include energy cost savings with subsequent benefits to the local economy, cleaner air, less reliance on fossil fuels and imported energy sources, and a move toward a more sustainable energy economy. Implementation of this plan would also serve to fulfill numerous objectives that are stated in the Arcata General Plan: including Policy RC-8, Energy Resources Management (City of Arcata 2008).

The Community Greenhouse Gas Reduction Plan also includes applicable recommendations for sustainable transportation, including:

– Improve bicycle infrastructure,

– Improve pedestrian infrastructure (sidewalks, paths, and walkways), and
– Improve mass transit infrastructure.

However, the plan's emission reduction goals and planning were not extended to years beyond 2020.

City of Arcata General Plan 2020

The General Plan 2020 contains the following policies relating to energy in the Resource Conservation and Management Element.

Policy RC-8: Energy Resources Management

Objective. *Reduce the net emissions of greenhouse gases from Arcata; reduce other negative impacts of energy production and use, including risks from nuclear power, air emissions, fuel spills, and wildlife and habitat destruction; reduce energy costs to the city and its residents, and increase the percent of energy purchases from sources within our region; increase the city's and nation's energy security and reduce our vulnerability to changes in energy availability and price; increase public awareness of energy issues and encourage an energy conservation ethic; monitor the cost and effectiveness of Arcata's actions so we and others can learn from them; and implement Arcata's Advisory Proposition B.*

Applicable sub-policies:

- ***RC-8a: Encouragement of appropriate energy alternatives.*** *In making energy purchases, the City shall consider how suppliers meet the objectives of this policy. The City shall choose suppliers that provide good tradeoffs among these objectives, giving due consideration to investment in energy conservation as an alternative use of energy funds. In addition, the City shall attempt to purchase at least 10% of its electrical energy (in energy units, not cost) from renewable sources within Humboldt County by the year 2020.The City shall take measures to encourage the availability to, and use by, residents of energy suppliers that best meet the objectives of this policy. The City shall convert City vehicle fleets to a mix of fuels that best meets the objectives of this policy.*
- ***RC-8b: Encouragement of energy efficiency and conservation.*** *The City shall coordinate with energy suppliers and agencies to educate residents, property owners, and business operators about the need for and benefits of conserving energy. The City shall maintain and distribute current information about building insulation; energy efficient appliances, lighting, and heating; other conservation measures and materials; and home power alternatives. The City shall continuously seek and implement cost-effective steps to reduce City energy use. The City shall attempt to reduce the City's total consumption of purchased energy by at least 20% (in energy units, not cost) by the year 2010.The City shall adopt the goals of the national "Energy Star Program" (or its successor programs) for all City construction projects and all construction projects assisted by grants for which the City is an applicant. These goals include achieving a minimum of 15% greater energy efficiency than would a building designed with existing Title 24 standards. Explore and, if appropriate, adopt energy efficiency standards for existing residential and commercial buildings upon substantial remodel. Consider requiring energy efficiency inspections, disclosure, and retrofits at change of ownership based on cost-effective and commercially available energy efficiency measures.*
- ***RC-8c: Promotion of energy efficiency in transportation.*** *The City shall give strong consideration to energy conservation and the goals of this policy in all transportation and traffic management decisions. It is City policy to reduce the need for motor vehicle trips within the city and between the city and other destinations, and to reduce per-trip energy consumption; this policy applies to trips by residents, non-residents, and city staff. Such measures as bike and pedestrian paths, public transportation, parking and traffic management, and encouraging use of alternative-fueled vehicles shall be used to make these reductions.*

Advisory Proposition B – Approved by Arcata Voters April 8, 1980:

"In accordance with America's renewed determination to be energy self reliant, be it resolved that the citizens of Arcata and their City government are committed to the enactment of conscientious energy

conservation measures and the accelerated development and active promotion of safe and economical alternative renewable energy sources for our community.

Objective. *Be it further resolved that the City government of Arcata support complete independence from nuclear power including the permanent closure of the Humboldt Bay nuclear power plant and its replacement by safe, clean and efficient generating sources more compatible with the resources and health and safety of the Northcoast, such as conservation, solar power and generation from wood waste."*

Applicable sub-policies:

- ***RC-8c: Promotion of energy efficiency in transportation****. The City shall give strong consideration to energy conservation and the goals of this policy in all transportation and traffic management decisions. It is City policy to reduce the need for motor vehicle trips within the city and between the city and other destinations, and to reduce per-trip energy consumption; this policy applies to trips by residents, non-residents, and city staff. Such measures as bike and pedestrian paths, public transportation, parking and traffic management, and encouraging use of alternative-fueled vehicles shall be used to make these reductions.*

City of Arcata Local Coastal Program

There are no policies within the City of Arcata's Local Coastal Program that regulate energy resources.

Proposed City of Arcata General Plan 2045

Policies in the proposed General Plan 2045 relating to energy resources include:

Policy AQ-1: Point and Area Sources of Air Pollutants

Objective. *Improve air quality by reducing emissions from stationary point sources of air pollution (e.g., equipment at commercial and industrial facilities), and stationary area sources (e.g., wood-burning fireplaces and gas-powered lawn mowers), which cumulatively emit large quantities of emissions.*

- ***AQ-1a Reduce emissions from stationary point sources: commercial and industrial.*** *Coordinate with energy providers to develop incentive programs encouraging the use of less polluting, energy efficient designs and equipment in commercial and manufacturing uses. Encourage commercial and industrial uses to self-enforce emissions reductions by maintaining and repairing equipment, correcting leaks, installing control devices, and minimizing accidental releases. Coordinate with the District to establish buffer zones between point sources and the public, particularly sensitive receptors such as schools, hospitals, and convalescent facilities.*
- ***AQ-1b Reduce emissions from stationary area sources: residential, commercial, and industrial.*** *Prohibit installation of wood burning appliances, including replacement, remodel, addition, or new construction. New construction retrofits must comply with energy efficient construction codes to reduce energy consumption including high-efficiency windows, water heaters, and furnaces. Encourage electric heat pump appliances.*
- ***AQ-1c Coordination between the District and Arcata Fire Protection District****. The City will encourage Arcata Fire Protection District officials to coordinate with the District to develop procedures for identifying, monitoring, and informing the public of high pollutant incidents related to fires and accidental or intentional releases of toxic or unknown materials. Coordination should encompass current air quality levels, meteorological conditions (stagnant air), prevailing wind directions, location of nearby sensitive receptors, potentially affected land uses, and types of potential toxic materials. Coordination and required permits are particularly important during the planning and implementation of controlled burns.*
- ***AQ-1d Review of development projects for emissions reductions****. Evaluate new construction plans to reduce point and area sources of pollution. Consult with the District during the environmental review process to ensure that:*

1. *Air quality impacts of development projects are assessed using analytical methods and significance criteria for emission rates approved by the District.*
2. *Air quality mitigation is feasible, workable, monitorable, and cost effective.*
3. *Impacts of projects that may be individually insignificant, but cumulatively significant are minimized or mitigated.*
4. *Innovative measures are incorporated into the project design to reduce air quality impacts.*
5. *The City shall require air filtrations systems at new sensitive receptor buildings to be designed and constructed with air filters rated at a minimum efficiency reporting value (MERV) 13 or higher.*

Encourage the District to enforce these measures and their related policies.

Policy AQ-2: Mobile Sources of Air Pollutants

Objective. *Improve air quality by reducing emissions from transportation sources, particularly motor vehicles, and other mobile sources. Reduce vehicle miles of travel and encourage shifts to alternative modes of travel.*

- ***AQ-2a Implement land use measures to reduce vehicle trips, miles traveled, and air pollutant emissions.*** *Implement or encourage the land use and development measures which reduce motor vehicle travel as outlined in the Transportation Element. These measures are also effective in reducing mobile sources of air pollutants.*

- ***AQ-2b Implement transportation measures to reduce vehicle trips, miles traveled, and air pollutant emissions.*** *Implement or encourage the following measures to reduce vehicle miles traveled and provide alternatives to the single occupant motor vehicle, as outlined in the Transportation Element.*

  1. *Provide as direct and safe a travel route as possible for all travel modes.*
  2. *Implement and support public education programs explaining the negative impacts of single occupant vehicle use and encourage the development of employer-based measures to reduce employee automobile travel.*
  3. *Require A&MRTS and encourage other fleet operators to convert vehicles to run on less polluting alternative fuels at the earliest feasible time (See Policy RC-8a).*

- ***AQ-2c Reduce or minimize the creation of "hot spots" or localized places of concentrated automobile emissions.*** *Implement or encourage the following measures to reduce hot spots, which occur where groups of vehicles are required to idle (e.g., at congested intersections, driveways and drive-through facilities).*

  1. *Minimize the delay and congestion at unsignalized and signalized intersections to reduce emissions from idling vehicles. Attempt to achieve this through reducing automobile travel, minor capacity improvements, or fine-tuning of intersection operations. Discourage major capacity improvements at intersections, minimize new signalized intersections, or any other improvement which discourages walking, bicycling, or transit use.*
  2. *Minimize or restrict land uses with drive-through facilities located in areas of concentrated traffic or near congested intersections.*
  3. *Construction of projects with large parking lots or high volume driveways shall identify traffic impacts and provide evidence that project design will optimize internal circulation and minimize delay. Ensure that mitigation measures balance the needs of automobiles, pedestrians, bicyclists, and transit riders.*

- ***AQ-2d Design Arcata's highest traveled arterials to minimize stopping.*** *Recognize that automobiles are most efficient and less polluting at constant, moderate speeds between 25 and 35 miles per hour. Minimize idling delay, excessive congestion, and excessive speeds with the following measures:*

  1. *Encourage Caltrans to coordinate traffic signals on Samoa Boulevard to maximize progression.*

2. *Eliminate traffic bottlenecks with traffic flow improvements (such as re-allocating turning lanes, or converting all-way stop control to roundabouts or two-way stop control), without impacting the safety of pedestrians, bicyclists, or transit facilities.*
3. *Review access plans for commercial driveways to ensure designs minimize idling vehicles and concentrations of traffic. For larger projects require multiple driveways rather than single driveways and consider turn restrictions where delays to existing driveways could be significant.*
4. *Encourage and support law enforcement's efforts to expeditiously manage traffic incidents.*

- ***AQ-2e Recognize that poor air quality is caused by the combination of high pollutant emissions and meteorological conditions that do not allow for dispersal of pollutants.*** *The City shall coordinate a joint effort with the District to minimize the impact of high pollutant incidents and notify the public about meteorological conditions that contribute to poor air quality. The joint effort shall include employing the following measures:*

  1. *Implement added air pollution control measures during predictable meteorological events of stagnant air. Inform the public of high pollutant incidents and encourage measures which minimize impacts, such as limiting use of wood-burning fireplaces, gas powered equipment, and avoiding non-essential vehicle travel.*
  2. *Promote and encourage employer-based and project-based Transportation Demand Measures (such as subsidized bus fare, flexible work hours, indoor bike storage, and incentives to carpool) to reduce automobile travel, particularly during periods of poor air quality.*
  3. *Support and encourage local industrial and commercial efforts to reduce emissions and particulate pollution from industrial plants and trucks, particularly during periods of poor air quality.*
  4. *Require traffic and construction site dust control measures at construction projects. Require measures which reduce emissions from construction activity and maximize efficiency of traffic flow during inversion conditions.*

- ***AQ-2f Enforce air quality control measures and monitoring at construction sites.*** *Construction emissions shall be controlled because, although they are temporary in nature, they can often be the greatest air quality impact of a project. Require the dust and erosion control measures for construction activities.*

- ***AQ-2g Enforce air quality control measures and monitoring for agricultural operations.*** *Air emissions from agricultural operations, including field burning, airborne soils, and over-spray from herbicide applications, shall be controlled and monitored through air quality standards, as well as adherence to the Land Use Code.*

Policy AQ-2: Mobile Sources of Air Pollutants

Objective. *Participate in regional efforts to improve and monitor air quality and meet air quality goals, coordinate transportation and land use development planning with the North Coast Unified Air Quality Management District, and educate the public.*

- ***AQ-3a Air quality standards and monitoring.*** *Identify potential emission sources of airborne toxins from mobile and stationary sources. This may be in coordination with the California Air Resource Board and the District, as appropriate. Enforce rigid high standards to restrict fumes, smoke, dust, or other environmental pollutants from stationary sources of pollution.*

- ***AQ-3b Develop and distribute material to educate the public on air quality issues.*** *Work with Humboldt State University, the California Air Resources Board, and the District to develop educational material regarding air quality, impact of air quality on people, plants and animals, and what citizens can do to improve air quality. The City will make this information available.*

- ***AQ-3c Cooperation in enforcement activities and programs.*** *Cooperate with the District in implementing and enforcing the district's rules and programs. Consider joint implementation of programs between the City and the district such as:*

1. *A voluntary wood-burning-devices dryness certification program.*
2. *Free cordwood moisture checks.*
3. *Brochures on wood burning.*
4. *Conversion of conventional wood burning devices to EPA certified devices.*
5. *Use of district non-compliance funds for low-cost replacements.*

Develop land use ordinances and guidelines for new residential development to limit wood burning devices. Use District strategies to identify improper wood burning device use, improperly dried fuel, and faulty equipment, and provide education to violators or take enforcement action.

- ***AQ-3d Indoor air pollution.*** *Factors such as sealed building interiors, inadequate ventilation, non-openable windows, and use of building materials that release toxic substances contribute to indoor air pollution. To maximize indoor air quality, the installation of openable windows and adequate ventilation systems, the use of pollution-reducing houseplants, as well as the selection of non-toxic building materials and interior finishes, is encouraged in all new buildings and in the retrofitting of existing buildings.*
- ***AQ-3e Greenhouse gas reduction.*** *Many of the chemicals of concern for air quality are also greenhouse gases. The City shall work locally and regionally to develop plans and programs to reduce or reverse greenhouse gas emissions to meet State and Federal greenhouse gas reduction goals.*

Policy AQ-4: Odor

Objective. *Minimize public exposure to noxious odors from industrial, manufacturing, processing, and food and beverage production operations.*

- ***AQ-4a Odor controls.*** *Identify potential sources of noxious odors and regulate those sources to avoid adverse effects on adjacent sensitive receptors. Noxious odors are defined as foul smelling airborne emissions that are sufficiently concentrated to cause physical discomfort to those inhabiting adjacent areas. Regulations imposed to reduce effects of these odors shall include limiting hours for odor emissions, periodic monitoring, and filtering to reduce concentrations.*

Policy D-1: Overall Community Design

Objective. *Maintain community diversity and quality in the built environment; with structures and other physical features harmonious with their neighborhood context; and with a physical and visual transition between urban area and the surrounding open space lands.*

- ***D-1a: Building Characteristics.*** *Building design shall consider established City characteristics and planned features and shall offset the neighborhood impact of increased heights and new uses in some areas of the community. This shall be accomplished by:*

  1. *Breaking the massing of larger developments through setbacks rather than constructing a single large, monolithic building.*
  2. *Avoiding large, unbroken expanses of wall and roof planes.*
  3. *Providing articulation in building mass, surfaces, rooflines, wall planes, and facades, and including distinctive architectural features and ornamentation.*
  4. *Parking Lot Locations. Disallow the placement of parking lots along street frontages in the interest of maintaining continuous building frontages along the primary commercial streets and improving walkability. Parking lots and structures must be located behind buildings, or otherwise located subordinate and obscured by design features.*
  5. *Custom Standards Along Designated Streets. Plan for custom use, development, and design standards along designated streets with the objective of generating a more welcoming and vibrant city.*
  6. *Main Building Entrances. Require main building entries to be visually prominent and oriented to a public street or pathway.*

7. *Pedestrian Connections. Required pedestrian walk paths to connect entrances directly to a public sidewalk.*
8. *Pedestrian-Friendly Design. Require parking location and design to not detract from pedestrian-friendly streetscapes, walkable neighborhoods, and active and inviting mixed-use districts. Locate parking facilities away from building frontages in the rear of the lot unless determined infeasible in unique circumstances.*
9. *Minimize Visual Dominance. Screen parking facilities for limited visibility from the street frontage with landscaping, art, or other visually appealing methods.*
10. *Varied and interesting Facades. Create street-facing building facades that are varied and interesting with human-scale design details.*
11. *Articulation. Incorporate architectural elements that reduce the box-like appearance and perceived mass of buildings.*
12. *360-Degree Design. Provide for buildings designed as a unified whole with architectural integrity on all sides of the structure.*
13. *Quality Materials. Ensure quality materials that maintain their appearance over time.*
14. *Design Details. Promote design details and materials compatible with the existing neighborhood design.*

- ***D-1k: Pedestrian Priority and Accessibility in Streetscape Design.*** *Ensure that streetscape design and improvements prioritize pedestrian circulation that promote walkability and support a car-free lifestyle and accessibility for all ambulatory modes and abilities. Require new development to consider the needs of a diverse range of abilities; for example, position obstructions to path-of-travel to the curb line or other less obtrusive locations wherever feasible.*

Policy D-8: Community Benefits Program

Objective. *Ensure new development benefits the community generally while streamlining approval and accountability in the development planning process.*

- ***D-8j: Incentivize Active and Alternative Transportation as a Community Amenity.*** *Through the community benefit program, allow increased development intensity and simplified development processes for projects that provide on-site active and alternative transportation amenities, such as car share/bike share, free electric vehicle charging stations, employee showers, on-site covered and secure indoor bike parking, bus passes for residents and/or employees, dedication of parcel frontage to transportation uses, charging stations for e-bikes, shared parking, and related amenities that stimulate non-motorized and zero-carbon transportation options above and beyond current requirements of state law.*
- ***D-8k: Sustainable and Green Buildings as a Community Amenity.*** *Through the community benefit program, allow increased development intensity and simplified development processes for projects that provide designated levels of sustainable and green building features.*

Policy PF-1: Water Supply and Delivery

Objective. *Manage the City's potable water resources to ensure adequate quantities for community use, to promote water conservation, to maintain water quality, and not to deplete source supplies.*

Applicable sub-policies:

- ***PF-1c: Water conservation.*** *The City shall use a combination of economic incentives, educational programs, and auditing to promote water conservation and shall remain in compliance with Humboldt Bay Municipal Water District policy regarding its Five-Stage Water Rationing System. Continue to encourage the use of infrastructure and practices that promote efficient water and energy use such as rain barrels, green roofs, and retention structures. Encourage reduced water demand by requiring water-conserving design and equipment in new construction and encouraging the retrofitting of existing development with water-conserving devices, along with water capture and conservation practices.*

Water rates will continue to be higher for consumption above baseline usage. Information about conservation devices such as flow restrictors, and practices such as off-peak irrigation, will be made available to the public. Building and site development permits that require connections to the City's water system shall incorporate water conservation design features and best management practices.

The City shall also implement water conservation measures through the water, wastewater, and drainage master plans, and through leak detection and inflow and infiltration (I/I) reduction programs.

In response to water shortages, the City will work cooperatively with the regional water supplier and the supplier's other municipal customers to implement an effective water shortage contingency plan that defines response actions based on the severity of the water shortage. End use prohibitions shall be determined based on current conditions, recommendations of a regional task force, and historic water use data and trends, and will be considered for mandatory penalties, charges and other escalating enforcement actions including education and outreach, issuing a verbal/written warning, penalty assessment, and water service termination. The City may consider imposing sharply graduated excessive use rates and/or excessive use fines, additional forms of water rationing, warnings, and physical flow restrictions to water users who fail to respond to less severe sanctions.

- ***PF-5f: Energy conservation and decarbonization of City facilities.*** *Continue reducing City facility energy consumption, including conservation and weatherization measures exceeding building code standards, electric only appliances/ HVAC/ water heating systems and renewable energy sources. Consider Greenhouse Gas Reduction measures in all new facility, renovations, site design and connectivity decisions. Develop and implement City practices to increase electrification equity and affordability for all residents.*

Policy PF-6: Integrated Waste Management

Objective. *Reduce solid waste generation at the source; maximize re-use and repair of appropriate items and material; promote composting and recycling; and properly transport non-recyclable solid waste to approved disposal sites. ensure new development is adequately cited and designed, including adequate physical space, for solid waste bins.*

Applicable sub-policies:

- ***PF-6a: Source reduction.*** *Source reduction and materials re-use are the most cost-effective ways to minimize solid waste. Source reduction, or waste prevention, reduces the growing costs of collection, recycling, and disposal systems. Source reduction and re-use shall be promoted through educational programs and incentives. Examples of effective source reduction and re-use activities that shall be promoted are:*

  1. *Backyard composting, landscaping with low water needs, and grass mulching.*
  2. *Purchasing durable re-usable goods instead of disposable items (e.g., cloth diapers, rechargeable batteries).*
  3. *Repairing equipment and appliances.*
  4. *Purchasing goods from second-hand stores, flea-markets and swap meets.*
  5. *Reducing the use of packaging by buying in bulk or purchasing fresh food at farmers markets.*
  6. *Moving away from using paper copies for as much City business as possible by working with electronic mail, forms, and re-using of scrap paper if possible, if copying is necessary.*
  7. *Reusable coffee cups and beverages provided in dispensers.*
  8. *Termination of unwanted mail.*
  9. *Incentives such as on-call garbage collection and differential solid waste fees shall be used to encourage source reduction.*

- ***PF-6b: Recycling.*** *The City's recycling program shall continue and expand, unless a more efficient and cost-effective method of collecting and reusing materials is identified. The City shall continue to*

contract for recycling, collection, and processing, in order to help meet and exceed the State diversion goal. The following programs shall also be promoted:

1. *Collection of commercial corrugated cardboard.*
2. *Collection of office paper.*
3. *Collection of organic waste.*
4. *City procurement policies and practices reflecting State requirements for purchasing recycled content paper products.*
5. *Implementation of density bonuses for buildings designed to promote recycling.*
6. *The City's active involvement in the Humboldt County Recycling Market Development Zone.*
7. *Public education to "close the loop" and buy locally-made products with recycled content.*
8. *Public education on recycling that includes self-haul services for recyclable materials not collected curbside.*
9. *Support for development and expansion of recycling-based manufacturing.*

In order to minimize increases in solid waste volumes and maximize the amount of material returned to productive use, the City shall continue these programs with a target of reducing landfill volumes as specified in the Zero Waste Action Plan.

- ***PF-6h: Plan Utility Infrastructure to Accommodate Envisioned Growth.*** *In planning for improvements to the overall utility infrastructure, including wastewater and electrical demand, design the systems to accommodate the planned amount of growth outlined in other policies and consider the impacts of locating new infrastructure on potential future habitat restoration sites. Plan for future infrastructure needs due to conversion of uses (e.g., electrification). Infrastructure will be developed over time as needed, and the City's Capital Improvements Program (CIP) will reflect near term infrastructure needs through the annual update process.*

Policy RC-8: Energy Resources Management

Objective. *Reduce energy use through conservation and efficiency practices, reduce energy costs to the city and its residents, and increase the percent of energy purchases from renewable sources; increase energy security and reduce our vulnerability to outages and increased price; increase public awareness of energy issues and encourage an energy conservation ethic.*

The City will actively participate in Redwood Coast Energy Authority's primary guiding document the Humboldt County Comprehensive Action Plan for Energy (CAPE) and RePower Humboldt, a community-wide effort to define a vision and Strategic Plan for achieving energy independence and energy security in Humboldt County

Applicable sub-policies:

- ***RC-8a: Encouragement of appropriate energy alternatives.*** *The City will participate in Redwood Coast Energy Authority's Community Choice Energy (CCE) program, supporting renewable energy purchases over non-renewable sources.*
- ***RC-8b: Encouragement of energy efficiency and conservation.*** *The City shall disseminate Redwood Coast Energy Authority information to educate residents, property owners, and business operators about the need for and benefits of conserving energy. This includes information about building insulation; energy efficient appliances, lighting, and heating; other conservation measures and materials; and home power alternatives.*

  The City shall continuously seek and implement cost-effective steps to reduce City energy use. The City shall adopt national "Energy Star Program" goals (or its successor programs) for all City construction projects and all construction projects assisted by grants for which the City is an applicant. These goals include achieving a minimum of 15% greater energy efficiency than would a building designed with existing Title 24 standards.

Explore and, if appropriate, adopt energy efficiency standards for existing residential and commercial buildings upon substantial remodel. Consider requiring energy efficiency inspections, disclosure, and retrofits at change of ownership based on cost-effective and commercially available energy efficiency measures.

- ***RC-8c: Promotion of energy efficiency in transportation.*** *Reduce motor vehicle trips within the city and between the city and other destinations, and reduce per-trip energy consumption; this policy applies to trips by residents, non-residents, and city staff. Such measures as bike and pedestrian paths, public transportation, shared parking, and alternative-fueled vehicles shall be used to make these reductions.*
- ***RC-8e: City Electrification Ordinance.*** *Prepare and pass an 'all electric' Ordinance that phases out natural gas infrastructure and use.*

Policy PS-8: Climate Adaptation and Resiliency

Objective. *The City will continue to support and monitor research about the nature of all hazards in Arcata, including research on prediction and warning systems, community vulnerability and consequences assessments, and improvements to building performance and resilience. The City will continue to pursue efforts that minimize Arcata's contribution to climate change by reducing greenhouse gas emissions and protecting people, the built environment, and the natural environment from the impacts of climate change.*

Applicable sub-policies:

- ***PS-8b: Greenhouse Gas Reduction.*** *City actions shall reduce local contributions towards climate change by mitigating greenhouse gases and increasing carbon sequestration. The City shall update relevant plans and policies periodically to meet State and local climate goals.*
    1. *Encourage reduction in greenhouse gas emissions, by providing alternatives to use of gas-powered vehicles. Such alternatives include public transit, alternatively fueled vehicles, bicycle and pedestrian routes, and bicycle- and pedestrian-friendly development design.*
    2. *Encourage and facilitate investments in renewable energy and green technology.*

Prioritize nature-based solutions that restore ecosystem function and maximize ecological benefits to plants, animals, and people.

Policy D-1: Overall Community Design

Objective. *Maintain community diversity and quality in the built environment; with structures and other physical features harmonious with their neighborhood context; and with a physical and visual transition between urban area and the surrounding open space lands.*

Applicable sub-policies:

- ***D-1e: Promote energy efficiency and solar access.*** *Site and building design shall emphasize energy efficiency, solar orientation and consider shading of adjacent structures, balancing development needs with solar access.*
- ***D-1g: Provide for bicycles, pedestrians, and transit in design.*** *Design shall incorporate provisions for bicycle and pedestrian circulation, and transit. Facilities should be located and designed so that these alternative travel modes are fully interconnected.*

Policy LU-1: Overall Development Pattern

Objective. *Establish a pattern of development that concentrates activity and amenities in a pattern of centers, clusters and mixes of uses to support the City's focus on infill development and active transportation. Provide an overall land use arrangement that concentrates city-wide uses and functions in these areas with an emphasis on areas within walking distance of the central Plaza Area, Cal Poly*

Humboldt, and existing neighborhood and employment centers which provide a mix of commercial services, residential uses, and community facilities.

Applicable sub-policies:

- ***LU-1d: Reduce Parking Maximums in the most walkable areas of the city.*** *Reduce maximum allowable parking requirements within Infill Opportunity Zones to promote walkable communities. Minimize vehicle parking requirements and maximize walk, bike, and transit infrastructure.*
- ***LU-1aa: Incentivize Mixed Use as a Community Amenity.*** *Incentivize mixed-use projects that have a ground-floor non-residential (retail, office, light industrial, or other job-creation component) through the community benefit program where not otherwise required by the form-based code.*

Policy CM-1: Balanced Transportation System with Choice of Modes

Objective. *Create and maintain a balanced transportation system with choice of bus transit, bicycle, and pedestrian as well as private automobile modes. Reduce the percentage of trips that are made by automobile and provide the opportunity and facilities to divert trips from automobiles to other modes. In planning for improvements to the overall circulation system, design the system to accommodate the planned amount of growth outlined in other policies. Ensure the circulation system supports a functioning, safe, sustainable multi-modal network. Support increased demands for all efficient forms of mobility emphasizing alternative modes pedestrians, bicycles, and other non-motorized or shared transit options, then vehicles, and trucks, in an effort to induce demand of multimodal transit alternatives and implement transportation demand management strategies, in keeping with citywide Circulation Element policies.*

Applicable sub-policies:

- ***CM-1a: Complete Streets.*** *The City shall direct the design, construction, reconstruction, repair and maintenance efforts on the City's streets, bridges, pathways, and sidewalks, creating a comprehensive, integrated transportation network that is safe, accessible, comfortable, accommodating, and welcoming to users of all ages, races, ethnicities, incomes, and physical abilities, and all modes of transportation, particularly those walking, rolling, biking, and using transit, and in doing so the City shall apply a Complete Streets framework in all applicable and feasible transportation projects to allow the safe, comfortable, convenient and accessible use of streets for all street users.*
- ***CM-1b: Investment in alternative modes.*** *In order to provide a realistic and cost-effective balance between travel modes, the City shall emphasize investment in alternative modes (bikeways, etc.) as a priority over increasing vehicular capacities of streets. Throughout the City, design sidewalks and street crossings for maximum accessibility. Accessibility features may include but are not limited to widening sidewalks, requiring high-visibility/striped crosswalks, installing bulb-outs, pedestrian activated crossing signals, and aligning ramps with path-of-travel. Where the urban grid pattern is interrupted or incomplete, evaluate opportunities to continue the circulation block patterns with new connections that consist of entirely non-vehicular active transportation facilities.*
- ***CM-1c: Interconnections and transfers between travel modes.*** *The City shall provide and maintain a Transit Center to facilitate interconnection and transfers between bus routes and systems. As funding permits, Transit Center facilities shall be improved to encourage its use as a multi-modal transfer point. Pedestrian and bicycle amenities shall be provided at other locations which serve as modal transfer points such as bus stops and park-and-ride lots.*
- ***CM-1d: Intercity travel.*** *The City shall coordinate with Humboldt County and Caltrans to provide adequate facilities for vehicles, buses, and bicycles to serve intercity demand. Joint efforts may include transportation improvements outside of Arcata which serve intercity travel, such as bicycle links, timed-transfer bus stops, park-and-ride lots, and regional transit service and development of park-and-ride lots in Arcata to reduce intercity vehicular travel.*
- ***CM-1i: Balanced Transportation System.*** *Create and maintain a balanced transportation system with choice of bus transit, bicycle, and pedestrian as well as car sharing and private automobile modes.*

Reduce the percentage of trips that are made by automobile and provide the opportunity, incentives, and facilities to divert trips from automobiles to other modes. Provide negative incentives, such as parking meters, permit parking, time limited parking, carpool incentives, and other targeted parking measures that encourage alternative modes utilizing "induced demand" strategies.

- ***CM-1J: Mobility Infrastructure that Supports Car-free Lifestyle.*** *Plan and implement the mobility and circulation infrastructure to support a car-free lifestyle, increase pedestrian safety, reduce greenhouse gas emissions, and minimize vehicle miles traveled.*

Policy CM-2: Travel Demand Management

- ***CM-2a: Land use development patterns.*** *The City encourages and supports travel demand management efforts. The City shall promote land use and development patterns that encourage walking, bicycling and transit use. In recognition of the link between land use and transportation, the land use plan shall discourage low density, homogenous land-use patterns that foster automobile travel and are impractical to serve with transit. Land use planning shall emphasize high density and mixed land- use patterns which translate into higher transit and pedestrian travel in the downtown and neighborhood commercial areas. Infill, redevelopment, and reuse of underutilized property at higher densities shall be encouraged prior to outward expansion of City boundaries. The following land use measures are emphasized:*

  1. *Mixed-use neighborhood centers within transit corridors which include housing and commercial services near employment.*
  2. *Land use patterns which maximize linking trip opportunities by assembling uses, thus allowing people to take care of a variety of daily needs with a single trip.*
  3. *Clustering of higher density housing and incorporation of residential units on upper floors of commercial buildings.*
  4. *Integration of new housing into neighborhood shopping centers, including Sunny Brae, Westwood, and Valley West.*
  5. *Pedestrian-oriented land use and urban design, including the following elements:*
     a. *Pedestrian-scale block patterns.*
     b. *Incorporate pedestrian and bicycle amenities into public and private projects.*
     c. *Design streets for multi-modal use.*
     d. *Integrate transit stop facilities into public and private projects.*
     e. *Orient buildings and houses to the street.*
     f. *Provide attractively landscaped streets and buffers.*
     g. *Preserve existing and historic urban fabric.*
     h. *Eliminate blank wall facades.*
     i. *Incorporate bicycle routes and enhancements in public and private projects.*
  6. *A fixed urban services boundary to reduce sprawl and infrastructure costs.*
  7. *Focused growth along existing or planned transit corridors rather than extension of transit to serve new isolated development.*
  8. *Prevention of large areas of single uses. Isolated single-use developments at the edge of the City could encourage automobile travel for commuting and errands.*
  9. *Provision of convenience retail and services in ground floor space in the downtown to accommodate the needs of employees and reduce the need for mid-day automobile trips.*
  10. *Adopt and maintain zoning regulations that allow for a mix of land uses in order to reduce vehicle trips and the overall need for automobile use.*

- ***CM-2b: Consider Non-motorized Campus Layouts.*** *For areas that have incomplete block patterns and/or are currently lacking in vehicular roadways, consider providing limited to no new facilities for motorized vehicles. Instead, consider creating a campus layout with vehicular access on the perimeter and robust non-motorized facilities throughout the interior. Plan for the infrastructure that would be*

required for these areas to serve as key park and ride/transit hubs. Where new vehicular roadways are constructed within currently roadless areas, provide for a wide right-of-way whose cross section includes ample on-street parking, narrow vehicle lanes, bike lanes, sidewalks in excess of six feet, street trees, and enhanced pedestrian crossings at least every 300 feet.

Policy CM-3: Bus Transit Policy

Objective. *Maintain a bus transit system which connects and serves major commercial and employment areas within Arcata, Cal Poly Humboldt, public schools, and higher density residential areas. Increase average citywide transit mode share of daily person trips to 12% from the 2020 level of 3% by 2040.*

Applicable sub policies:

- ***CM-3b: Regional transit service.*** *Short- and long-range transit plans shall be coordinated with the regional transit service provided by the Redwood Transit System. The City supports regional transit plans which improve service and timed transfers, and reduce headways for intercity travel. In the interest of enhanced coordination and efficiency for local and regional service, the City shall continually evaluate alternatives to existing services including potential mergers with the Humboldt Transit Authority or other service providers.*
- ***CM-3c: Bus route system.*** *Public transportation is both a civil right and a critical climate solution, and should be designed to provide service competitive with automobile travel in terms of access, convenience and comfort. Potential improvements to the transit system should be assessed according to the best available evidence of both need and existing and induced demand. In order to increase safety and access to basic needs, work with relevant transit agencies, major employers, key user groups, and area schools to plan for enhanced public transit and school bus lines and new stops to both accommodate the new growth and serve existing community needs.*
- ***CM-3d: Transfers between routes and systems.*** *The public transit system shall provide convenient transfers between routes, other transit services, and other modes of travel such as bike share locations with racks for one-way trip use. The Arcata Transit Center shall serve as the primary multi-modal transfer station. Bus stops should be located near municipal parking lots or future park-and-ride lots. The A&MRTS and Redwood Transit System schedules shall be coordinated to provide a timed-transfer system at key stops.*
- ***CM-3e: Bus stops.*** *Existing bus stops should be improved and new bus stops on future routes should be designed with appropriate amenities and features. Design elements include either bus stop lanes or bus turnouts. Bus stop design amenities which increase rider comfort and feeling of safety and encourage walking and bicycling are emphasized, including shelters, benches, lighting, shade trees, signs, information kiosks, waste receptacles, paved surfaces, facilities for disabled and alter-abled riders, and secure bicycle parking. Prioritize covered seating at all bus stop locations wherever feasible. Bus stop areas should be consistently maintained and cleaned, including vandalism repair and graffiti removal. Developers shall be required to provide bus stops and amenities on their frontage if the property is located on an existing or future bus route and is an appropriate location for a stop. Pedestrian, bicycle, and handicapped rider access should be provided to neighborhood bus stops.*
- ***CM-3g: Transit implications of new development.*** *The engineering department and A&MRTS shall evaluate proposed new development projects and make recommendations prior to project approval regarding transit improvements and road designs.*

Policy CM-4: Circulation Maps and Context Sensitive Street Design Policy

Objectives. *Plan the circulation network consistent with Figure T-k and Figure T-i to create Complete Streets solutions that are appropriate to individual contexts; that best serve the needs of all people using streets and that support the land-use, climate, safety, and environmental quality targets and policies of the City and which: 1) efficiently utilizes existing facilities and reduces need for investment in new or expanded street and highway facilities or capacities; 2) improves connectivity of streets to provide for direct routes between origins and destinations; 3) has a high quality of regular maintenance and repair; and 4) maintains*

a level of service which minimizes delays, but allows for higher levels of congestion during the short peak periods on weekdays.

Policy CM-5: Bicycle and Pedestrian Facilities

Objective. *Create a complete, interconnected bikeway system and pedestrian network. Increase the percentages of person trips via walking and bicycling, which serves the full range of mobility needs.*

Proposed City of Arcata General Plan 2045 Gateway Area Plan

Policy Chapter 1: Land Use

Objective. *Establish an overall land use arrangement that promotes mixed-use, multi-story buildings with a clear emphasis on high-density housing that is equitable, environmentally sustainable, and compatible with the envisioned neighborhood character. Allow for a broad diversity of non-residential uses that support a pedestrian/bicycle-friendly environment, contribute to a car-free lifestyle, and meet the physical, social, and economic needs of residents.*

Applicable sub-policies:

- ***GA-1a: Land Use Targets.*** *Aim to achieve a mix of residential and non-residential uses in each land use subarea that supports the full range of services to Gateway Area residents, workforce, and visitors. Estimated long-term targets to balance uses are shown in Table 5.*

Policy Chapter 6: Open Space and Conservation

- ***GA-6e: Bike/ped Connections.*** *Establish new off-street bike/ped connections to connect open spaces and activity centers in the Gateway area. Enhance connections between the Plan Area and parks and open space destinations near to the Plan Area, such as Arcata Plaza, Shay Park, and Arcata Marsh.*

Policy Chapter 7: Mobility

Objective. *Prepare for a substantially realigned transportation network within the Gateway Area that significantly enhances bicycle and pedestrian facilities while also creating a more efficient vehicular circulation pattern with better north-south and east-west connections for all modes of travel. Seamlessly link the Gateway Area to key destinations throughout the City via non-motorized facilities to support opportunities for a car-free lifestyle.*

Applicable sub-policies:

- ***GA-7a: Design Mobility System per Plan Figures.*** *Design and construct the mobility and circulation system of the Plan Area per Figure 8 and Figure 9 and the Cross Section and Intersection Design Concepts above, as well as in accordance with the Open Space, Streetscape, and Site Development sections of this Area Plan. In the engineering design stage of implementing the above cited Figures/Concepts, allow for deviations and alterations such as:*

    1. *Throughout the entire Plan Area, sidewalk widths may increase beyond six feet, especially on the north sides of east-west streets where expanded sidewalks on the sunny side of the street would allow welcomed outdoor seating, and at well-traveled pedestrian boulevards to ensure a clear path of travel. Adjusting sidewalk widths will necessitate adjustments to the dimensions of other features, such as drive lanes, parking lanes, bike lanes, outdoor seating, street furniture, and the like. On-street parking lanes may need to be eliminated.*
    2. *Throughout the entire Plan Area, on-street parking angles may be adjusted as need to be either parallel, perpendicular, angled-in, or reversed angled-in. Adjusting parking angles may necessitate adjustments to the dimensions of other features, such as sidewalks, drive lanes, bike lanes, etc.*
    3. *Outside of City rights-of-way, the alignments and widths of Class I trails (i.e., separated shared use paths) may need to be adjusted based on environmental constraints, community needs, the availability of right-of-way, and other factors. Seek opportunities in public rights-of-way to daylight*

creeks using bridges when reconstructing bike/bed infrastructure.

4. *The trail within the Q Street right-of-way south of 10th Street may eventually need to be converted into a full vehicular roadway with a cross-section similar to other two-way roads proposed within the Plan Area.*
5. *The final design of transportation facilities within the Barrel District may change substantially but should follow the parameters outlined in Policies CM-2b and GA-5b.*
6. *Where available, pursue Opportunities for "green streets" infrastructure in streets/public right of ways, and provide for storm water features off-site (i.e., "storm water banks"). Consider opportunities to improve storm water drainage for the Jolly Giant Creek watershed.*

- ***GA-7d: Shorten Pedestrian Crossing Distances.*** *Create additional and safer methods for crossings Shorten distances for pedestrian crossings along K Street and 11th Street by shortening distances for pedestrian crossings to improve overall walkability in the Plan Area. Evaluate other roadways within the Plan Area that warrant shortened pedestrian crossings, with an emphasis on areas with planned or developed alternative transportation infrastructure, such as 8th and 9th Streets.*

Policy Chapter 8: Streetscape

Objective. *Create high-quality streetscapes that are visually interesting and provide safe and comfortable places for people to walk and gather. Provide for a streetscape design that visually unites the Gateway Area and promotes a cohesive sense of place.*

Policy Chapter 9: Design and Architectural Standards

Objective. *Ensure site design offers a mix of vibrant, mixed-use neighborhood structures with active and inviting public spaces. Provide for visual interest in walkable neighborhoods with street-level activity and public gathering places that support a car-free lifestyle.*

Applicable sub-policies reside in the Design Element Policy Groups D-1 and D-8 and Policy LU-1d.

Policy Chapter 11: Infrastructure and Services

Objective: *Provide sustainable infrastructure that serves the planned growth of the Gateway Area.*

Applicable sub-policies reside in the Public Facilities policy groups 1 and 6.

6.2.4 Evaluation Criteria and Significance Thresholds

Under criteria based on Appendix G of the CEQA Guidelines, the Project would be considered to have a significant impact on energy resources if it would result in any of the following:

- Result in potentially significant environmental impact due to wasteful, inefficient; unnecessary consumption of energy resources, during Project construction or operation; or
- Conflict with or obstruct a state or local plan for renewable energy or energy efficiency.

The following sections describe the anticipated environmental impacts on energy due to the Project.

6.2.5 Methodology

Existing information sources were reviewed to determine whether any portions of the study area contain significant energy resources and to evaluate how these resources, if any, would be affected by the Project. This analysis evaluates the use of energy resources (e.g., fuel and electricity) during the construction and operation of the Project. Specifically, the analysis considers whether construction and operation of the Project would use large amounts of fuels or energy, and whether they would be used in a wasteful manner.

6.2.6 Impacts and Mitigation Measures

Impact ER-a: Would the Project result in potentially significant environmental impacts due to wasteful, inefficient, or unnecessary consumption of energy resources, during Project construction or operation?

Construction

Construction of the land uses accommodated by the General Plan 2045 may involve demolition, grading, excavation and use of heavy machinery as discussed under Section 3.3, Air Quality. Construction would require the use of fuels, primarily gas, diesel, and motor oil. The precise amount of construction-related energy consumption that would occur is uncertain. Additionally, electricity would be used for certain hand tools, such as table saws and compressors, and lighting. Construction activity would also require energy associated with transportation of workers, materials, and vendors. The use of energy would fluctuate depending on the development type, size, and construction activities.

However, excessive idling and other inefficient site operations would be prohibited. Equipment idling times would be minimized either by shutting equipment off when not in use or reducing the maximum idling time to five minutes or less (as required by the California airborne toxics control measure (Title 13, Section 2485 of the CCR)). Additionally, Off-Road Regulations require the use and management of construction fleets such that energy consumption is minimized. Therefore, the implementation of the General Plan 2045 would not result in wasteful, inefficient, or unnecessary consumption of fuel use during construction. In addition, Waste Management Plans are required for construction for all City projects as part of the building permit review stage, as required per the California Green Building Code, with the intent of diverting construction materials from the waste stream which has associated upstream and downstream energy impacts. Based on these requirements already in place, no further mitigation is necessary, and the impact would be less than significant.

Operation

The General Plan 2045 would allow new development to occur within the City. Implementation of the General Plan 2045 would result in energy consumption from building use and on-road transportation. As detailed in Section 6.5.3 (Regulatory Framework), an interconnected framework of State Executive Orders, Assembly Bills, Senate Bills, State agency regulations, and State agency planning documents rely on, plan for, and promote increased energy efficiency, renewable energy generation, and renewable energy use of transportation and land use development. These regulations and plans aim to reduce overall energy consumption and decreased use of non-renewable energy resources.

Electricity and natural gas demand would increase compared to existing conditions due to the anticipated growth accommodated under the General Plan 2045. However, the General Plan 2045 includes policies and measures to implement an electric-only ordinance. Additionally, new buildings, redevelopment, and building additions would be subject to California Title 24 Energy Code and CALGreen Code Mandatory Measures (such as electric-ready, solar power generation infrastructure and onsite energy storage requirements). As previously stated, these regulations are updated every three years; therefore, it is anticipated that future iterations of the regulations would be even more energy efficient and have increased requirements for onsite energy generation and storage.

Additionally, the General Plan 2045 includes policies and measures that reduce single-occupancy vehicle use by providing planning, infrastructure, and design for alternative and active modes of transportation. Because the General Plan 2045 facilitates non-motorized transportation such was bicycling and walking, operations-related energy impacts from the transportation sector would be minimized. As shown in Section 4.2 (Transportation), the General Plan 2045 would result in a less-than-significant impact for vehicle miles travelled.

In summary, regulatory compliance would increase the energy efficiency of buildings and vehicles; as a result, there will be a reduced energy demand from new buildings and transportation activities. Additionally, the General Plan 2045 includes policies and measures for energy efficient design, buildings, land use mixes, and public and active transportation modes that would minimize energy demand associated with implementation of the General Plan 2045. Therefore, operation of growth that would occur under the General Plan 2045 would not result in

inefficient, wasteful, or unnecessary consumption of energy resources. The operational impact would be less than significant.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

Impact ER-b: Would the Project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

The General Plan 2045 would not conflict with or inhibit the implementation of the State Energy Action Plan, Senate Bill (SB) 1389, SB 100, AB 1007, or other applicable state regulations because the Project would comply with California's regulations that minimize energy consumption by construction equipment, minimize energy consumption by buildings and the transportation sector, and increase renewable electricity delivery to end users.

The electricity provided by PG&E is subject to California's Renewable Portfolio Standard, which mandates that a portion of the power comes from renewable sources. The California Renewable Portfolio Standard is a state mandate that all power providers are required to meet or exceed. Electricity providers must meet the minimum requirements of the standard.

Furthermore, the General Plan 2045 includes a measure to adopt an electric-only ordinance for new development, which would minimize installation and use of gas appliances. The Project facilities would comply with applicable state requirements. State regulations and regulatory requirements have been implemented consistent with the State's renewable energy and energy efficiency plans and goals. For example, California recently surpassed the 1.5 million zero emission vehicles sold goal 2 years ahead of schedule.

The majority of the State plans are not directly applicable to the General Plan 2045, but rather affect the development that would be accommodated by the General Plan 2045 through means such as regulation of vehicle efficiency standards, and the renewable energy mix with energy providers. For State plan requirements that are directly applicable to the General Plan 2045, The General Plan 2045 complies. The Project would therefore not conflict with or obstruct a state or local plan for renewable energy or energy efficiency. Impacts would be less than significant.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

6.2.7 Cumulative Impacts

Impact ER-C-1: Would the Project contribute to a cumulatively significant impact to Energy Resources?

The General Plan 2045 growth horizon is 2045. This coincides with or occurs after the following major milestones:

- Senate Bill 100 and Senate Bill 1020, which require renewable energy and zero-carbon resources to supply 100 percent of electricity by 2045,
- Executive Order N-79-20, which requires all new passenger vehicles sales to be zero-emission by 2035

As growth occurs throughout Humboldt County, there would be an increase in electricity and natural gas demand. As shown in Impacts ER-a and ER-b, above, the General Plan 2045 would not result in wasteful or inefficient use of energy resources through implementation of General Plan policies and measures, and compliance with State regulations. As with the City of Arcata, other land use agencies within Humboldt County are required to comply with State regulations regarding energy conservation and renewable energy infrastructure (Title 24 Energy Code and CALGreen Code Mandatory Measures). Furthermore, the City is actively coordinating with the County of Humboldt and other regional partners to finalize and implement the draft Climate Action Plan, which is currently

being revised from the draft that was published in April 2022 for public review. The Plan is intended to reduce GHG emissions throughout Humboldt County and explores locally oriented strategies to reduce emissions from vehicle travel, electricity consumption, natural gas use and other sources of GHGs. As a result of these regional and state regulations and commitments, the General Plan 2045 would not significantly contribute to a cumulatively considerable impact for wasteful, inefficient, or unnecessary energy use.

Mitigation Measures: No mitigation is necessary

Level of Significance: Less than significant impact

7.0 Alternatives

7.1 Introduction

This chapter presents the alternatives analysis for the Project. Section 15126.6(a) of the CEQA Guidelines requires EIRs to "describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project and evaluate the comparative merits of the alternatives. An EIR need not consider every conceivable alternative to a project. Rather it must consider a reasonable range of potentially feasible alternatives that will foster informed decision making and public participation. An EIR is not required to consider alternatives which are infeasible. The lead agency is responsible for selecting a range of project alternatives for examination and must publicly disclose its reasoning for selecting those alternatives. There is no ironclad rule governing the nature or scope of the alternatives to be discussed other than the rule of reason." This section of the CEQA Guidelines also identifies the purpose (15126.6[b]) which is for the EIR to identify ways to mitigate or avoid the significant effects that a project may have on the environment (Public Resources Code Section 21002.1). The discussion of alternatives shall focus on alternatives to the project or its location, which are capable of avoiding or substantially lessening any significant effects of the project, even if these alternatives would impede to some degree the attainment of the project objectives or be more costly.

For ease of reference, the Project objectives identified in Chapter 2, the Project Description, are repeated below:

– General Plan Objectives
  - Provide an update to the City's General Plan to reflect the current values and overall community vision more effectively (see General Plan Chapter 1 for the community vision statement).
  - Update General Plan policies to ensure they support the community vision.
  - Promote racial equity, social justice, and diversity to support an equitable and inclusive community. Enhance Arcatan's quality of life; promote equity and social well-being for the entire community.
  - Re-emphasize and support well planned infill projects that complement Arcata's historic development patterns and preserve open space.
  - Accommodate growth that protects important environmental resources, as well as ensures long term economic sustainability.
  - Meet the housing needs of existing and future residents through a variety of housing types and designs including infill development, high density multifamily/mixed use projects, and mixed use.
  - Adjust to climate-change and promote sustainability.
  - Improve mobility and safety for pedestrians, bicyclists, and vehicles.
  - Maintain opportunities for industry and employment to foster a diverse and resilient local economy.
  - Satisfy current state mandates for General Plans that have been issued since the General Plan was last updated.
  - Ensure consistency and compliance with other City plans that have been adopted or revised in recent years, such as the Housing Element.

    - Ensure existing infrastructure and facilities (water, sewer, transportation, etc.) can support the planned/projected population.
- Gateway Area Plan Objectives
    - Focus on infill development to create a high-density residential and mixed-use neighborhood that reflects community values of open space, arts and culture, and livability.
    - Stimulate the creation of a volume and variety of housing types.
    - Promote thoughtful development through form-based and streamlined development standards.
    - Promote a balance of mixed uses to create a neighborhood that offers a car-free lifestyle consistent with the City's climate action goals.
    - Design circulation improvements to accommodate planned growth, minimize vehicle trips, and support a pedestrian-friendly public realm.
    - Support and grow the area's arts identity.
    - Plan for environmental restoration and sustainability features.

One of the alternatives analyzed must be the "No Project" Alternative. CEQA Guidelines Section 15126.6(e)(1) states that the purpose of describing and analyzing the No Project Alternative is "to allow decision makers to compare the impacts of approving the proposed project with the impacts of not approving the proposed project." The No Project analysis is required to "discuss the existing conditions at the time the notice of preparation is published…as well as what would be reasonably expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services" (Section 15126.6[e][2]). The No Project Alternative discussion will typically proceed along one of two lines: (A) when the project is the revision of an existing regulatory plan or policy, the No Project Alternative will be the continuation of the existing plan or policy, or (B) if the project is a development project on identifiable property, the No Project Alternative is the circumstance under which the project does not proceed (Section 15126.6[e][3]). Thus, in the case of this draft EIR for the Arcata General Plan 2045, the No Project Alternative would assume the proposed Project would not be adopted and development in the Project Area would occur as intended in the City's General Plan 2020.

7.1.1 Significant Impact of the Project

The following significant and unavoidable impacts are identified in Chapter 3 through Chapter 6 of this Draft EIR:

- Air Quality (cumulative impact)
- Cultural Resources (adverse change in the significance of a historical resource)

7.1.2 Identifying Project Alternatives

Numerous Project alternatives have been explored by the City. These include considerations of public scoping period comments received in February and March 2022. The Notice of Preparation and comments received during the public scoping period can be found in Appendix A and Appendix B, respectively. Comments germane to CEQA received during scoping included:

- Concerns related to the capacity and ability of local services, such as fire protection and the wastewater treatment system, to adequately serve additional development and growth;

- Concerns related to development height and density;
- Requests to address aspects of the climate crisis including promotion of electrification and reduction of greenhouse gas and vehicle miles traveled;
- Concerns related to transportation safety;
- Concerns related to construction impacts on wetlands and migratory birds; and
- Concerns related to construction and operational noise due to traffic.

Ultimately, three alternatives were chosen to further analyze due to their potential feasibility to lessen differing environment impacts. The alternatives analyzed in this chapter in addition to the proposed Project include the following: (1) No Project Alternative, (2) Dispersed Development, and (3) Reduced Population Estimate. The environmentally superior alternative is described in Section 7.5.

7.2 Alternatives Considered but Rejected

During the planning of the Project and the scoping process for the Draft EIR, several alternatives to the Project were evaluated and/or suggested. These alternatives are summarized below and were evaluated to determine if they meet the qualifications for alternatives receiving full EIR analysis, as required under CEQA.

The criteria for consideration as a feasible alternative are described in CEQA Guidelines Section 15126.6(a) and summarized above in Section 7.1 of this EIR. Based upon that guidance, the following alternatives were rejected.

7.2.1 **Rejected Alternative A**: Development in Hillsides and/or Arcata Bottoms (Urban Sprawl)

The potential impact to agricultural and forest resources is greater when implementing development goals that do not prioritize infill development, such as urban sprawl. The forested slopes of Fickle Hill Ridge and the Arcata Community Forest constitute a significant ecological, recreational, economic, and educational resource for the citizens of Arcata and the surrounding region. Lands outside of City limits, i.e., the Arcata Bottom, are currently utilized for and are highly suitable for agricultural production and would potentially be threatened by sprawl development. Under the General Plan 2045, sprawl is explicitly discouraged through adoption of the City's greenbelt designation, which protects rural and agricultural lands within the City's Planning Area. This alternative would be inconsistent with the intent of the General Plan 2045, impair agricultural production, promote sprawl, and extend traffic into currently lesser-developed areas. Accordingly, this alternative was rejected.

7.2.2 **Rejected Alternative B:** Four Story Alternative

Baseline development maximum building height is four stories in Residential High and Commercial Central, and three stories in other districts that allow residential development. This alternative would increase the maximum building height in all districts that allow residential development to four stories. This alternative would have similar environmental impacts to the proposed Alternative. The potential for meeting the City's residential development needs is lower with this alternative. In addition, this alternative is effectively the same as the reduced population alternative. For these reasons, this alternative was rejected from further study.

7.2.3 **Rejected Alternative C:** Infill Agricultural Sites

There are approximately 138 acres of agricultural lands zoned Agricultural Exclusive inside the City boundaries. Forty-one contiguous acres west of Alliance Road of 27th Street are in the Coastal Zone. The balance is outside of the Coastal Zone. These lands represent a significant land bank that could be developed for high-density housing, satisfying the City's housing needs for decades. However, the City and the Coastal Commission have strong agricultural preservation policies. This alternative was rejected because it conflicts with the Coastal Act and the General Plan 2045.

7.3 Analysis of Alternatives

This section describes the Project alternatives that were selected and analyzed in accordance with CEQA Guidelines Section 15126.6(a). As described above in Section 7.2, other potential alternatives were evaluated, but were determined to be infeasible, would not attain most of the Project's basic objectives, or would not avoid or substantially reduce significant impacts of the proposed Project and have been rejected.

The three alternatives to the proposed Project evaluated further in this Draft EIR include: (1) No Project Alternative; (2) Dispersed Development; and (3) Reduced Population Estimate. A comparison of alternatives is provided in Section 7.4. The environmentally superior alternative is described in Section 7.5.

7.3.1 Alternative 1: No Project

Description

The No Project Alternative is required to discuss the existing conditions at the time the Notice of Preparation is published and evaluate what would reasonably be expected to occur in the foreseeable future if the project were not approved. Thus, in the case of this Draft EIR for the General Plan 2045, the No Project Alternative would assume the proposed Project would not be adopted and development in the Project Area would occur as intended in the City's General Plan 2020. The mitigation measures presented in this EIR would not be active under this alternative. Current land use and zoning designations would remain unchanged under Alternative 1. Full buildout of those designations and compliance with applicable City regulations would be assumed to occur.

The City's population grew at an annual average rate of 0.65% between 2000 and 2020. The growth rate in the second 10-year period was 0.94%. For the purposes of this analysis this rate would be maintained. Alternative 1 would not update the General Plan, therefore the City would lack a long-term guide for development throughout the City and there would be uncertainty regarding the City's ability to meet its current Regional Housing Needs Assessment requirements.

Analysis

Aesthetics

Under the No Project Alternative, development would continue based on the land use patterns that currently exist and would be guided by the General Plan 2020. Less development would be likely to occur, and outside of the Gateway Area, impacts to aesthetics would be similar to the proposed Project.

As discussed in Section 3.2.4, under the proposed Project some public views would be modified by Project development allowable in the Gateway Area, predominantly when looking down on the Gateway Area from the hillside to the east. However, unlike the proposed Project, the No Project Alternative would not propose

a Gateway Area Plan and associated design features within that Infill Opportunity Zone. Therefore, the impacts to aesthetics would be less than significant and would be slightly less under the No Project Alternative.

Air Quality

Under the No Project Alternative, a lower development intensity would occur. With less development, temporary construction-related air quality impacts from grading and construction and longer-term air quality impacts from building operation (energy usage, maintenance), would be lower than under the proposed Project. However, growth patterns that are not centralized can promote longer trip lengths, thereby increasing pollution and emissions. Under the No Project Alternative, less multi-family residential units near existing development centers would likely be developed. Single-family residential units away from development centers can increase emissions due to further proximity to jobs and other critical resources. Under the No Project Alternative, the General Plan 2045 policies that would result in efficiencies related to transportation, promoting greater energy efficiency, or maximizing infill development and therefore fewer emissions per person, would not occur. Additionally, the No Project Alternative would not adopt and implement the mitigation measures proposed in this EIR, therefore air quality impacts would be greater than the proposed Project. The impact would remain significant and unavoidable.

Cultural Resources

Development under the No Project Alternative would continue to be guided by the General Plan 2020 which includes policies to protect historic resources. If demolition or alternation of a historic landmark is proposed, General Plan 2020 Historic Preservation Element Policies H-1d and H-1e require discretionary and design review approval prior to proceeding with the project. General Plan 2020 also includes preservation incentives. These policies reduce potential impacts on historic resources to a less than significant level. The No Project Alternative would not establish the Infill Opportunities Zones and Gateway Area Plan, in which two specific properties occur with known potential for demolition. Under the proposed Project, the demolition of the two properties, one of which is a local historic landmark, would result in a significant impact to historic resources, which is an unmitigable impact, and thus a significant unavoidable impact. Therefore, the No Project Alternative would have a lesser potential to impact historic resources.

Buildout under the General Plan 2020 could potentially disturb archeological resources. Increasing activity in undeveloped areas surrounding the City could possibly expose or unearth unrecorded sites. The General Plan 2020 Historical Preservation Element contains measures protecting both recognized and unrecorded archeological resources. Adhering to these policies would reduce potential adverse impacts associated with loss or damage of these resources to a less than significant level. The impact on Cultural Resources would be less under the No Project Alternative.

Greenhouse Gas Emissions

Under the No Project Alternative, a lower development intensity would occur. However, the General Plan 2045 policies that would result in efficiencies related to transportation and therefore fewer emissions per person, would not occur. The No Project Alternative would be inconsistent with transportation electrification, reduced parking, and other carbon neutrality policies of the California Air Resources Board (CARB) Scoping Plan & Redwood Coast Energy Authority's RePower Humboldt Plan. Additionally, this alternative would not be consistent with AB 32 greenhouse gas reduction goals, potentially resulting in cumulative significance. The No Project Alternative would not adopt and implement the mitigation measures proposed in this Draft EIR; therefore, air quality impacts would be greater than the proposed Project. Without the implementation

of these mitigation measures, the No Project Alternative would have a significant and unavoidable impact related to greenhouse gases.

Hazards and Hazardous Materials

Current land uses, as well as future land uses proposed under the General Plan 2045, involve or would involve the generation, transport, use and disposal of hazardous materials. Under both the No Project Alternative and the proposed Project, new development would be subject to state and federal regulations that would reduce the potential for hazards and hazardous materials. Existing and proposed General Plan regulations and policies would also reduce these potential risks to a less than significant level. Compared to the proposed Project, the No Project Alternative would not increase or decrease the potential exposure of a school or airport to hazardous materials, interfere with an adopted emergency response plan or emergency evacuation plan, nor exacerbate wildland fire exposure. Impacts under this alternative would be similar to the proposed Project and would be less than significant.

Land Use and Planning

Under Alternative 1, fewer residential units would be developed than under the proposed Project, consistent with what is allowed under existing zoning. Applicable land use plans, policies, and regulations would continue to be implemented. General Plan 2045 includes policies to support compliance with regional plans and state policies regarding housing, greenhouse gas reduction, and transportation. The No Project Alternative would not implement those policies and therefore may be in conflict with enforceable state policies and therefore may require additional mitigation. Alternative 1 would have a greater impact related to housing compared to the proposed Project due to the most recent state-mandated Regional Housing Needs Assessment requirements not being met. Without this requirement, population growth and needs would not be met, thus resulting in a greater impact level. Additionally, because this alternative would not plan for increased housing needs and would not include updated climate change planning consideration, it would not adequately meet the Project's housing and sustainability goals. The proposed Project's impacts related to land use and planning would be less than significant without additional mitigation, beyond those identified throughout this Draft EIR. Alternative 1 may require new or additional mitigation in order to not conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect.

Noise

Under the No Project Alternative, the City's land use patterns would remain the same and slightly less development would occur. New development would not be concentrated in Infill Opportunity Zones and therefore mitigation would not be required to reduce impacts to sensitive uses near roadways and commercial/industrial facilities. Development intensity under this alternative would be less than the proposed Project, and therefore, noise impacts would be reduced compared to the proposed Project. Impacts under this alternative would be less than significant.

Population and Housing

Under the No Project Alternative, development would continue based on the land use patterns that currently exist and would be guided by the General Plan 2020. Less development would be likely to occur and if population growth exceeds what was forecasted in the General Plan 2020, unplanned growth would occur. Although this alternative would not displace housing or people, Alternative 1 would have a greater impact related to housing compared to the proposed Project due to the most recent state-mandated Regional Housing Needs Assessment requirements not being met. The land uses allowed under the General Plan

2045 would provide opportunities for cohesive new population, housing, and business growth in the City and would not induce substantial unplanned population growth. These opportunities would not occur under the No Project Alternative; therefore, population growth and housing needs would not be met, resulting in greater impacts. Alternative 1 may require new or additional mitigation. With no new policies or plans proposed, the No Project Alternative would have a significant impact on population and housing.

Public Services and Recreation

The No Project Alternative would result in a lesser increase in population and development and therefore lower pressure on public services and recreational facilities. Recreational considerations for Alternative 1 are the same as the proposed Project. Existing policies would continue to protect and maintain parkland and acquire new parkland. Impacts to public services, including fire, police, school, other public facilities, and parks and recreational services would be slightly less than the proposed Project and would remain less than significant.

Tribal Cultural Resources

Both Alternative 1 and the Project could result in direct or indirect impacts to tribal cultural resources due to construction activities, such as grading and excavation, that may result in inadvertent and accidental destruction or disturbance of tribal cultural resources. Under both Alternative 1 and the Project, federal and state laws require project specific consultation with local tribes, addressing potential impacts to tribal cultural resources. The General Plan 2020 contains policies and implementation measures to further reduce impacts to tribal cultural resources. The Project includes updates to those policies as well as new Local Tribal Input Policies and Implementation Measures to increase collaboration. Similar to the Project, Alternative 1 would have a less than significant impact on tribal cultural resources.

Utilities and Service Systems

Given Alternative 1 would accommodate less development and assumes less population growth than the proposed Project (which assumes growth of 43% over 2020 population estimates), impacts to utilities and service systems would not be significant, similar to the Project. The domestic water supply, existing storage reservoirs within the City's distribution system, and existing water treatment capacity are sufficient to meet the water supply needs of current and future population growth, and no impact would occur. The City's wastewater treatment plant is currently being upgraded and would continue to have sufficient capacity to meet the needs of the proposed Project projected growth, therefore construction or relocation would not be required. In both Alternative 1 and the proposed Project, future projects developed under the General Plan 2045 would not adversely impact water quality via stormwater inputs due to compliance with the Municipal Separate Storm Sewer System (MS4) permit and other City policies, and a less than significant impact would occur. Alternative 1 would not create new or different impacts to electrical power, natural gas, and telecommunication facilities; a less than significant impact would occur. Impacts to the City's infrastructure systems and water supply would be reduced under Alternative 1 and impacts would remain less than significant.

Transportation

Under the No Project Alternative, development would continue based on the land use patterns that currently exist and would be guided by the General Plan 2020. All roadways, bikeways, and intersection improvements would be designed to City or Caltrans engineering and safety standards, as appropriate. Future development under the General Plan 2045 would also be required to comply with street design standards, Manual of Uniform Traffic Control Devices requirements, building code requirements, fire code

requirements and zoning regulations, ensuring that this alternative would result in less than significant impacts with respect to design hazards and emergency access.

Under existing conditions, the City's overall land use diversity score of 81.5 (an ideal score is 100, see Section 4.1 for more information). Since the countywide average score is 74.3, Arcata's score is 28% better than the countywide average. Under future proposed Project conditions, the City's overall score would improve to 83.9, indicating that Arcata's land use patterns would be more diverse than under existing conditions, and would continue to generate lower rates of vehicle miles traveled than the Countywide average. Although the No Project Alternative would maintain or slightly improve Arcata's land use diversity score, it would continue to be higher than the impact threshold of 75.4, and therefore would be less than significant.

Agriculture and Forest Resources

Compared to the Project, the No Project Alternative would have equivalent impacts to agricultural resources with respect to conversions of agricultural land (less than significant), conflicts with agricultural zoning or a Williamson Act contract (no impact), or other changes resulting in conversion of farmland (no impact).

Neither the proposed Project nor this Alternative would have significant impacts to forest resources as no changes to zoning of forest land or forest management practices would occur. In both cases, removal of vegetation could occur to accommodate construction, However, potential removal of trees during infill development would be minor, if at all, and removal of trees would typically require a permit and likely require mitigation to offset the loss of that vegetation. Therefore, the impacts related to agriculture and forest resources would be equivalent to the proposed Project.

Biological Resources

Under Alternative 1, biological resources impacts would be similar to the proposed Project. As a result of existing federal and state regulations protecting natural resources (such as wildlife habitat), and existing and proposed policies under the General Plan 2020 that would require assessment, inventories and buffers for protection of natural resources, it is unlikely that implementation of this alternative would have a substantial adverse impact directly or indirectly on a special-status species via construction in undeveloped lands.

General Plan 2020 and the proposed Project contain policies to protect against any significant disruption of riparian or other Sensitive Natural Community (i.e., Environmentally Sensitive Habitat Area) habitat, provide strong protective measures for wetlands, uphold biological and ecological integrity that would protect wildlife habitat and migration, provide adequate protections to trees, and would not conflict with adopted Habitat Conservation, Community Conservation, or approved local, regional, or state habitat conservation plans that apply to the City. Future development under this alternative, as with the Project, would be required to comply with local, state, and federal regulations to minimize impacts to potential biological resources. Alternative 1 would have a less than significant impact on biological resources.

Geology and Soils

Activities under the No Project Alternative and General Plan 2045 may include building construction, shallow excavation, and repaving, which could potentially be ruptured by the Fickle Hill fault, resulting in a potentially adverse impact. Existing policies would reduce impacts from seismicity and liquefaction risks to a less than significant level. General Plan 2045 further requires new building and infrastructure and substantial renovations in areas with seismic hazards to incorporate geotechnical report specified measures into project design (PS-2d). These policies would not be implemented under the No Project Alternative.

Under both Alternative 1 and the proposed Project, construction activities, including cut, fill, removal of vegetation, and operation of heavy machinery would disturb soil and, therefore, have the potential to cause erosion. These construction activities would be performed in compliance with the Best Management Practices prescribed in the Arcata Municipal Code, North Coast Regional Water Quality Control Board regulations and the California Building Code. Therefore, no substantial soil erosion or loss of topsoil would result from development occurring under the proposed General Plan 2045, and the potential impact would be less than significant. Alternative 1 would not require the use of additional septic tanks or an alternative wastewater disposal system.

Development within the City could uncover paleontological resources which are protected by state law. If paleontological resources were discovered, a potentially significant impact could occur. The General Plan 2020 contains policies in the Historic Resource element to protect and preserve paleontological resources, including policy H-7f to suspend land disturbance activities upon the discovery of archeological or paleontological materials until the nature of the resources has been ascertained and the appropriate disposition method determined. The No Project Alternative would have a less than significant impact on geology and soils.

Hydrology and Water Quality

The No Project Alternative would have similar hydrology and water quality impacts as the proposed Project. Future development within Arcata would increase the total impervious surface area in the Project and Alternative 1; however, the General Plan 2020 policies, Land Use Code, City's MS4 requirements (in compliance with the Clean Water Act), along with other state and federal regulations would reduce water quality impacts to a less than significant level. Future projects would be required to comply with federal, state, and local regulations, such as the National Pollutant Discharge Elimination System and Stormwater Pollution Prevention Plan. The Public Safety element contains policies to reduce impacts related to flooding to a less than significant level. Both Alternative 1 or the Project would be expected to have relatively little effect on the quantity or quality of groundwater availability in the Mad River Valley Lowland Basin and would not conflict with a water quality control plan or sustainable groundwater management plan.

Although development under the No Project Alternative would be subject to local, state, and federal regulations that help to address hydrology and water quality impacts, the additional policies and actions related to hydrology and water quality in the proposed General Plan 2045 would not be adopted. These include additional policies related to sewer source control and pretreatment (PF-2g) and MS4 General Permit compliance (RC-7a.8). Therefore, impacts would be similar and less than significant.

Mineral Resources

Under the No Project Alternative, the City would be developed under the current General Plan 2020 land use plan. The General Plan 2020 and the proposed General Plan 2045 include policies to promote sustainable aggregate extraction to address potential mineral resource impacts. Unlike the proposed Project, the General Plan 2020 does not promote infill to the same extent. Infill would require comparatively less aggregate than that needed for new development requiring more new building foundations and road networks. Although infill development would not be promoted, slightly less development would occur, so a similar, unsubstantial use of mineral resources would be expected. The impact to mineral resources would be less than significant.

Wildfire

The No Project Alternative would result in a smaller increase in development, population, and employment, compared to the proposed Project, thereby reducing wildfire risk. However, General Plan 2045 includes policy updates for improvement to evacuation routes and methods, and a new policy to promote defensible space to reduce vulnerability to wildfire. Under the No Project Alternative, although policy updates would not be incorporated into local governance, due to the smaller increase in development, population, and employment wildfire impacts would remain less than significant.

Energy

Under the No Project Alternative, development would continue based on the land use patterns that currently exist and would be guided by the General Plan 2020. Similar to the proposed Project, new buildings, redevelopment, and building additions would be subject to California Title 24 Energy Code and CALGreen Code Mandatory Measures (such as electric-ready, solar power generation infrastructure and onsite energy storage requirements). There would be no anticipated wasteful, inefficient, or unnecessary consumption of energy resources. Under the No Project Alternative, no policies to reduce energy use through conservation and efficiency practices would be adopted. However, by following state plans and regulations, the No Project Alternative would remain in compliance with energy conservation and renewable energy infrastructure regulations. Impacts under this alternative, as with the proposed Project, would be less than significant.

7.3.2 Alternative 2: Upzoning Single-Family Zoning Districts (Dispersed Development)

Description

An alternative to planning for concentrated development in Infill Opportunity Zones is to plan for dispersed development. The General Plan 2045 anticipates approximately 22% of population growth in the plan period to occur in single-family zoning districts. These projections include anticipated accessory dwelling unit production associated with SB 9 (2021), both of which would allow up to four units on each existing single-family parcel. Enabling this increase in density, also known as “upzoning,” on these properties could increase the development potential across the City resulting in less reliance on higher-density projects in the Infill Opportunity Zones. The General Plan 2045 anticipates approximately 42% of units (46% of the population growth) to occur within Infill Opportunity Zones.

The City currently has 1,124 acres designated in residential land use classification, excluding Agricultural Residential. The City’s three low-density, single-family zoning districts comprise 78% of the land area designated residential. Residential Low-density occupies 578 acres citywide comprised of 2,803 parcels. Residential Very Low Density and Agricultural Residential covers 534 acres and 605 parcels. Twenty-two percent of the residential land area is in Residential Medium and Residential High Density.

Of the total number of parcels zoned Residential Low and Residential Very Low, 253 are vacant (Housing Element 2019). These parcels comprise 61 acres. At the proposed Residential Medium Density designation, 25 units are allowed with up to an additional three accessory units per parcel. Therefore, the total density for Residential Medium zones ranges from 25 to 49 dwelling units per acre. Assuming a middle range of 35 units per acre and assuming an average household size of 2.2 to 2.5 people (consistent with the project description), 2,135 units could be developed in Residential Medium Density properties to house 4,697 to 5,338 people. Residential High zones are proposed to allow up to 50 units per acre with an additional three accessory units per parcel. Therefore, between 50 to 70 dwelling units/acre would be

allowed in Residential High zones. If the Residential low and Very Low vacant parcels were designated Residential High Density, 3,050 units housing 6,710 to 7,625 people could be developed. This only accounts for development on vacant properties. The Residential Very Low properties that are built out at current standards of two units per parcel would be re-developable at higher densities adding to the total.

While other zoning districts do allow residential uses, they are less widely dispersed throughout the City. Upzoning single-family districts to either Residential Medium or Residential High density would spread development across the entire City. The mitigation measures presented in this Draft EIR would be active under this alternative.

Analysis

Aesthetics

Under Alternative 2, upzoning single-family districts to Residential Medium or Residential High density would spread development across the entire City, therefore aesthetics changes would occur throughout the City. Development would not be anticipated to be substantially different from existing development, nor would it be likely to adversely affect scenic vistas. All development would be in compliance with applicable zoning and other regulations governing scenic quality, which include considerations of design character. Therefore, similar to the proposed Project, a less than significant impact would occur.

Air Quality

Under Alternative 2, a slightly reduced development intensity would occur. With less development, temporary construction-related air quality impacts from grading and construction and longer-term air quality impacts from building operation, would be lower than under the proposed Project. However, upzoning single-family residential districts dispersed throughout the City would promote longer trip lengths (as opposed to concentrated development in a single area), increasing pollution and emissions due to further proximity from jobs and other critical resources. Furthermore, due to the dispersed development and associated longer trip lengths, Alternative 2 would not support active transportation methods to the same extent as the proposed Project. Therefore, similar to the Project, Alternative 2 would exceed the North Coast Air Quality Management District's stationary sources emission thresholds for some toxic air contaminant emissions. The impact would remain significant and unavoidable.

Cultural Resources

As with the proposed Project, construction of Alternative 2 could unearth unknown archaeological resources or human remains which would have a significant impact. However, policies would be in place under the proposed General Plan 2045 to protect those resources, including pre-project review and procedures for inadvertent discovery of archaeological resources. Therefore, Alternative 2 would not cause adverse impacts to cultural resources, including archaeological materials and human remains. Similar to the proposed Project, Alternative 2 would have a less than significant impact on archaeological resources.

Alternative 2 would not establish the Infill Opportunities Zones and Gateway Area Plan. Under the proposed Project, the demolition of the two properties in the Gateway Area, one of which is a local historic landmark, would result in a significant impact to historic resources, which is an unmitigable impact, and thus a significant unavoidable impact. While historic resources may be demolished under Alternative 2, it is less likely that demolition will occur, and the demolition of the properties in the Gateway Area is not be proposed; therefore, it would have a lesser potential to impact historic resources. Under Alternative 2, historic resources may be demolished in other areas throughout the City, however existing and proposed

General Plan policies are in place to protect these resources, including discretionary review (Policy H-5), and independent CEQA evaluation.

Greenhouse Gas Emissions

Under Alternative 2, a slightly reduced development intensity, and more widespread development would occur. The growth occurring under Alternative 2 would produce similar impacts as the proposed Project. With the implementation of mitigation measures, Alternative 2 would reduce impacts related to greenhouse gases to a less than significant level.

Hazards and Hazardous Materials

Current land uses, as well as future land uses under the General Plan 2045 and Alternative 2, involve or would involve the generation, transport, use and disposal of hazardous materials. Under both Alternative 2 and the proposed Project, new development would be subject to state and federal regulations that would reduce the potential for hazards and hazardous materials. Existing and proposed General Plan regulations and policies would also reduce these potential risks to a less than significant level. Compared to the proposed Project, Alternative 2 would not increase or decrease the potential exposure of a school or airport to hazardous materials or interference with an adopted emergency response plan or emergency evacuation plan. Dispersed development could be located in areas with a higher fire severity rating compared to the Infill Opportunity Zones located in core, urban City areas. Therefore, wildfire impacts would be increased under Alternative 2, but would remain less than significant due to the low wildfire risk in the City. Impacts under Alternative 2 would be similar to the proposed Project and would be less than significant.

Land Use and Planning

Under Alternative 2, a similar though slightly reduced amount of residential and non-residential development would occur as under the proposed Project, but development would occur throughout the City rather than centralized in Infill Opportunity Zones. Development would be consistent with applicable land use plans, policies, and regulations.

As with the proposed Project, Alternative 2 would comply with state plans and regulations. Alternative 2 would have a less than significant impact on land use and planning after the incorporation of mitigation measures in this Draft EIR.

Noise

Upzoning single-family districts to either Residential Medium or Residential High density would spread development across the entire City. New development would not be concentrated in Infill Opportunity Zones and therefore mitigation would not be required to reduce impacts to sensitive uses near roadways and commercial/industrial facilities. Development intensity under Alternative 2 would be less than the proposed Project, and therefore, noise impacts would be reduced compared to the proposed Project. Impacts under this alternative would be less than significant.

Population and Housing

The land uses allowed under Alternative 2 and the proposed General Plan 2045 would provide opportunities for cohesive new population, housing, and business growth in the City and would not induce substantial unplanned population growth. Both plans afford measured, planned population growth that would not divide an established community. Both plans would meet state-mandated Regional Housing

Needs Assessment requirements. Similar to the proposed Project, Alternative 2 would have equivalent less than significant impacts on population and housing.

Public Services and Recreation

It is anticipated that Alternative 2 would have minimal impacts to public services and utilities similar to the proposed Project. Recreational considerations for Alternative 2 are the same as the Project. Alternative 2 would have equivalent less than significant impacts on public services and recreational resources.

Tribal Cultural Resources

Both Alternative 2 and the Project could result in direct or indirect impacts to tribal cultural resources due to construction activities, such as grading and excavation, that may result in inadvertent and accidental destruction or disturbance of tribal cultural resources. Local policies as well as federal and state laws require project-specific consultation with local tribes, addressing potential impacts to tribal cultural resources. Similar to the Project, Alternative 2 would have a less than significant impact on tribal cultural resources.

Utilities and Service Systems

Upzoning single-family districts to either Residential Medium or Residential High density would spread development across the entire City, which could require expansion of new utilities and infrastructure to serve areas further from the City core. However, given Alternative 2 would accommodate less development and assumes less population growth than the proposed Project (growth of 43% over 2020 population estimates), impacts to utilities and service systems would not be significant. The domestic water supply, existing storage reservoirs within the City's distribution system, and existing water treatment capacity are sufficient to meet the water supply needs of current and future population growth, and no impact would occur. The City's wastewater treatment plant is currently being upgraded and would continue to have sufficient capacity to meet the needs of the proposed projected growth, therefore construction or relocation would not be required. In both Alternative 2 and the Project, future projects developed under the General Plan 2045 would not adversely impact water quality via stormwater inputs due to compliance with the MS4 permit and other City policies, and a less than significant impact would occur. Alternative 2 would not create new or different impacts to electrical power, natural gas, and telecommunication facilities, therefore a less than significant impact would occur. Overall, while less development and population would require less capacity, the utilities and service systems are sufficient for both Alternative 2 and the Project. A less than significant impact would occur.

Transportation

Under Alternative 2, similar to the proposed Project, all roadways, bikeways, and intersection improvements would be designed to City or Caltrans engineering and safety standards, as appropriate. Future development under the General Plan 2045 would also be required to comply with street design standards, Manual of Uniform Traffic Control Devices requirements, building code requirements, fire code requirements and zoning regulations, ensuring that this alternative would result in less than significant impacts with respect to design hazards and emergency access.

Under existing conditions, the City's overall land use diversity score of 81.5, compared to the countywide average score of 74.3. Under future proposed Project conditions, the City's overall score would improve to 83.9. However, the Project proposes a mix of land uses which generally leads to decreased vehicle miles traveled. Alternative 2 would maintain or decrease the City's score because the dispersed development in

upzoned residential areas could generate higher rates of vehicle miles traveled. However, it would continue to be higher than the impact threshold of 75.4, and therefore would be less than significant.

Agriculture and Forest Resources

Alternative 2 would not propose increased development on agriculture or forest lands. Increased development intensity would occur on previously zoned residential parcels. No zoning changes to Agriculture Residential parcels would be proposed. Therefore, Alternative 2 would have equivalent impacts to agricultural resources with respect to conversions of agricultural land (less than significant), conflicts with agricultural zoning or a Williamson Act contract (no impact), or other changes resulting in conversion of farmland (no impact).

Neither the proposed Project nor this Alternative would have significant impacts to forest resources as no changes to zoning of forest land or forest management practices would occur. In both cases, removal of vegetation to accommodate construction could occur. However, potential removal of trees during infill development would be minor, if at all, and removal of trees would typically require a permit and likely require mitigation to offset the loss of that vegetation. Therefore, the impacts related to agriculture and forest resources would be equivalent to the proposed Project.

Biological Resources

As a result of existing federal and state regulations protecting natural resources, and existing and proposed policies under the General Plan 2045 that would require assessment, inventories and buffers for protection of natural resources, it is unlikely that implementation of this alternative or the proposed Project would have a substantial adverse impact directly or indirectly on a special status species via construction in undeveloped lands. The regulations protecting biological resources in the existing General Plan 2020 and mitigation measures proposed in this EIR would be sufficient to mitigate the impacts to biological resources to a less than significant level.

Geology and Soils

Activities under Alternative 2 and General Plan 2045 may include building construction, shallow excavation, and repaving, which could potentially be ruptured by the Fickle Hill fault, resulting in a potentially adverse impact. Existing and proposed General Plan 2045 policies would reduce impacts from seismicity and liquefaction risks to a less than significant level.

Construction activities, including cut, fill, removal of vegetation, and operation of heavy machinery, would disturb soil and, therefore, have the potential to cause erosion. These construction activities would be performed in compliance with the Best Management Practices prescribed in the Arcata Municipal Code, North Coast Regional Water Quality Control Board regulations and the California Building Code. Therefore, no substantial soil erosion or loss of topsoil would result from development occurring, and the potential impact would be less than significant. Alternative 2 would not require the use of additional septic tanks or an alternative wastewater disposal system.

Development within the City could uncover paleontological resources which are protected by state law. If paleontological resources were discovered, a potentially significant impact could occur. Mitigation Measure GEO-1 inadvertently discovery protocol, would reduce the potential impact to less than significant. Therefore, the impacts related to geology and soil would be less than significant with the incorporation of mitigation, and equivalent to the proposed Project.

Hydrology and Water Quality

Alternative 2 would have similar hydrology and water quality impacts as the proposed Project. Alternative 2 has the potential to increase impervious surfaces slightly more due to its dispersed development pattern which could occur on undeveloped parcels, rather than infill promoted by the Project, which would take place on currently developed sites.

Regardless, the General Plan 2045 policies, Land Use Code, City's MS4 requirements, along with other state and federal regulations would reduce water quality impacts to a less than significant level. The Public Safety element contains policies to reduce impacts related to flooding to a less than significant level. Both Alternative 2 or the Project would be expected to have relatively little effect on the quantity or quality of groundwater availability in the Mad River Valley Lowland Basin and would not conflict with a water quality control plan or sustainable groundwater management plan. The hydrology and water quality impact of Alternative 2 is equivalent to the proposed Project and would be less than significant.

Mineral Resources

Under both Alternative 2 and the proposed Project, construction of buildings and roads would use aggregates, such as those extracted within Humboldt County outside of the City. Unlike the proposed Project, Alternative 2 does not promote infill development above and beyond state law. Infill would require comparatively less aggregate than that needed for new, dispersed development requiring building foundations and new road networks. Although infill development would not be promoted, slightly less development would occur, so a similar, unsubstantial use of mineral resources would be expected. The impact to mineral resources would remain less than significant.

Wildfire

Alternative 2 would result in a similar, though slightly increased, wildfire impact. Dispersed development could be located in areas with a higher fire severity rating compared to the Infill Opportunity Zones in core Arcata areas. Therefore, wildfire impacts would be increased under Alternative 2, but would remain less than significant due to the low wildfire risk in the City.

Energy

Under Alternative 2, upzoning single-family districts to Residential Medium or Residential High density would spread development across the entire City as opposed to concentrated in the Infill Opportunity Zones. Dispersed development could increase energy (fuel) usage due to increased trip length. However, development intensity under this alternative would be less than the proposed Project, and therefore, energy use would be reduced. Similar to the proposed Project, new buildings, redevelopment, and building additions would be subject to California Title 24 Energy Code and CALGreen Code Mandatory Measures. Ultimately, Alternative 2 would have an equivalent less than significant impact on energy resources.

7.3.3 Alternative 3: Reduced Population Estimate

Description

The scale of growth is in large part predicated on the policies that direct development to accommodate the growth. The City's population grew at an annual average rate of 0.65% between 2000 and 2020. The growth rate in the second 10-year period was 0.94%. During the last half of the 2000s, the City adopted several zoning amendments that streamlined development processes. While City policy was not the only

factor stimulating growth, in the 2010-2020 period, it contributed significantly to the increase in the pace of development.

An alternative to the proposed 1.0% to 1.4% average annual growth rate is to reduce growth estimates and impose reductions in reduced development potential. Policies aimed at reversing streamlining could be implemented to slow development, which would decelerate population growth. If more restrictive policies were put in place, the target population growth rate could be reduced to range between 0.65% and 0.73%. This would put the total population in 2045 at 22,628, relative to the 2020 baseline. Any population growth past this would be assumed to be absorbed by neighboring communities, such as the City of Eureka or unincorporated areas of Humboldt County.

To implement this option, the City could set lower allowed residential densities and adopt measures to increase discretionary decision making in development proposals. Policies could be established that set low targets for housing production and provide increased protection for existing residents. These polices could then be cited to deny or defer projects if housing targets are met.

In addition, the City could adopt stringent design policies. The state laws regulating housing production generally allow jurisdictions to regulate based on objective standards. The City could adopt objective standards that limit production of lower cost designs and require larger areas of each parcel to be set aside for onsite amenities, such as open space or parking. This would decrease the number of projects that are proposed, and the number of units that could be constructed. Together with a more complex development approval process, these measures would assist in implementing the reduced population estimate alternative. The mitigation measures presented in this Draft EIR would be active under this alternative.

Analysis

Aesthetics

Under Alternative 3, less development would be likely to occur and with the implementation of stringent design policies, impacts to aesthetics would be less than to the proposed Project. Some public views could be modified by Project development allowable in the Gateway Area; however, Alternative 3 would not target growth specifically in the Gateway Area, therefore those impacts would not occur. In general, less change from existing conditions would occur, therefore Alternative 3 would be likely to have no impact on aesthetic resources.

Air Quality

Under Alternative 3, a lower development intensity would occur throughout the City. With less development, temporary construction-related air quality impacts from grading and construction and longer-term air quality impacts from building operation, would be lower than under the proposed Project. However, if the population drivers anticipated in the proposed Project persist, but Arcata reduces its growth rate, the new population would likely be absorbed in nearby communities instead of in Arcata. This would promote longer trip lengths, increasing pollution and emissions due to further proximity from Cal Poly Humboldt, the prime population driver through this planning period. Alternative 3 would result in less active transportation trip reductions and more severe air quality impacts. Therefore, similar to the Project, Alternative 3 would exceed thresholds for some toxic air contaminants. The impact would remain significant and unavoidable.

Cultural Resources

As with the proposed Project, construction of Alternative 3 could unearth unknown cultural resources which would be a significant impact. However, policies would be in place under the proposed General Plan 2045

to protect cultural resources, including pre-project review and procedures for inadvertent discovery of archaeological resources. Therefore, Alternative 3 would not cause adverse impacts to cultural resources, including archaeological materials and human remains. Similar to the proposed Project, Alternative 3 would have a less than significant impact on cultural resources.

Alternative 3 would not establish the Infill Opportunities Zones and Gateway Area Plan. Under the proposed Project, the demolition of the two properties in the Gateway Area, would result in a significant impact to historic resources, which is an unmitigable impact, and thus a significant unavoidable impact. Because Alternative 3 does not propose to demolish these properties, it would have a lesser potential to impact historic resources. Though less likely than the other alternatives due to the lowered development intensity, historic resources may be demolished in other areas throughout the City. Existing and proposed General Plan policies are in place to protect these resources, including discretionary review (Policy H-5), and independent CEQA evaluation. Alternative 3 would have a less than significant impact on historic resources.

Greenhouse Gas Emissions

Under Alternative 3, a lower development intensity would occur throughout the City. However, population growth, especially due to Cal Poly Humboldt, would likely be absorbed by nearby communities instead of in Arcata. This would promote longer trip lengths, increasing pollution and emissions, and reduced participation in alternative transportation methods. Alternative 3 would not comply with the CARB Scoping Plan because it would not support vehicle miles traveled reduction and transit-supportive densities. This alternative would have a larger greenhouse gas impact than the proposed Project. Impacts would be potentially significant.

Hazards and Hazardous Materials

Current land uses, as well as future land uses under the Arcata General Plan 2045 and Alternative 3, involve or would involve the generation, transport, use and disposal of hazardous materials. Under both Alternative 3 and the proposed Project, new development would be subject to state and federal regulations that would reduce the potential for hazards and hazardous materials. General Plan regulations and policies would also reduce these potential risks to a less than significant level. Compared to the proposed Project, Alternative 3 would not increase or decrease the potential exposure of a school or airport to hazardous materials, interference with an adopted emergency response plan or emergency evacuation plan, or wildland fire exposure. Impacts under this alternative would be similar to the proposed Project and would be less than significant.

Land Use and Planning

Under Alternative 3, fewer residential units would be developed than under the proposed Project. General Plan 2045 includes policies to support alignment with regional plans and state policies on housing. Alternative 3 would not implement those policies and therefore may be in conflict with enforceable state policies and therefore require additional mitigation. The City would not likely be able to maintain housing element compliance with this alternative. If the population drivers anticipated in the proposed plan persist through this period but Arcata reduces its growth rate, the new population would likely be absorbed in nearby communities instead of in Arcata. This could create additional cumulative impacts. Additionally, because this alternative would not plan for increased housing needs, it would not adequately meet the Project's housing goals. Alternative 3 may require new or additional mitigation in order to not conflict with land use plans, policies, or regulations; however, impacts would be significant and unavoidable even after mitigation due to potential conflicts with state housing law.

Noise

Development intensity would be less under Alternative 3. Development intensity under this alternative would be less than the proposed Project and not concentrated in Infill Opportunity Zones, and therefore, noise impacts would be reduced compared to the proposed Project. Impacts under Alternative 3 would be less than significant.

Population and Housing

Alternative 3 would limit development allowed in the City. Alternative 3 would have a greater impact related to housing compared to the proposed Project due to potential for the most recent state-mandated Regional Housing Needs Assessment requirements not being met. While regressive development policies may limit some forms of development, it is likely that state law would supersede local regulations to ensure housing projects are allowed to be constructed in ways that are cost-feasible to developers by requiring cities to relax barriers to housing production for projects that adhere to set affordability targets. Therefore, Alternative 3 would induce unplanned growth within the City. Additionally, if the population drivers anticipated in the proposed Project persist through this period but Arcata reduces its growth rate, the new population would likely be absorbed in nearby communities instead of in Arcata. This would cause a cumulative impact that does not exist with the proposed Project. Alternative 3 would have a significant and unavoidable impact on population and housing.

Public Services and Recreation

It is anticipated that Alternative 3 would have less public services and recreational resource impacts than the proposed Project due to lower population growth. Slower population growth would have lesser demands on fire and police protection, schools, parks, and other public facilities within the City, compared to the proposed Project. Impacts from Alternative 3 would be less than the Project and would remain less than significant.

Tribal Cultural Resources

Both Alternative 3 and the Project could result in direct or indirect impacts to tribal cultural resources due to construction activities, such as grading and excavation, that may result in inadvertent and accidental destruction or disturbance of tribal cultural resources. Local policies as well as federal and state laws require project-specific consultation with local tribes, addressing potential impacts to tribal cultural resources. Similar to the Project, Alternative 3 would have a less than significant impact on tribal cultural resources.

Utilities and Service Systems

Given Alternative 3 would accommodate less development and assumes less population growth than the proposed Project (which assumes growth of 43% over 2020 population estimates), impacts to utilities and service systems would not be significant. The domestic water supply, existing storage reservoirs within the City's distribution system, and existing water treatment capacity are sufficient to meet the water supply needs of current and future population growth, and no impact would occur. The City's wastewater treatment plant is currently being upgraded and would continue to have sufficient capacity to meet the needs of the proposed projected growth, therefore construction or relocation would not be required. In both Alternative 3 and the Project, future projects developed under the General Plan 2045 would not adversely impact water quality via stormwater inputs due to compliance with the MS4 permit and other City policies, and a less than significant impact would occur. Alternative 3 would not create new or different impacts to electrical power, natural gas, and telecommunication facilities; a less than significant impact would occur. Overall, while less
